It may be said that the packers sold direct from themselves, as the manufacturer or producer of the article, to the retailer, and thus eliminated the wholesale grocer. It was by a natural economic process that the wholesaler or jobber was eliminated. If the situation had not been changed by the consent decree or by legislation, that elimination would have occurred on all such merchandise so handled by these packers. In this instance, however, we find a decree based on the application of the United States that puts back into business an extra middleman who, by an economic process, had been eliminated.

It was said that the packers' profits were growing too large. I have only briefly referred to that. Does anybody know what the packers' losses have been since the shrinkage began; since the peak of high prices were reached; since $23 hogs, and cattle selling for the highest prices ever known in the live-stock markets? The decline has begun. Does anybody know what the packers have lost?

The losses they have taken have been such that unless the packers had behind them immense resources, great surpluses, and the soundest manufacturing and commercial organization, the losses would have bankrupted any concern in this country. The inventory losses of the packers have been something to stagger the human imagination. Twenty-five million dollars, at least, within 12 months would be a too conservative estimate of the losses.

There is no great steam railway in the country which does not lay aside a portion of its net earnings as a surplus to meet some emergency, either some great convulsion of nature, such as flood or fire, or some other unforeseen action of the elements, which the utmost of human intelligence can not look forward to guard against, or business depression and reduced earnings until outgo equals income. It is a well-known fact that every well-managed railroad maintains such a surplus account.

There is no great fire insurance company in New York City, in Philadelphia, or in Connecticut—which is the home of some very good fire insurance companies—that does not lay aside a surplus to cover great fires which may occur, as at San Francisco, at Baltimore a few years ago, and at Chicago, when that city was almost burned to the ground. They keep such surpluses in actual cash or in liquid assets which can be taken out and readily turned into cash in the market places or exchanges of any of the principal cities.

The liquidating process which has come upon the country, as is well known, was bound to occur. There is no prudent man who did not anticipate it nor good business man who has not prepared for it. So the packers have taken the losses which accrued to them; the individual farmer has taken his loss in instances where he has bought and carried over cattle. The producers in North Dakota have taken their loss. I know of one instance in North Dakota where more than 5,000 head of cattle covered by a chattel mortgage could not be sold for enough to pay the mortgage. I know of instances in Illinois where people bought cattle in order to save the bank from loss. There has been enough trouble in other places besides the North Dakota banks, and everyone has been trying to help within the limits of his ability, for nobody wishes disaster to come. So I repeat the farmer has taken his loss, the stockman has taken his loss, the commission man has taken his loss, the packer has taken his loss, and, in the aggregate, because of the fact that the packer had more collected capital and because his instrumentalities were greater, he has taken the greatest losses of any other one connected with the meat industry.

From this morning's press report I desire to read a dispatch dated Chicago, January 19, 1921:

CHICAGO, *January 19.*

Only by drawing on reserves accumulated by their foreign connections were Armour & Co. enabled to show a net profit as a result of their 1920 operations, according to the annual report of J. Ogden Armour, president of the company, which he presented to-day to the stockholders. For the first time in the history of the company stockholders other than members of the Armour family attended.

The statement disclosed that while the company's total sales approximated $900,000,000 for the year, that portion of it which represented sales in and exports from this country resulted in losses aggregating many millions of dollars. In view of these losses, Armour & Co. found it necessary to draw upon the reserves of their foreign connections to show a net profit of $5,319,975.44, which represented but 2.4 per cent on the average net capital investment of $231,000,000. Regarding the prospects for 1921, Mr. Armour said:

"There is abundant reason to look forward to a better year. We have maintained tonnage and outlets. The coming months should show a brisk business."

The consent decree, to which I referred a few moments ago—and I will return to it in order that I may complete the remarks I desire to make upon that branch of the subject—totally divorced the five packers from engaging in the distribution of anything other than strictly packing-house products and incidental by-products. I do not regard that decree as in the interest of the consumer. As I have said, it thrusts back into the distributing processes the middleman whom the economic laws of trade had eliminated. The wholesale grocer thought he ought to be protected by legislation or by court decree. The total business of the five large packers as represented by the distribution of "unrelated products," as they are often called, was so small that the packers decided it was better to consent to the decree and to retire from the distribution of such products than to have further trouble with the Government authorities. It was only about 3 per cent of the total wholesale grocery trade. Therefore that branch of it is disposed of, and the consumer must thank the United States Government for keeping in the process of distribution one more middleman to take a profit to be loaded on the retail price that he finally pays in his kitchen.

Mr. SHEPPARD. Mr. President——

The PRESIDING OFFICER (Mr. KELLOGG in the chair). Does the Senator from Illinois yield to the Senator from Texas?

Mr. SHERMAN. Yes, sir.

Mr. SHEPPARD. Has the Senator a list of those unrelated products?

Mr. SHERMAN. I have. In the consent decree all of them are fully set out. I do not think the consent decree has been incorporated in the CONGRESSIONAL RECORD, and I think at the close of my remarks I shall incorporate it, so that the unrelated products may be found.

While this was in progress I took the trouble to look up what some wholesale grocers deal in.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Kentucky?

Mr. SHERMAN. Yes; I yield.

Mr. STANLEY. Has the Senator from Illinois incorporated in his remarks, or will he do so, the decree or finding of the Attorney General with reference to the stockyards?

Mr. SHERMAN. Yes; I shall refer to that in a moment.

The wholesale grocers themselves deal not merely in food products, not merely in groceries or what is commonly understood by the term "groceries," but deal in a great variety of unrelated products. I can buy a coal hod from some wholesale grocers if I am in the grocery business. I can buy a log chain from one firm of wholesale grocers. I can buy a gang plow from another one. They do not manufacture them. They buy them, or get them in trade from somebody, and distribute them. In the hearings one witness says that he bought from wholesale grocers a bill of 40 separate items that he counted, and

there was not one item that could be consumed by any living creature but an ostrich. The grocers do not follow the same law that they ask the packers to follow.

I am not complaining about the grocers distributing anything they wish to. What I criticize them for is the extreme bias with which they pursue somebody else whom they think they can not compete with, and begin a crusade, or sometimes it is called a propaganda—a word that I think has been so greatly overworked that I seldom use it myself. I took occasion to look up my friends, the wholesale grocers, and in fact to keep some of the documents they sent me. None of them appear in the hearings, and so I think it is well enough to show what they have been doing.

Here, for instance, dated July 18, 1919, is one from the Southern Wholesale Grocers' Association, from Jacksonville, Fla., and other associations in like manner, northern and western, have the same documents. I take this as a sample. It is headed:

KENYON BILL VERSUS FOOD TRUST.

To all wholesale grocers:

* * * * * * *

The Kenyon bill means death to the packers' monopoly. It will end their hopes to establish a food trust. * * *

Every grocer, both wholesaler and retailer, must rally to defend the business of distributing the food products of the Nation against the inroads of the big Chicago meat packers.

Act now!

Write or telegraph your Senators and Representatives saying that you want the Kenyon bill in order to prevent the packers from building up a food trust—

That is practically the same as the Gronna bill. It amounts to about the same thing—

Next: Get every retail grocer who is a thinking American citizen to do the same.

Then: Report to the bureau of research and publicity all the evidence you can get showing how the meat packers are bringing pressure on grocers to induce them to oppose the Kenyon bill. Who pays for the telegrams retailers are sending? Do the packers' agents make true statements about the Kenyon bill?

LEWIS H. HANEY,
Director Bureau of Research and Publicity.

Another inclosure gives a synopsis of the Kenyon bill and provides for licensing; and, among other things, the licensing provision in the Kenyon bill says:

Dealers in dairy products and poultry, whose business exceeds $500,000 a year, and who are doing an interstate business—

Must be licensed.

In order to remove any possible fear here is a postscript to this illuminating circular:

P. S.—It will be easy to get provision (d) of section 4 amended if it seems likely to injure the grocery jobber.

And provision (d) of section 4 is what I have read:

Dealers in dairy products and poultry—

And so forth. They suggest that it will be very easy to strike that out; to let it go through now, and if it hurts the wholesale grocer they will get it stricken out later on.

This went out in an avalanche, a great flood of it. Not much was said about it at the hearings. Our wholesale grocery friends were quite quiet about it.

Then I have, in addition to that, from the Western Grocery Co., which pays nearly 20 per cent dividends, doing business at Dubuque, Iowa, a number of statements, signed, typed, or printed in imitation of type, by various persons up and down the Mississippi River against the bill. It shows that there has been just as much effort to promote the bill as there has been against it. Certainly there is nothing wrong in this. I do not offer it with that view. It is perfectly legitimate. So is it legitimate for those opposed to this bill to give their reasons and to concentrate their opposition. The packers have been condemned because they have done no more than the wholesale grocers.

I have here a number of resolutions in opposition to the bill, the Gronna bill or the Kenyon bill, as it is commonly called—the Gronna bill now S. 3944. First, I will offer the resolution of the Illinois Manufacturers' Association, which in unqualified terms opposes this bill, and gives the reasons why in the resolution. Of course, the Illinois manufacturers will be accused of being interested. They are engaged in a great variety of business, capitalized some of them for large amounts of money, and manufacture everything from the frogs at railway crossings on through to knitting needles and the like. Then, again, these men might be more or less connected with manufacturing lines that would bring them into communication with packers, it is said. That is the criticism. Very well. I insert the foregoing resolutions here at length:

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, January 14, 1921.

DEAR SENATOR: We are informed that a vote is to be taken on January 24 on the Gronna bill (S. 3944). This bill is the successor of the Kenyon and Kendrick bills, seeking to control not only the packers but the stockyards and live-stock commission men and many others connected with the live-stock industry. You know how much our association has had at heart the building up of our industries and how our organization has stood like a Gibraltar against the attacks made on the manufacturing industry.

Our board of directors has considered this legislation and adopted some time ago resolutions as follows:

"Whereas it is proposed by such legislation to delegate to some Government official the power to grant a license to do business in the United States, subject to such regulations, terms, and conditions as may be prescribed from time to time; and

"Whereas, among other things, there is vested in some Government official the power to limit the kind or character of business to be transacted by any licensee; and

"Whereas Government control or operation of private business enterprises will greatly increase the expense of operation and seriously impair the efficiency of such enterprises; and

"Whereas the Illinois Manufacturers' Association is unalterably opposed to such legislation, because—

"1. It establishes a system of paternalism in Government which is un-American.

"2. It subjects private business to bureaucratic control.

"3. It is a step toward the complete socialization of all private business and property:

"Now, therefore, be it

"*Resolved*, That the Illinois Manufacturers' Association, desiring to make record of the fact that it is without reservation opposed to the enactment of the Kenyon, the Kendrick, or the Anderson bill or other similar legislation by the Congress of the United States, does hereby protest against the same, and respectfully requests and urges the Senators and Representatives in Congress from Illinois to oppose these bills and to do everything possible to prevent their adoption, either in their original or amended form; be it further

"*Resolved*, That copies of this resolution be mailed forthwith to the chairmen and members of the Senate and House Committees on Agriculture and to all Senators and Representatives in Congress."

We know you are doing all in your power on this proposition and feel that your course meets the general approval of all sane thinking people and the business interests of this State. We want to send you these resolutions, however, so that you may know how we feel, and that you will have our backing in your efforts to defeat this pernicious legislation.

Yours, very truly,

JOHN M. GLENN.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

Here is the Illinois Live Stock Association, holding its meeting at Springfield, Ill. The live-stock association is made up of a great number of actual farmers. It is not made up of men who have an office in Washington, who have a paid bureau, a secretary and an assistant secretary, with a force of shorthanders and of skilled advertisers, who ordinarily represent but little of actual farming but do represent a skilled force of agitation. These men, on the contrary, are actual farmers, and are distributed throughout the entire State of Illinois. They run from the small towns out to the rural free delivery. They are men who own farms. I know one at least who is a farm tenant, and who would rather rent than buy land, because he says he would rather rent it from the landlord, from a money-making viewpoint, at present prices than to own it. He remains a tenant by choice, and he is quite a large farmer and stock raiser. Then it ranges up to the large live-stock producer, who does practically nothing but raise or collect stock cattle, feed them on roughage until the proper time, put them on grain when he thinks the market is favorable, and after the proper time of corn feeding send them to whatever market he pleases. They ship from that country to Indianapolis, to St. Louis, and to Chicago. From the original producer the animals necessarily go on the hoof. But little is ever shipped beyond the packing house on the hoof now.

These resolutions of the live-stock associations condemn in unqualified terms the passage of such legislation as Senate bill 3944:

Our association—

Quoting—

represents the live-stock interests of our State, and we sincerely believe that the above resolution expresses the judgment of the large majority of the live-stock interests in our State.

I shall insert here the resolutions at length:

ILLINOIS LIVE STOCK ASSOCIATION,
Chicago, Ill., March 6, 1920.

"*Resolved*, That the Illinois Live Stock Association is opposed to the governmental regulation of the live-stock and meat industry as proposed by the Kenyon-Kendrick and Anderson bills now before the Congress of the United States. We believe such regulation is detrimental to the best interests of both producer and consumer, and will do more harm than good. If evils exist we believe the proper method of correcting them is by specific laws forbidding defined practices, and that so great an industry should not be placed at the mercy of any commission such as proposed, which would, in effect, have the power to enact its own laws and to punish infractions thereof: And be it further

"*Resolved*, That we urge upon the Congress of the United States, before any legislation affecting our industry is enacted, that a joint committee of both Houses of Congress call a conference of delegates representing the producers, shippers, railroads, stockyards, commission men, traders, and packers in an effort to agree upon any legislation found to be absolutely necessary and essential. Such agreed legislation should not contemplate the establishment of more bureaucratic control, but merely the enactment of a minimum of specific law."

The above resolutions were unanimously passed at the annual meeting of the Illinois Live Stock Association held in Springfield February 26 and 27, 1920.

Our association represents the live-stock interests of our State, and we sincerely believe that the above resolutions express the judgment of the large majority of the live-stock interests in our State.

Trusting you will give this matter your earnest consideration, and hoping some beneficial legislation will be the outcome of a conference such as proposed, we beg to remain,

Yours, very truly,

ILLINOIS LIVE STOCK ASSOCIATION,
EDW. F. KEEFER, *Acting Secretary.*

So both from manufacturers and from live-stock producers and farmers comes the opposition to this bill. What is true of my own State in regard to opposition is equally true of the opposition in other States. Some very large live-stock associations, one national in character, composed of two members from every State in the Union, having 35 States represented, met and undertook to indorse this legislation. With 70 members present, it was only able to secure from three members an affirmative vote on the indorsement.

In the consent decree it was said that it was necessary to divorce the packers from the stockyards. It was assumed that an undue advantage was given the packer by an ownership in stockyards. At certain points—live-stock markets in the United States—some of the packers did have an ownership or a part ownership in the yards. My recollection is, quoting from memory, that at Fort Worth, Tex., Armour, or Armour and Swift together, took over the stockyards, when they did not amount to much, for the purpose of developing their own trade.

They buy in that market and slaughter. There was a stockyard near that place on the Missouri, Kansas & Texas road. It was not a successful yard; it was not making money; it was not attracting to Fort Worth any considerable number of live stock.

In the hearings great criticism is based on the fact that when the Missouri, Kansas & Texas traffic manager approached the packers to obtain some of their freight business for the Missouri, Kansas & Texas road he was told that so long as the Missouri, Kansas & Texas maintained yards of their own in competition with those established by the packers they saw no reason for diverting any of their traffic. For my part, I see no objection to that. If I am a competitor in business of another concern and the other concern asks me to give part of my business to it, that is a perfectly legitimate reply. The Missouri, Kansas & Texas afterwards discontinued the Missouri, Kansas & Texas yards, and the Missouri, Kansas & Texas afterwards received some of the packers' freight. I regard that as legitimate argument and process. It is an economic process that belongs not only to the packing business but to the railroad business.

I allude to this as I go along, because no one can read all of the hearings. At any rate, great criticism resulted from an interest or ownership in the yards, on the part of the packers, in some parts of the United States. The largest stockyards were in Chicago. There the Union Stock Yards and the Junction Railway Co. formed the terminals through which the live stock finally reached the packing houses. The terminals are incident to every great stockyard. Kansas City has extensive terminals. There is no large manufacturing concern which does not have its own terminals, and I happen to know from actual experience that most manufacturing concerns build and pay for their own terminals. As a rule the steam railways do not build sidings and switches which connect with a factory.

The process is about as follows: You apply to the proper manager, and the traffic department sends somebody down to look over the ground. They tell you that they will furnish the ties, the grading, the iron, the switches, and other appurtenances at actual cost to you. They want no profit on it, but they must have the kind of a track over which their engines and cars can safely be hauled. You pay for it, and you pay for the actual time of the gang of men they send out to lay the track. That is all there is to it. You enter into an agreement with the railroad by which it is to be operated at a merely nominal cost, and through that agency you get cars on the sidings to your factory for loading purposes.

The packing-house plants, being somewhat separated, although, in the main, in the same area, took a very large terminal. The yards for the accommodation of the daily arrivals of live stock require a great deal of room, and consequently these yards grew to very large proportions. They are an incident, but a very necessary instrumentality, of the live-stock business in every packing-house center. They have been developed by the packers primarily for the purpose of furnishing well-equipped yards that would attract live-stock shipments to their packing plants. I need not go further into this than to say that by the consent decree the packers consented to release and forego forever their ownership or interest in all stockyards.

Mr. STANLEY. Mr. President, in a great many instances other industries, where their terminal facilities are large and complex, have separately incorporated them and have been allowed terminal allowances, or divisions of rate, or some other consideration for initiating freight. Have the packers ever engaged in that practice?

Mr. SHERMAN. I do not think so. There have been switching or connecting concerns in manufacturing plants of various kinds, and it is perfectly legitimate. I do not criticize it, because it takes money to make large terminals.

Mr. STANLEY. I was not aware of the separate incorporation of any of these facilities as common carriers or that they have not always preserved their status as stockyards.

Mr. SHERMAN. I believe that in some cases there are connecting lines of railroad—connecting the different railroads with the stockyards, which the packers have had to build, and they have been separately incorporated. I know of one instance where certain of the large steel mills in the Chicago area have done this. There is a railway incorporated whose entire business is simply the transfer of freight from one plant to another, a distribution of cars to the various plants. It does not do a general freight business, and receives no outside business, carries no passengers, and no freight for the general public; but it is incorporated to bring those separated plants into a more contiguous relation with each other, and it does it very efficiently.

Mr. STANLEY. The Elgin, Joliet & Eastern is practically such a one.

Mr. SHERMAN. Yes; and what is called the Outer Belt Line in Chicago is very similar. So at the present time, under the consent decree, the problem remains for the packers to dispose of the yards. Here are the rather singular provisions of the decree. It compels the owner of property acquired under the provisions of law, as they supposed at the time, and with no objection at the time they acquired that ownership, to sell it. I am aware that in regard to alien ownership of land, as in California and my own State, there is a similar provision. If an alien continues to own land in Illinois for a certain time without becoming naturalized, the State's attorney of the county in which the land is situated, or if in more than one county the State's attorneys of the several counties, is required by a mandatory provision of the statute, by proper court proceedings, to obtain a decree to divest the alien of ownership, and to expose the land for sale at the door of the courthouse, at the county seat of the county, and to sell it, taking out the costs and remitting the balance of the proceeds to the alien.

California is not the only State in the Union where the people are agitating against alien ownership. It is going on in a great number of States. It has been in force in my own State since 1889, more than 30 years ago. It was to cover the case of a landlord in the corn belt. He was an Irishman, as I remember, and an absentee landlord, rather a contradiction in terms, but nevertheless that was the fact. He had large ownerships and rented out, under very exacting leases, as much rack-rent as there is in the potato fields of his native Ireland, some thousands of acres. Primarily, he was the provoking cause of this legislation. He had himself naturalized, and died. I think he died an American citizen in order to save having a forfeiture of his estate. I refer to this to show that in no single instance has a tract of land been exposed to sale under the alien ownership law that it ever lacked a purchaser. Farmers crowd in and buy every acre of what is exposed for sale under such statutes.

But when the Government, by decree, orders stockyards sold, and the market is open for anybody to buy a stockyard, for some reason they do not flock up to the doors of any Government building, or seek the marshal's office, saying: "Can I not buy a stockyard this morning?" I have not found a man yet who wants to buy a stockyard as an independent proposition, to own it and operate it as a stockyard.

Mr. STANLEY. Mr. President, I do not wish to interrupt, and the question is not hostile, but my understanding is that the packers have heartily concurred in this program outlined by the Attorney General, by which they are to be divested of any interest, direct or indirect, in the operation of the stockyards.

Mr. SHERMAN. The Senator is right. They consented and are trying in good faith to carry it out.

Mr. GRONNA. It was a voluntary agreement.

Mr. STANLEY. Yes; a voluntary agreement. I will say to the Senator in this connection that I am not predisposed to the control of private business by a Government commission. Public utilities must be controlled to a greater or less extent by a commission, as, for instance, the Interstate Commerce Commission. Does not the Senator think it would be better for the stockyards to rid themselves of any semblance of this dual

activity, and by getting rid of the stockyards to preserve their autonomy and their activities as a strictly private business? The preparation of beef or its by-products for sale is a strictly private business.

Mr. SHERMAN. Yes.

Mr. STANLEY. I doubt if the operation of a stockyard is, and for that reason I think it is better for the stockyards and for the packing business that they should, if they can, divorce themselves from the business of carriage, directly or indirectly.

Mr. SHERMAN. I quite agree with what I assume are the Senator's views on the subject. If I were able to give advice, if I had a client who was a packer and an owner as well of a stockyard company and a terminal or junction railway, I would advise him to adhere strictly to the packing business and its incidental products and to let the other go as a separate enterprise, not connected with his plant. I quite agree with what I believe the Senator's view is on that subject, and, acting on that view, I presume the counsel for the packers consented that in this decree there might be incorporated that provision. The peculiar hardship to which I was directing my remarks was the court order to sell this property and divest themselves of some $30,000,000 worth of property, without at the same time the Government's furnishing them a purchaser. All of the interests in yards in dispute and which led to this decree would be the packers or their families.

All of the packers are not merely Mr. Armour, and Mr. Morris, and Mr. Swift, and others; there are thousands of men interested in the packing business, all of their shareholders outside of them. But the hardship of it is to dispose of these yards throughout the country—at Kansas City, at Fort Worth, at Denver, at St. Louis, at Chicago, at Omaha, at St. Paul, at Milwaukee, and various points. They must be disposed of to somebody or they must be given away, and it is not proposed by the Government to confiscate this property. A proposal has been under consideration, no doubt many have noted in the press reports, to organize a company for the purpose of taking over these companies. But that has been subjected to some criticism, at least some scrutiny, by the Department of Justice, and with possibly some doubt about whether it would be satisfactory to the Attorney General.

So that plan remains in waiting. But at least the property should be taken care of in that way, unless it is to return to a state of nature, like property before the laws of civilization, first holder gets it, and that is not to be thought of.

The actual value of the terminals and the yards over the United States aggregate many millions of dollars. They have grown up since the Civil War closed, in 50 years or more of economic development of the country, and especially the last 25 years, the great period of industrial development in the United States. I take it by the consent decree that for further purposes of discussion the yards, terminals, and the unrelated products are divorced from any further debates on the bill. They are cared for by the decree, which I shall later incorporate in my remarks.

These matters I shall now discuss are of a very elementary character. They lie at the basis of successful business. I do not know of a single undertaking, nor have I ever had a client, some of whom have lived in Chicago while I lived down State, that ever violated the rules that underlie these business relations that did not come to grief. Every business in the large population centers must be run at a fair margin of profit or it can not endure. In smaller places men do not watch percentages as they do in the large cities. A percentage of one-half of 1 per cent means at the end of the year, with the volume of the large enterprises, either success or failure. Therefore they watch closely the per cent, and they must keep those per cents in view, as the prudent sailor on the high seas watches the barometer as it rises or falls, as a presage of coming weather.

The market in which the packer buys is the most singular market in the world. He has no control over the market. In the very nature of things he can not control, by the slightest degree, the arrival of animals at the packing-house centers. He can by no means or in any way control the raw material constantly arriving which he must use in his packing house. The flow of meat animals to the market comes from many individual sources, some large, some small. What leads the live-stock producer to ship is his own opinion based somewhat upon his own condition. Animals reach the age when they can be taken off grass to be grain fed, to be put upon corn for a given period, and then at the end of that time, the growth having reached the point where they put on no more pounds profitably, they must go to the market. The live-stock producer keeps that in mind; he is skilled in that, and whenever the end of the profitable feeding period has been reached that carload of cattle goes to the market. They do not consult the packer. They often do not consult even their favorite commission man. They ship to a market whose purchaser is unknown, whose price is unknown except for the quotation of the preceding day obtained by telephone, and they ship to an open market for an open purchaser, taking their chances.

This applies both to the large producer and the small. They must ship based upon the laws of nature, upon climatic conditions. Where there are grass animals brought from the range, they must ship by the growth of the animal. It is so old after its birth. Its period of productive growth ceases after a certain time. Grain fed into the animal after that time is a loss and, therefore, arbitrarily the stock must be shipped at that time.

Over these processes of the birth of meat-producing animals the packer has no more control than he does over the birthday of any Senator. Nature controls the process. It can be accelerated and increased in time of need, as during the war period, but it can not, and is not controlled save by the inexorable law of supply and demand in peace times and can not be controlled under the ordinary normal conditions that prevail in all the live-stock producing area.

Therefore the flow of animals coming into the live-stock market is something over which the packer has no control. His raw material is beyond his control in any way. The supply must be taken up, the purchasers must absorb the live stock, or it will cease to come to that market and go elsewhere. So the packer, both large and small, finds himself under the necessity of taking up the flow of animals which come to that market. If they come in larger quantities than are needed, there will be a lower price. If they are slack, they will bid higher just as the market always does. It is a condition as old as the world rule of supply and demand that controls ultimately the price of the steer, the sheep, or the swine.

Mr. GRONNA. Mr. President——

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Does the Senator from Illinois yield to the Senator from North Dakota?

Mr. SHERMAN. With pleasure.

Mr. GRONNA. I quite agree with the Senator from Illinois that the packers can have no control over the primary shipment of stock, but I can not agree with the Senator that the so-called Big Five packers may not have something to do with the price when that stock is disposed of.

If it is true, as has been stated (and I do not believe it has been successfully denied), that the five large concerns buy or handle, with their subsidiaries included, 80 per cent, or a little more, of the cattle, more than 60 per cent of the swine, more than 70 per cent of the calves, and more than, I think, 80 per cent of the sheep and lambs, what would happen, may I ask the Senator from Illinois, if those five operators stayed out of the market? I am not saying this for the purpose of attributing any sinister motives to those people at all. I believe that the men who own and operate these big plants are just as honest and just as patriotic as the average citizens of the country; but I ask what would happen to the market with that condition, if all five of those packers, or even most of them, stayed out of the market?

Mr. SHERMAN. For one or two days or until all live stock en route on the day they stayed out and those in transit had reached there or been diverted to other points, there might be a surplus, but after that there would be no more stock coming to that market. Any surplus would simply go elsewhere a few days. The live-stock market and its dependent industries would not stop at any or all such points. The independent and smaller packers would seize the abandoned business of the large packers. Some days in Chicago and other points they now buy more head than the five packers together. The large packers would perish and the others would take up their business. It makes no difference whether the large packers handle 50 per cent, 80 per cent, or 100 per cent as long as they are in competition with each other, there is and can be no control of price. And there is no evidence in the Trade Commission report, or elsewhere, that the price has ever been manipulated.

Mr. GRONNA. But the Senator knows that the five packers are the big operators at the common stockyards which the Senator has enumerated.

Mr. SHERMAN. They are at some of them. I will name the ones: Chicago, Kansas City, Omaha, St. Louis, Fort Worth. Those are the principal ones.

Mr. GRONNA. And St. Paul.

Mr. SHERMAN. Yes, and St. Paul, Minn. That is correct. There is nothing in that, even. Suppose they quit, suppose they conspire with each other with willful and malicious intent at all these points to quit buying. It is perfectly evident that after about the third day, or probably the second day, because the telegraph and telephone can be used, there would be no

more arrivals at those points for those packers to get at, even if they tried to resume. There are other points than the ones I have enumerated as the principal markets, and at every one of the large markets, according to the Senator's figures, which I think are just a little bit too high, there is 20 per cent or 30 per cent bought by some one else. Taking out all the subsidary companies, the Hammond Packing Co. as a subsidiary of Swift, and so on through the list, eliminating any ownership that involves control of the plant, there remains a vast army of the so-called independent packers.

Now, the independent packers are no pigmies in business, many of them. Some of them have a business that runs to $70,000,000 every 12 months. They are constantly present at both the large and the small markets. What would happen in Chicago, which is the largest live-stock market in the world, if the five great packers quit buying? Immediately the small packer would begin to enlarge his plant and to take up the slack in the business. It would only turn the business, by the voluntary action of the packers that are complained of, from their slaughter houses to those of the independent packers.

Let me say to the Senator from North Dakota [Mr. GRONNA] that for my own satisfaction I cut at random from the market columns of the Chicago Tribune for 55 days the market reports on hogs arriving in Chicago. There are more swine arrive there and slaughtered there than any other place in the world. In the 55 days there were 17 days when the independent or small packers bought more hogs on the market in Chicago than the five great packers did. I took the dates at random, with no desire to accumulate and collect for the purpose of showing this result. Some days the small packers in the aggregate bought from 5,000 to 6,000 head more hogs in Chicago than the five great packers all put together.

What would be the result of the hypothetical condition the Senator assumes might happen by some fell conspiracy? If Swift & Co., Armour & Co., Morris & Co., Wilson & Co., and Cudahy & Co. all got together some evening and said "Let us buy nothing to-morrow; let us freeze out the market," to-morrow there would be a great run of meat animals in Chicago and there would be no large five buyers. The small buyers would come out and, up to the capacity of their packing plants, they would buy everything on the market.

They might not be able to absorb all of it, but immediately, before unloading, all of the others would be diverted to some other market, and there the small packer would take the remainder of the fruits of this hypothetical conspiracy. It is true it would cost some freight, but after one experiment of that kind the five great packers would be out of business in the United States, and nobody knows it better than the Senator and myself. It must be assumed that no legitimate business man in this country will commit manufacturing or commercial suicide, nor will the packers do so any more than anybody else.

Returning now to the peculiar market in which the packer must buy his raw material—for to him a live animal is raw material—he must take it all; there can be no amount allowed to go over, to any appreciable degree, because that would destroy the market. So the packers absorb the market. They are not like the manufacturer of steel, who can order pig iron from some producer or smelter when he may want it, and in such quantities as he may want it. He can put it out in the yard if he wants to do so, and keep it indefinitely. A live-stock animal sent to market can not be kept beyond a certain period, even on the hoof.

Let me incidentally remark here that the complaint is made about the high price of grain and hay which is sold at the yards to the owners of stock to keep them for the 24 hours or so before they are sold to the packing house. I pay more for a shredded wheat biscuit or a boiled egg in Chicago than I do down in the country towns, to begin with. But lay that aside. I know as much about the stock raiser and the farmer as does the average Senator in this Chamber. I was raised among them; I was one of them until I was 24 years of age. All of my people are farmers and stock raisers to this day. I am reflecting upon none of them, but I do say that I do not know one of them, relative or stranger, who in buying stock to ship into the market does not stipulate in the contract that the cattle are not to be fed, watered, and salted so many hours before they are weighed.

But the packers do not wish to buy hay at $14 a hundred, and they do not want a little rock salt licked up to increase the appetite for water just before the cattle are being weighed, nor do they want grain fed in the same way more than other people. All of the food in the process of digestion inside of a live animal to be slaughtered is one of the unsalvaged things of the packing-house business. It can not be salvaged, and yet it is weighed in to the packer. If there is an unscrupulous dealer who does not comply with the contract and who fills the animal up before it is weighed, in that case the purchaser buys water, hay, and corn at live-stock prices. It is impossible to make a feed yard out of a stock yard, and it is uncommercial to furnish cheap food to feed into the animals and keep them there. It is not the purpose of the market point. The feed yard is a thousand miles from Chicago in many instances, and the feeding must be done before the animal comes to Chicago.

So the packer goes out on the market and buys what he needs. He can not control the number of head that come in there; he must buy them. In the main the packers must absorb the supply of the market in order to keep the market alive and going.

I wish now to turn to the other end of the business. The packing house is merely an agency, so far as the immediate public are connected with this subject, for the conversion of the live animal into edible food products and the distribution of those products in the best possible condition for a reasonable profit. Without some form of packing house the present supply of meat to American consumers would be an impossibility. There can be no such thing as a famine in the United States under the modern system of transit, collection, preparation, and distribution of foods. The market in which the packer sells is different from other markets of commercial products. First, he sells a highly perishable product. Generally the packer disposes of his product within a week from the time the refrigerator car arrives at its destination. The fresh meat chilled in the cold storage rooms in the packing house and transferred directly into the refrigerator car will not keep beyond two weeks; it must then be sold and consumed.

The packer ships into a market of the most peculiar character. He goes there without a purchaser or a price. He does not know who will buy his product or at what price he can sell it. He knows only the cost price. He must be governed by the supply and demand of the market; he must be governed by what the retail dealer is willing to pay, who is the one who sells to the consumer. The retailer takes from 40 to 100 per cent profit in passing it on to the kitchen of the consumer. Everybody here lets the retailer alone. Some of the worst profiteering in Washington was the innocent-looking retailer, who is willing to let the packer take the blame. The retail dealer shops around. Here in Washington, for instance, the retail dealer will go to Swift, to Armour, to Cudahy, to Morris, to Brennan, to Dold, to Kingan, and a host of small packers. He will market around much as a good housewife with a basket to see where he can do the best. The packer, after taking up the supply of meat animals on the market and converting them into fresh meat, ships his product in his refrigerator cars to different parts of the country, and there he does not know how or to whom he can sell it. He must do business on an intimate, accurate knowledge of what the market wants.

That leads me to remark upon the percentages which are complained of in the Federal Trade Commission report, to which I now allude. The Federal Trade Commission in their report base their conclusion that the five packers named are a monopoly upon the fact that there is very little variation in the percentages of live stock bought in the principal live-stock markets of the country and of fresh meats sold in the various consuming centers. These percentages, they say, indicate a conspiracy or a common understanding by which the packers parcel out the share that each packer is to have. First, let me consider the percentages in connection with the amount of business done by way of purchases at various live-stock markets. The percentages do run rather uniformly. The purchases show that as between the five great packers the percentages do not vary a great deal. It must be remembered that a very small percentage applied to such large aggregate principals results in a large number of head of live stock. Sometimes there is a difference of 2 per cent one way or another; sometimes one packer forges ahead at Denver and loses at some other place. For instance, in Denver it was shown that Swift & Co. has been increasing its purchases of cattle substantially, as compared with Armour & Co., the only other large packer in that market; but there is nothing said about that in the report of the Federal Trade Commission, which refers to Denver as a "50–50 market" and insinuates that there is an even division.

At St. Paul, Minn., Armour & Co. has been rapidly increasing its percentage, as compared with Swift, during recent years by a very material amount, but there is nothing said about that in the report of the Federal Trade Commission, except an insinuation that here again there is an even division. The percentages vary from week to week, and in different markets; but if all the figures be reduced to percentages there will be shown in the

aggregate hardly a difference of one full per cent; sometimes the difference will appear to be only a small fraction of 1 per cent, although I find that even the Federal Trade Commission's figures show that Swift & Co. increased its percentage in all markets during the five years, 1913–1917, so that that company handled over 100,000 more cattle in the last year than it would have handled if it had not increased its percentage.

That illustrates what I said awhile ago to the effect that one of the basic underlying principles of modern business in large centers of population is to watch closely the percentages. It depends upon the small margin in the entire volume of business done at the end of the year whether a concern has gained or lost according to the percentages. A percentage may be very small, but upon the aggregate total it may amount to a great deal. So with many million head of live stock coming into the various markets of the United States 1 per cent will figure out nearly 100,000 head of cattle. The question of percentages, therefore, is not the same in the packing industry as it is in the ordinary business, where the percentages may vary from 5 to 10 per cent and apply to a relatively small aggregate total. If the same rule were applied to the packing-house industry that is applied to the ordinary business, the total upon which the percentage is based would be a prodigious amount. Therefore when it is said that the percentages do not vary from year to year, as in what is called the "tattered-leaf" memorandum, which was found, I think, in the desk of Mr. Swift by one of the investigators, the statement is not significant. A similar memorandum can likely be found in the desk of every manager or officer connected with the packing-house industry in Chicago, big or little. The fact is that each packer follows these percentages carefully from week to week to see that he is keeping up in the competitive race. Not one is willing to fall behind by a fraction of 1 per cent if he can help it.

Do you not suppose, Mr. President, that the traffic manager of a railroad knows the per cent of freight and passenger business in the district tributary to his mileage at the end of the year? He certainly does. He computes the per cent for that year and lays it side by side with the percentages for the preceding year in order to find out if anyone has entered upon what is his natural transportation territory. If he finds his percentage has fallen 1 per cent, to him it may mean an aggregate large sum, and he immediately sets about to ascertain how the shrinkage has occurred. He may find that some new competitor has come in and secured the business; that some energetic freight solicitor has secured away part of the freight that belongs to his line. So the packer naturally has similar percentages computed; he has them furnished him every day; they are computed by statisticians or accountants and laid on his desk. There never was any secret about it. If a variation of 1 per cent in one day is continued it will mean at the end of 30 days or at the end of a 6 months' period a prodigious total of live stock bought and slaughtered by a great packing plant. Every one of the packers knows every day the percentages of all the other packers, including Brennan, Dold, Kingan, Swift, Morris, Cudahy, and the others.

There is nothing beyond that. The whole conclusion of the Federal Trade Commission that the packing industry is a monopoly and conspiracy is based upon the fact that certain percentages remain practically constant throughout the year.

Let me call attention to something else. In a town of 5,000 population it will be found that with two or three dry-goods men running year after year for a 20-year period, the percentage of each of the total volume of business done in that town will remain nearly an invariable constant.

One will forge ahead a little one year and then fall back the next year on account of some more aggressive action on the part of his competitor. That is competition in business; but the very fact that in a local business it remains the same way might be taken as evidence of a conspiracy by the dry goods men.

Let me take an actual condition. This is verified by chartered accountants. I spoke not long ago of Montgomery, Ward & Co. and of Sears, Roebuck & Co., both large mail-order houses in Chicago. The business of both of those mercantile concerns has increased by percentages very greatly in recent years. Both of them show a very large growth, indeed, in the aggregate of their transactions. If, however, the aggregate of the business of both be taken and the percentage of Montgomery, Ward & Co. be figured on the total aggregate of both, it will be a certain percentage, and if Sears, Roebuck & Co.'s percentage of the total aggregate of both be computed it will be a certain percentage, and it will be found that the percentage of each will run along an even line; that although they have increased their business 5, 10, 15, or 16 per cent over the preceding year the percentage that each has transacted of the total volume of both has remained an invariable, constant percentage of the whole; and still there is no understanding between those two houses. They are rivals of each other. They are controlled only by the price of merchandise on the market, and they sell only at the margin of profit that will permit them to continue doing business and paying dividends upon the net worth—the capital and surplus invested in the business. This proves absolutely that the fairly constant percentages in the packing industry can not be accepted as proof of an agreement to divide receipts.

[At this point Mr. SHERMAN yielded to Mr. KING, who raised the point of no quorum, and the roll was called.]

Mr. SHERMAN. Mr. President, I regard these constant percentages shown in the purchases by the five large packers in the Chicago markets and elsewhere as being only the same phenomena that attend other large commercial transactions in the same cities. If there were more in it than a coincidence there certainly would be accessible in the hearings more evidence of a conspiracy. The authors of this are only another instance of persons misled by circumstantial evidence who have a preconceived judgment to sustain.

I have taken all the matters that might bear most unfavorably upon the five defendants in this Trade Commission report. There is what is known as a letter on substitutes for lard which has been quoted by the Federal Trade Commission as conclusive proof of a conspiracy in regard to prices. This relates to the selling and not the purchasing market. It is a letter by Armour & Co. to the manager of their branch house at Pittsburgh, dated January 24, 1918.

It's always been our understanding that if our organization had the same price as the other fellow, that's all they need. This is certainly a fact on substitute—

I might remark here that the substitute is a compound the base of which is cottonseed oil, and during the war it became very necessary to supplement animal fat by some vegetable compound. It was done very largely by the combinations developed by the large packers, and so lard substitute went upon the market as a very excellent preparation. It is healthful and answers all purposes about the kitchen for cooking.

This is certainly a fact on substitute since January 14, and we will be very much surprised if your territory does not triple its business each month. We do not recall having such an opportunity in the history of the firm, and if this practice is maintained it's a pretty safe bet we will get our share.

This was followed on January 28, 1918, by a circular from Mr. Sharpnack, the manager of the branch house in Pittsburgh, addressed to all managers, giving the following instructions:

Please give this compound—

Referring to the substitute—

all attention possible. Everybody's price must be the same as yours. If you find any deviation make doubly sure that you are right by seeing the bill, noting the date of same, quantity sold and the price, and let me have it.

The Federal Trade Commission continues:

This so pleased Armour & Co. that on January 30, 1918, L. L. Whelen, of Armour's lard department, wrote the superintendent of the branch office at Pittsburgh:

"Very glad to note your cooperation on White Cloud"—

That is the brand of lard substitute—

"as per your circular to houses dated the 28th. In this connection, however, it occurs to us that we should not make any noise about competitors' prices being identical, etc. Under present conditions this is not advisable, as you are undoubtedly aware. Also you might destroy this letter on the subject."

Then the Federal Trade Commission continues, in regard to these two letters, saying that this is conclusive evidence of a pool for entire packing products of every kind in selling on the market.

Bear in mind this was dated January, 1918, and the commission, or its active agents, the men on the commission who seemed to be the responsible force, act a good deal like Alice in Wonderland, whenever they see anything they think it is another thing; and it is a good deal like the Einstein theory of where a thing is. The problem about a star is not what you are, but where you are; the question of relativity including a thorough understanding of the fourth dimensions and a great many other abstruse mathematical problems. But the Einstein theory is no more difficult to understand than the theory of the Federal Trade Commission, that when they see one thing they think they see all of something nonexistent. They are a good deal like Baron Cuvier, the naturalist, who said that when he got the bone of an animal he could construct a whole animal out of it. That is what the Trade Commission is doing. They think they have a bone here, and they have been gnawing it with great unction.

Bear in mind that this was January 28, 1918. We were still at war. We were in the midst then of our troubles. The Food Administration of the United States had, through various departments, summoned food producers, as well as other producers

of various war necessities, to Washington and elsewhere, and by consent had entered into arrangements highly beneficial to the Government, and necessary for the support of the Army in the rear, so that those who were upon the actual fighting line should be properly sustained, furnished both food and the necessities of modern warfare. Among other things, animal foods and animal fats became of primary consideration. We all remember now how Germany broke down on her supply of animal fats. It was only because of the great resources of the United States, poured generously and in immense volume into the hands of the allied nations, that we finally defeated not only by actual war but by economic needs our enemies in the Old World.

In pursuance of this general plan of marshaling our resources and of conserving them in the most efficient way, the Government fixed a price upon animal fat. All the packers, large and small, entered into that agreement. I might remark here, as it is kindred, that the profits of the packers on the edible-food products from a live animal were fixed at not exceeding 9 per cent, and they did not exceed it, and, in fact, did not equal it during the entire period this arrangement was in force.

This, therefore, was an arrangement of the Government. The price was fixed on lard substitutes, which includes the article referred to in these two letters; the price being fixed by the Government, nobody could sell at any other price.

The Government did not even look with favor upon cutting that price. Cutting prices for war essentials was not generally regarded by the Government with favor. I state that generally with regard to all of these products. It was thought that it would discourage production, and all of us in this Chamber are familiar wth the inducements we offered to the producer, whose activities must be voluntary, and who had to be enlisted upon his own free will, if we would go to 100 per cent capacity. Acting upon that suggestion, we encouraged the producer of live stock—hogs, cattle, sheep—and every form of human food, including the great breadstuff grains of the country, and the farmer and the stock raiser responded, as did the packer and the manufacturer of iron and steel products and of explosives and men engaged in the production of every line of the essentials of warfare.

So the lard substitute compound had its price fixed, and it is to that fixed price these letters refer. The Federal Trade Commission never mentioned the fact that the price had been fixed by the Government itself through the Food Administration.

That they were watching their competitors, big packers and little, is evident upon the reading of the letter, and when they refer to others selling at the same price, and say that "Your price must be the same as all others," it does not refer, as the Federal Trade Commission improperly would have us believe, to a price fixed by a conspiracy of the packers but it refers to a price fixed by the Government authorities.

Mr. KING. Mr. President——

The PRESIDING OFFICER (Mr. KELLOGG in the chair). Does the Senator from Illinois yield to the Senator from Utah?

Mr. SHERMAN. I yield.

Mr. KING. I am not quite sure that I correctly understood the statement made by the Senator a moment ago respecting the profits which were fixed by the Government, and which were not exceeded by the packers in the sale of their meat products. The Senator stated that the maximum was 9 per cent. Is it not a fact that the profits of the packers on their entire turnover for a number of years last past has not been much more than 1 per cent?

Mr. SHERMAN. That is correct.

Mr. KING. Or approximately 1 per cent on the turnover?

Mr. SHERMAN. It has been about 1.8 per cent on the volume of business. It can be estimated that way. It has been much less than 9 per cent on capital and surplus, and this year it will represent practically nothing on domestic business—business in the United States. The packers have taken tremendous losses in their inventory value on the business done in the United States for the last 12 months. They have suffered in common with every other vendor of meat products, whether on the hoof or dressed, and the profit on many of their meat products would run much less than the 9 per cent of the net worth—that is, the capital investment and surplus.

Mr. McCUMBER. Mr. President, when the Senator speaks of 9 per cent, does he refer to 9 per cent upon the capital invested?

Mr. SHERMAN. Yes; the capital employed in the business.

Mr. McCUMBER. That is, it would be 9 per cent on the stock or 9 per cent upon the capital invested?

Mr. SHERMAN. The capital invested, including borrowed money.

Mr. McCUMBER. That is what the Government fixed?

Mr. SHERMAN. Yes.

Mr. McCUMBER. Was there not a showing made here by the Federal Trade Commission—or perhaps it was a finding—that they made several hundred per cent upon the capital invested?

Mr. SHERMAN. Yes; but that was due to their imagination. That was the profit of one concern on capital stock alone. Some companies are capitalized for small amounts, with no reference to total investment. Profits on capital stock in such cases mean nothing.

Mr. McCUMBER. That is all imaginative?

Mr. SHERMAN. It is; and I will say to the Senator that any such figures do not state the situation accurately. I know the Senator follows me and appreciates the difference when I say that the 9 per cent profit was on edible meat products. It did not extend to by-products. They were not included in the restriction. During some of these war years, taking the total volume of the domestic business of the packers, by which I mean the business done in the United States, they showed profit on the total business that in some instances ran beyond 9 per cent. But that would include fertilizer, glue, bones, phosphate, hides, and everything that comes out of a live-stock animal. But upon the edible meat products their profits ran less than 2 per cent on sales, 1.6 and 1.8, varying with the different packing-house plants, some a little more and some a little less. I am referring now to the 1.6 and 1.8, all under 2 per cent; that is, for each dollar's worth of business done they made less than 2 per cent. Of course, where they do an immense volume of business, that enables them to earn dividends as hereafter given on their capital stock. I think all authorities agree, the Federal Trade Commission and the packers' statisticians themselves, that net worth now means capital stock and surplus; and when I speak of dividends on that basis of profit I mean net worth. A profit of 2 per cent on sales means a profit of 11 or 12 per cent on investment. The packers "turn over" their investment about six times a year.

Mr. KING. Mr. President, I have been compelled to be absent during part of the remarks of the Senator, and I am not sure whether he has discussed the question to which I wish to direct his attention. He has just referred to the fact that the packers this year upon their domestic business would be compelled to sustain a loss, and the inference was that upon their foreign business there might be some profit. If the Senator has not discussed it, I am sure I would be glad to have him discuss, and I think other Senators would, before he concludes, this feature of the subject: To what extent the stock grower of the United States is dependent for profit upon a foreign market, to what extent the sheepman and the cattleman are dependent upon our exports of meats for profit, what the situation would be if the only market they had was the domestic market, what work has been done by these packers to extend the foreign market of the live-stock industry, what efforts have been made by the enemies of the packers to destroy their foreign market, which is the American foreign market, and what the destruction of that market would mean to the live-stock interests here in the United States.

Mr. SHERMAN. I expect to go into that, and the subject is as large, or is becoming so, as the domestic markets of the United States. The Chicago meat packers are international now in their activities. They have gone beyond the limits of the United States by force of actual conditions, and in order to keep up their export trade from the United States they have been compelled at times to take losses on export business from the United States and balance it by business done in South America and other foreign countries. By foreign trade I do not mean exports from the United States but exports from foreign countries where they have packing plants of their own.

Mr. McCUMBER. Mr. President, before the Senator leaves the subject of profits by these companies, I would like to understand thoroughly what he means by the percentage of profits. He speaks of 1 and 2 per cent upon the volume of business. One or two per cent upon the volume of business might mean 100 per cent upon the capital actually employed. The turnover might be made three times and it might be made three hundred times in a year. I presume in determining what is a legitimate or a fair profit we should take not necessarily the capital stock but the actual amount of money invested from the beginning of the year to the end of it in conducting the business and the profit upon the amount of capital invested. Can the Senator give us any idea what that was?

Mr. SHERMAN. The Senator is right about that. Let me premise the statement I shall make by the following: A great controversy arose with the Federal Trade Commission on the methods of accounting by the five large packers. It was said that their methods of computing their gains and losses were

defective. There are only two ways of estimating the gains and losses. The one is to take the entire volume of business done in a year. That would include the turnovers, if once or twice or a half dozen times. That would be the sales for the entire year, say, to simplify it, and on that their gains would be, on each dollar's worth of business done, taking the total volume, so many cents. When I speak of 1.8 per cent or 1.6 per cent on each dollar's worth of business in this connection I mean upon the total volume of business done. When I speak of dividends paid I mean the returns on the net worth of the business. The net worth—and I think the Federal Trade Commission accepted this as a standard basis—includes the capital and surplus employed in the business, not including any temporary loans on short-time paper that are made for putting into the business and carrying for a time until returns come in and then paying them off; but the interest paid on such loans is charged up as a part of operating expense. If there are no long-time loans represented by bonds of a long period that could be added to capital stock none of such short-time loans are ever included as a part of capital stock. I have already explained that a profit of 2 per cent on sales means a profit of about 12 per cent on net worth. The turnover is about six times. The profit on sales shows its effect on prices; the profit on net worth shows what return the investors in the business are getting.

I do not speak for Chicago alone. I have a right to speak in this Chamber for that community and all of its various manufacturing, fiscal, and commercial organizations. They are my constituents, the immediate constituency that I represent here. I have seen the packing-house business grow from a time when there was no market to its present magnitude. I have seen the time when there was no market except at fixed intervals during the year and when it was impossible to tell, when one was feeding a carload of hogs, whether they could be sold or not, and the stock grower took his chances.

Following the close of the Civil War two or three houses began to develop. There were Morris, Swift, and Armour, and soon came Cudahy, who was an employee of one of the preceding I have named. He began business on his own account as an independent packer. He is now only classified as one of the Big Five, because he has been successful.

Michael Cudahy was a success from the beginning, because he knew the packing business. He went into the packing business and got his share of the business—I am using that phrase properly—not a conspired share, but his share of the business in the United States because he knew how.

There was an old firm of Schwarzchild & Sulzberger, commonly known to the trade as S. & S. They were in the market for a long time. Finally Schwarzchild died, and Ferdinand Sulzberger ran the business as Sulzberger & Sons. The elder Sulzberger eventually retired and then died. The packing house was left to his two sons. The two sons did not develop into packers. They did not seem to care much for the packing business. They had a fortune, and they thought more of spending the income of the fortune in New York City and at places where social entertainment more accorded with their views than in Chicago in the packing-house office. The natural result followed. Social laws can not set aside economic laws. A business house and a counting house will have its way in the end. The securities issued in the lifetime of the elder Sulzberger matured. They were held by various persons. They were represented in this country by certain banks and certain brokerage houses, Kuhn, Loeb & Co. being one. They did not propose that the packing business of Sulzberger & Sons should be run by the two sons unless they paid attention to it. They were not packers, they are not packers yet, and they never will be. The banks declined to renew the loans, not because they wished to drive Sulzberger & Sons out of business but purely because they could not recommend to their investors that the loans be renewed upon a business conducted as it then was.

All that is gone into in the hearings before the Sims committee in the House, all of it is in the report of the Federal Trade Commission, and it is referred to in the press reports of the London newspapers with considerable vigor as one of the processes by which one of the smaller packing houses was "frozen out." That is the expression used universally. Here is the truth about it: The two boys would not attend to the packing business. The securities would only be renewed when the boys sold out and put their business in the hands of somebody who knew the business. Many a railroad has had the same experience. It takes a packing-house man to run the packing-house business. It takes a lawyer to run the law business.

That is what was the matter in this so-called freezing-out process. I know that it was for a time regarded as one of the relentless, merciless procedures of the other four big packers, but when they found the packer who knew the business and who was willing to take it, then the banks extended the securities because they had faith that he would run the business on a business basis and pay his debts. That is when Thomas E. Wilson took Wilson & Co., successors to Sulzberger & Sons, and became the other one of the Big Five, as they are called in the Federal Trade Commission report. That is what led to this evolution. One family ran out in the packing business.

Let it be said for the others, that the Armour & Co. business was founded by Philip D. Armour. He first began business in Milwaukee, Wis., with John Plankinton. They afterwards opened a small packing house in Chicago, about 1868. In a little while, by the natural growth of Chicago, the railroads began to build up and population came, and in 1870 Chicago had about 300,000 population. It exceeded then considerably the population and the facilities furnished at Milwaukee. Eventually the firm moved down to Chicago and became Armour & Co. there. Simeon B. Armour, brother of Philip D. Armour and uncle of Ogden Armour, went to Kansas City and opened a packing house there upon his own account. That was the beginning of the Armour business of Kansas City. He continued in business until his death. After his death and the death of Kirkland Armour, the Armour interests in Kansas City were merged with the brother's interest in Chicago, and both are now identical. It is the Armour family packing plant.

I think the Armour concern was incorporated about 1900; I am speaking from memory now. Before that time it had been a partnership. It was incorporated finally for $20,000,000 capital. It had been in business since 1868 in Chicago. I think in 1916 there was a stock dividend of $80,000,000 declared, making the total capitalization of Armour & Co. $100,000,000. That has been alluded to in the Federal Trade Commission report with great severity. It has been made the basis of an argument that no new money has been put into the packing business, but that the profits of the business have been so gross that they have accumulated to present figures.

Let me state this, which is the record. I care not what the Federal Trade Commission may find or what inferences they may draw, this is the record, and it can be ascertained by anyone who cares to investigate:

Philip Armour made it his practice not to take his profits out as dividends but to reinvest them in the business, thus accumulating a surplus on his books. At the time of his death he only owned one packing-house plant in the world. He confined himself to that packing house and developed that business and was satisfied with it. He is reputed to have said that if any of his boys developed any business ability as packers, they could take that plant and go on and do whatever the situation required; if not, the one plant was enough. But the Armour family have steadfastly followed the father's financial policy. For more than 50 years in Chicago they have uniformly, from their net earnings at the end of the year, held out nearly 88 per cent of it, 88 cents on every dollar's worth of those net earnings, and distributed the other 12 per cent in dividends. That is the record of a half century. This accumulated surplus during that time continued up to 1900, when they were incorporated for $20,000,000 and it continued after that time because the surplus was there and it made the book value of the stock that much more.

In 1916, in order to bring the actual capitalization up to the real book value of the stock, they took $80,000,000 that had accumulated between 1868 and 1916, nearly 50 years of accumulation, and gave to each stockholder what it represented in shares of stock paid up. That is all there was to that.

The same thing is done by the national banks every day; it is done by every State bank in New York, Pennsylvania, Ohio, and Illinois every day. The dear public outside says, "Well, there is another steal; there is another melon cut." As a matter of fact, it represents the savings of stockholders for many years, or for a series of years at least, who have refrained from taking dividends and allowed a surplus to accumulate until at last it is taken in paid-up stock. That surplus is used in the management of the business. Wherever money is needed, instead of going to the banks and borrowing it on short-time notes at 7 per cent interest, they have the accumulated surplus to draw on. There is not a railroad in the country, as I have stated, that does not do the same thing. The Chicago, Burlington & Quincy Railroad has $110,000,000 capital, while the net invested value of its tangible property, its assets, is $240,000,000; its book value is much more than the par value of its stock. It never has capitalized its surplus earnings, but they have been allowed to accumulate. Every railroad does not do it in so large a degree, but all prudent railroads keep an emergency fund with which to meet great emergencies that can

not be anticipated. That is the story of the Armour stock dividend, which is referred to in the Federal Trade Commission's report.

Let me give another illustration. It is said that no new money has gone into the business. As a matter of fact, the savings of nearly 50 years of self-sacrifice, of self-control, and of refraining from declaring earnings went into the Armour business when they issued the paid-up stock in 1916. It was there and was used continually.

Swift & Co. have put into their business $65,000,000 new money since 1904. They invited the shareholders to subscribe for additional stock, and they have done so. There are now, I think, more than 40,000 shareholders.

Mr. WADSWORTH. There are over 40,000.

Mr. SHERMAN. I thank the Senator. That represents $65,000,000 of new capital, cash which has been brought in from the outside by the investing public. The business is no longer a family packing undertaking. The elder Swift built it up, as did the elder Armour build up the Armour Packing Co., and as Nelson Morris built up the Nelson Morris Packing Co. in the earlier times, but these three families have been fortunate enough to have somebody, some son or sons in the family who have taken the responsibility and who have developed the business ability to run a packing house. That is the reason they are in it to-day. They did not start it; they are not there by voluntary choice, but by the traditions of their fathers they are running the business which they inherited as a family asset. They have wealth enough to quit; if they had not been active and had not had the western push in them, they would have retired on their incomes when their fathers died. They could have lived in affluence for the remainder of their lives, but they have gone on and have developed the business founded in Chicago until it is continental in scope. Armour has a fleet of 6,000 refrigerator cars in the United States and Swift probably has slightly more in constant use. Because these sons declined to be idlers they have become the targets of mediocrity and such men as dominate the Trade Commission.

Libby, McNeil & Libby, formerly a subsidiary of Swift & Co., not long ago declared a dividend of paid-up stock. It was said at the time that that was another horrible example of the packers' profits. Let it be known that of $12,800,000 of the stock of Libby, McNeil & Libby for this new undertaking, $6,400,000 was sold to the investing public; that $1,400,000 was sold to employees at its actual value, so that they might have an interest in the business. So $7,800,000 was brought into Libby, McNeil & Libby's business last year. The remaining $6,400,000 represented the accumulated net earnings of some years past. I do not recall from memory now, but I think for some eight or nine years past they had declared modest dividends and had reinvested a part of their earnings to develop the business and to provide leeway for the purpose of meeting emergencies that might arise. Finally it was disposed of by issuing the amount of paid-up stock I have indicated for the extent of the surplus, enough to cover it; in addition, $1,400,000 of stock was sold to employees and $6,400,000 to the general subscribing public outside. So nearly $8,000,000 additional new money was put in that business; and, in the aggregate, more than $72,000,000 of additional money has been brought into the packing business from the outside, although a representative of the Federal Trade Commission told the Senate Committee on Agriculture that no new money had been invested in these companies since 1904.

I think I know both sides of the packing controversy. I have been in packing troubles for more than 25 years of my life. It has been a constant bone of contention in the Illinois Legislature; and I did penal servitude there for many years. [Laughter.] We had the packers with us always, like the poor, not willingly but dragged in by ambitious statesmen. They have always been an asset for anybody in Illinois who wanted public office.

I come, now, to the refrigerator-car lines and the cold-storage space used by the packers. Some of the five large packers go out and hire space in public cold-storage warehouses. During the war they did not have adequate cold-storage space of their own in which to chill their meat, and occasionally, even during the normal course of business, they do not have adequate cold-storage space.

I think it would mitigate the fervor to some extent of the criticism, even of those who are opposed to the packers, if they could realize for a moment the tremendous drafts which were made upon the five large packers during the war. They were called upon to deliver within a fixed time, say, within 90 days, 120,000,000 pounds of bacon. Very few, indeed, can have any idea of what a tremendous amount 120,000,000 pounds of bacon is. Then, they were called upon to furnish fresh meat to the Army in tremendous quantities. They were required to ship fresh meats by refrigerator cars, put them into refrigerating space in ocean vessels to be carried to any French or British port—a French port preferably, as it involved less transportation to reach the American Army—and deliver them in good edible condition to the commissary department of the Army, or to the naval forces. That was done throughout the entire period of the war, and during that time a very large draft, of course, was made upon all the packers, both large and small. As a result, there was sometimes a very great dislocation of the business. It resulted also in the packers taking great chances. A portion of the vast inventory losses incurred during 1919 was due to the fact that the business of the five large packers was keyed up to the point necessary to handle the tremendous business of the Government during the war; but when the armistice came suddenly in November, 1918, without a great deal of preliminary warning even to the best informed, it found them with a gigantic productive instrumentality on their hands and with vast stocks of cured meat, as well as edible fresh meat, waiting to be disposed of.

In addition, there was the stimulated product of the cattle producers all over the country and the farmers who were pouring their live stock into the market. Europe had to be fed, it is true, and for a time our exports continued; but when they fell off, then our markets began to suffer the natural result, and the inventory value of the packers' products sank prodigiously in a short time. So they have taken, as I have already said, tremendous losses within the last year, losses so great that none but the very best founded houses and concerns of the greatest financial strength and responsibility could have carried the load without involving the entire business in bankruptcy.

Now, with regard to refrigerator car lines and cold-storage warehouses, so far as the packers have cold-storage space of their own, it is incidental to the packing-house business; it is as much a part of their business as is the slaughterhouse itself or as the cold-storage room in which the meats are chilled. Under modern conditions the packing industry can not be conducted without such facilities.

I have already gone at some length into the reasons for the packers owning their refrigerator cars, which possession, according to the Federal Trade Commission, is a crime—the great transportation crime of the country. The packers, large and small, have said in the hearings before the House, before the Attorney General, before the Interstate Commerce Commission, and before every authority having any power in the matter, that they will be very glad to dispose of their refrigerator cars at cost to anybody, provided they can be guaranteed an adequate service in refrigerator cars in return. That is all they want. The necessity is what led them to construct the cars in the beginning, and they are willing at any time to let the cars go in the event it will not impair their facilities in the distribution of their product. That, it seems to me, ought to dispose of the question. But let me ask, at the present time, with railroad freight rates as high as they are and with passenger fares greatly enhanced, how is it possible for the steam railroads of the country to build or buy some 20,000 or 21,000 refrigerator cars? This would involve an expenditure of many million dollars, which the railroad companies could hardly obtain. If they could obtain it, there would have to be another raise in rates, and the dear public is now paying about all it can. So I think the better way is to let the five big packers keep their refrigerator cars, which they constructed or bought and paid for, and let them operate them themselves, although they say that they have been operated at a loss during some years. Let them keep them and operate them. The public is suffering very little injury out of their operation by the packers, even according to the report of the Federal Trade Commission.

It costs every family in the United States about 5 cents a week, counting the average-size family, under the census returns. They pay about 5 cents a week, or about $2.60 a year, to the packers for slaughtering meat and distributing it all over the United States in refrigerator cars.

Mr. WADSWORTH. That is for all the packers, not simply the big packers.

Mr. SHERMAN. That is for all of them—not the five alone, but the whole 235 packers that are doing an interstate business, and that are coming under the jurisdiction of the Federal Trade Commission in their investigations. Of the 235 there are only five that are complained of, and they are complained of because they are big.

Good heavens, big! We have some big banks in New York—the Guaranty Trust Co. and the National City. We have another big one in Chicago—the Continental-Commercial National—and a host of other large banks. We have a big oil company with offices in New York—26 Broadway, is it not?—

and we have another or two big ones at various other places, one in Chicago, one in Kansas City, and scattered around, and they are all making money. If anything is to be indicted and destroyed and slain by the Government because it is big, then let us all quit and crawl back into our pigmy shells, where we would belong, and stay there. We are unfit to be a race of men with red blood and with commercial genius and enterprise.

There are 235 packers that are doing, in a large or small way, an interstate business. There are about 1,200 packers in the United States that are found in the census returns. Now, it is said that the big packers do 70 per cent—the Senator from North Dakota spoke of 70 or 80 per cent—of the interstate commerce business. I think the figure is substantially correct. That is the interstate business. Now, the interstate business is very largely a fresh-meat business. It is a business reached by refrigerator cars, where they distribute from the convenient stock markets and packing-house plants to consuming centers. I wonder if the Federal Trade Commission knows, or whether its active, vociferous mouthpiece wou'd understand if he did know, that two-thirds of the consumers of meat in the United States live east of the Mississippi River; that two-thirds of the cattle produced in the United States are west of the Mississippi River?

It involves the collection of live stock on the hoof at convenient and economically correct marketing points where packing-house facilities are to be had, their conversion into fresh dressed meat, into cured and pickled meat, and their economical distribution to the markets and consumers of the United States. That is the problem; and of the 235 packers doing an interstate business in a larger or smaller way, five are singled out to furnish the example and the basis for the legislation proposed in this bill.

Why not put all the flouring mills of Minneapolis under a commission? They are the greatest flouring mills in the world. Nowhere has anybody had the enterprise and the business ability and the backing of accumulated money to go in the market and spread the product of breadstuffs as the Minneapolis mills have done. Why not put them under a commission? Here are five concerns—I think now they are all incorporated—doing a business that is under investigation by the Federal Trade Commission. These gentlemen, when they refer to the marketing processes, seem to forget that no small packer with a few hundred thousand dollars or even a few million dollars can transact a successful interstate business under the requirements of American market conditions.

When two-thirds of the consumers live east of the Mississippi River, and the great producing center, the range, the grain, the roughage, the forage necessary to maintain cattle and hogs, is west of the Mississippi River, this great area must be bridged by some agency. No small agency can do so. The cattle and the hogs that feed the Atlantic seaboard towns must be transported from 1,500 to 1,800 miles, stopping in transit to be converted at the Chicago packing house, or elsewhere, at Kansas City, into edible products, and continued on. Very little live stock goes east on the hoof any longer. The fact that the railroads had a heavy traffic in live animals to eastern cities was one reason why they did not look with favor upon refrigerator cars—that they interfered with the traffic east of live stock—but there is comparatively little of that done now.

I think New York City has about 750,000 Hebrews, and all of them in their meat consumption adhere to the ancient ritual. They eat kosher meat. It is a part of their belief. The rabbi must be present when the animal is slaughtered.

For a time the slaughtering was conducted in New York City by a marketing or slaughtering concern, and afterwards it was taken over by one of the five great packers. One or two other large packers have houses there. They ship east the beef cattle on the hoof to New York City, because the animal can not be slaughtered in the packing house in Chicago in the absence of the requirements of the Hebrew faith and be shipped to New York City and find a market among the 750,000 Hebrews of that city. It therefore led to another development of the business that is referred to in the report of the Federal Trade Commission as another crime of the packers, reaching out their tentacles and seizing another plant. If the beef cattle from the West were to feed the persons of this ancient religious faith in New York City, it was indispensable that they take this agency and develop it; so they did. They buy a good many cattle locally in the Eastern States, wherever they can be found fit for the purpose. What can not be found, the balance for that supply, must be shipped from the western cattle fields; and so the live-stock car is used by some of the packers to that extent. But in the transportation of dressed fresh meat no small packer can engage in the business. He may be small now, but if he goes into the business he eventually must invest in it a vast sum of money. First, there is the long haulage, the cattle coming from the range or from the stock raisers' fields, where they are raised under such conditions that they can be fed grain in adequate season and marketed in Kansas City, Omaha, Forth Worth, Chicago, St. Louis, or St. Paul. They are then converted into meats.

These edible fresh meats, of which the duration is two weeks to be sold and consumed on the market, must be transported from one thousand to twelve hundred miles, or from Chicago, 970-odd miles by the shortest rail route known, and they must go into this indeterminate, indefinite market to which I adverted a while ago, buying upon a market they can not control and selling in a market the price of which they do not know; and still they act between the producer and the consumer as the great manufacturing and distributing agencies for all the meat-eating population of all the Eastern States, except what is related to local traffic. All the fresh meat, outside of that furnished by local traffic, comes from some of these interstate packers, the 235.

Jacob Dold does a large business. He is at Buffalo and he does a very extensive business. Several Baltimore packers do a large business. Kingan & Co. do a large business—over $60,000,000 a year. He is located in Indianapolis. Patrick Brennan does a large business. Many packing houses in Iowa do considerable businesses, and have been in business a long time, and they have testified that they make money. Here are these tremendous agencies in the interstate business, covering this long chasm between the producer and the consumer, employing hundreds of millions of dollars, and involving a risk that no small enterprise can take; and they have successfully met the duty imposed upon that business. I see no cause for criticism, no cause for legislation, no reason for the reports of the Federal Trade Commission describing them as a menace to the consuming public. Here are some minor matters—the cattle loan associations. I merely wish to refer to them in order to cover such incidental details as seem to be necessary in the business.

The cattle loan associations are a necessary outgrowth of the business. They are not for the purpose of adding to the profits of the packers. They are for the purpose of promoting the production of live stock, for the purpose of loaning money to live-stock raisers who otherwise would not be able to borrow it except at exorbitant rates. I have been in the investment business part of my life, and I never yet saw a time when I would loan a dollar of my client's money on a cattleman's paper, not because it is not good to those who know the business, but because I do not know anything about it. Nobody loans on cattlemen's paper except those who know the business, unless the man has other assets outside. What is commonly called cattlemen's paper is not money loaned by a cattlemen's association, or bank, or whatever it is. It is not a pawnshop into which the cattleman goes and puts up a chattel mortgage on his cattle and gets some money back from the Cattle Loan Association. That is not what it is at all. There seems to be a misunderstanding even in the minds of some of the witnesses and in the report of the Federal Trade Commission. The Cattle Loan Association is a concern that takes the cattleman's paper, whatever he needs, and pays him cash for it, with whatever discount is agreed upon. They indorse it and sell it at a bank on their indorsement. They virtually run a guaranty company on a cattleman's note. It is just like a brokerage house which goes out on the curb on La Salle Street in Chicago, or down on Wall Street, in New York, and sells commercial paper.

In so far as the packers are interested in cattle loan companies, it never has been proved that they have called loans in order to force cattle onto the market. They have been a boon to the cattle raiser.

Then there are trade papers which are objected to. The greater part of those trade papers are run by somebody who has no connection with the packers whatever. The packers in some instances were concerned in them, but merely for the purpose of furnishing accurate market information in an attractive form from day to day.

The cattlemen's bank has been often criticized in the same way. These and kindred matters are minor affairs, and I apprehend that in no way would any of the five packers for a moment make any question if any Government authority requested them to divorce themselves of whatever relation they have with any of these lines of incidental business. It is not a matter of dispute at all. I believe that it would be better for them to confine themselves exclusively to the packing-house business and to packing-house by-products.

The manner in which these markets are made at these various points seems to be alluded to by the Federal Trade Commission as somewhat offensive. I want to take an example in the State

of Texas. At Fort Worth, before Armour & Co. and Swift & Co. went there, the total receipts of the stockyards for the previous year were less than 227,000 of all the varieties of meat-producing animals. Armour & Co. and Swift & Co. bought yards there on the occasion I referred to, some time ago, and installed packing plants, and the market has now reached the point where the total annual receipts are 3,540,000 head of stock, nearly 1,600 per cent increase. There are probably men from Texas who would tell you, if they were consulted, that they are asking for enterprises of this kind to come to southern States; and they are coming, too.

Armour & Co. went to Jacksonville, Fla. They found an opportunity there to market some of their products and to build a packing house, which they did. They opened up a market there, and now Jacksonville, Fla., since they have been there, has become one of the leading live-stock markets in that section of the United States. Before this trade was developed it was a negligible quantity, and was just merely for local slaughter. These developments have continued for many years, and it seems to me, instead of being an object of criticism, it ought to be a matter of congratulation.

There was a question about how many packers were involved in this legislation, or were the provoking cause of it. The five great packers seem to be the ones aimed at. I have here a statement sent out by a list of companies, stating:

> The undersigned companies constitute practically a complete roster of the important so-called "small packer" in the United States. We wish to protest to Congress, and directly to the American people, against the baseless charges of profiteering which are being made against the packing industry in general. We declare to the public and offer to prove that—
>
> (1) The average profit received in the packing industry on a dollar's worth of product sold to the retailer is less than 2 cents.
>
> (2) The rate of profit at this time is considerably less than the figure just mentioned.

Then they give a list of the entire number of packers. I think the aggregate here of the large and small packers is 91, and they, with the 5, make 96, and, with the balance of the 235 that do a packing business in a small way, constitute all who are engaged in the interstate commerce of the country.

It is said by the Federal Trade Commission that, first, there is a monopoly in the purchase of cattle, and, next, in the sale of the product. I think I have covered that sufficiently without any more elaboration of the point. There is a total lack of evidence. There is a great wealth of inference and of opinion, of charge and of insinuation, but the evidence which would prove anybody guilty is totally lacking on the issues they make up. With the Federal Trade Commission a coincidence is a criminal conspiracy, an economy a public menace, and a business success a crime.

The packers themselves were heard, some of them in person, some through their responsible managers; but the inferences that were drawn in the Federal Trade Commission's report are of a most violent character. In the absence of evidence, it seems that conjecture took the place of what would ordinarily be regarded as evidence in this Chamber, and it would be much more subject to the criticism if it were a court of justice. No rules in an ordinary hearing before a congressional committee are followed such as govern testimony before a court.

These violent reports that were made by the Federal Trade Commission are summed up in a letter to the President. The letter to the President I will in due time insert in the RECORD, as I wish to make it the basis of some observations.

Further, they sent a letter to the Department of State, requesting that two copies of the Federal Trade Commission report should be sent to a great list of foreign countries, embracing in the letter the list. They also sent with it a form letter, in which it was made to appear that the President of the United States is sending the Federal Trade Commission's report; and they also wrote a letter to the consular agents of the United States in these various countries. These countries, it may be remarked, are the ones where the live-stock market is found, where our export trade either now exists or could be developed, and in every instance it is a place where the greatest of mischief could be done if the report of the commission should be taken as accurate.

When the Federal Trade Commission was faced with the charge that they were intentionally breaking down the export trade of the United States, they strenuously denied it. They deny it yet. The former chairman denied it in his addresses. He denied it in one at the Sherman House in Chicago, in which he went at some length into the charge, and said that anybody who would destroy the export trade of the United States is a traitor.

He has furnished his own condemnation, because before I get through with the unquestioned proofs in this instance I will demonstrate that he knew it, and intended it, and exults in the fact that he has injured the export trade of the five great packers.

The small packer does comparatively a small quantity of export business. It was intended this injury should be done. These Federal Trade Commission reports were sent abroad with the express purpose of agitating in foreign countries against the only exporters who can extend our markets over the world.

Bear in mind that there are some Englishmen who are in the packing business themselves. Of course, the parliamentary reports of various subcommittees do not find that there is any monopoly in England among their packers. They are all the shriven saints of the commercial world. They are given absolution to go into every market on earth into whose harbor the British flag can enter. I will read that report before I get through. Under the panoplied shield of the United Kingdom we meet that competition with the beef and pork from our own fields and our own packing houses, and we find our competitors abroad, from New Zealand and Australia to Smithfield Market, London, clubbing us and aiming at our export trade with the Federal Trade Commission report.

I have followed this not one day or one month, but I have followed this business for more than 25 years, so that I think I know as much as any lawyer can know what I am talking about on this subject, and I know what the Federal Trade Commission designed to do.

It is well, no doubt, that the active end of this commission has ended his public service. He has accomplished all the mischief one man can accomplish. His name will probably be preserved in public documents, and possibly in the CONGRESSIONAL RECORD. He is like the unknown, obscure character who fired the Ephesian dome. The historian would not preserve his name, because he sought that preeminence, bad though it might be; but the dome was destroyed. The magnificent edifice built up in the export trade of American meat has been threatened by the Federal Trade Commission report. There is a rule of civil responsibility in torts, and a criminal responsibility, that a person intends, and will be conclusively presumed to intend, the natural and probable consequences of his own acts deliberately done. Those are the principles which govern the Federal Trade Commission report.

[At this point Mr. SHERMAN yielded the floor for the day.]

Friday, January 21, 1921.

Mr. SHERMAN. Mr. President, the Senator from North Dakota [Mr. MCCUMBER] made some very material inquiries yesterday, during the progress of the consideration of the bill, about the profits that had been paid upon investments in the packing business. Taking the investment to mean the net worth as a basis for such computation, I now present, in order to more fully answer that material inquiry made by the Senator, figures set forth at page 15, part 5, of the Federal Trade Commission report on the meat-packing industry, from which it appears that the five great packers, from 1914 to 1918, made certain percentages. They are computed on the net worth, and, of course, represent profits on investment and not merely so many cents on the dollar of the volume of business done for the year. The percentages run, for the five great packers: In 1914, 8$\frac{3}{10}$ per cent; in 1915, 12$\frac{3}{10}$ per cent; in 1916, 18½ per cent; and in 1918, 15 per cent. The 1920 earnings are covered, first, by Mr. Armour's report as president of the company, which was referred to in the newspaper dispatches yesterday and quoted by me then, from which it appears 2$\frac{1}{10}$ per cent was earned upon the investment, the net worth, of his company. To do that he had to draw entirely on the surplus derived from foreign business. He defined that to mean not export business from the United States or any part of the domestic business of the United States, but solely the trade in South America, the export or other business done by his packing plant in that portion of the Western Hemisphere. So far as the United States business, either foreign or domestic, is material, no profits were earned. That business was transacted in 1920 at a loss. This ought to satisfy our exacting friends who profess to be frightened at the law and the profits.

I am confident from what I know in a general way of the course of business affairs that the packers and other large enterprises which have been necessarily required to carry large inventories will none of them on their United States business, either domestic or foreign, make any substantial profit. If profits are made at all, they will be very small, and most of the packers, if not all, will incur heavy losses upon their American business. If any dividends are paid they will be paid from reserves drawn from other sources not connected with the markets of the United States or from surpluses which have been built up out of past earnings.

In this connection I also desire to call attention to the percentages of profit, as given on the same page of the commission's report, made by the independent packers, the so-called small packers, although some, as I suggested yesterday, are very far from being small. Some do a business of $75,000,000 annually and on down to two or three million dollars annually, but all of them do a considerable business. Their percentages for the year 1914 were 12.6 per cent, as against 8.3 per cent by the five large packers; in 1915, 13 per cent, as against 12.8 per cent by the large packers; in 1916, 22 per cent and a fraction, as against 18.5 per cent by the large packers; and in 1918, 18 per cent, as against 15 per cent by the large packers.

The commission proceeds to say:

In every year the independent packers tabulated average a higher rate of return than the great packers.

Without admitting that there is any probative value in such evidence, however, they continue:

No conclusion can be drawn from these figures until certain qualifications are presented. Initially the independent packers shown are a selected group, comprising only those companies whose accounts were so clearly kept that reliable tabulations could be made from them. Practically all of the larger independents are included, but scores of small companies have been excluded.

At the hearings before the Senate Committee on Agriculture and Forestry in 1919, the smaller packers appearing, I think, 21 altogether being represented, testified uniformly that during the preceding year they had made profits in their business and were entirely satisfied with the course of affairs. There was not a small packer who appeared before the committee who testified to losses. Those facts are to be found in the Senate committee hearings, which are accessible to Senators.

In closing my discussion yesterday evening as to the markets in which the finished products are sold, especially fresh dressed meat, I called attention to the fact that that market is a peculiar one; that it differs from any other market in which large enterprises find an outlet for their merchandise. It is impossible to create a monopoly of the fresh dressed-meat market. There is the ever-present independent packer; there is ever the local butcher, who can draw in larger or smaller quantities, as the supply requires, or who can on very short notice collect and slaughter animals for local distribution to the consumer. There is no market in the world that is so incapable of being converted into a monopoly as the meat market in the United States for the retail trade. That dressed meats are a highly perishable merchandise is recognized in the fact that only such quantities are sold as can be absorbed by the local market.

It would be the height of commercial imprudence to send more fresh meat into any market than can be consumed. It is, therefore, the part of good business on the part of the packer to ascertain about how much he can sell in any given market. When he has done so his refrigerator cars are loaded in such number as may be necessary and transported to that market so as to supply what he thinks the reasonable demand will be for his merchandise. To go beyond that would be to invite loss, because if fresh meats can not be consumed in a comparatively short period, not exceeding two weeks, as I said yesterday, they become unmerchantable and inedible and for food purposes they are entirely lost. No monopoly is possible therefore; but the fixed, constant percentage of the dressed meat sold in the various markets is taken as evidence that an alleged conspiracy exists among the five large packers; that they have a common understanding to send only so much; that they have apportioned or divided the market amongst themselves. If the market for any perishable product of the volume and of the kind indicated should not maintain something near a uniform percentage, it would show the lack of good business sense on the part of the managers of the industry. If they send more so as to show a dumping and loss on that market, necessarily their balance sheets at the end of the year will show a loss, because the product would be unconsumed or would be sold at a loss. They so nearly gauge their own ability to sell in the market that their knowledge appears to a layman outside to be possessed of an almost uncanny value. Hence to gentlemen who start out resolved to find a conspiracy whether it exists or not this result of good sense is a conspiracy.

As a matter of fact, however, it is only the application of ascertained market knowledge to a highly complex and hazardous business. It is not evidence of a conspiracy that the percentages, therefore, remain nearly constant. They vary somewhat from year to year, as much as could be expected in view of the character and size of the trade, but the fixed percentage is no greater than in business of other kinds. I referred to that briefly on yesterday.

The very fact that they should ascertain what the market will absorb is recognized in the decree in the case of United States against Swift, decided in 1902. You may search the hearings conducted by the Federal Trade Commission in vain and read their voluminous reports upon the subject, but nowhere is that part of the decree quoted, although the prosecution is referred to in connection with the civil suit. The decree, however, after providing that they shall not do a variety of enumerated acts contains this language:

Nothing herein shall be construed to prohibit the said defendants * * * from curtailing the quantity of meats shipped to a given market where the purpose of such arrangement in good faith is to prevent the overaccumulation of meats as perishable articles in such market.

That recognizes the right to limit the shipments of this perishable merchandise so that no waste shall occur, and if such action be taken in good faith, based upon the common laws of prudence in commercial undertakings, it is not a violation of the antitrust law for those engaged in the business to keep track of each other's percentages and act upon the supposition that their competitors, large and small, will ship about a constant percentage for the next day or the next week and that they themselves will ship about a given percentage such as they have been accustomed to having absorbed in that particular market. The case referred to is Swift *v.* United States (196 U. S.).

In the Senate committee hearings 195 witnesses appeared. Of that number 82 were producers, farmers, and live-stock men. Of the remainder there were only 12 who had any criticism to make of the large packers, and some of the 12 were opposed to licensing the industry. Twenty-one small packers appeared before the committee and more than a score of retailers and a goodly number of wholesalers, as well as the representatives of civic and trade organizations, in addition to manufacturers, commission men, canners, editors, and so forth. Those who appeared against the pending measure were practical men of business affairs, of good standing in their community, and possessing knowledge in their respective lines of effort; yet of the entire 195 who appeared there were but 12 who were in favor of the enactment of the legislation proposed in the pending and in kindred bills. If such a large preponderance of testimony on the part of witnesses having an adequate knowledge of what they testified to should develop in a court of justice, there would be very little question as to what the verdict would be.

I stated yesterday that there ought to be an amendment to this bill, if it shall ever pass, by which a Member of Congress would be prohibited for a term of at least five years after the expiration of his service in Congress from serving on such bureaus, boards, or commissions as may have been created during his term of service, when he himself had a vote in creating them and in providing the appropriation to pay their expenses.

A Senator who is quite active in the Live Stock Association and somewhat intimately connected with the market committee of that association, which is the active instrumentality of the organization, made a public announcement at the meeting of that association held at El Paso, Tex., that he would be willing to resign from the United States Senate in order to serve as a member of the live-stock commission. First, it pays $10,000 a year, which is $2,500 more from a pecuniary viewpoint than is paid to a Member of Congress in either House. This announcement, of course, would appeal to the sensibilities of some and the vanities of others attendant on that convention or on the meeting of the association. I think that furnishes an additional reason for the passage of such a law as I have outlined; and I should be glad to have the Senator, if he recognizes himself by such a meager description as I have given, explain matters, because I think it is due to this body that he do so. He can not explain his activity in promoting his own welfare more definitely than he has.

No doubt there will be a number of amendments offered—some are pending now—to what is known as the Gronna bill. These amendments can not impair the substance of the bill so long as section 10 remains in it. Section 10 endows the commission with the delegated power of legislation. It enables it to make rules which shall have all the authority of an act of Congress. The rules are of a comprehensive character that will govern every part and ramification of the packing industry in the United States. These are rules made by men in their individual capacity. They are not legislation by Congress. They are rules; and in the last analysis this section transmutes a government of law into a government of individual men, irresponsible in character, liable for nothing, to no suits for damages, for nothing that they may do in traducing the industry or destroying it, and leaves them free at will to ravage the legitimate enterprise over which they are given authority.

There is some feeling against what is called the Gronna bill, as evidenced by the action of the El Paso meeting of the National Live Stock Association, because, with all the premedi-

tated preparation, a resolution indorsing the Gronna bill was offered, and before it was thought prudent to put it to a vote they cut out all reference to the Gronna bill and simply passed a resolution declaring that they were in favor of constructive legislation for such reasonable regulation of the packing industry, and so forth, as might be required. That is done by the very association the market committee of which is the prime instigator, outside of the Federal Trade Commission, of the agitation responsible for these bills.

I now turn, Mr. President, to the conditions attending the foreign market of the American meat packers, whether they be large or small, any of them doing an export trade.

The first document to which I refer is found in public document No. 1297 of the House of Representatives of the Sixty-fifth Congress, second session. Under date of July 3, 1918, the Federal Trade Commission transmitted to the President a summary of the report on the meat-packing industry. They inclose with it a letter to the President of the date indicated. This is the first public knowledge given to the American packing business, to the live-stock producers or farmers, or to the consumers of the country, or anybody interested, of the contents of the report so that it can be taken as a basis either for legislation, for criticism, or for legitimate discussion.

Let me say further—and I will anticipate that much in the foreign situation—that the British Board of Trade, while essentially private in its activities, is yet recognized by many acts of Parliament, some special and temporary and some more permanent in character, as one of the instrumentalities for the regulation of new business, both foreign and domestic, in the United Kingdom.

It appears from evidence contained in the CONGRESSIONAL RECORD, so far as I am able to discover, that the British Board of Trade had at least one volume of the reports, containing very hurtful charges against the meat-packing industry of the United States, in September, 1918, promptly upon its promulgation in this country. For a year previous it had the invidious newspaper publicity promulgated by the Federal Trade Commission during its investigation. The British Board of Trade, beginning their investigation with a committee appointed February 3, 1918, had before them for their guidance and for their findings a large part of the hurtful portion of the Federal Trade Commission's report, as well as the invidious newspaper propaganda before any of those named in the report had an opportunity to explain or justify their actions or to otherwise defend themselves. This at least calls for an explanation. It appears from evidence that unexplained would indicate that they sent the report to foreign authorities in order to start a crusade against a legitimate American industry before the persons assailed were able to have a copy of their charges in order that they might answer them.

The letter to the President, answering some inquiries, finds that there is a monopoly both in the buying market of live stock and in the selling of the finished product. It refers at some length to the manipulations of the market, as they call them, and refers to the hearings they have had at great length, and these summaries contain their conclusions. Few people will read the great mass of testimony in the hearings held by the Federal Trade Commission and now published and accessible. It is with them as it is with the hearings before the committee. They are voluminous. Their perusal requires great time and labor; and it is almost impossible for the average Member of Congress, to say nothing of the private citizen, to acquire a detailed knowledge of them. The conclusions contained in the summary, therefore, ordinarily are taken as true.

In connection with the foreign or export business, on page 5 of the summary is the statement that—

> Out of the mass of information in our hands, one fact stands out with all possible emphasis. The small dominant group of American meat packers are now international in their activities, while remaining American in identity.

With anybody that was ordinarily a red-blooded American, that had traveled outside of the borders of the United States, that statement, instead of being a criticism, would be a matter of congratulation and of honest civic pride; but to these alarmists it seems to be a ground of criticism and a cause for destruction.

While "international in their activities," they are "American in identity"! There is not a large export concern in the United States in any line, whether it be in canned goods, in clothing, in cotton or woolens, or any of the great essential staples of human life, concerning which it is not a matter of pride that their international activities from the home offices in the United States retain abroad, wherever they go, the American identity. Unfortunately, we have not been able to carry much of their farm products under the American flag. That is our fault; but it will be doubly our fault if we destroy the ability of those large concerns to go to the markets of the world, and to remain international in their activities.

Do we want to be classified as "little Americans," as the "little Englanders" have been classified in years past, from the days of Gladstone down to the present, who believe in cooping themselves up on their island home and remaining like a hermit crab, living on their own substance, and never drawing anything from abroad? The British Empire is builded upon her world-wide activities; and her financial strength and her world-wide extension of her merchant shipping and the increase of her Navy consequent upon that was the great determining element in the World War that enabled her soldiers to join with their French allies and hold the enemy in check. If we are to remain petty Americans, selling among ourselves, and there shall be no international activities without arousing the antagonisms of the "little Americans," then we might as well quit, and blot the word "enterprise" out of the dictionary of our commercial activities.

> Blame which now attaches to them for their practices abroad as well as at home inevitably will attach to our country if the practices continue.

So solicitous, these appointed custodians of the reputation of this Republic abroad! I shall come to that in a specific way before I conclude.

> The purely domestic problems in their increasing magnitude, their monopolization of markets, and their manipulations and controls, grave as those problems are, are not more serious than those presented by the added aspect of international activity. This urgently argues for a solution which will increase and not diminish the high regard in which this people is held in international comity.

The man who wrote that does not know what international comity is. He is speaking a foreign tongue. There is one kind of internationalist that I can stand, and that is the man that will take the name of America abroad in manufactures, in commerce, and in diplomacy; and I hope some time we will train a family or breed of diplomats that can meet on equal terms the diplomats of the Old World. We are lamentably short in that respect. We neither speak their languages, understand their laws nor the traditions and the genius of their Governments or their races, mixed so that Europe has been for a hundred years—and never was it more so than it is to-day—the most dangerous place into which an American can venture if he represents this Government. Our Chief Executive recently found it out. Daniel in the lion's den was a minor scene compared to our Chief Executive when he fell into the den of the European diplomats.

I refer again to page 10 of the summary; and this is carried far and wide, as I will show in a moment. They refer to the Sulzburger Sons' group of packing houses and the reorganization of that business, and draw some very damaging conclusions. I gave in the RECORD the truth about it yesterday, but here they represent it as a conspiracy to destroy an influential packing house through one or more bankers of New York City—the Guaranty Trust Co., the Chase National, the banking house of Kuhn, Loeb & Co., William Saloman & Co., and Hallgarten & Co. Then they continue:

> The combination among the Big Five is not a casual agreement brought about by indirect and obscure methods, but a definite and positive conspiracy for the purpose of regulating purchases of live stock and controlling the price of meat, the terms of the conspiracy being found in certain documents which are in our possession.

I respectfully invite any Member of Congress to read the documents which they give in their report. There is not a respectable lawyer or layman inside of this body who would take their documents and on them find anybody guilty of any offense, civil or criminal.

The elements represented by this agitation have tried at various times to prosecute the packers criminally. They have been indicted in Chicago at least twice by grand juries. They have been tried by the petit jurors drawn from that Federal judicial district, and in both instances they have been acquitted. As I remember, they were tried in 1906 and acquitted. They were tried in 1911 and 1912, the trial beginning in 1911 and lasting about three months, and the jury returned the verdict some time in the winter of 1912. That was the case in which one of the principal sponsors of this bill, the junior Senator from Iowa [Mr. KENYON], was then assistant attorney of the United States, and engaged in the prosecution.

The jurors in that case, as I read the list, drawn mostly from northern Illinois and Cook County, which, of course, comprises Chicago, are jurors about three-fourths of whom are farmers living outside of metropolitan influences. It is characteristic that among the great mass of steady-going farmers and live-stock men you do not find hostility to the packer. They sell in the stockyards, they sell to the commission men, and still I find no hostility the nearer you get home.

The principal hostility is by a set of professional agitators. If the agitation stops, like Othello, their occupation is gone.

There is contained in this not only the criticism of the domestic business of the packers, but they enter into a criticism of their foreign business, the business originating in foreign countries. They say:

The Armour, Swift, Morris, and Wilson interests have entered into a combination with certain foreign corporations by which export shipments of beef, mutton, and other meats from the principal South American meat-producing countries are apportioned among the several companies on the basis of agreed percentages. In conjunction with this conspiracy, meetings are held for the purpose of securing the maintenance of the agreement and making such readjustments as from time to time may be desirable. The agreements restrict South American shipments to European countries and to the United States.

Be it remembered that the British Board of Trade is a party to that agreement. The British Board of Trade controls the allocation of refrigerating space in meat boats from Argentina. They control it because they are British boats; all of them are under the British flag. In one instance, at least, during the war, they gave about one-half the refrigerating space to American companies that they were entitled to under former contracts. The packing-house business by American packers in the Argentine country exists because the packers from Chicago understand the business, and they are enabled to meet the British packer on his own ground, either in England or in any foreign country where live stock is produced and to do business with him upon a profitable basis. But this criticism is contained in the summary of the report, and goes on as other portions of it.

On pages 12 and 13, following, as a sort of an auxiliary, the former statement, they continue:

The investigation of foreign interests of the American packer is not yet complete. The following list of those companies which thus far have been identified as subsidiary to or affiliated with the Big Five is indicative of the extent of their activities.

Then follows a list of foreign companies, in Australasia, which, as most people know, embraces the territory of Australia and New Zealand; in Uruguay, in Brazil, in Argentina, in Canada, in Great Britain, in Germany, certain portions of France, Italy, Denmark, and Paraguay. Some of them are duplicated. They say that they have not completed their investigation, but that a subsequent installment would be furnished the public in due time. It has not yet arrived. But there has been enough to keep the public occupied in digesting that already given.

Again, I find referred to a letter which is of some significance, sent to the State Department, of which I have a copy. They innocently abstained from placing this in the CONGRESSIONAL RECORD or in their hearings. This was a letter transmitting the summary of the report of the Federal Trade Commission, from which I have been reading, the document named, dated September 27, 1918, and signed by the chairman. He quotes a great deal of the Federal Trade Commission report and summary. It is addressed to the Chief of the Diplomatic Bureau of the State Department, Washington, D. C., and is as follows:

It is requested that one copy of the Federal Trade Commission's summary of the report of the meat-packing industry be sent through the proper channels to the head of each of the countries listed below:

Great Britain	Italy	Argentina	Colombia
France	Spain	Venezuela	Portugal
Brazil	Chili	Uruguay	Honduras
Paraguay	Mexico	Haiti	
Panama	Cuba	Sweden	
Guatemala	Switzerland	Norway	

There is inclosed a form letter, containing ideas the commission desires to convey to the recipients of this report, which material is to be used as your judgment may direct.

The commission appreciates your courtesy in taking care of this matter.

Very truly, yours, FEDERAL TRADE COMMISSION.

Here is the form letter referred to which I have been able to procure, filled out and addressed to the President of Switzerland. It is dated September 26, 1918, and reads:

MEAT-PACKING REPORT.

The PRESIDENT,
Switzerland.

SIR: There is inclosed herewith a copy of the summary of the report of the Federal Trade Commission on the meat industry, which was recently released for publication by President Wilson, and which may be of interest to your Government. Two copies have also been sent direct to the legation of your country in Washington.

By direction of the commission and with expressions of its highest esteem.

Yours, very truly, FEDERAL TRADE COMMISSION.

The way the letter reads, Mr. President, it would be inferred that the President of the United States sent this summary of the Federal Trade Commission report to the heads of the various Governments named in the form letter.

Again, there is a criticism of the South American pool, and that is directly connected with the division of traffic from South America to European points. Of course recently, as was the case even during the war, comparatively small amounts of the South American meats come to the United States market. Almost the entire business, and I think now and for some time past the entire business, has been an export trade by the American packers from their plants there to European markets.

The pool about which the Federal Trade Commission complains is one entered into during the war. I doubt whether the Federal Trade Commission knew the ultimate facts. If they did know them, I further doubt whether they would have published any part of the truth in their reports or hearings. They were not searching for the ultimate truths upon which a business transaction is founded. They are engaged, like a grand jury, in merely getting evidence enough to indict somebody, and letting it go at that; and the only place we can try the case is in the Senate Chamber, the House, or before the great jury of the American people. That is a part of my justification for the unreasonable length of time I take upon this gigantic commercial enterprise.

The South American pool was entered into by the British packers in South America under the direction, supervision, and with the consent of the British Board of Trade. The American meat packers were each of them allotted, by the British Board of Trade itself, their space in the refrigeration. We had no option in the matter. It was during the war. We were willing to help. We were acting with the allied nations, and we acted as the European authorities requested us. We had every reason to believe they were our friends, and they were.

For instance, I believe Morris & Co. were allotted 3 per cent of the space. They had a contract with the steamship lines for double that space before this arrangement was made. That contract was annulled and they were restricted to one-half the space. They cheerfully acquiesced in it and went on furnishing their portion of the meat to be transported from their packing plant in South America to fill European needs.

At first certain of the packers declined to go into the pool, but ultimately they did. They either had to, under the arrangement, or no refrigeration space could be obtained and they would be debarred entirely from South American trade. So at last from necessity they went into the pool and made the agreement.

The terms under which arrangements were made, the quantities to be shipped, the various ports where they were to be debarked, and the prices, were agreed upon by the pool, and not by the individual packer. This is looked upon as a crime, and one of the grounds of the denunciation heaped upon the American packer is that he went into this arrangement. It was not his at all, but was a part of the arrangement made by those representing the allied nations.

Mr. President, now I want to refer, in such a way that I can afterwards insert it in the RECORD to preserve a full history of the transactions for the last three or four years and up to the present, to the British ministry of reconstruction report of their committee on trusts. On pages 8 and 9 of this committee report I find the following:

The American Meat Trust. As an illustration of the extent and effect of a trade combination in one industry affecting both this country and America, we desire—

Say the members of the committee making this investigation—

to refer to the summary of the report of the Federal Trade Commissioner on the meat-packing industry issued by the Federal Trade Commissioner at Washington on the 3d of July, 1918—

This is the report from which I have been quoting and which I hold in my hand, known as Public Document No. 1297—

in which much interesting information is given as to the activities of the five principal meat-packing corporations in the United States, which are commonly known as the Meat Trust or the "Big Five." The summary shows—

And then follows more than a thousand or twelve hundred words quoting literally from the summary of the Federal Trade Commission's report on the packing industry of this country. This is contained in the report of the committee on trusts, signed by Charles A. McCurdy, chairman, and a number of other committeemen. I shall refer to this hereafter as the McCurdy report. McCurdy has been very active in reconstruction processes and in rationing food and obtaining food from foreign sources during the war. He is a man who acts upon such information as he can obtain. Obtaining the summary of the Federal Trade Commission's report from what he considers official authority, he takes it as the truth and entitled to credence and quotes it in his report and sends it out over the United Kingdom. I shall in due time incorporate the necessary parts in the RECORD at length without reading them. It is not my desire to take any more time than I am compelled to take to present matters.

I next read from what is called an interim report on meat profits by a subcommittee appointed by the standing committee on trusts. It is presented, as the other report is, to Parliament by command of His Majesty; price, twopence. It is accessible to all of us. Even with the high prices in our own country, the foreign prices are not such as to preclude us from useful information.

Under the profiteering acts of the United Kingdom of 1919 and 1920 this report on meat contains a number of suggestions which are very worthy of attention by the Senate. Some are threatening, some are useful to us, some indicate the Englishman's love of fair play even when things are against him, and when the balance of trade is very unfavorable, and when the pound sterling has reached the point where every true Englishman must view it with profound regard, to say the least.

On page 4 of the report I find something that I commend to the Federal Trade Commission, either as now constituted or as hereafter it may be found. It says:

The only way—

Speaking of Australasian imports—

of holding up supplies of home-raised meat is to keep the cattle alive and not send them to market, as was done to some extent by farmers just before the abolition of control, in hopes of higher subsequent prices; but once cattle are ripe for slaughter it is not economical to withhold them from the market.

I referred to that on yesterday. It seems that it is just the same in England as it is here. When a beef steer is fit, especially if he has been put on grain, he must be shipped at the opportune time. If he is held beyond that point he is a losing animal. He loses for the grower and he loses for the consumer, because his meat value begins to depreciate after a certain time.

Speaking of the power of the Australasian importer to hold back imports, it is said:

It is plain that such power can only be exercised within narrow limits since new supplies are always coming forward, and it is obvious that it does not exist at all with regard to fresh meat, which must be sold soon after it is killed.

Again, and this is merely a preliminary matter, in paragraph 4 they consider under this head:

THE AMERICAN MEAT COMPANIES.

We devoted a considerable amount of time to the investigation of the operation of the American meat companies, popularly known as the "meat trust." Of these there are five: Armour & Co., Morris & Co., Swift & Co., Wilson & Co.—in London, Archer & Co.—and the LaBlanca Co.—owned by Armour and Morris—which import meat from their own works in South America. There are also two British offices, the British & Argentine Meat Co. (Ltd.), and the Smithfield & Argentine Meat Co. (Ltd.), and one Argentine Co.—the Sansinena Co.—which have, since the spring of 1914, up till a few months ago, when Morris & Co. seceded, been acting in cooperation with the American companies through the River Plate meat conference.

Another company registered in the United Kingdom is the Vestey Bros.

Speaking of the American companies, and I do not wish to take the time to read it all, it says:

The companies themselves admitted that in the past they have worked together in "pools" and other forms of combination. They now claim that they are quite independent of each other, but, as is pointed out in paragraph 16 of the report of the meat supplies committee, formal independence is quite consistent with a simple tacit understanding to respect each other's position. That by itself would secure them all the economic advantages of an active combination, and, while a certain amount of freedom may be conceded to branch houses for efficiency purposes, we are satisfied that all questions affecting the strategy of the trade as a whole are settled in conference between the heads of the businesses in Chicago.

If by that they mean the head of each business settles the policy to be pursued in furnishing meats to the British market, it is true; but if by that they mean they act in concert with each other to a common end, it is not true. Each head of the business, the responsible managing mind, will determine how much is to be sent to the British market, like any market in the United States. If they send to the Smithfield market more fresh meat than can be consumed, if it can not be used there, losses are suffered on the British market, just as in Baltimore or Philadelphia. There is no difference because the ocean intervenes. That is a mere physical obstruction that is overcome by modern steamship travel and by the processes of artificial refrigeration. For centuries British merchants and shippers sitting in London have framed plans by which their merchandise has sought the world's market. Why should men in Chicago not do so?

This finding of the committee is based on the Federal Trade Commission report. Later on, in various places, the language and references are of a character that make it certain that the subcommittee in this interim report have had access to the same poisonous sources of information.

Here is one thing that it would be well for us to remember, because it is their finding upon an independent investigation:

The representatives of the trade whom we questioned were unanimously of opinion that it was impossible even for the strongest combination to control prices in Smithfield for more than a few days, partly because climatic reasons and a deterioration of chilled beef in cold storage forced quick sales, partly because a rise in prices speedily evoked an increased supply of home raised meat.

I might remark here that the Smithfield market is the great market for the city of London. It is an ancient market just outside of the city, which furnishes a market place for all the consumers of the metropolis of the world. So when they speak of the Smithfield market we know that it is the principal British market that is referred to.

Again in paragraph 9 they say:

Although the American companies are extending their purchases of British cattle in various centers, we can not find, so far, any signs of a serious intention on their part to capture the home-killed trade of the United Kingdom or to reduce the British butchers to a state of dependence.

That is almost humorous, that a man sitting in his office in Chicago, drawing his beef supply from Texas or from Wyoming, has the business ability to reduce a British butcher at the Smithfield market to a state of servile dependence. British pride can stand this line of the report and their sense of fair play will do the rest.

Continuing, the report says:

It is true that Morris & Co. are large buyers of British and Irish cattle, and that, at least before the war, that branch of their business was increasing, but there was no evidence that they had any disturbing effect upon our cattle markets. We understand that the American companies have been making inquiries into the possibilities of developing a packing-house business in the Irish meat trade.

If the English can not feed the Irish on anything but potatoes, it is about time Americans went over there to furnish them a little good meat. I think the Irish will be duly thankful under the present agitated condition of the Emerald Isle.

They continue:

If these projects are successful, their progress will have to be carefully watched. The American companies have now 34 stalls in Smithfield market as against 20 in 1908, and their shops are in the best position; but there are now, in all, 364 stalls as against 344. About half their trade, nevertheless, according to the information given to us, is still done through jobbers, who consider their position fairly secure on account of their intimate knowledge of the requirements of the retail trade of the different parts of London, which enables them to "cut up" the meat satisfactorily and prevent waste in distribution.

Fears are sometimes expressed that the American companies have been surreptitiously acquiring possession of British businesses, but these fears are greatly exaggerated. Armour, Swift, and Morris are represented in the United Kingdom by companies of American origin, but registered in the United Kingdom, and the Sociedad La Blanca Co. has a branch house in London. Wilson & Co. (formerly Sulzberger & Co., and earlier Schwarzschild & Sulzberger) are represented by Archer & Co. (Ltd.).

Then it goes on with the description of all the British branches of the American packers. There are certain parts which I will not take the time to read, but will insert in the RECORD at the conclusion of my remarks, because I think they are important as a part of this presentation. Then the report takes up the question of taxes, and without reading that part, which I will insert as stated, it says that the British companies are taxed not only on the profits they make in the United Kingdom, but upon all the profits in foreign trade because they are home British companies. They suggest that this is a serious handicap to the British companies that must engage in competition in the world market with the American packer, because the American packer does not pay taxes upon the profits he makes in the United Kingdom or in any of the colonial dependencies. They suggest, and there is a threat in this connection, that they propose to ask Parliament in due time to legislate so as to tax in England the American packer upon all the business he does in the world just because he has a branch business there. It will be time enough for Congress, when they do this, to consider whether it would not be fair to retaliate and tax every English house in a like manner in the United States upon its profits whether made in England or Australasia or any part of the Old World. It will be just as fair.

In view of the letter to the Department of State, sent with the request that the summary of the report be transmitted to the heads of the various Governments named below in the letter, in view of the form letter that was inclosed, in view of the numerous quotations made in the two reports that go directly to the British Parliament, it is evident that the Federal Trade Commission has had some very material influence upon those committees and upon the authorities in the United Kingdom.

Let me now refer to the press. As England is about as free a Government as is our own, and in some particulars a little freer, it is well enough to pay attention to the press. I have

a number of clippings from various newspapers. These newspaper clippings are from the London Standard, from the London Star, from the London Chronicle, and from the London Times, a very old and influential newspaper of Lord Northcliffe. There is one in particular in the London Star to which I shall refer. I shall insert the quotation at length hereafter. The paper starts out by saying, "Our reporter has interviewed," giving the name, "the chairman of the Federal Trade Commission and," so-and-so "following a report on the American meat trust." The article goes at great length into the freezing out of the Sulzberger Sons packing house, and also into the report of the Federal Trade Commission, stating that the meat-packing industry is a monopoly, both for the purchase and for the sale of packing-house products, and that great agitation has resulted in the United States against the packers. It sets it all out, and from the nature of the information given the reporter could have obtained it only from the chairman of the Federal Trade Commission. Reading it for the first time, when it was sent to my office over a year ago, I came to the conclusion that it, in substance, was an interview by the chairman of the commission. He has denied, however, that he gave any interview.

The article says, "our reporter interviewed the chairman," giving his name, and then follow statements of an extremely prejudicial character against the five great packers. The chairman of the Federal Trade Commission was in England at the time and was in London on the date referred to. I corrected the statement that he was there at public expense. He later said, in an address, I believe, at the Sherman House, in Chicago, that he paid his own expenses to England. Let that be granted; I gladly make the correction. He is one of the few who have done so. However, he drew his salary while he was absent on his trip abroad, maligning, as I say with due deliberation, this legitimate American industry. There was no deduction made from his salary. He was there as a public officer, at public expense, barring only the expense of his steamship ticket and hotel bills and such other incidental expenses as attach to that line of travel.

In addition to that there is one other matter that I must not omit, that is a part directly of the agitation begun by the Federal Trade Commission. It did not occur while the chairman of that commission was abroad, but I find, under date of February 24, 1919, an extremely interesting letter. Armour & Co. have a plant in New Zealand. New Zealand, as many of us know, is a country of about 100,000 square miles, with a population that is English in its origin, enterprising, and active. A large part of the country is range, well adapted to stock raising, and particularly to the raising of sheep, which, as is the case in Australia, constitute a staple food as well as a wool producing animal. Armour & Co. bought or built a packing plant in New Zealand. They employed one of the best live-stock men in that country as a manager.

Some time after the Federal Trade Commission report was sent out, some time after it was known in Europe and in the antipodes, Armour & Co. made application to the proper authorities under the laws of New Zealand for a license to engage in the export trade from New Zealand. They made the application to the minister of agriculture of New Zealand on December 19, 1918, and on February 24, 1919, Armour & Co. received the following answer:

OFFICE OF MINISTER OF AGRICULTURE,
Wellington, February 24, 1919.

MESSRS. ARMOUR & CO. OF AUSTRALASIA (LTD.),
Christchurch.

DEAR SIRS: The director general of the department has submitted to me your letter of the 17th, in which you formally apply for the issue to you of a meat-export license under the slaughtering and inspection amendment act of 1918. I regret to inform you that I can not grant this license. This decision has been arrived at after the perusal of the official summary of the report of the Federal Trade Commission on the meat-packing industry appointed by the United States Government. With reference to the canned meat referred to in your letter of the 8th instant as having already been purchased, this meat may be shipped by you, and no action will be taken against you in respect of its shipment.

Yours, faithfully, W. D. S. MACDONALD.

A license, it must be observed, was withheld, not for any misconduct on the part of Armour & Co. in New Zealand, but was withheld because of the report of the Federal Trade Commission. That is the same commission whose form letter was scattered broadcast, sent to the Department of State, and furnished to the consular offices of the various countries represented in this country. It may be fair to conjecture that the consular officers, of the two copies furnished them, would at least send one to their home Governments for use by the heads of the proper departments. So in New Zealand a license was refused, and no exports can be sent from that country by the Armour plant which has been erected there, but all that plant can do is to engage in the local trade in that country. Is this an injury to the American packer? Is this proof of the charge made? To an unbiased mind it is.

Some of the newspaper clippings to which I have referred are of the most violent character. They are all based upon the summary of the report of the Federal Trade Commission. They show that the newspapers of Great Britain were particularly violent at the time of Mr. Colver's visit to England. There seemed to be a rash, so to speak, of agitation at that time, an epidemic of epithets, a round of abuse of the American packers such as would almost raise a mob under ordinary conditions if the packers were present in person in the British Isles. Here is specific evidence—and it continues to the present day—of the harmful effect upon an American industry, having a plant located halfway round the world, of the activities of the Federal Trade Commission. It is true that the Chicago packing enterprises are international in their character, but they remain American in their identity.

In view of all the facts, I think I am fully justified in saying this of the chairman of the Federal Trade Commission, whose name I shall refrain from mentioning for the same reason that the historian did not mention the name of the wretch who "fired the Ephesian dome." If his name appears, it will be in documents submitted at the close of my remarks or in reading from judicial records the indubitable evidence of his trustworthiness, his business ability, his character, and his veracity. I chance to know something about these distinguished reformers.

At the Sherman House, in Chicago, on Wednesday afternoon, October 1, 1919, the chairman of the commission indulged in some remarks. He said:

> This is the first time I have been in Chicago since the charge emanating from Chicago was made against myself and colleagues. A resident of this city, Mr. Edward Morris, of Morris & Co., in a statement given to the public press on or about July 15, 1919, said, in effect, that the Federal Trade Commission has been in secret correspondence with foreign Governments, and especially with the Government of England, conspiring against the American export trade, and that especially I, during a visit to England and by means of newspaper articles, interviews, and by meetings and conferences with certain officers of the British Government, conspired against the American export trade.

A man who would do that is a traitor. The chairman of the trade commission habitually sees red, and the very fact that every sensational newspaper in London, in Manchester, and in Liverpool, in Newcastle on the Tyne, and in Sheffield were seeing red at the same time the chairman of the Federal Trade Commission arrived on the island is a remarkable coincidence. It is a sympathetic rash. If he were investigating himself he would find himself guilty of enormous crimes upon less evidence than that.

I submit the letters I have read, the clippings from various newspapers, the letter from Mr. MacDonald, the minister of New Zealand, forbidding Armour from engaging in the export business on account of prejudiced quotations from a prejudiced Federal Trade Commission report and the action of the British committees that reported upon that subject directly to the British Parliament. From what source did the agitation in the newspapers arise? Was there any coincidence or does it beseem that there is any truth in the statement that they broke out when the chairman of the Federal Trade Commission arrived on British shores? Before that time they had been comparatively quiescent, but upon his arrival they not only saw red but they frothed in most un-British fashion. The habitual stoicism of the Englishman seems to have been broken down, and he raved like a populist 40 years ago in Kansas, when he saw everything as a conspiracy against the farmer. These clippings from a British newspaper would put to shame the wildest statements ever made in a populistic newspaper of 40 years ago, when I first began to notice certain phenomena of the human mind in political matters.

Does that signify anything? Not to him, but to the average mind it looks very much like the Federal Trade Commission and the chairman himself are directly responsible for this injury that has been wrought upon the packing industry of this country abroad.

I now read from the proceedings in the United States District Court in Chicago:

> Ten years in a Federal penitentiary for using the mails to defraud is the sentence imposed by Judge Kenesaw Mountain Landis, of the Federal court of Chicago, on S. C. Pandolfo, promoter of the Pan Motor Co., of St. Cloud, Minn. Thus ingloriously terminates the immediate career of one of the pirates of promotion, whose "get-rich-quick" methods at the expense of gullible investors were disclosed by the World's Work in January, 1919. The former emperor of St. Cloud was an ambitious man and his exalted game was perhaps the greatest promotion swindle in recent years. By flattery, coercion, appeals to patriotism, and to fear of criticism, Pandolfo succeeded in having the

Commercial Club of St. Cloud as his strongest ally, leading bankers and business men of the town to serve on his board of directors, and letters of recommendation from the officers of reputable banks, with which to sell his stock. Such a combination of "dependable" indorsements was fortified in a plant which cost—at rush work and high prices—nearly a million and a half dollars. There the heavy hammers were kept going on outside orders for drop forgings and the noise thus created was the tune to which the stock was sold. Pan Motor stock of a par value of $4,750,000 was sold at twice its par value. Pandolfo got the first half of every subscription paid in.

At the time of the trial the company had only $5,000 cash in bank and owed about $250,000.

The Associated Advertising Clubs first called attention to the reality in the operations. Pandolfo raised the cry of "conspiracy" against himself. The verdict is a credit to the Associated Advertising Clubs and a victory for every legitimate advertiser. Suits against the Associated Advertising Clubs of the World; Doubleday, Page & Co.; the Daily Sentinel, of Grand Junction, Colo.; the Financial World; the Arizona Bankers' Association, and others would have added $5,000,000 to Pandolfo's fortune if he had won them.

Federal Judge Kenesaw M. Landis in rendering the verdict bitterly scored those papers which sell their news columns for advertising purposes, as well as the State laws of ——— that permit incorporation of stock-jobbing enterprises. Following are quotations from Judge Landis's statement:

I now quote literally:

Now, if this court had jurisdiction over a sovereign State I would call a special grand jury to consider the indictment of—

I will omit the name of the State—

for its offenses as disclosed from time to time in the criminal proceedings in this court. The State of ——— plays the game, because by playing it it gets money in its treasury to help run its State, thereby relieving its own citizens to that extent from the burden of taxation. ——— is willing to get it that way, and is still getting it. The Pan Motor Co. was incorporated under its laws.

Certain laws, naming them. I will cut out all parts referring to the State. It is improper to mention it under the rules of the Senate.

The COURT. Now, the Minneapolis Daily News, in October, 1917, under date of October 2, carried an article about the Pan Motor Co., of St. Cloud. This is a news article of the Minneapolis Daily News. Whose paper is that, Mr. Cummins?

Mr. CUMMINS. It is one of the Clover Leaf dailies. There is one published in Omaha, one in St. Paul, and one in Minneapolis.

The COURT. Who owns them?

Mr. CUMMINS. The chairman of the Federal Trade Commission is president of the corporation.

The COURT. What is his name?

Mr. CUMMINS. Colver.

The COURT. If he is the owner of this Minneapolis Daily News, he had better quit being chairman of the Federal Trade Commission and reform his crooked paper.

Mr. CUMMINS. That was in reward of supporting the administration.

The COURT. Judge Rush, who is the owner of this paper? Is that man the owner of this paper?

Mr. RUSH. This is all news to me.

The COURT. Well, Mr. Cummins lives in St. Paul, and he ought to know.

Mr. CUMMINS. I did not say that he owned it; he is connected with it.

The COURT. You said he was chairman?

Mr. CUMMINS. Chairman of the Federal Trade Commission. He is one of the officers of the corporation that publishes the Clover Leaf dailies.

The COURT. Now, in the Minneapolis News, on the 2d of October, 1917, I find this: "In the experimental building, just across from the main unit, cars are now being turned out at the rate of from 3 to 10 a day." Now, there was no more justification for that statement than there is for saying that from 3 to 10 cars a day are being turned out in this room now. That was in the Minneapolis News of October 2, 1917.

Judge Landis said, further:

On the witness stand Forsyth (who was the automobile editor of the Minneapolis News, on October 2, 1917, but a few weeks later was hired by Pandolfo as his advertising manager) testified that it was the policy of the Minneapolis News to open its news columns to advertisers whose patronage it was soliciting, to open its news columns to such concerns and there give hospitality to such stuff of those concerns whose advertising they were soliciting as would induce favorable action by their intended advertisers. This is what that man said was the policy of the Minneapolis Daily News.

So I deal with the Minneapolis News in the same category as I deal with the Merchant and Manufacturer; and the Banker, and other eminent Chicago publications (fake write-up sheets) whose activities as shown by the evidence in this case make the old Chicago Dispatch of Joseph Dunlap look like the last word in conserving morality.

In a court of justice, Mr. President, when a witness testifies you are at liberty to go into his life record. I confine myself to what was said by the judge from his bench. A promoter of a newspaper, an officer of a publishing company that sold its news columns to an advertiser of a fraudulent concern, that bled the public for millions, and led its responsible agent to a 10-year sentence in the penitentiary under the postal laws, while the promoter of this yellow sheet that obtained advertising and income from the deluded victims of this fraudulent promoter goes scot-free and attempts to reform the United States and the world—he it is who has lately given a definition, before he left the commission, of commercial morality.

Well might Rabelais put on the sacerdotal vestments and stand in the sacred places where the worshipper's sins are forgiven and claim infallibility and holiness. This degraded adventurer is the source of the report that has damaged every farmer and stock raiser from Texas to Canada, and every packer, large and small, in the United States. So it is, though, that many men, after they are no longer able to exercise their vices of booming criminal promoters for their own pelf, become holy and devout men, showing others the way to repentance. This seems to be the status of the chairman of the Federal Trade Commission; and I leave him in the merited obscurity to which the court consigns him, free himself from punishment but his deluded victims in the penitentiary.

Then, again, I read from this matter about those who are forging the evidence to destroy legitimate American industry abroad, from the attorney that conducted the investigation on behalf of this odoriferous chairman of the commission. I refer to him by name, happily, because he is ninety-nine parts notoriety and one part lawyer, anyhow, and it can not displease him.

The investigation upon which the Federal Trade Commission report is based was strictly ex parte in character. An examination of the act creating the commission does not contemplate such reports. As I suggested at the outset of my remarks yesterday, it was intended that it should be an assistance to the legitimate business of the country—that it should help them over their difficulties. The very fact that the Webb law promotes cooperation and pools for export purposes shows the tendency of modern times, even in our country. The packers are condemned abroad and at home for doing what the Webb law authorizes. A $100,000,000 corporation was formed day before yesterday for the purpose of promoting American trade. Here are five large packers that proposed to open the business of the world to the American, and they are indicted by the Federal Trade Commission, traduced abroad, and their business sought to be destroyed!

At the hearing before Commissioner Murdock, held at Boston December 28, 1917, the following conversation, reported at pages 546 and 547 of the official transcript, occurred between Mr. Heney, special counsel for the commission, and Commissioner Murdock. You will not find this in the published reports that are accessible to the average Member here. You have to go back and get the transcript.

Mr. HENEY. Mr. Commissioner, I should like to ask for an order at this time excluding all witnesses from the room with the exception of the witness who is being examined, following the same policy we followed in Washington at the commencement of the hearings.

Commissioner MURDOCK. That order will be made.

Mr. HENEY. I think it might be well for me to state for the benefit of the members of the press that this investigation is not a trial in which any parties are defendants and thereby entitled to appear by attorney. It is an investigation into the economic conditions as well as practices that may be prevailing, and it is ex parte, and while the commission will be glad to hear any witness that presents himself here, no one comes here with the right to be represented by attorneys, with the right to put on witnesses, because there is no investigation of that sort being conducted. * * *

Mr. Heney stated later that the commission would be glad to hear any witnesses who presented themselves, but such witnesses would be denied the right to produce evidence to corroborate their own statements or to cross-examine witnesses produced by the commission.

You could not present a balance sheet, you could not bring with you the knowledge you had of the department or of the business, you could not bring with you last year's report, you could not cross-examine a witness who appeared, even if you were allowed to remain in the room. All of the ordinary safeguards which surround a witness who is telling the truth, and all of the tests that are applied to a witness in cross-examination who does not tell the whole truth, were removed. Everything that belongs to the eliciting of testimony known to courts of justice through the development of the English-speaking race for more than a thousand years were absent from this ex parte investigation.

I present but a single instance of a court record relating to Mr. Heney. I will stick to the record with those gentlemen. In the land-fraud cases in Oregon he prosecuted Willard N. Jones, who was convicted in that series of prosecutions. Some others were convicted, and Jones among them. The matter of his conviction was brought to the attention of the Department of Justice. The methods pursued became a matter of investigation. It appeared that in selecting the jurors, Mr. McArthur, who later was speaker of the Oregon House of Representatives, was in the employ of the authorities representing the United States, and that he was given certain directions about how to make up a list of jurors to try Mr. Jones. He came in after a while and resigned, because his self-respect would not permit him to perform what was required.

Attorney General Wickersham, sending a letter to President Taft, said that the methods pursued in selecting the jury were

utterly indefensible. It seems that Mr. Heney, who had charge of the prosecution, sent out and packed a jury. Each juror was interviewed by an officer from the United States attorney's office, and was reported on somewhat as follows:

Strong for conviction.

One was reported:

He will find anybody guilty who is indicted, because what would he be indicted for unless he is guilty?

Another:

Always favors conviction.

With that kind of a jury, Mr. Jones was put on trial, and was convicted. He was convicted just as the packers were convicted in this Federal Trade Commission report. The summary of the Federal Trade Commission could have been written before any ex parte investigation was held by the commission. They knew what they would find. This jury knew before they had any testimony that they would convict Jones. They were brought there for that purpose.

President Taft gave an unconditional pardon to Jones. He said that of all the law's indefensible procedure to which his attention had ever been called in a court of justice that this malversation of the law exceeded anything in his knowledge. That is the record of Mr. Heney's prosecution on the Pacific coast, and I commend that record to the record made by him in the Federal Trade Commission. He had full swing; nobody could control him; no court even, no rule of evidence, no rule of law, statutory or common, restrained him in the wide range of his ex parte activities. The Federal Trade Commission report resulted with all the attendant train of evils I have portrayed.

Therefore, Mr. President, I say that when the chairman of the Federal Trade Commission in Chicago said that if he had been guilty of willfully damaging the export trade of the United States he was a traitor, he has furnished the evidence, which I have furnished here, that he himself is guilty as stated, and this is the basis of the legislation.

The junior Senator from Iowa [Mr. KENYON], presenting this bill, said that if the Federal Trade Commission could not stand, his bill had no foundation; that it was based upon the Federal Trade Commission. The bill has two essential elements, and I shall analyze it no further than to refer to them. One is section 10, already alluded to, which gives the commission created the power to make rules for the conduct of this business. They can tell a packer how he must conduct his packing business, how many animals he may purchase, how he shall slaughter them, where he shall sell them, how the by-products shall be worked up, how much money he may put in the business, how the rate of interest on the investment shall be paid for in dividends, how a packing-house plant shall be conducted. It puts in them the power to interfere with the management of the business. It does everything but guarantee that they will make anything on the investment. That is carefully avoided in the bill, as in all bills of that character.

The other is the licensing feature for all registrants. This is an open and avowed attempt to establish Government aid and protection to public markets, cooperative concerns, and so forth. I have no objection to the development of such marketing organizations, but to enter on a program of paternal fostering of such companies, as a part of a bill which at the same time aims to regulate and restrict and break down private enterprises, seems to me a most drastic socialistic step.

Incidental to this is the fact that all the knowledge gained by the Live Stock Commission may be given out to anybody, all the research, and the activities. All the laboratory work, all the mechanical improvements, all the methods which make a successful packing industry, gathered by anybody through his activity and energy, and the work of a lifetime, shall be taken away from him and spread broadcast among his competitors. What business in the world can stand such governmental interference? What other business is supposed to be handled in that way? What reason is there for it? This legislation is not regulatory; it is punitive in character.

There is one exception, that secret processes and formulæ shall not be divulged. They shall be kept private. How much is that worth, when every Government clerk, when everybody connected with the commission, can have the secret process and formula and can copy it and give it to anybody he pleases?

How much is the Government secrecy worth? Nothing. It means the death of private incentive. It is the end of initiative, of development, and is intended, as the commissioners say, to pull down the great packers and to distribute their business over a large area in small units.

I will tell you why the packers in Chicago have grown great. They have kept pace with the growth of Chicago, and no more. They have grown with the growth of Chicago. Like the packers of Kansas City, they have grown with their city. Like the packing industry in Fort Worth, they have grown with their city, with the possibilities of the cattle market. Men of my generation can remember when the grass animals from the range in Texas were driven north on the northern trail into the North, going there to be put upon northern grass and given grain before they went into the market. That is all changed. Texas has her own packing houses, her own yards, her own industry, and, with the proper degree of pride, the residents of Fort Worth send me letters and telegrams expressing their satisfaction with present conditions.

So it is with every place. The same applies in Jacksonville, Fla. The packing industry grows up where there are facilities for it, and they grow with the live-stock industry, supplying the wants of the producer, and grow with the market in the city, as it advances in its population and commercial and banking resources. That is why the packers of Chicago have grown big, and this report to which I have referred says that the principal danger of the American packers in British territory is because of their wealth and great business ability. If that be an indictment, then have the packers hanged, drawn, and quartered, because they possess that ability. If that be an offense, then let us quit endeavoring to carry American enterprise around the world. I do not belong to that type. I believe we ought to extend our markets.

Here on a falling market, with the glut of live stock in our own country, with our exports dwindled to nothing, with South American trade the only source from which at least one of the great packers can draw anything to pay on his investment, with the farmer and live-stock producer discouraged with low prices, with conditions to prevail next year unknown, with colossal losses taken by every farmer and live-stock producer, with the losses taken by the packers the greatest ever known in any industry in this country, it is not time for experiments of this character.

Mr. President, I stated yesterday that the losses of the five great packers in the shrinkage of inventory values were $25,000,000. That is so conservative that upon communication with statisticians who know markets they tell me that I was far below the truth. One concern alone has suffered as much as that. But a $25,000,000 shrinkage shows the extent of the losses, and on top of that comes the agitation for this bill. It is intended to embarrass, to weaken, to decentralize, to scatter, and to make impossible the business as it is carried on now in both the foreign and domestic trade.

Mr. President, I have concluded my remarks, and I wish to offer a great variety of documents to which I have referred, beginning with those referred to yesterday, and to insert them at length, without reading, in their appropriate places, together with all documents, without going through them and enumerating them, to which I have referred to-day, to have them inserted at length without reading, including the British reports made by committees to the British Parliament.

With this I conclude my observations on the bill for the present.

The PRESIDING OFFICER (Mr. WILLIS in the chair). Is there objection to the request of the Senator from Illinois? The Chair hears none, and the documents referred to will be printed as requested by the Senator.

The matter referred to is as follows:

The PRESIDENT OF THE SENATE and
the SPEAKER, HOUSE OF REPRESENTATIVES,
The Capitol, Washington, D. C.

SIR: The undersigned companies constitute practically a complete roster of the important so-called "small packers" in the United States. We wish to protest to Congress and directly to the American people against the baseless charges of profiteering which are being made against the packing industry in general. We declare to the public and offer to prove that:

(1) The average profit received in the packing industry on a dollar's worth of product sold to the retailer is less than 2 cents.

(2) The rate of profit at this time is considerably less than the figure just mentioned.

(3) The packer's profit adds less than a nickel a week to the meat bill of the average American family.

If these facts are not admitted, we ask that they be denied; if denied, that we have a chance to prove them.

The only fair method of earnings is the profit received on each dollar's worth of product sold. That is what the consumer and the producer wish to know. The slander and baseless denunciation which have been heaped on the packers have seriously injured the meat industry, the farmer, and the live-stock producer and have been severely damaging to the interest of the consumer.

All that we ask of the public is a fair, impartial attitude and judgment based on facts instead of prejudice and misrepresentation toward an essential industry which is serving the people cheaply and well.

SOUTHERN WHOLESALE GROCERS' ASSOCIATION (INC.),
BUREAU OF RESEARCH AND PUBLICITY,
Jacksonville, Fla., July 18, 1919.

KENYON BILL *v.* FOOD TRUST.

To all wholesale grocers:

Throughout the entire Southland the big meat packers, especially Armour and Wilson, are actively trying to arouse opposition to the Kenyon bill. The reason for the meat packers' activity is plain:

1. The Kenyon bill means death to the packers' monopoly. It will end their hopes to establish a food trust.

2. The Kenyon bill would free the wholesale grocers from the unfair advantages in competition which the meat packers get by using their private meat cars for grocery shipments.

3. The Kenyon bill would insure to the retail grocer the continued advantage of being able to buy from competing jobbers, rather than from the big meat packers, whose monopoly power can be used against the retailer at any time.

Every grocer, both wholesaler and retailer, must rally to defend the business of distributing the food products of the Nation against the inroads of the big Chicago meat packers.

Do this by actively supporting the Kenyon bill in the Senate. The Kenyon bill is the one which is most likely to pass. And remember, the Anderson bill in the House is the same as the Kenyon bill.

ACT NOW.

First: Write or telegraph your Senators and Representatives, saying that you want the Kenyon bill in order to prevent the packers from building up a food trust.

Next: Get every retail grocer who is a thinking American citizen to do the same.

Then: Report to the Bureau of Research and Publicity all the evidence you can get showing how the meat packers are bringing pressure on grocers to induce them to oppose the Kenyon bill. Who pays for the telegrams retailers are sending? Do the packers' agents make true statements about the Kenyon bill?

LEWIS H. HANEY,
Director, Bureau of Research and Publicity.

SOUTHERN WHOLESALE GROCERS' ASSOCIATION (INC.),
BUREAU OF RESEARCH AND PUBLICITY,
Jacksonville, Fla., July 18, 1919.

BUREAU OF RESEARCH AND PUBLICITY BULLETIN NO. 5.

To all wholesale grocers:

The following is a full and accurate statement of the contents of the Kenyon bill (S. 2202). Post yourself and act immediately to get the truth before the public with which you are in touch (see suggestions on p. 2).

THE KENYON BILL (S. 2202).

"SEC. 2. 'There shall be appointed by the President, by and with the consent of the Senate, a commissioner of foodstuffs. The commissioner shall, under the supervision and direction of the Secretary of Agriculture, administer and enforce the provisions of this act,' except section 17.

"SEC. 3. Every 'person engaged in the business of slaughtering live stock, or preparing live-stock products for sale, or of marketing live-stock products, as a subsidiary of, or an adjunct to,' the slaughtering of live stock, 'shall secure and hold a license which shall be issued by the Secretary of Agriculture upon application.'

"SEC. 4. The following persons shall also secure licenses: (a) Stockyard operators, (b) commission men handling live stock, (c) publishers of live-stock market quotations, (d) dealers in dairy products and poultry, whose business exceeds $500,000 a year, and who are doing an interstate business.

"SEC. 6. Meat packers, stockyard operators, etc., shall be subject to rules and regulations issued by the Secretary of Agriculture.

"SEC. 7. 'It shall be unlawful for any licensee to engage in any unfair, unjustly discriminatory, or deceptive practice,' or do anything tending to establish monopoly.

"SEC. 7½. 'After two years from the date when this act becomes effective, no licensee under section 3 shall own or control or have any interest in any stockyards.'

"SEC. 8. No meat packers, stockyard operators, etc., shall charge an unreasonable price or rate in commerce in connection with the business licensed.

"SEC. 9. All meat packers, stockyard operators, etc., shall keep proper accounts and records and make reports or returns as required.

"SEC. 13. 'If after hearing Secretary of Agriculture finds that the licensee has violated the provisions of this act, he may suspend the license or may revoke it. * * * An order suspending or revoking a license shall be final and conclusive unless within 30 days the licensee appeals to the circuit court of appeals. * * * If the circuit court of appeals affirms or modifies the action of the Secretary of Agriculture revoking a license, its decree shall enjoin the licensee from further carrying on without a new license the business covered by the revoked license.' When the accused meat packer or stockyard operator, etc., makes no appeal, or is convicted, the court shall appoint a receiver 'to take possession of the property and to continue the licensed business.'

"SEC. 16. The term 'transportation' as used in the interstate commerce act shall be deemed to include refrigerator cars." * * * "It shall be the duty of every common carrier by railroad, subject to the provisions of that act, to provide such cars in number sufficient from time to time, to accommodate the reasonable need therefor."

"No carrier subject to the provisions of such act shall, after the expiration of six months from date of this act, employ in commerce, any refrigerator cars * * * which are not owned or controlled by such carrier, except on the condition that they will be furnished by the carrier to any person making reasonable request for such cars."

Other sections of the act merely provide fines, define terms, judicial proceedings, etc.

THE BILL DOES THREE THINGS.

1. It subjects the meat packers and live-stock dealers to regulation, looking toward reasonable prices.

2. It divorces the packers from ownership of stockyards.

3. It puts the private refrigerator cars of the meat packers on a common carrier business.

WHAT YOU SHOULD DO.

1. Send a strong letter to every customer, urging support of the Kenyon bill (S. 2202) in the interest of all food dealers and consumers.

2. Explain to your salesmen the importance of this bill for the public interest.

3. Write yourself to Senators and Representatives, giving reasons why you want the Kenyon bill passed.

4. Resolutions by local associations, and petitions signed by retailers and others in favor of the bill, will help.

Remember that the reports of the Federal Trade Commission show that the meat-packing industry is an increasing and expanding monopoly. If it is not subjected to strong regulation, the wholesalers will undoubtedly be driven out and the retailers would be forced to deal with a great monopoly. Chairman Colver, of the Federal Trade Commission, recently testified before Congress as follows: "If the present tendency were continued, the wholesale grocery would disappear as an independently operated business in this country in five or six years, and that the retail groceries, as such, that is as independently operated concerns, would just about be due to disappear in 10 or 12 years."

LEWIS H. HANEY,
Director, Bureau of Research and Publicity.

P. S.—It will be easy to get provision (d) of section 4 amended if it seems likely to injure the grocery jobber.

[From the Washington Post, Jan. 21, 1921.]

WHOLESALE SELLING PRICE OF BEEF IN WASHINGTON.

Prices realized on Swift & Co.'s sales of carcass beef on shipments sold out for periods shown below, as published in the newspapers, averaged as follows, showing the tendency of the market:

Week ending:	Average price per hundredweight.
November 27	$16.53
December 4	13.49
December 11	13.50
December 18	15.53
December 24	16.22
January 1	16.63
January 8	17.01
January 15	16.73
Range per hundredweight:	
Low	14.00
High	19.00

SWIFT & CO.,

[From the Observer, Sunday, September 7, 1919.]

OVERSEAS TRUSTS AND BRITISH PRICES—THE REAL SOURCE OF PROFITEERING—"BIG BUSINESS" IN AMERICA.

(By Ignatius Phayre.)

It was shrewdly pointed out in the House of Commons to Sir Auckland Geddes that "you can not control prices unless you control supplies." And, speaking for the Labor Party, Mr. J. M. Thomas made the same point. He brushed aside the petty grabbing of small traders here at home, and laid stress upon the fact that "trusts and combines are the real cause of profiteering."

A moment's reflection shows that this is true, and that all the world is concerned with what Adam Smith called "higgling the markets" for Britain's supplies. Of these, two-thirds came to us from abroad before the war. Four-fifths of our wheat was sea-borne from the ends of the earth, nearly half our meat, and so on with butter, margarine, and other fats.

Lord Ernle reminded the British housewife that she could only feed her family with native produce from Friday night till Monday morning. For the rest of the week she had to look to foreign freights, which other days dropped like manna on our island shores, with the sea lanes safeguarded by our traditional naval power.

Into this perilous dependency we slipped insensibly, eating the cheapest food we had ever eaten—or will eat again. Farming declined as industrialism grew. In 1895, wheat touched the lowest figure it had reached for 150 years, and landlords and tenants were rueing the loss of £800,000 000 on the capital value of land.

As Mr. Prothero put it in the House of Commons: "The furnace and the factory flourished by the ruin of English agriculture." Now, consider the raw materials of that new industry. We import all our copper; between 90 and 95 per cent of lead, zinc, and tin; the whole of our cotton; 80 per cent of our wool; and 80 per cent of our timber. Although we smelt iron in this country, half the iron we use is derived from foreign ores that we import. Therefore it stands to reason that the prime source of profiteering must be looked for overseas, in the lands which produce and send us these commodities.

GOD AND MAMMON.

In all ages Governments have striven for the ideal of St. Thomas Aquinas, to whom lawful commerce meant "a moderate gain" and "the public good." But, as the Roman cynic reminds us, "Quid faciant leges, ubi sola pecunia regnat?" The chariots of gold have always found ways of driving through the laws.

In 1552 we find the Diet of Nuremburg investigating pools and mergers and trusts with all the zeal of President Wilson and his Senate committee to-day. "The thing that has been," says the Seeker of Wisdom, "it is that which shall be." All over the world at this hour, from London to Tokio and from Stockholm to Buenos Aires governmental bodies are probing the tricks of trade and the culprits appear to be very frank.

"Our mill," Mr. Paton, the grain magnate of Sherbrooke, told a cost of living committee in Toronto, "was not built for the glory of God, but to make money for the shareholders." And in Washington Mr. Ogden Armour explained how he had invaded the live-stock industry of Argentina and Uruguay so as to prevent British enterprise from depressing Chicago meat prices.

One Senator pointed out to the packer a profit item of £2,000,000 in the new South American venture and hinted that this was left outside the United States in order that it might escape taxation. Mr. Armour admitted that this was so. Now, America is emphatically the home of big business. For generations her ablest men have avoided politics and public service, devoting all their genius to commerce on a vast scale. And once again the cattle barons are to be prosecuted for secret agreements and restriction of trade.

Their ramifications are already world wide. Five of the Chicago packers had a turnover last year of £643,200,000, and of late they have launched out in hides, vegetable fats, eggs, rice, canned fish, cheese, and dairy produce. Clearly, it is undesirable that massed capital of this kind should have autocratic sway from Sydney to London and from Christiania to the Gran Chaco of Paraguay. Jointly or separately, the Big Five of Chicago hold great interests in 762 other companies, producing or dealing in 775 commodities, from poultry food to banjo strings.

THE FIGHT AGAINST THE TRUSTS.

For 50 years the American Legislature has fought these trusts, alleging "conspiracy," "unlawful monopoly," and "combinations to restrain trade," at the same time "praying for annulment of contracts and dissolution. The Sugar and Steel Trusts have been prosecuted. So have the big lumber concerns, the United States Shoe Machinery Co., and many railroads and shipping lines. The case of the Standard Oil is a classic one. The International Harvester Co., of Chicago, appealed to the Supreme Court against the alleged "acquisition and maintenance of a monopoly in agricultural implements and twine."

There are trusts in all branches, from fresh fish to plumbing supplies. All of them maintain watchful "lobbies" in the Halls of Congress so as to give warning of approaching trouble and to coach (and coax) legislators in the innocence and excellence of their enterprise. Very few people in this country realize the far-flung power of these trans-Atlantic trusts over the food they eat and the clothes they wear. One of them absolutely "owned" the huge State of California (three times as large as England), including even its parliament and judges.

For several years the "law honesty" of American trust magnates was the fluent theme of a "muck-raking" press. All his life Theodore Roosevelt waged implacable war upon such figures as the late Edward Harriman; that misanthropic little man of millions was publicly branded by the President as a "malefactor."

Nearly 30 years ago the Sherman antitrust bill became law; and in 1898 the Supreme Court extended its operations to the railways in their interstate commerce. But America is so vast, and evasion is so easy—thanks to the 48 frontiers and parliaments of as many jealous sovereignties—that trade monopolies continue to flourish, changing like chameleons, and eluding both State and Federal prosecution.

When dissolved as illegal, big business bobbed up elsewhere as a "holding company," a "consolidation"—or even as a "gentlemen's agreement," with nothing in writing at all. Colossal deals are favored, such as the taking over of Cuba's entire sugar crop, which is about 3,000,000 tons. In this way complete control of prices is assured, supplies restricted, and independent buyers frozen out.

THE MEAT TRUST.

The recent report to the President of the Federal Trade Commission plainly shows what a grip the Big Five of the Meat Trust (Swift, Armour, Morris, Cudahy, and Wilson) have upon our chief article of food. They are now international in their activities and are rapidly extending their power to cover fish and every kind of foodstuff. They are great, if silent, factors in cattle-loan companies, banks, and railways, in live-stock journals, in ice, salt, soap, glue, and machinery companies. Besides immense interests in the United States, these cattle lords own or control more than half the meat exports of Argentina, Brazil, and Uruguay. Moreover, they have large holdings in Australia and New Zealand.

The Federal commission allege "a definite and positive conspiracy to control world prices, to manipulate the live-stock markets, restrict international supplies, manipulate dressed meats and other staples, crush competition, secure special privileges at sea and on the rail, as well as from civic authorities everywhere." The Meat Trust now turns its tentacles to groceries, fertilizers, leather, and wool. And the packers' profits are now four times greater than before the war.

It is an American trust which also controls 85 per cent of the machinery used in British boot and shoe factories. These are compelled to sign an agreement which prevents them from benefiting by any new invention, even though it increase production and reduce the costs.

JAMAICA IN THE GRIP.

But the preposterous dominion of American trusts over our food is nowhere more glaringly seen than in the case of Jamaica, whose present poverty is largely due to the grip which the United Fruit Co. of New York has upon it. Our West Indian Isles saw a great chance of prosperity when the banana became popular with us, and cold-storage steamers brought the fruit over on a great scale. But along came the American trust, blanketing the island planters and fixing prices, even for the coster of the London streets. The late Sir Alfred Jones tried to relieve Jamaica by running a line of steamers from Bristol. But the American octopus won the fight, and threw other tentacles over the Caribbean. Fruit growers were so bled that they could only pay low wages. For a bunch of 100 bananas 2s.–2s. 6d. is paid; if there are less than 100 on the bunch, the figure falls to one-half. Hence the malaise in these lovely isles, and the protest of economic slaves, while the United Fruit Co. of New York more than doubles its profits.

Jamaica pays excessive freights for imports to her foreign "owner"; and if she in turn had only received 3s. more a bunch for her bananas in the last decade, the island would be £10,000,000 to the good. Tyrannous trade upon this scale is bound to be bad, despite its plausible pleading. "There can be no question," says the New York Commercial, "that a single group of men should not be permitted to accumulate so much power." The United States Steel Corporation has a capital of £300,000,000 and employs 260,000 men. One member of the Chicago Big Five—J. Ogden Armour—sits in a La Salle Street skyscraper controlling an army 65,000 strong, with an individual turnover of £105,000,000.

This man and his father have many a time taken a hand in the frenzied gambles of the Chicago wheat pit, where the breadstuffs of the world are recklessly juggled with by the million bushels, and that by operators who in many cases do not know a harvester from a plow.

IN OTHER LANDS.

It would seem that greed of gain—like drunkenness—is not to be cured by act of Parliament. Canada has her combines investigation statute, under which criminal proceedings can be taken. Yet last year the Alberta Grain Co., of Calgary, made over 100 per cent profit, and its manager drew £12,000 in salary. One elevator of the United Grain Growers showed 187 per cent. It is impossible to fix the elusive machinery of world trade. Has not a big north of England manufacturer assured Sir Auckland Geddes that "he was perfectly ashamed of the profits he was making"? The poor man had done his best to reduce these to a decent level, but even on the new scale—the president of the board of trade reports—he still "got a profit of £200,000 a year"! Australia's interstate commission, New Zealand's monopoly prevention, and South Africa's meat trades act of 1907 are other well-meaning measures which have had but little practical effect. Whether universal measures are possible through the economic council of the League of Nations remains to be seen.

There is much "secret diplomacy" in these concerns, whether they handle thread or traction. As for those abroad, their tricks are altogether beyond us. How are we to regulate live-stock prices in the meat-food States of the Central West? What control have we over the coffee fazendas of Brazil, the currant vineyards of Greece, which are deliberately destroyed to maintain a good price; the rice fields of Japan, the cotton of Texas, Arizona copper, or our own pit props that were hewn in Siberian forests?

—

[From the Daily Chronical Nov. 8, 1919.]

TRUSTS AND TRADE COMBINES—HOW THE AMERICAN "BIG FIVE" CONTROL OUR MEAT SUPPLY.

[In the second of his short series of articles on the system of trusts and combinations which control in a very large manner the trade of the world, Mr. C. A. McCurdy deals with the Big Five of the American meat trade, against whom proceedings are said to have been initiated by the United States Government for violation of the antitrust laws. As Mr. G. H. Roberts, M. P., the food controller, told the select committee on profiteering the other day that he was practically confined to America for his meat supplies, the operations of the Big Five affect nearly every home in this country.]

(By C. A. McCurdy, K. C., M. P., parliamentary secretary to the ministry of food; chairman of the committee on trusts.)

One of the most interesting examples of a modern trade combination is afforded by the Meat Trust of America, upon whose activities the Federal Trade Commission has recently reported to the President of the United States. From that report it appears that five great packing concerns in North America—Swift, Armour, Morris, Cudahy, and Wilson—have attained such a dominant position that they control at will the market in which they buy their supplies, the market in which they sell their products, and hold the fortunes of their competitors in their hands.

One fact, say the commissioners, stands out with all possible emphasis: "The small dominant group of American meat packers are now international in their activities."

These five corporations, commonly known as the Big Five, not only have a monopolistic control over the American meat industry, but have secured control, similar in purpose if not yet in extent, over the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products, and are rapidly extending their power to cover fish

and nearly every kind of foodstuff. In addition to these immense properties in the United States, the Armour, Swift, Morris, and Wilson interests, either separately or jointly, own or control more than half of the export-meat production of the Argentine, Brazil, and Uruguay, and have large investments in other surplus meat-producing countries, including Australia. Under present shipping conditions the big American packers control more than half of the meat upon which the Allies are dependent.

ALLEGATIONS AGAINST THE TRUST.

The combination among the Big Five is, in the opinion of the Federal Trade Commission, a definite and positive conspiracy for the purpose of regulating purchases of live stock and controlling the price of meat, the terms of the conspiracy being found in certain documents which are in our possession.

The report alleges that—

The power of the Big Five in the United States has been and is being unfairly and illegally used to:

Manipulate live-stock markets;

Restrict interstate and international supplies of foods;

Control the prices of dressed meats and other foods;

Defraud both the producers of food and consumers;

Crush effective competition;

Secure special privileges from railroads, stockyard companies, the municipalities; and

Profiteer.

From meat the American Meat Trust is now extending its activities to all staple groceries, to the grain trade, to fertilizers, and hides, leather, and wool.

England is one of the countries specially favored by their attentions. According to the report of the Federal Trade Commission, it was at meetings held at London in the spring of 1914 that an international meat pool was formed by the Armour, Swift, Morris, and Sulzberger interests, in conspiracy with certain British and South American concerns, to regulate and divide the shipments of beef, mutton, and other meats from South America to the United States and certain foreign countries, particularly England.

It is interesting to learn from the commissioners that the packers' profits in 1917 were more than four times as great as the average year before the European war, although their sales in dollars and cents at even the inflated prices of last year had barely doubled. In the war years 1915–1917 four of the five packers made net profits of $178,000,000. The British public contributed heavily toward those profits.

TRUSTS IN GREAT BRITAIN.

The report of the committee on trusts recently published by the ministry of construction shows the enormous extent to which the creation of trusts and trade combines has already proceeded in Great Britain. It is probably quite safe to say that 80 per cent of our most important industries are now controlled and directed by trade organizations, which effectively, if not always ostensibly, regulate prices either directly or indirectly by the control of output.

Competition as a factor determining prices for the protection of the consumer has to this extent at any rate ceased to exist.

The consumer has to pay a controlled price and not a competitive price, and there is no possible prospect of any return to the days of free competition.

Control of prices is now in operation over a very large part of the commodities in daily use, and it has come to stay. The question is no longer between control on the one hand and freedom of trade on the other.

The only questions are, by whom is control to be exercised, in whose interest, under what safeguards and supervision?

The consumer seems to me to have an unanswerable case when he demands that he shall have some say in the matter.

GOVERNMENT OR TRUST CONTROL?

Government control of prices may be an evil, but it may be a lesser evil than control of prices by one class of the community, by the producer, or the merchant, or the distributer, as the case may be.

And the consumer may feel a little nervous if he reads the report of the committee on trusts when he learns that it is the declared policy of some of the great British trusts to sell dear at home in order to sell cheap abroad. To quote from the report itself:

"There was a general agreement among representatives of associations before us that one of the beneficial results of the formation of associations sufficiently powerful to control and maintain prices in the home market was that it enabled British manufacturers to extend their output by selling their products at a lower price, or even at a loss in foreign markets."

This may or may not be a good policy, but surely the consumer at home ought to have some voice in the matter.

[From the Daily Express, Monday, February 17, 1919.]

AMERICAN MEAT SCANDAL—PROCEEDINGS AGAINST THE PACKERS.

(By J. W. T. Mason, Daily Express correspondent.)

NEW YORK, *Sunday, February 16.*

Mr. Victor Murdock, the member of the Federal Trade Commission who has been investigating the activities of the meat packers on behalf of the Government, has informed the Interstate Commerce Committee of the House of Representatives that the evidence secured by the commission has been turned over to the Department of Justice. He added: "There is no doubt in my mind that the Department of Justice will proceed against them. We ourselves are proceeding, and will proceed with every case we have against the packers."

Mr. Murdock then took up the subject of the international meat pool, and alleged that when the packers answered questions concerning it they answered erroneously. He produced documents showing that the packers agreed to divide the South American business among themselves, and added: "The packers have admitted the main indictment made against them by the Federal Trade Commission—that there is a proportionate division of live stock."

He urged adequate congressional legislation to regulate the packers, and declared that the situation could not be met by compromise and delay. He charged the packers with watching the formation of congressional committees of inquiry, and asserted that when committee vacancies occur the packers make sure that friendly Congressmen are appointed.

The Senate and House Committees which have been investigating the packers' case have now finished their inquiries, and will immediately proceed to draw up bills for submission to Congress.

[From the Times, Monday, January 27, 1919.]

UNITED STATES PACKERS UNDER EXAMINATION—CHICAGO AND SOUTH AMERICAN TRADE.

(From our correspondent.)

WASHINGTON, *January 26.*

The country is watching with deep interest the progress of the duel between the heads of the great packing industries and the congressional committees who are investigating them. Mr. J. Ogden Armour was again examined yesterday—this time by the Senate Committee on Agriculture—while Mr. Louis F. Swift appeared before the Interstate and Foreign Commerce Committee of the House of Representatives. Both men favored some kind of "reasonable regulation" of the packing industry.

Mr. Swift thought that the Government might apply to the industry a system similar to that by which the national banks were supervised. The law of supply and demand, he thought, did not result in fixing satisfactory prices; it involved too many fluctuations. His idea, expressed in vague terms, was that prices should be stabilized. The striking of an average price to extend over a given time would, he said, be better for everybody concerned, consumer as well as producer.

Mr. Armour was questioned concerning the abortive effort made some years ago to merge the Big Five packing houses. He intimated that a monopoly under Government supervision would be the ideal condition. Theoretically, if live-stock men could be taken into the arrangement of such a monopoly it would result in greater efficiency, a vast saving of money, and cheaper prices to the consumer. He admitted that under the present conditions branch managers of packing houses exchanged notes concerning their purchases of stocks.

Senator GORE questioned Mr. Armour closely in regard to the South American establishments, and inquired why, since he had included in his statement capital invested in South America, he had failed to include the $10,000,000 [£2,000,000] profit from that continent in the earnings of his firm. Mr. Armour explained that since 1917 South American profits had not been brought to this country, but reinvested in South America. "If you had declared dividends and brought money to this country it would have been taxed," suggested Senator GORE. Mr. Armour admitted that the suggestion was correct.

An attempt was made to show that Armour went into the South American business to prevent the products of that continent from flooding the United States and forcing prices down. Asked whether, if the South American business had been developed by British packers, they would have been able to compete with Chicago packers in the United States, Mr. Armour said that ultimately the effect of imports from South America would have been to break Chicago prices. He promised the committee to have another statement prepared showing profits in South America.

[From the Pall Mall Gazette, London, England, May 28, 1919.]

FOOD PRICES—SUGGESTION FOR A VIGILANCE COMMISSION.

(By C. A. McCurdy, K. C., M. P., parliamentary secretary to the ministry of food.)

Since last November the cost of food to the average working-class householder in Great Britain has been reduced something like 4s. 9d. per week. The Prime Minister's promise of a reduction by the summer of 4s. has been more than performed, but I am afraid that the British public are unlikely to see any further substantial reduction in the price of food during the present year.

With the conclusion of peace and the consequent raising of the blockade, which for the last five years has shut off the peoples of central Europe from the markets of the world, there is every probability of a temporary shortage of supply and enhancement of world prices in many essential commodities. If peace is to be concluded in anything but name, the inhabitants of enemy countries must, of course, be given some of the privileges of peace, and their competition will undoubtedly tend to our disadvantage in the quest for raw materials and foodstuffs.

POSITION OF THE CONSUMER.

At the same time the elaborate system of control built up by the ministry of food for the purposes of the war is being gradually demobilized. The international pools created among the Allies for the purchase and distribution of foodstuffs are ceasing to operate, the British Government is gradually going out of business as a provision merchant, and the feeding of Great Britain is once more being intrusted to the great business firms and the hosts of smaller traders who kept us fed in the days before the Great War.

The clogs and fetters of control are being removed in accordance with the wishes of the business community, but it would, however, be a mistake to suppose that by any removal of war-time restrictions we can get back to the level of prices which prevailed before the war. For one thing, the changed value of money and the marked tendency to increased industrial wages to cover the increased cost of living make it very unlikely that we shall find ourselves at the old level of prices for many years to come, and we have yet to discover the practical effect upon the British trader and the British consumer of the great increase in trade combinations and trusts having for their purpose the maintenance of prices—or the actual raising of prices to the consumer—which has come about during the war.

Those who desire information upon the growth of trusts in this country and abroad in the last few years should procure the report of the committee on trusts, over which I had the honor to preside. It was published by order of the minister of reconstruction a few days ago. (Report of Committee on Trusts, Cd. 9236.) It contains some interesting references to the operations of the American Meat Trust, which has secured monopolistic control not only over the American meat industry but over all the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products, and is rapidly extending its activities to cover fish and nearly every kind of foodstuff.

"THE BIG FIVE."

During the period of the war the British Government and the Government of the United States of America have stood as a buffer between the operations of the Meat Trust and the British consumer and producer. One of the problems of the immediate future will be to find some method by which the consumer may be safeguarded in times of peace against the operations of trade combinations of this kind. The Federal Commission of the United States of America, in their recent report upon the activities of the Meat Trust, allege that the power of the Big Five—the five great corporations of packers which dominate the trust—is used "to control the prices of meats and other foods, to re-

strict international supplies of foods, to defraud both the producers of food and the consumers, to crush effective competition, and to profiteer." This is a very formidable indictment, not calculated to inspire confidence in the minds of British consumers as to the cost of food prices when peace is finally restored, and the free play of economic factors, including the existence of Meat Trust and profiteers, is once more allowed to settle the prices of all the necessaries of life.

The committee on trusts has recommended that a permanent commission shall be created in this country to act as a watchdog for the public, to investigate grievances, to report on abuses, and to suggest remedies. The consumers' council in this country have suggested that one of those remedies should be the permanent retention of the ministry of food, charged with securing all necessary supplies for the British public at the lowest possible price. It is very unlikely that a ministry created purely for the purposes of war will be so retained, but there can be no doubt that in the task of safeguarding the public from profiteering in times of war the ministry of food have gained experience and discovered methods of control which may be of permanent value in times of peace.

—

[From the Mail, London, May 21, 1919.]

BRITISH TRUSTS—£33,000,000 ELECTRIC WORKS COMBINE.

The report of the committee on trusts and combines, appointed last year, was published yesterday by the ministry of reconstruction. Its main conclusions and recommendations were published in the Daily Mail a fortnight ago.

The committee, as already reported, recommends the establishment of a "tribunal of investigation" for promptly dealing with abuses which come to light.

When it is proved that acts injurious to public interest have been committed the board of trade shall make recommendations as to State action for the remedying of grievances.

Referring to the vast increase of trusts and combines, the committee state that the combinations range from periodical meetings of coal merchants for fixing prices to associations with capital in millions. In the electric industries there is an association with a capital of £33,000,000. They also quote Messrs. Coats (Ltd.) with £10,000,000, and the United States Steel Corporation, with £369,000,000 capital.

£35,600,000 MEAT PROFITS.

As an illustration of the effect of a trade combination in one industry affecting both this country and America, the committee refer to the report of the Federal Trade Commissioner on the meat-packing industry, issued at Washington in 1918, in which information is given of the activity of the Meat Trust, or the "Big Five," practically the only source from which the Allies could obtain supplies.

"The power of the Big Five in the United States," stated the report, "has been and is being unfairly and illegally used to—

"Manipulate live-stock markets;
"Restrict interstate and international supplies of food;
"Control the prices of dressed meats and other foods;
"Defraud both the producers of food and consumers;
"Crush effective competition;
"Secure special privileges from railroads, stockyard companies, and municipalities; and
"Profiteer.

"The packers' profits in 1917 were more than four times as great as in the average year before the European war."

—

[From the Mail, London, England, May 7, 1919.]

BRITISH TRUSTS—INVESTIGATION TRIBUNAL.

(From a special correspondent.)

The ministry of reconstruction committee appointed in 1918 to consider what steps may be necessary to safeguard the public against great combinations of capital, as mentioned in the Daily Mail yesterday, recommends the establishment of State machinery similar to that existing in the United States and some of the British Dominions for the rigid investigation of "monopolies, trusts, and combines."

Although they have not been found to be guilty of offenses against the public good, the committee foresees the imminent probability that British trade combines may become a public danger if not carefully watched. To this end it is proposed, in the first instance, to establish a "tribunal of investigation." Eventually legal machinery should be created for promptly and effectively dealing with such abuses as come to light.

British "trusts," the report declares, have vastly increased during the war. In the iron and steel industry alone there are 35 combinations, divided into such branches as pig iron, steel, rolled products, steel castings, iron, forgings, bar iron, and miscellaneous. The ministry of munitions found itself compelled to do business with no fewer than 94 separate combinations, including organizations like the "Tinfoil Association," the "Brass Rod Association," the "Cotton-Duck Manufacture Association," the "United Kingdom Rosin Importers' Association," and the "Sulphate of Ammonia Association." Practically every product included in the term "munitions" was controlled by a combine of dealers or manufacturers. The report explains, however, that in general the Government was not the sufferer.

MEAT "BIG FIVE."

A special section of the report deals with the "American Meat Trust," but it consists almost entirely of references to the "Big Five" (Chicago packers) in the United States Federal Trade Commission's report of July, 1918. This report alleged that the "Big Five" possessed a monopoly of practically the entire food supply of the United States. The American report affirmed that "under present shipping conditions the big American packers control more than half of the meat upon which the Allies are dependent."

The committee is of opinion that considerable mistrust prevails in the public mind concerning the activities of industrial combines in the United Kingdom. It is declared that this mistrust undoubtedly contains the seeds of possible social and political danger to the State, whether well founded or not. The committee is therefore unreservedly of the view that ways and means should be adopted for full investigation and for remedial action in cases of proved necessity.

The report is now in the hands of the ministry of reconstruction, and will presumably be submitted to Parliament in due course.

[From the Star, Thursday, February 6, 1919.]

POWER OF THE "BIG FIVE."—"FOOD MINISTRY UNDER THUMB," SAYS MR. TERRETT.

The allegations of Mr. Harry Moss, of the Islington abattoirs, as to the bad quality of the "boneless beef" which reaches London under the auspices of the food ministry, are supported by Mr. Joe Terrett, who writes:

"Will Thorne, M. P., brought up a case in Parliament last summer in which the ministry had tried to force this stuff on the butchers of Southport. An evasive answer was given to the definite charge that the glands had been removed to avoid examination for tuberculosis.

"The food ministry have repeatedly tried to force upon the public goods for which any private butcher would deservedly get a month's hard labor.

TRADE "DISGUSTED."

"No wonder the meat trade is utterly disgusted, for they are made to work not for themselves, but for the 'Big Five,' who have got the food ministry completely under their thumb.

"Could there be anything more shameful than the way in which the Government allowed Chicago to bulldoze it over feeding stuffs for the cottagers' pigs? Lord Ernle had a pig campaign. 'Don't walk a puppy—walk a pig,' he said, and the public responded, mostly workmen.

"Nothing expands like the pig stock, and we were on for a couple of million increase at a jump. Then the thunderbolt fell—no feeding stuffs.

"BIG FIVE" AT WORK.

"Why? Shipping shortage? Not a bit of it. We were actually refusing interned German tonnage offered by the Brazilian Government, and which would admirably have served to bring Argentine maize for the pigs.

"The 'Big Five' had been to work, diplomatically no doubt, but very effectively. Probably the old, old pistol, which has been cocked so often, was brought into play again—the Allied Armies' beef supply from Argentina. That has been the everlasting trump card of Chicago, and invariably the Government has capitulated.

"So the cottagers were told to kill their pigs. Yet if in 1915 they had stood up to Chicago they could have smashed it into submission. Now we are its slaves and our food ministers are willing to scrap every public health statute in its interest.

AMERICAN GOODS.

"Who, may I ask, were the owners of the 925 cases of condensed milk which recently were detained by the port medical officer of Salford Docks? They were American goods, and despite their condemnation by Dr. Dearden were sent by the ministry of food to a firm of coffee makers, who fortunately were honest men and rejected them.

"It took six weeks' strenuous fighting to stop the bureaucrats from dumping tuberculous and dropsical cow beef in London 12 months ago. Apparently they care for nothing but their salaries."

—

[From the Standard, London, England, May 23, 1919.]

WORLD FOOD CRISIS—ALLIES AND THE GREAT TRUST MENACE—CONTROL REVIVAL—MR. MCCURDY'S HINT OF SWIFT COUNTER MEASURES.

A halt has been called on the demobilization of the ministry of food both in London and in Paris. The Evening Standard is informed on good authority that the process of decontrol will be slowed down in the case of some foodstuffs, and that it is more than likely that control will be reestablished on others.

Not only in the United Kingdom but throughout the world the food position is occasioning the gravest anxiety. At the same time, we have it on the authority of Mr. H. M. Hyndman, the veteran Socialist leader, that the great American food trusts, using their immense pecuniary resources, are purchasing essential foodstuffs all over the world, even in our own colonies.

What will be the effect of these international factors on prices and supplies during the coming winter?

Mr. Charles A. McCurdy, M. P., of the ministry of food, and recently chairman of the committee on trusts—than whom none is more competent to speak on this subject—discussing the position to-day with an Evening Standard representative, said:

THE "FREED" FOOD CRY.

"When I came to the ministry of food some three months ago the cry of the public everywhere was for decontrol. It has been one of the primary duties of the ministry to decontrol as far as possible. In my view we may have gone too fast.

"Now we are faced with a very serious position. We decontrolled bacon, for instance. We were told we had big stocks, that we ought to let them loose on the markets, and that we were only keeping them to prevent loss to the exchequer.

"Well, we decontrolled bacon. To-day it is practically impossible for the working classes to get bacon, and wherever procurable it is at a very high price.

"Again, we decontrolled margarine. We were urged on all sides to disperse our stocks. In a large measure we obeyed this public mandate. What is the outlook now that we have done this? Simply that it is certain that the price of margarine is rising, and will continue to rise, and the public must be prepared to pay more.

"My point is that the Government and the public must make up their minds as to which of two policies shall be pursued. You can not have a policy of control and decontrol at the same time.

WHAT THE PEACE MEANS.

"There is just the same confusion of thought about the peace. There is a general desire, a very natural desire, that the process of peace should be hastened. What does it mean, however? Simply the opening of the markets of the world, international competition in the food markets, raising the blockade, and a general rise in prices. The public does not quite see that result with accurate vision.

"Those who have not closely followed the subject appear to see in the Paris economic resolutions some sort of protection for the Allies. Those resolutions, without any disrespect to those who did such good work in framing them, have now become very nearly obsolete in the face of the changed international position in central Europe and the practical annihilation of Austria and Hungary as nations. They have to be reconsidered in the light of a new 'series' of European nations which at the time of their framing no one could accurately foresee.

THE BIG FIVE.

"During the war the Allied Governments have been very closely associated for the buying and distribution of foodstuffs. The American Government has been one of the biggest purchasers from the 'packers.'

"Unless something is done—and it may be done—if this association of the Allies is broken with the signature of peace we have the fact at once that the comparatively helpless and unorganized wholesale and retail dealers of the world are pitted against the highly organized Food Trust of America.

"This food question is an international one. It is just the kind of question that the League of Nations, were it in being, might well tackle, but its machinery will not be ready in time. The whole world wants food and it can not starve while the league is getting into its stride.

IN THE HANDS OF TRUSTS.

"To face the position, it appears absolutely necessary that control, national and international, shall be maintained. We are in the hands largely of these American trusts. The 'Big Five' in the United States has been and is unfairly manipulating live-stock markets, restricting international supplies, controlling the prices of dressed meats, crushing effective competition, and profiteering on a great scale.

"This is an international as well as a national question. The United States is equally alive to the danger, as is evidenced by the report of the Federal Trade Commission on the meat-packing industry, which our own committee on trusts has placed on record. The 'Big Five' or 'the packers' not only have a monopolistic control over the American meat industry, but have secured control, similar in purpose if not yet in extent, over the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products. They are rapidly extending their power to cover fish and every kind of foodstuff.

"That is to say, they have a grip on a large part of the essential foodstuffs of the people of the world.

"With the quotation from the Federal Commission report: 'The combination among the Big Five is not a casual agreement brought about by indirect and obscure methods, but a definite and positive conspiracy for the purpose of regulating purchases of live stock and controlling the price of meat.' I need not emphasize the danger further.

"The most stringent surveillance of such trusts and combinations which affect the most vital needs of the people ought to be established.

"Mr. Hyndman is quite accurate in his statement that these trusts are buying up essential foodstuffs in our own colonies.

"Unless the allied Governments do take a strong line on the general international food question it is difficult accurately to forecast the grave results which must ensue both in the United Kingdom and in other countries during the coming winter.

"Speaking quite generally, it may be taken that the ministry of food here, the Government, and the allied Governments are awake to it, and it will be surprising indeed if some definite policy of meeting the situation is not adopted shall we say, 'before long?'"

—

[From the Evening Standard, Wednesday, July 30, 1919.]

AMERICA'S AMAZING PROSPERITY—THE FLY IN THE OINTMENT: CAPTURING LATIN-AMERICAN TRADE.

(From Sir John Foster Fraser, our special correspondent in the United States.)

The material prosperity of America is positively amazing. Everywhere is evidence of rampant wealth. America looks with a commiserating eye on Europe and is inclined to thank the Lord it is not as other countries.

I am writing from the State of Iowa, probably the richest and most productive area in the world. Wherever I go the corn crops are flourishing and the farmer is chuckling over the high prices he gets for his hogs. There is a land boom; it is spreading into Minnesota, and will probably reach Canada. Land is now selling at $300 an acre, which is about twice as much as it fetched in prewar days.

The direct cause is the war in Europe, the defective harvests on your side of the world, the barrenness of the wheat regions of southern Russia, the difficulty to secure freightage to bring foodstuffs from Argentina, Australia, and other parts of the world.

A LAND BOOM.

Shortage in Europe has meant high prices for land in America. The speculators are busy. Farms are bought and sold and rebought, and one hears stories of speculators picking up $100,000 in 10 days. But I gather from some of the agricultural bankers that prices are top-heavy. Though the prices for foodstuffs are high, the mortgages are leaving the farmers no better off than they were before.

Cost of necessaries of life is still climbing. There used to be an agitation for a paper half dollar. "Now we've got it," says the American, meaning that for a dollar to-day you can only purchase what 50 cents would buy five years ago. The wages of the workingman have gone up, but they have not kept pace with the increased cost of living, so that, on balance, the worker is not so well off as he was formerly.

DISPOSAL OF WAR STORES.

The United States Government had accumulated enormous quantities of tinned foods to be shipped to the soldiers overseas. These foods are now being disposed of. Chicago, shouting for cheaper food, has had a city food commission to deal with the selling of Government meat and other articles.

The Government has £5,000,000 of surplus meats in storage in and near Chicago. These meats are in 6 and 12 pound tins, and consist mainly of bacon, roast beef, and corned-beef hash. When bids were invited the best bids came from the packing houses which had supplied the meats, and they offered just 25 per cent of the prices the Government had paid them.

Yet the tendency of the good-natured American is to grumble, denounce, declare the profiteers ought to be imprisoned—and yet do nothing. Behind the complaints is a kind of admiration for the man who can exploit the public and "get away with it."

And what carries the American over many a jarring inconvenience is the knowledge that circumstances provide that all the rest of the world must be largely dependent on the United States for years to come. Representatives of the great trading and manufacturing corporations are touring Europe looking for business developments. Because Europe is in industrial chaos is all the more reason why the Americans should get busy.

EYES ON SOUTH AMERICA.

Commercial men are especially directing their thoughts to South America. Before the war Germany in Brazil and Great Britain in Argentina and in the west coast Republics had it very much their own way in commerce. Then the route from New York to Buenos Aires was via Southampton. Now, the United States is determined to alter all that.

The war has given America an easier opportunity to spring in and get the South American trade. But the southern Republics have long been rather politically suspicious of the "North Americans," as they call the people of the United States. America is now making itself most agreeable to the countries south of Panama. There has been a Pan-American Commercial Conference at Washington, and the slogan was "America first."

Many business men are sure that it is in this direction rather than in Europe where the "dough" is to be found. It is thought that in view of Europe's heavy indebtedness, the unfavorable exchange market, and the necessity to find work for the unemployed in Europe there will be a limitation of American imports into Europe. Uncertain factors in trading with Europe are absent in commercial relations with South America. The United States sees its opportunity, and is going ahead with energy.

ATTACKS ON PACKERS IMPERIL OUR INDUSTRIES, SAYS MCCANN—DECLARES ENGLISH BROKERS AND MIDDLEMEN FIND BEST ANTI-AMERICAN PROPAGANDA MADE FOR THEM BY RECKLESS SENATORIAL EFFUSIONS ON "OLD STUFF."

(By Alfred W. McCann.)

ST. LOUIS, *July 25.*

The accusation of Senator KENYON, of Iowa, to the effect that the packers are fighting the Kenyon and Kendrick bills for Federal regulation of the packing industry is amusing, but not astonishing.

His assertion that "the packers are engaged in a propaganda to manufacture public opinion, the like of which has never before been seen in this country," is true. I, who have consistently and persistently fought the packers in courts and out of them, over a period of many years, can hardly be accused of undue friendship in their behalf. Certainly I will not be called a packer propagandist by Senator KENYON.

But it would be amazing, indeed, if the packers did not attempt to meet the KENYON propaganda by a brand of their own, for in these hours of Washington hysteria the packer baiters have become, without knowing it, propagandists of the worst type. Their activities are already damaging American industry beyond the power of constructive legislation to make repairs.

WORLD-WIDE RESULTS.

Every time a senatorial orator attacks the packers the cables at once carry the "news" to all the British dominions, as well as to the South American Republics.

Within 72 hours of an antipacker demonstration in Congress the newspapers of Brazil, Uruguay, Argentina, Australia, New Zealand, and England blaze with reports of the iniquity and rapacity of American business.

It is this sort of propaganda which the speeches of Senators and Representatives are so ably carrying on in the interest of a large group of English brokerage concerns, who are now seeking to destroy the American meat industry in South America and to close the European markets against Chicago, Kansas City, Omaha, and East St. Louis.

Throughout the war every American newspaper report blackening the reputation of the American packers was cabled to the London press, even though other more urgent messages were obliged to wait for days and even weeks.

AMERICAN SYSTEM ATTACKED.

When recently Commissioner Colver, of the Federal Trade Board, went to England he reopened the London newspaper attack upon the American system of direct distribution from meat producer to consumer. His visit to London merely revived the antipacker propaganda that so well serves the British and Dominion brokers in their efforts to provoke hostility against the packers.

I have hundreds of clippings from the British press showing how skillfully the antipacker propaganda has been carried on in South America and the dominions and how foolishly the American politicians have played into the hands of the British brokers.

Already so violent has become the sentiment of New Zealand against the American meat industry that the New Zealand Government, bold to an extremity not realized in America, has actually confiscated the New Zealand plants of Armour & Co. The same sort of anti-American legislation in Australia and the United Kingdom is actually expected by the packers, and if American politicans continue to give the British broker propagandists the sort of ammunition they are now providing there is little doubt that England and Australia will follow the example set by New Zealand.

REASON FOR THE PROPAGANDA.

Why should any such high-handed program be contemplated in those countries, you ask. For the simple reason that the American packers, grave as have been the charges against them, have revolutionized the system of meat production and distribution wherever they have gone. During the war, for instance, the British Government commandeered all the meat of New Zealand and Australia, paying the farmer at the rate of 9 cents a pound for the dressed product.

This 9-cent meat was then sold by the favored British brokers at 18 cents a pound. The producer did not get the money, neither did the consumer. The brokers, who render no service either in production or distribution, pocketed the coin.

In Argentina, where British control could not be enforced, American competition compelled the British brokers to pay the producer all the way up to 18 cents a pound, not for dressed meat but for live stock on the hoof. This high-priced meat had to be sold in England just as cheaply as the 9-cent meat, but it did not allow the leeching, parasitical brokers a rake-off.

BRITISH SYSTEM THREATENED.

If the American system of direct buying from the farmer and direct distribution from the slaughterhouses is permitted to continue unmolested throughout the United Kingdom, it simply means that the old British system of middlemen brokerages will be abolished.

It is to save the plums by developing enmity against the American system that the propaganda agents of these threatened British brokers are now so active in spreading any and every story discreditable to the American way of doing business.

Heretofore no man dealing in meats in the United Kingdom could buy a live animal on the hoof without paying a purchasing broker's rake off. This was followed by the payment of a slaughtering broker's

rake off. The slaughterer could ship direct. He had to employ a transportation broker and pay a transportation brokerage rake off.

These operations necessitated financing and a financial broker had to be paid. The former did not receive his money until the dressed product was actually sold in the English market and then the collection broker had to get his rake off.

KNOCKS OUT MIDDLEMEN.

All these sets of middlemen have been abolished by the American system, which pays the farmer the moment the live animal leaves his hands, and then slaughters, finances, ships, collects direct to the exclusion of scores of middlemen, whose only function is to make compulsory jobs for themselves, out of which they collect revenue they do not earn.

It is high time that foolish politicians who make wild charges, without proving them, should begin to understand that every time they open their mouths in a manner that casts odium upon any American industry their words are taken up and flashed around the world to the detriment of American trade.

These same politicians know, or ought to know, that after the signing of the armistice no mail came from South America to the United States for three months.

SET-BACK SUFFERED ALREADY.

American industry with South American connections was thus forced out of touch with South American trade, while European agents, whose mail service was uninterrupted throughout were busy making hay.

Why, then, should Messrs. KENYON and KENDRICK blow their official trumpets with such fierce energy when they must know that with every blast an effort is made to drive another nail into what is hoped may be an American coffin?

Nor are the American packers alone affected by this silly propaganda, but every other form of American industry is actually threatened by it. The impression is being created that Americans are all crooks, looters, despoilers, brigands.

It is a European characteristic to accept without challenge any statement given out by a Government department. Any such statement possesses a dignity and finality that disarms scrutiny. The people of Europe, South America, and the British dominions believe, without question, the publicly reported utterances of perspiring politicians solely because they are members of a government body such as the Federal Trade Commission, or hold important public positions as Representatives of the people at Washington.

Yet the charges against the packers have never been tried in a court, no indictments have been returned against them. Their sins have been many, but the stuff now being published in the British and foreign press at their expense has been dug up from tombs long closed. I was one of the examiners of the Federal Trade Commission, and it makes me laugh to see instances that became history 12 years ago resurrected by Messrs. KENYON and KENDRICK, and reported in Europe as if they occurred yesterday.

I would say that if the packers did not attempt to meet the Kenyon-Kendrick propaganda by propaganda of their own they would not only be un-American, but insane. These comments, it is needless to say, will not be cabled to Europe, Australia, or South America.

UNITED STATES CANNERS' MONOPOLY—574 CONTROLLED FIRMS.

WASHINGTON, *Friday.*

The Federal Trade Commission, after a thorough investigation of the meat-packing industry, has forwarded a preliminary report to President Wilson, which declares that the approaching control by the packing companies of all important foodstuffs in the United States and their international control of meat products will become a certainty unless strong action is taken to prevent it. The report alleges that five great packing companies—the Swift, Armour, Wilson, Morris, and Cudahy companies—control jointly or separately 574 companies; that they have a minority interest in 95 others and an undetermined interest in 93 more, producing or selling 775 commodities, largely foodstuffs.

Commenting on the packers' interest in leather, fertilizers, cottonseed oil, and grain foods, the report declares: "The reason why the packers are seeking to secure the control of meat substitutes is that if the prices of these substitutes are once brought under their control, the consumer will have nothing to gain by turning to them for relief from the excessive meat prices." The five packing companies, the report asserts, handle at least half of the poultry, eggs, and cheese in interstate commerce, and control or are associated with 17 meat companies in South America.—Reuter.

[From the London Daily Mail, Sept. 8, 1919.]

UNITED STATES TUBE FIGHTS—NEW YORK HAS TO WALK.

(From our own correspondent.)

NEW YORK, *Thursday.*

One aspect of the present labor situation in the United States is furnished by the strike of the underground and tramway car men of Brooklyn, which is now in its third day. The men demand recognition of their union, an 8-hour day, and an increase of 25 per cent in wages, all of which so far the Brooklyn Rapid Transit Co. has refused to consider.

The result is that scenes are taking place in New York and Brooklyn exactly like those seen in London during the tube strike last spring. During the rush hour yesterday morning the company was able to run a good service, but during the day the attitude of the strikers grew more and more menacing. Finally, after the protection afforded by stationing two policemen on every tramway car and several in each underground train had proved inadequate the service was entirely suspended. Tens of thousands of business people were obliged to walk long distances from home across Brooklyn Bridge, which is itself a mile and a half long, or else to sleep in Manhattan (the New York side of East River).

This morning the service had not been restored, and hundreds of people traveled to work in Army motor lorries, taxicabs, and tradesmen's carts. The strikers' mood continues to be threatening.

Yesterday they beat and more or less seriously injured several loyal drivers and policemen. Flying squadrons in motor lorries attacked the cars in the streets, partly wrecking them. To-day 40,000 police will be on duty to try to protect the loyal employees. The men have greeted this news with the threat of a sympathetic strike of tramway car men in Manhattan.

MEAT TRUST PROSECUTED—MR. WILSON'S REPLY TO DEAR FOOD PROTESTS.

President Wilson has arranged to address both Houses of Congress in joint session to-morrow on remedies for the high cost of living.

In the meantime Mr. Palmer, the Attorney General, has ordered the initiation of legal proceedings against the "Big Five" (the heads of the principal meat-packing firms) for violating the antitrust law. He has further directed his officers throughout the country to abandon all other activities and concentrate their attention upon finding and prosecuting food hoarders and profiteers.

The action against the meat packers is based on the report of the Federal Trade Commission, which, after an exhaustive inquiry, finds that they have established a practical monopoly of food products. The commission declares that the packers—

Dominate the stockyards,
Control prices by agreement,
Discriminate against independent buyers, and
Restrict the meat supply of the Nation by manipulation.

The prosecution of the packers is the most spectacular reaction on the part of the Government to the outcry against the high cost of living and the demand of workmen for vastly increased wages.

But to-day there are many revelations concerning the extent to which the necessary supplies are being hoarded. Manipulation in the leather market was exposed yesterday.

From farmer to retail shopkeeper it was shown that excessive profits had been added to the cost of leather at every stage of its manufacture and sale, until to-day boots cost three or four times the price asked before the war.

At yesterday's hearing in Washington it was pointed out that the cost of food alone had risen 16 per cent since last year and 83 per cent since 1913. Wages generally at the same time have increased 37 per cent. This is a conservative statement. It takes no account of the prices demanded by profiteers.

HOARDING AND HIGH PRICES.

Newspapers to-day all tell the railway employees no amount of wage increases will have any effect on the cost of living unless production is increased. But the effect of their remarks as regards production is somewhat diminished by a remarkable statement issued this afternoon by the Federal Trade Commission that the law of supply and demand has to-day much less to do with the rise in prices than is supposed. The statement shows that the stocks of foodstuffs on hand to-day are far higher than those a year ago, when the most inordinate demands were being made upon them by the armies and civilian populations of Europe. Yet prices are higher.

The commission roundly asserts that provisions are being held in cold storage by speculators for still higher prices. One instance will suffice to illustrate the significance of the report. It states that there is to-day in stock 179,100,000 pounds of canned tomatoes against 88,500,000 pounds last year. But since December none has been placed upon the market.

REVELATIONS PROMISED.

WASHINGTON, *Thursday.*

In support of labor's plan for Government ownership of the railways, with profit-sharing for the workers, Mr. Glenn E. Plumb, the Chicago lawyer, its formulator, announces that 14 railway trade-unions had summoned a conference at Washington to present to the United States people and Congress information showing that there has been systematized plundering on the transportation highways by certain financial interests.

Mr. Plumb promises revelations proving that the same interests had been seeking to obtain secret control of railway properties.—Reuter.

NEW YORK POLICE RESTIVE.

NEW YORK, *Thursday.*

The New York policemen have applied for membership in the American Federation of Labor. When their union is formed they intend to demand a minimum wage of £360 a year, and threaten to strike for it.—Wireless Press.

—

[From the Daily Dispatch, May 23, 1919.]

BRITAIN'S FOOD IN GRIP OF UNITED STATES TRUSTS—PRICES MAY SOAR STILL HIGHER AFTER PEACE—BACK TO CONTROL—AMERICANS BUYING EMPIRE SUPPLIES.

The food position is occasioning such grave anxiety that a halt has been called on the demobilization of the ministry of food both in London and in Paris.

The Daily Dispatch is informed on good authority that the process of decontrol will be slowed down in the case of some foodstuffs, and that it is more than likely that control will be reestablished on others.

The great peril is that when peace is signed the American Meat Trust, which has now spread its tentacles to meat substitutes, such as cheese and eggs, and is operating not only in America but in the British Empire, will use the great demand from Germany and neutral countries as a lever to force up prices.

Mr. Charles A. McCurdy, M. P., of the ministry of food and recently chairman of the committee on trusts, discussing the position yesterday with a Daily Dispatch representative, said:

"When I came to the ministry of food some three months ago the cry of the public everywhere was for decontrol. It has been one of the primary duties of the ministry to decontrol as far as possible. In my view we may have gone too fast.

"Now, we are faced with a very serious position. We decontroled bacon, for instance. We were told we had big stocks; that we ought to let them loose on the markets; and that we were only keeping them to prevent loss to the exchequer. We decontroled bacon. To-day it is practically impossible for the working classes to get bacon, and wherever procurable it is at a very high price.

"Again, we decontroled margarine. We were urged on all sides to disperse our stocks. In a large measure we obeyed this public mandate. What is the outlook now that we have done this? Simply that it is certain that the price of margarine is rising, and will continue to rise, and the public must be prepared to pay more.

"My point is that the Government and the public must make up their minds as to which of two policies shall be pursued. You can not have a policy of control and decontrol at the same time.

"WHAT PEACE WILL MEAN.

"There is just the same confusion of thought about the peace. There is a general desire—a very natural desire—that the process of peace should be hastened. What does it mean, however? Simply the

opening of the markets of the world, international competition in the food markets, raising the blockade, and a general rise in prices. The public does not quite see that result with accurate vision.

"During the war the allied Governments have been very closely associated for the buying and distribution of foodstuffs. The American Government has been one of the biggest purchasers from the packers. Unless something is done—and it may be done—when this association of the Allies is broken with the signature of peace we have the fact at once that the comparatively helpless and unorganized wholesale and retail dealers of the world are pitted against the highly organized food trusts of America.

"To face the position it appears absolutely necessary that control, national and international, shall be maintained. We are in the hands largely of these American trusts. The Big Five in the United States have been and are unfairly manipulating live-stock markets, restricting international supplies, controlling the prices of dressed meats, crushing effective competition, profiteering on a great scale.

CORNERING ALL FOODSTUFFS.

"This is an international as well as a national question. The United States is equally alive to the danger, as is evidenced by the report of the Federal Trade Commission on the meat-packing industry which our own committee on trusts has placed on record. The Big Five of the packers not only have a monopolistic control over the American meat industry but have secured control similar in purpose, if not yet in extent, over the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products. They are rapidly extending their power to cover fish and every kind of foodstuff.

"That is to say, they have a grip on a large part of the essential foodstuffs of the people of the world. The most stringent surveillance of such trusts and combinations which affect the most vital needs of the people ought to be established.

"Mr. Hyndman is quite accurate in his statement that these trusts are buying up essential foodstuffs in our own colonies. Unless the allied Governments do take a strong line on the general international food question it is difficult accurately to forecast the grave results which must ensue both in the United Kingdom and in other countries during the coming winter."

The ministry of food here, the Government, and the allied Governments are awake to the position, Mr. McCurdy added, and it would be surprising, indeed, if some definite policy of meeting the situation was not adopted before long.

—

[From the Hull Daily Mail, November 8, 1919.]

FIGHTING TRUSTS—START OF THE CAMPAIGN.

(By C. A. McCurdy, K. C., M. P., parliamentary secretary to the ministry of food; chairman of the committee on trusts.)

One of the most interesting examples of a modern trade combination is afforded by the Meat Trust of America, upon whose activities the Federal Trade Commission has recently reported to the President of the United States. From that report it appears that five great packing concerns in North America—Swift, Armour, Morris, Cudahy, and Wilson—have attained such a dominant position that they control at will the market in which they buy their supplies and the market in which they sell their products, and hold the fortunes of their competitors in their hands.

One fact, says the commissioners, stands out with all possible emphasis: "The small dominant group of American meat packers are now international in their activities."

"THE BIG FIVE."

These five corporations, commonly known as "the Big Five," not only have a monopolistic control over the American meat industry but have secured control, similar in purpose if not yet in extent, over the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products, and are rapidly extending their power to cover fish and nearly every kind of foodstuff. In addition to these immense properties in the United States, the Armour, Swift, Morris, and Wilson interests, either separately or jointly, own and control more than half of the export-meat production of the Argentine, Brazil, and Uruguay, and have large investments in other surplus meat-producing countries, including Australia. Under present shipping conditions the big American packers control more than half of the meat upon which the Allies are dependent.

The combination among the Big Five is, in the opinion of the Federal Trade Commission, a definite and positive conspiracy for the purpose of regulating purchases of live stock and controlling the price of meat, the terms of the conspiracy being found in certain documents which are in our possession.

THE INDICTMENT.

The report alleges that the power of the Big Five in the United States has been and is being unfairly and illegally used to manipulate live-stock markets, district, interstate, and international supplies of foods, control the prices of dressed meats and other foods, defraud both the producers of food and consumers, and crush effective competition.

Secure special privileges from railroads, stockyard companies, the municipalities, and profiteer.

From meat the American Meat Trust is now extending its activities to all staple groceries, to the grain trade, to fertilizers, and hides, leather, and wool.

England is one of the countries specially favored by their attentions. According to the report of the Federal Trade Commission it was at meetings held at London in the spring of 1914 that an international meat pool was formed by the Armour, Swift, Morris, and Sulzberger interests in conspiracy with certain British and South American concerns to regulate and divide the shipments of beef, mutton, and other meats from South America to the United States and certain foreign countries, particularly England.

It is interesting to learn from the commissioners that the packers' profits in 1917 were more than four times as great as the average year before the European war, although their sales in dollars and cents at even the inflated prices of last year had barely doubled. In the war years 1915, 1916, and 1917 four of the five packers made net profits of $178,000,000.

The British public contributed heavily toward those profits.

TRUSTS IN GREAT BRITAIN.

The report of the committee on trusts recently published by the ministry of construction shows the enormous extent to which the creation of trusts and trade combines has already proceeded in Great Britain. It is probably quite safe to say that 80 per cent of our most important industries are now controlled and directed by trade organizations, which effectively, if not always ostensibly, regulate prices either directly or indirectly by the control of output.

Competition as a factor determining prices for the protection of the consumer has, to this extent at any rate, ceased to exist.

The consumer has to pay a controlled price and not a competitive price, and there is no possible prospect of any return to the days of free competition.

Control of prices is now in operation over a very large part of the commodities in daily use, and it has come to stay. The question is no longer between control on the one hand and freedom of trade on the other.

The only questions are, By whom is control to be exercised, in whose interest, under what safeguards and supervision?

The consumer seems to me to have an unanswerable case when he demands that he shall have some say in the matter.

Government control of prices may be an evil, but it may be a lesser evil than control of prices by one class of the community—by the producer, or the merchant, or the distributer, as the case may be.

And the consumer may feel a little nervous if he reads the report of the committee on trusts when he learns that it is the declared policy of some of the great British trusts to sell dear at home in order to sell cheap abroad. To quote from the report itself:

"There was a general agreement among representatives of associations before us that one of the beneficial results of the formation of associations sufficiently powerful to control and maintain prices in the home market was that it enabled British manufacturers to extend their output by selling their products at a lower price, or even at a loss, in foreign markets."

This may or may not be a good policy, but surely the consumer at home ought to have some voice in the matter.

—

BAD MEAT SCANDAL.—"AMERICAN BEEF BATHED IN VINEGAR AND SODA."—BIG FIVE'S BLACK BOOK.

SENSATIONAL REVELATIONS, PARTICULARLY INTERESTING IN VIEW OF THE QUALITY OF BEEF AND BACON WHICH HAS BEEN REACHING THIS COUNTRY FROM AMERICA, ARE MADE BY THE UNITED STATES FEDERAL TRADE COMMISSION, WHICH HAS BEEN INQUIRING INTO THE OPERATIONS OF THE AMERICAN MEAT TRUST—REFERENCE IS MADE TO BEEF THAT WAS SO BAD THAT IT HAD TO BE BATHED IN VINEGAR AND SODA—DEMAND FOR INQUIRY IN BRITAIN.

The Star learns that the joint agricultural advisory committee of the ministry of food and the board of agriculture has decided to support the demand of the British Empire Producers' Union that a Government inquiry shall be held into the combinations in the meat trade.

It is, as the Star has pointed out, vitally important that the operations of the "Big Five" in this country shall be thoroughly investigated, and the recent report of the United States Federal Trade Commission on its operations has given us a good lead.

PACKERS' PROFITS.

The "Big Five," as the American Meat Trust is called in the commission's report, announced in 1917 that it was going to pool its resources and sell its meat at near cost in the cause of the Allies. The United States Federal Trade Commission has reported that the packers' profits were 350 per cent greater in 1917 than in the average of 1912, 1913, and 1914, and that this figure does not include the foreign profits of Armour & Co., which must be enormous.

The "Big Five" consists of Armour & Co., Swift & Co., Morris & Co., Wilson & Co. (formerly Sulzberger), and the Cudahy Packing Co. The United States commission reports that they control at will the markets at which they buy and those in which they sell.

WIDE POWER.

Their power rests on the control of the following:

Stockyards with collateral institutions, such as cattle-loan banks and trade newspapers, heavily subsidized.

Companies which own the refrigerator cars, used so extensively for the transport of perishable goods.

Cold-storage plants.

Branch-house system of distribution.

Banks and real estate, cattle ranches, etc.

Although much evidence had been willfully destroyed by the packers, the commission secured many interesting letters and the private memorandum book of Mr. G. Sulzberger (called the "Black Book"), in which he had made notes after the secret meetings of the trust as to the manner in which the supplies were to be divided up.

In view of the quality of the beef and bacon which has been reaching this country from America, the letters are full of disclosures. Mr. Guy C. Shepard, vice president of the Cudahy Co., wrote to his general manager on February 12, 1918:

"There never was a time in the history of the business when we have had as good a margin on the hogs for as long a stretch continuously, and naturally it has made every one very greedy to kill every hog they possibly could. * * * The main idea that we had in mind was that it was profitable business, and the first thing to do was to take the order and then get through with it some way or other."

On February 6, 1918, there is a letter to the assistant manager of the Cudahy plant at Omaha noting that he had sold beef cheek meat at 12½ cents and that E. A. Cudahy considered it worth 18 cents, as "we have been having discussion recently with the Food Administration about having the specification revised so that cheek meat might be included, and would like to have this extended to shank meat and bull meat."

Cheek meat, shank meat, and bull meat until recently were almost valueless, being inferior kinds of beef.

A CANDID LETTER.

On February 23, 1918, T. G. Lee, of Armour & Co.'s Philadelphia branch, wrote to the head office in Chicago:

"This has been a very unsatisfactory week, because of the great quantity of bad-condition beef we have had to sell. Morris and Wilson had just as much trouble as we had. Wilson bought beef from Arch Street that was so bad that we bathed it in vinegar and soda before we showed it to them. I think this beef also was shipped to New York for freezing.

"I certainly do not know what they are going to do with this beef. I certainly do not think beef in the condition they are buying ought to be exported or offered to our armies."

The United States commissioners' report contains many other equally sensational facts about the "Big Five" and their gigantic monopoly.

PROFITEERING ACTS, 1919–20.

CENTRAL COMMITTEE—INTERIM REPORT ON MEAT.

(Prepared by a subcommittee appointed by the standing committee on trusts and adopted by the standing committee.)

Members of the subcommittee: Mr. H. W. Macrosty, O. B. E., chairman; Mr. D. Carmichael; Mr. W. G. Curnick; Mr. W. Gallacher (Mr. Gallacher has not signed the report, as he was out of England during practically the whole of this inquiry, and was only able to attend the first meeting); Mr. A. Johnston; Mr. M. V. Leveaux; Dr. J. Spencer Low, C. B. E., M. B., C. L. B., B. Sc., D. P. H.; Mr. A. P. McDougall; Mr. R. S. Pengelly; Mr. J. J. Terrett.

Secretary to the subcommittee: Mr. N. W. Bird.

Terms of reference: To investigate the question of trusts, combines, and agreements affecting prices in connection with the meat trade (including hog products), so far as they affect the British consumer.

TERMS OF REFERENCE.

To the CHAIRMAN STANDING COMMITTEE ON TRUSTS:

SIR: 1. We were appointed by the standing committee on trusts to investigate the question of trusts, combines, and agreements affecting prices in connection with the meat trade (including hog products), so far as they affect the British consumer.

METHOD OF PROCEDURE.

It was decided that in the first instance the subcommittee should devote its attention to the meat trades dealing with beef and mutton, and that afterwards it should proceed to investigate the trade in hog products and canned meat. In connection with the first part of its work it has examined 40 witnesses, either in London or in Glasgow, and has studied the reports of previous committees, more especially those of the departmental committee on combinations in the meat trade (Cd. 4643), which sat in 1908–1909, and of the interdepartmental committee on meat supplies of 1918 (Cmd. 456). Reference should be made to the latter for additional information on certain of the subjects which have occupied us. The members of the committee were also acquainted with the various inquiries which have been conducted in the United States, Australia, and New Zealand.

BRITISH AND COLONIAL MEAT.

2. So far as the home-grown meat trade and the trade in imported meat from the Dominions are concerned, the committee has not found any evidence of the existence of either temporary or permanent combinations which did or could exert any seriously detrimental effect on traders or on consumers. Butchers who were in the habit of buying cattle stated that they had not met with any rings of sellers or dealers, and it was generally agreed that prior to the institution of the ministry of food there was no combination among wholesale butchers or commission salesmen. The universal opinion was that the Wholesale Meat Associations set up by that ministry in connection with the rationing scheme would be dissolved as soon as control ceased. So far as we have been able to ascertain, there are now no wholesale associations which exercise any control over supplies or prices. In the retail trade we are informed that 70 per cent of the retail meat traders of England and Wales are organized locally into associations which are united in a national federation, and 1,600 of the retailers in Scotland are members of 29 local associations included in the Scottish Federation of Meat Traders, which was formed about 18 months ago. No charge was made that these organizations attempted to control prices or supplies. During the past year there has been considerable vigor in the organizing movement, and plans are being discussed for cooperative action in the sale or working up of by-products, but such schemes are quite in their infancy. Retail butchers whom we examined were of opinion that their associations would in the ultimate resort be able to counteract any organization of wholesalers by undertaking cooperative purchase of cattle from the markets, but wholesalers, on the other hand, were very skeptical of the possibility of any such action. Our attention was also drawn to the new development of cooperative organizations of farmers for the purpose of running slaughterhouses, but any such movement must be of slow growth. Butchers expressed the view that they would be able to make amicable arrangements with such associations, so that by eliminating middlemen, and without increasing prices to consumers, both parties would be able to gain substantially.

3. Complaints were made of speculation which took various forms—the reselling of cattle at various markets by dealers before the animals were finally slaughtered; the reselling of meat by jobbers at Smithfield, so that it passed through several hands before reaching the retailers; and the selling of whole cargoes of Australasian meat, even before arrival at port. We believe, however, that all such speculation is unorganized, occurring only under particular conditions of supply, and is not characteristic of the meat trade as a whole. Australasian importers have a certain power of holding back their meat, since it is frozen, but no evidence was tendered to us that that power was misused. It is plain that such power can only be exercised within narrow limits, since new supplies are always coming forward, and it is obvious that it does not exist at all with regard to fresh meat, which must be sold soon after it is killed. The only way of holding up supplies of home-raised meat is to keep the cattle alive and not send them to market, as was done to some extent by farmers just before the abolition of control in hopes of higher subsequent prices, but once cattle are ripe for slaughter it is not economical to withhold them from the market.

THE AMERICAN MEAT COMPANIES.

4. We devoted a considerable amount of time to the investigation of the operation of the American meat companies, popularly known as the "Meat Trust." Of these there are five—Armour & Co., Morris & Co., Swift & Co., Wilson & Co. (in London, Archer & Co.), and the La Blanca Co. (owned by Armour and Morris), which import meat from their own works in South America. There are also two British companies, the British & Argentine Meat Co. (Ltd.) and the Smithfield & Argentine Meat Co. (Ltd.), and one Argentine Co. (the Sansinena Co.), which have, since the spring of 1914, up till a few months ago, when Morris and Wilson seceded, been acting in cooperation with the American companies through the River Plate Meat Conference (see paragraph 12). Another company registered in the United Kingdom and connected with the Union Cold Storage Co. (Ltd.) (Vestey Bros. (Ltd.)) has also had works in Argentina and in Brazil since 1917, but it acts independently.

5. The main field of operation of the American companies is in the United States. The Federal Trade Commission, in its report on the meat-packing industry, gave an "unqualified affirmative" to the question whether combinations, etc., "out of harmony with the law and the public interest" existed in that industry. The companies themselves admitted that in the past they have worked together in "pools" and other forms of combination. They now claim that they are quite independent of each other, but, as is pointed out in paragraph 18 of the report of the meat supplies committee, formal independence is quite consistent with a simple tacit understanding to respect each other's position. That by itself would secure them all the economic advantages of an active combination, and while a certain amount of freedom may be conceded to branch houses for efficiency purposes, we are satisfied that all questions affecting the strategy of the trade as a whole are settled in conference between the heads of the businesses in Chicago.

6. The committee on combinations in the meat trade reported in 1909 that the American meat companies doing business in the United Kingdom acted in cooperation. For some years they had been in the habit of meeting weekly to discuss prices and supplies, though of late these meetings had become less formal. The committee were in doubt as to how far the companies tried to control the price of beef in Smithfield, but were of opinion that they were unable to do so. They did, however, fix the prices for their own meat in the country markets each day on the basis of the ruling prices at Smithfield each morning, and their provincial salesmen had very little discretion as to varying those prices. It was also held to be clear that they did arrange to some extent the supplies which each company should place on the market daily.

7. In letters to this committee the American meat companies deny that they had been in the habit of acting in combination. But our inquiries in general corroborate the findings of the committee of 1909. We have heard evidence that these meetings continued at least until 1912, though with the use of telephonic communication they became less frequent. Evidence was also given us that representatives of the companies had the right to inspect each other's books if it was suspected that one of them was putting on the market more than its agreed quota. The belief on the market is strong that the cooperation between the companies has continued, and that, although the circumstances of the war period have made it both unnecessary and impossible to control prices, the fact that the companies were joint contractors for the allied forces has brought them into even closer relations with one another. The representatives of the trade whom we questioned were unanimously of opinion that it was impossible even for the strongest combination to control prices in Smithfield for more than a few days, partly because climatic reasons and the deterioration of chilled beef in cold storage forced quick sales, partly because a rise in prices speedily evoked an increased supply of home-raised meat. At most what the companies had tried to do was to agree not to sell below a particular price up to a particular hour, but even that limited control broke down more often than not. The trade also believed that the companies fixed the quantities of meat that were to be put on the market weekly, these quantities depending to some extent on the meat that was afloat, but the large butchers, at least, regarded such regulation as a good thing, since it tended to stabilize prices. It was also pointed out that the regulation of the market so as to force up prices would require the limitation of shipments from South America and, with the known expansibility of home supplies, would reduce trading to a gamble, in which the importers would be as likely to lose as to gain. With regard to the fixing of country prices, as Smithfield is admitted to be the ruling market, we do not see any danger in attempting to regulate country prices by Smithfield prices so long as the latter are free from control. The practice is not unknown in other commodities. We note also that Swift's agent in Glasgow declared that he had a free hand to sell at whatever price he liked, but he admitted that the agents of the other companies were not in that position. We also obtained direct evidence that the American companies agreed with one another as to the shops that should be opened in various provincial centers so that there might be an appearance of competition with a real division of territory.

8. No complaint was made to us of unfair trading on the part of the American companies except that in "developing" trade or in clearing surplus stocks they would make no limit in cutting prices. Most of the witnesses praised them for their enterprise in placing cheap meat of good quality before the public and for giving good service to their customers. As to whether they had achieved their position by ousting British traders or by developing a new class of consumers there was more difference of opinion, and probably both views are in part correct. What the British trades did complain about was that while they had been controlled and forced to put all their businesses into one common pool, the River Plate meat companies (and not the Americans only) had been allowed to retain their customers, thus maintaining their connection. This, however, was a result of the war, for these companies being contractors for the meat supplies of the allied armies (an interruption of which could not on any account be allowed) were in a strong bargaining position as against the ministry of food. Again, it was urged that the same companies, being the sole possessors of beef, which was in short supply and cheap compared with British meat, were able this summer to impose conditions on purchasers and force them to take also Australasian mutton, which they did not want. This action, however, was only possible because at that time beef supplies were extremely restricted. Further, the imposition of the conditions of sale of which complaint was made was part of a campaign to get rid of the Government stocks of mutton, and is not a matter of blame to the River Plate companies.

9. Although the American companies are extending their purchases of British cattle in various centers, we can not find, so far, any signs of a serious intention on their part to capture the home-killed trade of the United Kingdom or to reduce British butchers to a state of dependence. It is true that Morris & Co. are large buyers of British and Irish cattle, and that, at least before the war, that branch of their business was increasing, but there was no evidence that they had any disturbing effect upon our cattle markets. We understand that the American companies have been making inquiries into the possibilities of developing a packing-house business in the Irish meat trade. If these projects are successful, their progress will have to be very carefully watched. The American companies have now 34 stalls in Smithfield Market as against 20 in 1908, and their shops are in the best position, but there are now, in all, 364 stalls, as against 344. About half their trade is, nevertheless, according to the information given to us, still done through jobbers, who consider their position fairly secure on account of their intimate knowledge of the requirements of the retail trade of the different parts of London, which enables them to "cut up" the meat satisfactorily and prevent great waste in distribution. Fears are sometimes expressed that the American companies have been surreptitiously acquiring possession of British businesses, but these fears are greatly exaggerated. Armour, Swift, and Morris are represented in the United Kingdom by companies of American origin, but registered in the United Kingdom, and the Sociedad La Blanca has a branch house in London. Wilson & Co. (formerly Sulzberger & Co., and earlier Schwartzschild & Sulzberger) are represented by Archer & Co. (Ltd.), a British registered company, of which the ownership is shared by the American company and the English managing director. As an English business it is an

old concern, and the managing director claims that he "by his agreement with the present company * * * has sole control of the affairs of Archer & Co. (Ltd.) and of the conduct of its business, without referring in any way to Wilson & Co. (Inc.) or others." Apart from these agency companies, we note that out of the long list of 762 companies in which, according to the Federal Trade Commission, the "Big Five" are interested, only the following British companies connected with the meat trade are alleged to be owned by one or the other of the American companies or by persons connected with them, viz: National Oil & Hide Co., London (Morris and Swift); Haarers (Ltd.), London (Morris); Currey & Co. (Ltd.), London (Swift); London Butchers' Hide & Skin Co. (Morris and Wilson are minority shareholders); Roderick Scott (Ltd.), Glasgow (Swift owns 45 per cent and titular owner, who has long been Swift's agent, maintains that he recently admitted them into his business in order to insure the continuance of his agency). We understand that the National Oil & Hide Co. is an organization created by the Morris and Swift companies for dealing with the hides and fats from cattle imported by them, and was not originally a British business acquired by them. Negotiations, we were informed on good authority, are afoot for the acquisition of financial control over certain other provincial businesses by certain of the American companies. It is obvious that the continued prosecution of this policy might in the end lead to the American companies obtaining domination over important distributing centers.

10. The growth of the British and Irish cattle industry over the last 10 years does not suggest that it has suffered material injury from the competition of imported meat, though the latter has no doubt kept the price of home-raised meat lower than it otherwise would have been. Taking the account given in the report of the meat supplies committee, it is plain that the Empire is or shortly can be self-supporting in mutton and lamb; that there is nothing to fear from the competition of Argentine mutton; and that the American meat companies have no hold in the sheep-producing areas of Australia and New Zealand. The case is very different with regard to beef. The same report shows that in 1913–14—the last year not affected by the war and its consequences—about 60 per cent of our supplies of beef and veal were produced at home, about 7 per cent in the British Dominions, and nearly a third in "foreign countries"—i. e., South America. For a long time, even given the most rapid development of home and Dominion production, we must be dependent on South America for a great part of our beef supplies, and the United States meat companies have at present nearly 60 per cent of the beef output from Argentina and Uruguay and about 75 per cent of the capacity of the meat works built or building in Brazil.

11. A reference to paragraph 17 of the meat supplies report shows that here is the danger point to the British consumer. The American companies entered the River Plate in 1907, and in 1909 they had 35 per cent of the trade; in 1911, after a price war, they forced the British and Argentine companies to agree to a division of the trade, whereby about 43 per cent fell to the Americans; in April, 1913, another price war broke out by Morris & Co. leaving the combination and demanding an increased share; in June, 1914, peace was restored by the concession to the Americans of an increased proportion, bringing up their share of the trade to 59 per cent of the total. This last dispute was generally regarded as engineered. It was characterized by the forcing up of cattle prices in Argentina and the lowering of meat prices in England, where for a time butchers could buy good chilled meat at 2½d. per pound, a fact which accounts for the benevolence with which some of them still regard the American companies, though it is not clear that the consumer benefited to the same extent as the retailer.

12. The combination or "conference" which terminated the last price war took the form of a pooling agreement. All the insulated shipping tonnage serving the River Plate was covered by contracts with the meat companies, and these were allocated by consent on the basis of the shares of the output agreed between the meat companies. "Rivalry in the purchase of cattle ceases to be necessary, and as each of the companies in the 'conference' has full knowledge of what meat is coming forward and what the others are doing there need be no rivalry in selling." (Par. 20, Report of Meat Supplies Committee.) All the competitors have the same market knowledge, and we get all the effects of a close combination, even although the signs of it are not so evident as when the combinations committee investigated in 1908–9.

13. The operation of the income tax laws has also been a severe handicap on the British meat companies. Prior to 1915 the profits of nonresidents in the United Kingdom could only be taxed by reference to the results shown by accounts kept by branches or agents in this country, but in that year the assessing commissioners were empowered to charge the nonresident on a percentage of the turnover of the business done by him. This introduced some measure of equality, but (as was stated in par. 21 of the report of the interdepartmental committee on meat supplies) "by the finance act of 1918 nonresidents were authorized to appeal to the assessing commissioners to have the assessment in respect of profits from goods or produce manufactured or produced abroad restricted to the merchants' profits. The net result is that the American meat companies are assessed for income tax and excess-profits duty only on their merchant profits made in the United Kingdom, while companies resident in the United Kingdom and operating in the dominions or foreign countries are taxed on their profits, whether as producers or merchants, and whether brought to the United Kingdom or not." In fact, it would appear that the act of 1918 has practically restored the position existing before 1915. The immense financial strength of the American companies by itself forces the British companies into a position of inferiority, and does not need to be reinforced by this differential treatment in taxation. In 1913 and 1914 the British companies had, as a consequence of destructive competition, to pass their ordinary dividends, and to secure peace had to give up a large proportion of their trade. To-day, Morris & Co., who started the fight in 1913, are again demanding an increased share of the trade, and this time they are supported by Wilson & Co.

14. We found through all branches of the meat trade a general apprehension that the American meat companies were aiming at world dominion. It was asserted that they at present dominate, not only the United States but South America, and that they have a solid footing in Canada and Australia. Fears as to the extension of their activities are not confined to this country, but are equally strong in Australia, New Zealand, and Canada. The more they may be able to extend their operations in South America the more they may be able to divert necessary supplies from this country, and the more they are able to control distributive business in the United Kingdom, the more securely will they have the British consumer in their grip at the end. Without necessarily indorsing all the fears that have been expressed, we do concur in the opinion of the home trade, that it is not a healthy condition of affairs when in 1913 the American companies controlled over 45 per cent of the supply of all beef, home raised and imported, at Smithfield market, and the danger is not lessened by the fact that the strength of the American companies depends more on their wealth and business ability than on any conjoint action in this country. Security for sufficient supplies of beef at reasonable prices depends on the maintenance of the British companies operating in South America and on their release from their present dependence on the moderation of the American companies. For 13 years the latter have pursued a steady policy, sometimes in cooperating, at other times in apparent independence, of reducing the share of the River Plate trade held by the British companies. There is no sign that that policy has come to an end. On the contrary, it appears to be still in full activity; and while the consumer may temporarily profit during the periods of destructive competition, we are not aware of any case in which after competitors have been eliminated the victors have not more than compensated themselves for their campaign losses.

15. We are, consequently, in cordial agreement with paragraph 57 of the report of the meat supplies committee, in which the committee says:

"We believe that the stimulation of supplies from within the Empire and the protection of British interests outside the Empire form the best basis for insuring sufficient supplies for the United Kingdom, and we are strongly of opinion that this should be accepted as the permanent Government policy. The specific measures that may from time to time be required can be determined when occasion arises, but the public adoption of this policy will give confidence and encouragement to British producers at home, in the dominions, and in foreign countries."

In our view public opinion in Australia and New Zealand is sufficiently alive to the situation to deal with any special problems that may arise there.

16. It would not be expedient to discuss here in detail measures which might be applied under particular circumstances, but if the general line of policy suggested above be steadfastly pursued it will be the less difficult to decide at the appropriate time on any special course of action. In fact, if foreign interests were convinced that His Majesty's Government were resolved that the share of the beef trade which is at present in foreign hands should not be increased to the loss of producers at home and in the dominions and of British importing companies, they would not be disposed to incur the heavy losses which aggressive action on their part would entail, and the risk of aggression would disappear.

We would urge, however, that any legislation which may be contemplated for the purpose of dealing with trusts and combinations should be of such a character as to include within its scope the form of cooperation which we believe to exist among the American meat companies, should provide for the investigation of complaints against these companies, collectively or individually, and should insure that the utmost publicity be given to their methods of doing business. We also strongly support the meat supplies committee in their condemnation of the "severe handicap" to which British meat companies are subjected by the income tax laws in comparison with foreign meat companies, and we recommend that steps be taken to insure that the latter should be on the same basis of taxation in this country as the former. We further would point out that the position of British shipping companies which run services of meat ships from South America to the United Kingdom should not be overlooked in the consideration of any defense measures against the American meat companies. The transportation of meat to this country is virtually a monopoly of British shipowners, and its value has been fully proved during the late war. If insulated shipping were subjected to some form of Government control to be exercised in cases of emergencies, it would be possible to prevent the development of further control of British meat markets by foreign combinations. Such relations also should be established between the Government and British shipowners as would remove from the latter any temptation, through the offer of higher freights, to divert part of our meat supplies to other countries or to sell their insulated ships to foreign meat or shipping companies.

17. We also agree with the recommendation of the meat supplies committee (par. 60(b) of their report) that the operation of the Las Palmas works of the British and Argentine Meat Co. (Ltd.) (which since the autumn of 1915 have been operated on behalf of His Majesty's Government), should continue to be run on the same lines as during that period. Convinced as we are that the movement of prices of refrigerated meat must be carefully watched, we hold that it is necessary that the costs of producing such meat should be accurately and systematically ascertained, so that it can at any moment be determined whether any particular price movement is natural or artificial. The possession of the Las Palmas works gives the Government an "observation post" of great value in the very center of the operations of the American meat companies, and we are confident that its utility will be no less in peace time than it was during the war.

18. Two special proposals for control of foreign combinations were put before us. The first of these is discussed at length in paragraphs 36, 37, and 41 of the report of the meat supplies committee, and we agree with their conclusions that it could not be adopted owing to the demand that would be created for financial assistance to farmers at home engaged in the rearing and fattening of cattle. Briefly, it proposed to stimulate production of meat in the dominions by granting a bounty to producers for all meat consigned to British importers and to assist British companies operating in foreign countries by giving them a smaller bounty; in this way it was expected that foreign companies would be at a permanent disadvantage and would be unable to increase their trade. The second proposal contemplates the licensing of all importers and wholesale meat traders, and perhaps of retail butchers as well, and the confining of foreign firms to the importation and wholesale sale of foreign meat only. We do not see that there is any need for the licensing of retail traders or for the refusal to allow foreign firms to deal in home or colonial meat. If importers and wholesalers were licensed, no substantial limitation would be imposed on their activities, and the only utility of such a suggestion appears to us to be that as part of the machinery of a general scheme of control the withdrawal or suspension of license might be the punishment for specific trading offenses.

19. We do not think it proper to conclude this part of our inquiry without drawing attention to the growth of Vestey Bros. (Ltd.) The interest controlling this British registered company controls also the Union Cold Storage Co. (Ltd.), subordinate companies with meat works in Argentina, Brazil, Venezuela, and China; meat works operated by W. & R. Fletcher (Ltd.), in Australia and New Zealand, and Nelson Bros. (Ltd.), in New Zealand, W. Weddell & Co. (Ltd.) and the Colonial Consignment & Distribution Co. (Ltd.), which are large importers of Australasian produce, and the multiple shop retail companies of W. & R. Fletcher (Ltd.), the Argenta Meat Co. (Ltd.), and Eastmans (Ltd.). They also own the Blue Star Line (Ltd.) of meat ships and do a large business in importing provisions, poultry, and eggs from China, and before the war they had a similar trade from the Continent and Siberia. They are, consequently, an organization of very wide scope. They do

not, of course, possess anything like a monopoly, either local or general. No complaints were made to us of their methods of trading, and, although some witnesses expressed the fear that they might enter into alliance with the American companies, the relations between the two parties, at present at least, do not appear to be particularly friendly. In attempting to forecast the prospective course of the meat trade, the future of this amalgamation of interest can not be left out of account, and should they depart from their present policy of independence the consequences might be very serious.

20. Of necessity we have had to confine our investigations to the meat trade of the United Kingdom, but so far as there is a danger from large combinations, other countries, both consuming and producing countries, are likely to suffer as much as our own.

It is generally believed that the peoples of the Continent of Europe will in future consume much more meat than they have in the past, and there will, consequently, be greater demands on the world's meat supplies. Any such pressure of demand would facilitate the operations of a meat trust. It therefore appears to us that it is desirable that the Governments of the countries concerned should discuss together the possibilities of making joint investigation into the world's situation with the object of taking such common action as may be required.

HIDES AND FATS.

21. We deemed it proper to extend our inquiries into the methods by which butchers dispose of their hides, fats, and other by-products, since the prices obtained for these commodities must necessarily react on the prices which the butcher can afford to take for his meat. We found that the universal opinion among butchers was that they did not receive fair prices for any of their by-products, and that they were faced by rings and combinations of buyers for the purpose of keeping prices down at unremunerative levels. Naturally these charges were strongly denied by the buyers.

22. Butchers, as a general rule, send their hides to "hide markets," i. e., to firms which collect the hides, sort and class them, and sell them on commission by auction. In a great many cases these firms are companies whose shareholders are the local butchers. The buyers are tanners who receive the catalogues issued by the hide markets, and either attend themselves to buy, or much more generally send their buying orders with price limits to agents (in Scotland, termed factors) or professional buyers who attend the markets and buy on commission for the tanners. The advantage to a tanner in buying through an agent is that he gets only the actual hides he wants instead of having to take a whole "lot." Any one agent may have buying orders from several tanners, and while some agents confine their operations to one hide market, others attend all the hide markets in a town, and others travel about from town to town. Usually there is more than one hide market in a town; thus at Manchester, which is the chief center, there are Markendale's and the Lancashire Butchers' Hide and Skin Co., both of which are owned by butchers; the former charge a commission of so much a hide, but the more usual practice is a percentage on the selling price. The number of buyers at the weekly market is small—from 4 to 12 at Manchester; 10 or a dozen at Leeds, of whom 4 or 5 will be local tanners. The concentration of buying in the hands of a small number of buyers representing a much larger number of principals is probably the main reason for the belief that there is a ring of factors or tanners.

23. We heard representatives of the Tanners' Federation, who warmly denied that their members acted either locally or nationally as a ring, and asserted that their federation had nothing to do with prices. Each buying agent aggregates all his buying orders and divides out the lots bought according to the requirements of his principals. Agents with orders for the same class of hides naturally tend to compare their engagement and obviously can find an advantage in coming together and avoiding competition which might on occasion involve disappointment of some of their principals. They would thus appear to have a certain power to depress prices, but, on the other hand, as they are paid by commission their interest lies to a certain extent in the amount of their invoices, while, again, each buyer will not desire to let prices go so high as to induce the tanners to restrict their purchases. According to the tanners, this conflict of motives leads the agents to exercise a stabilizing influence on prices. Any butcher in England who is dissatisfied with the price he gets for his hides can, and frequently does, transfer his custom to another hide market, usually with varying results. Probably the main and unavoidable cause of suspicion is that a butcher can not trace his hides through a sale since they are classed and sorted into lots with hides received from other butchers.

24. In regard to England, there was little direct evidence of frequent combination among buying agents. Naturally the regular buyers in a market resent the entrance of a newcomer and contrive to make him pay fully for the goods he wants, particularly would this happen before the war when men who were not regular buyers appeared and wanted to buy hides for America.

This, of course, is not disadvantageous to the butchers. On the other hand, the agents have been on occasions suspected of combining to put prices down, and we are told that at Manchester the auctioneers had them withdraw their hides from sale. With regard to Scotland, evidence was led that at certain hide markets prices were arranged beforehand by the factors (or agents) that all hides of one class would be bought by one man, all those of another class by another man, and so on, a subsequent repartition taking place privately. This system is described by an auctioneer as virtually a "mock auction." "We are certain," he said, "that these men agree upon the price because they never oppose one another." As large numbers of the Scottish hides go to England, prices in Scotland follow those in England, the chief Glasgow market, for example, taking place on the Wednesday in each week, and the Manchester markets, which rule the whole trade, on the preceding Tuesday. This of itself must import a certain amount of unreality into the Scottish auctions, and the auctioneers occasionally, if they suspect that the proper price is not being bid, withdraw their hides and dispose of them privately. One market practice which prevails, in Scotland at least, appears to us to be quite indefensible, namely, that hides entered at one market and bearing that market's stamp can not be sent on to another market for sale there. The evidence as to the sale of hides, taking England and Scotland together, was not of a harmonious character, and evidently the circumstances varied widely from a free sale to a "mock auction," according to time and place. The price of British hides is always largely affected by the price of imported hides, which are usually in a much better condition for use by tanners, and the prohibition (which has now been raised) of the export of British hides, except on license, effectively deprived sellers of an alternative market. Sheepskins appear to be usually sold direct by the selling agents to the fellmongers.

25. Raw fats are sold either direct to tallow melters or to collectors, who sell to tallow melters, or through auctions usually held by the "hide markets." The English trade is largely done by direct purchase, the Scottish trade by auction. There are two main organizations among buyers—the London Oil and Tallow Trades' Association and the Raw Fat Melters' Association of Great Britain. The former deals only with contracts and questions arising therefrom, and not at all with prices. The latter was established under the ministry of food in connection with the control of the trade, and contains about 200 out of 300 firms in the business; it notifies its members of the current prices obtainable for tallow and other finished products, and advises them as to the prices which should be paid for the various grades of raw fats. The latter prices are determined periodically at meetings of six representatives of the Raw Fat Melters' Association and six representatives of the Hide Markets' Federation, and a price once fixed holds good till there is a fresh determination. Although these prices are agreed between the buyers and the sellers, they are not enforced by any disciplinary action, and any melter is free to buy in any market at any price he chooses to offer; such freedom, we are told, was not infrequently exercised. The Melters' Association do not guarantee their members supplies at the list prices, but occasionally the officials used their good offices to obtain from firms holding plentiful stocks supplies of fat for small consumers who had found themselves unable to fill their requirements. The object of arranging prices in the way described was stated to be to prevent the various "markets" from stealing each other's customers. This form of organization is somewhat closely akin to that method of combination which consists in the division of territory among the members.

26. In the north and midlands of England fat is generally bought in the way just described, largely for textile purposes, and there is no large buying interest like soap. It is obtained through the hide markets, generally by private treaty, the buyers sometimes attending themselves and sometimes send their order to the same professional buyers who buy hides for tanners, remunerating them by commission. It was strongly denied that in these areas there was any attempt by the agents to put down prices or any efforts by big firms to squeeze out small firms. Of course, the competition of foreign tallow and oils exercises a restraining influence on the prices obtainable for British fats.

27. The London trade is done usually by direct purchase from the butchers, there being running contracts the prices in which are governed by the "Market Letters." After the weekly auctions of Australian and New Zealand tallow (which form by far the great bulk of the imported supplies) the market letter is drawn up and issued by the market committee composed of persons who have been in the habit of attending these auctions for many years. It states the prices for the different grades of imported tallow at which accounts are to be settled in case of nondelivery, and also (at so much premium or discount according to quality) the prices of British fats for the purposes of the current contracts. There does not appear to be any grave objection to this procedure, but some criticism would be removed if, as was suggested to us, representatives of the butchers were associated with the other traders in the issue of the Market Letter. Contracts may, of course, be framed without any reference to the Market Letter. Fats in the London area are largely sold to the soap makers, and it was asserted that large soap makers either forced small buyers out of the market or compelled them to join a combination. Large companies must, of course, take measures to insure their supplies; we understand, however, that a subcommittee appointed by the standing committee on trusts is now inquiring into the whole question of the conditions of the soap trade. During the first seven months of 1920 over 66 per cent of our imports of crude tallow came from Australia and New Zealand, about 12.6 per cent from Argentina and Uruguay, and 6 per cent from the United States, so that plainly it was not possible for the American meat companies to manipulate the fat market to the detriment of British producers.

28. The fat trade in Scotland appears to be in a much more unsatisfactory condition than anywhere else. There are three main sales of fat each month at Glasgow, Edinburgh, and Aberdeen, Glasgow being the leading market, and there are about a dozen leading buyers. The fat is sold through the hide markets on behalf of the butchers and purchased by the representatives of the fat melters, among whom the soap works constitute the largest interest. One auctioneer described the process: "It is conducted by auction, or something like that, and our probable quantities for the coming month are catalogued. Catalogues are despatched to the melters and they attend our sales and bid for the tallow when it suits them. Sometimes they do not. If fresh opposition comes on the ground they stand out and say they will not buy. A man would come along and buy, say, 5 tons of our tallow. He would upset the price of the other people, and they would simply stand out and say, 'Very good, sell to this gentleman; but if you sell to this gentleman we are not buyers,' and the result is that a man who can move 5 tons of tallow is no use to us. We want a man who can buy big quantities, and I have seen opposition; but this opposition has never lasted very long. * * * The other people bid them up too much, so that it was a case of throwing away a lot of money." This walking-out policy he had seen adopted "half a dozen times," and his statement was confirmed by others. A small buyer could not obtain what he wanted by applying to the "ring" at their meeting before the sale, but they were described as "not overbearing—they do not crush everybody out." New large buyers were fought as described. "There is no doubt," said this same witness, "they (the melters) are working in collaboration with each other." It was asserted that prices were generally arranged before the sale, but occasionally there would be a squabble in the ring, and violent competition would rage for a few months.

29. Another auctioneer said: "The buyers came forward, and they used to discuss the whole position in the street. I have seen one lot waiting an hour and a half before they came in. When they did come into the sale the price was very often a uniform price. At times I have seen it all bought by the one buyer. If there was an outsider there, a small man—we usually had an odd little man who was not of much value from our point of view—he could not finance the whole thing, but he was good enough for our purpose to butt in and give trouble, and we always appreciated it. When that got too severe they would allocate one of their number to buy the lot, and after the sale was finished we would be told to transfer to so-and-so and so on, and they would all get their own lot. From that we understood they had come to some agreement." When prices were forced too low the auctioneer had no alternative but to withdraw his sale and dispose of the fat privately. Certain classes of fat were ordinarily sold by private

treaty, the price of these better qualities being based not on bargaining but on the prices paid by the melters for rough fats. Some firms of selling agents now do not auction their tallow, but dispose of it privately to the melters on the basis of the prices in the circulars of the Raw Fat Melters' Association, and it appears not improbable that this form of sale is increasing.

30. Two different factors producing similar results have been operative in the hide and fat trades. Tanners have centralized their buying through a special class of buying agents, and thus reduced competition in buying. As there is a well-organized market in leather, the tanners are able to base the buying limits which they give to their brokers on the selling values of their leather, and as the same kinds of hides are required by all tanners making the same classes of leather it is likely that the limits given by different tanners are very close to each other. All this produces an appearance of combination, but is nevertheless quite consistent with substantial independence among the tanners. Only in Scotland, where prices must follow those in England, were there any strong accusations that prices were made before sales. On the whole, the interest of the buying agents lies probably in the direction of keeping prices moderate so as to encourage their principals to make large purchases, and the usual talk about "the state of trade" which goes on in every market would facilitate a common action in that direction.

31. The same result is produced in the fat trade by the great concentration which has taken place in the soap industry. Margarine makers have largely passed from the use of "oleo" to that of vegetable oils, thus decreasing an important market for fats. On the other hand, butchers, at least in Scotland, seem to be retaining more fat for sausage making, but the large makers are in the market as buyers of special grades of fat. The development of industry has thus brought about a serious reduction in the number of buyers of rough fats and has correspondingly reduced the bargaining power of the sellers. This has been attended in Scotland by the existence, for 20 years or more, of "rings" of buyers at the fat auctions.

32. No practical suggestions were made to us for making any conspicuous improvements in sales by auction. Butchers, except those trading on a very large scale, can not dispose individually of their hides and fats; but it seems to us that their selling agents would find it better to develop, at least in fats, the practice of selling direct to users instead of conducting sales by auction. The methods of selling on the market letter or on the Raw Fat Melters' Association circular, where values are assessed by buyers and sellers in cooperation, appear to us to be much less open to criticism than auctions where the attending circumstances are such as to give rise to suspicion; but, as already suggested, the butchers ought to be more closely associated with the issue of the market letter.

33. We feel bound to point out, however, that the evils incidental to the present methods of disposal of hides, fats, and other by-products are really the result of the general practice of slaughtering animals on the private premises of the butcher. At the large works in the United States and Argentina, where cattle are slaughtered in great numbers, hides and fats can be sold in bulk to the advantage of their owners, and machinery can be installed for making the most economical use of blood and other by-products. In the towns and cities of Scotland, and to a less degree in those of England, public abattoirs have been set up, but none of them are so efficiently equipped as those in America. The establishment of public abattoirs also subserves the interests of national health, since only at them can proper sanitary arrangements be provided and proper supervision and inspection of meat carried out. If such abattoirs were established as near the districts where cattle are fattened as is reasonably possible from a business point of view, suitable chilling chambers could be built where the meat could be properly cooled and transported in that state to the centers of consumption. Reforms of this kind are being actively discussed in France, and it is plain that the loss that is unavoidable when cattle are transported "on the hoof" would be prevented. We commend these considerations to the notice both of butchers and farmers, who can only increase their sales by cheapening the cost of meat to the consumer. When costs of production are so high as they are to-day, it is important that full values should be obtained for all by-product if meat is to be reduced in price. If sellers will cooperate they can by bulk sales of hides and fats free themselves from subordination to large tanners or soap makers, or to "rings" of buying agents, where organizations exist. By cooperation they can also profitably utilize many minor by-products now allowed to go to waste.

SUMMARY OF FINDINGS AND RECOMMENDATIONS.

34. Our findings and recommendations may be summarized as follows:

BRITISH AND COLONIAL MEAT.

(a) There is no evidence of the existence of either temporary or permanent combinations in the home-grown meat trade or the trade in imported meat from the Dominions, which did or could exert any seriously detrimental effect on traders or on consumers.

(b) Speculation in meat is unorganized, occurring only in particular conditions of supply, and is not characteristic of the meat trade as a whole.

AMERICAN MEAT COMPANIES.

(a) There is at least a tacit understanding between the American meat companies to respect each other's position, which secures to them all the economic advantages of an active combination, and all questions affecting the strategy of the trade as a whole are settled in conference between the heads of the businesses in Chicago.

(b) While the trade is of opinion that it is impossible to control prices at Smithfield for more than a few days, the American companies have attempted to fix a minimum price for meat up to a particular hour of the day; they have regulated the quantities of meat which were to be put on the market weekly, and it has been their practice to fix the prices for their country sales on the basis of the London prices.

(c) No complaint was made of unfair trading on the part of the American companies beyond severe cutting of prices for the purpose of developing trade or clearing surplus stocks. Complaints were made that the River Plate meat companies (British, American, and Argentine) had been in preferential position under control compared with British traders in home and colonial meat, but this was only a temporary incident of war conditions.

(d) The share of British trade held by the American companies has increased, and this development requires to be carefully watched, although there are no signs at present of a serious intention on the part of the American companies to capture the home-killed trade of the United Kingdom or to reduce British butchers to a state of dependence.

(e) For a long time we must be dependent on South America for a great part of our beef supply.

(f) The American meat companies have at present nearly 60 per cent of the beef output from Argentina and Uruguay, and about 75 per cent of the capacity of the meat works built or building in Brazil, whereas in 1909 they had only about 35 per cent of the River Plate meat trade.

(g) The growth of the American companies has been largely brought about by the destructive competition which from time to time they have waged against the British meat companies, with the result that the latter were forced in June, 1914, to consent to a pooling agreement determining the share of the trade to be apportioned to each company.

(h) The policy of the American companies is to-day the same as it has been since their entry into the River Plate trade, namely, the continued reduction of the share of the trade held by British companies, and this policy involves the risk of grave dangers to the British consumer.

(i) The British registered company of Vestey Bros. is controlled by English owners resident abroad, but it has at present no connection with the American meat companies; the combination of interests represented is so large that if the company departed from its policy of independence the consequences might be very serious.

(j) The prospect is that there will be greater demands on the world's meat supplies in the future than in the past, and this development would naturally increase the power of any trust. All countries, therefore, where meat is a common article of food are now, or soon will be, equally concerned with our own in the private control of meat supplies.

We recommend, therefore:

1. That it should be the declared policy of His Majesty's Government to prevent the percentage of the beef trade which is at present in foreign hands from increasing, to the loss of producers at home and in the Dominions and of British importing companies.

2. That in any legislation which may be contemplated for the purpose of dealing with trusts and combinations there should be provisions for dealing with the form of cooperation which we believe to exist among the American meat companies and for the investigation of complaints against these companies, and that the utmost publicity be given to their methods of business.

3. That steps be taken to insure that foreign meat companies should be subject to the same basis of taxation in this country as the British meat companies.

4. That the Las Palmas meat works in Argentina should continue to be operated on behalf of His Majesty's Government so as to afford a means of watching the developments of cost and price movements.

5. That the control of insulated shipping would afford one effective means of preventing British meat supplies from falling under the domination of particular interests, and that, accordingly, the Government should be equipped with such reserve powers, and should maintain such relations with the shipowners, as would prevent the diversion of meat supplies from the United Kingdom and the wholesale transfer of British insulated shipping to foreign ownership.

6. That the Governments of the various consuming and producing countries should discuss together the possibilities of making joint investigation into the world's meat situation with the object of taking such common action as may be required.

HIDES AND FATS.

(a) In England hides are sold by auction, the sellers being "hide markets," i. e., firms which collect the hides and sell them on commissions; the buyers are tanners who usually purchase through agents or professional buyers, each of whom may act for several principals. This concentration of demand would appear to be in favor of the buyers, but so long as auctions are honest no serious evil seems to arise. Evidence was given, however, that on occasion English auctioneers suspecting combination among the buying agents withdrew their hides from the auction and sold them by private treaty. In Scotland it appeared to be quite a regular practice for the buying agents to fix the auction prices beforehand and to squeeze out independent bidders.

(b) The sale of fats is also conducted by auction in Scotland, and the evils of the "mock auction" appear to be even more rampant than in the case of hides. In the north and midlands of England fats are sold by direct treaty at prices fixed periodically at joint meetings of representatives of the Raw Fat Melters' Association and the Hide Markets Federation, but those prices are not enforced by any disciplinary action. The London trade is governed by the prices quoted in the weekly market letter drawn up and issued by the market committee after the weekly auction of Australian and New Zealand tallow.

We consider that the selling agents for the butchers would find it better to develop, at least in fats, the practice of selling direct to users instead of conducting sales by auction, but in the London trade the butchers ought to be more closely associated with the issue of the market letter. The practice, prevalent in Scotland, whereby hides entered and stamped at one market can not be forwarded to another market for sale appears to us entirely reprehensible.

We consider that the development of public abattoirs would not only be conducive to the public health but would enable butchers to set up organizations for the cooperative sale and treatment of their hides, fats, and other by-products, which would realize great economies and prevent the evils which at present attend the current methods of disposal by auction.

35. In conclusion we desire to place on record our appreciation of the admirable services rendered to us in our investigations by our secretary, Mr. N. W. Bird.

MINISTRY OF RECONSTRUCTION—REPORT OF THE COMMITTEE ON TRUSTS APPOINTED IN FEBRUARY, 1918.

LIST OF MEMBERS AND TERMS OF REFERENCE.

(1) The minister of reconstruction appointed in February, 1918, a committee composed as follows: Mr. Edward Shortt, K. C., M. P. (chairman), Mr. Percy Ashley, Mr. E. Bevin, Mr. J. H. Guy, Mr. J. A. Hobson, Mr. J. F. Mason, M. P., Mr. G. Scoby Smith, Mr. W. H. Watkins, Mr. Sidney Webb, Mr. Douglas Wenham, Mr. John Hilton (secretary); with the following terms of reference:

"In view of the probable extension of trade organizations and combinations, to consider and report what action, if any, may be necessary to safeguard the public interest."

(2) In June, 1918, Mr. Edward Shortt, having assumed the office of chief secretary for Ireland, was unable to continue his chairmanship, and the minister of reconstruction, having accepted Mr. Shortt's resignation, appointed Mr. Charles A. McCurdy, M. P., chairman of the committee.

(3) In June, 1918, the minister of reconstruction appointed the following additional members to the committee:

Mr. Stanley Machin, J. P., Mr. Frederick Richmond, Mr. H. L. Symonds.

REPORT.

To the Right Hon. Sir AUCKLAND GEDDES, K. C. B., M. P.

SIR: We have held 15 meetings, and have heard verbal evidence from witnesses representing the principal trade associations and combinations in the United Kingdom. We have also considered written statements submitted to us, in response to invitations issued, by representative trade associations, combines, large amalgamated concerns, chambers of commerce, and federations of manufacturers, and from individuals and firms in a position to judge the effects of combinations on outside interests. We have received communications from traders in competition with combinations, from merchants, from Government departments, from labor leaders, and from representatives of the trade and technical press. We have also made use of such reliable documentary evidence as was readily available, and have considered certain memoranda prepared for the use of the committee by Sir John Macdonell and others.

We find that there is at the present time in every important branch of industry in the United Kingdom an increasing tendency to the formation of trade associations and combinations, having for their purpose the restriction of competition and the control of prices.

Many of the organizations which have been brought to our notice have been created in the last few years, and by far the greater part of them appear to have come into existence since the end of the nineteenth century. For reasons which we shall presently discuss, there has been a great increase in the creation of trade associations during the period of the war.

The following list of associations connected with the iron and steel industry, nearly all of which are definitely known or believed to be engaged in regulating prices and output, affords some indication of the extent to which the creation of trade combinations has now proceeded. The list does not purport to be at all exhaustive, even of this one industry.

LIST OF SOME ASSOCIATIONS IN THE IRON AND STEEL INDUSTRY.

Pig iron: Cleveland Pig Iron Association (17 firms), Scottish Ironmasters' Association (12 firms), South Staffordshire Ironmasters' Association, West Coast Iron Committee (7 firms), Ferro-Manganese & Spiegel Association (5 firms).

Steel: Scottish Steel Makers' Association (7 firms), Northeast Coast Steel Makers' Association (10 firms), South Wales Siemens' Steel Association (8 firms).

Rolled products: British Joist Makers' Association (9 firms), British Rail Makers' Association (16 firms), Midland Steel Angle Makers' Association (6 firms), Small Steel Bar Association (8 firms), Sheet Makers' Conference (31 firms), Rod Rollers' Association (11 firms), Welsh Plate & Sheet Makers' Association.

Castings (steel): Steel Castings Manufacturers' Association (20 firms).

Iron: Cast Iron Hollow-ware Makers' Association, British Cast Iron Pipe Founders' Association, National Light Castings Association.

Forgings: English & Scottish Forgemasters' Association (18 firms), Federated Forgemasters (13 firms), Midland Forgemasters' Association.

Bar iron: Lancashire Bar Iron Association, Scottish Bar Iron Makers' Association (13 firms), South Yorkshire Bar Iron Association (10 firms), Northeast Coast Bar Iron Association (5 firms).

Miscellaneous: Iron & Steel Wire Manufacturers' Association (29 firms; prices are dealt with in the "secondary associations"), British Tube Makers' Association (32 firms), Steel Nail Makers' Association, Weldless Steel Tube Makers' Association (7 firms), Wire Netting Association (10 firms), Railway Tyre & Axle Makers' Association (14 firms), Railway Wheel & Axle Makers' Association (15 firms), Steel Rope Wire Makers' Association, Coil Spring Makers' Association.

This list, which, as already stated, does not purport to be complete, affords some indication of the extent to which associations pervade the whole iron and steel industry of the United Kingdom. A large proportion of them are either permanently or intermittently price associations, concerning themselves, as a rule, only indirectly with output. In the majority of cases they do not comprise more than a small number of firms, but generally a large proportion of the trade.

The products with which the above-mentioned associations deal are raw materials or intermediate products, but there exist also many associations of manufacturers of the more finished iron and steel goods. Iron and steel wire, as also such wire manufactures as nails, steel ropes, and wire netting, are the subject of separate but coordinated associations. The makers of iron castings used in domestic building are grouped in a powerful association embracing 90 per cent of the industry. There is an association comprising the whole of the galvanized sheet-iron manufacturers, and another comprising four-fifths of the makers of metal bedsteads. Besides the associations of independent firms, as described above, there are in the iron and steel industries an increasing number of great consolidations. Some horizontal, as where a number of steel, shipbuilding, bolt and screw, or other firms engaged on the same stage of manufacture have amalgamated; and some vertical, as where firms previously engaged as separate business concerns in coal, pig iron, steel, and structural or marine engineering have become fused into one financial interest. It is not definitely known that all those associations regulate output and price, but we are satisfied that, as regards many branches of the iron and steel industry, price is only partly determined by competition and is regulated by the manufacturers acting in concert.

As another prominent instance, we may take the chemical industry, which is ancillary to a wide range of other industries. The production of chemicals in this country is almost wholly in the hands of two great consolidations. In the electric industries there is an association of businesses of a different nature, with a total capital of £33,000,000. In soap, tobacco, wall papers, salt, cement, and in the textile trades there are powerful combinations or consolidations of one or other kind which are in a position effectively to control output and prices.

2. These associations and combinations are of many different grades and kinds. The simplest form of understanding may be illustrated by the periodical meetings of coal merchants or other dealers for informally discussing the prices to be charged by all. At the other end of the scale would be such consolidations as are represented by Messrs. Coats (Ltd.), in this country, with a capital of £10,000,000, or the United States Steel Corporation of America, with a capital of £369,000,000. Between those two extremes lie a multiplicity of more or less loosely organized associations, of which a well-known federation may serve as an example. This is a federation of firms engaged in the manufacture of an article of furniture. On the formation of the federation a computation was made of the total output of such furniture in the United Kingdom and of the respective share of that output contributed by each of the subscribing firms. Each firm was then assigned a percentage of the total output based on its sales prior to the formation of the federation. Each firm remained at liberty to increase its output so far as it was able and desired to do so; but upon all sales made by any firm in excess of its assigned percentage of the aggregate trade done 5 per cent in value had to be paid each month into a pool. Any firm whose output for the month was less than its proportionate share of the aggregate output was entitled to receive from the pool 5 per cent in value upon the amount of its deficiency. An arrangement of this kind was found to be common to a great many of the associations into whose working we inquired, and has as one of its effects the curious result that a member of the association may, if he desires, entirely withdraw from active manufacture and allow his share of the output to be absorbed by more active firms and as compensation draw a substantial sum month by month from the pool. It was explained to us by one of the witnesses that, in his view, the pensioning of inefficient members of the trade in this way was more economical than any attempt to drive them out of the trade by competition. One witness of great experience asserted "that it was a law of progress that the inefficient should go, but in practice progress was impeded because he would not go, so instead of trying to kill him they had decided it was better to pension him off, since that cost far less. If the inefficient man, who used to struggle to do 3 per cent of the trade, likes to content himself with doing 1½ per cent, or none at all, the difference goes to the more efficient man, who, working more economically, can well afford to pay into the pool from which the inefficient man can draw compensation."

It is a further regulation of the federation that no firm shall sell their furniture at lower prices or at higher discounts or on different terms than should be specified by the federation from time to time. Each firm must give the secretary of the federation full access to its books. The members contribute 1 per cent of the amount of their monthly sales to a reserve fund and are liable on any breach of the regulations with regard to selling, prices, terms, or discounts to pay a fine to the federation not exceeding 20 per cent on the whole amount of the transaction, with a minimum of £10 for the first offense and £20 for the second offense during any 12 months. The affairs of the federation are managed by a committee of 10 principals of firms belonging to the federation. Admission to membership is by vote of the committee, and new members have an aggregate output assigned to them by the federation for the purpose of computing their liability to contribute to or their right to receive payments from the pool, and also pay an entrance fee proportionate to the amount of their output. In this and similar associations there appears to be no desire to exclude new firms from joining, but, on the other hand, every desire to make the membership as far as possible comprehensive of the whole or a very substantial proportion of the trade.

3. In some of the other associations which came under our review the regulations as to sale prices were omitted. One of such associations, covering 99 per cent of the total British output of an important steel product, was formed upon the basis that at the outset each firm in the trade should have a percentage of the total output allocated to it. At the end of each month the secretary receives from each firm particulars of its output during the month. By adding these amounts the total output of the trade for that month is ascertained. The secretary then calculates what percentage of the total each firm has done, compares that actual percentage with the allocated percentage, and then informs each firm how much it has exceeded or fallen short of its agreed quota. For every ton by which a firm has exceeded its percentage it pays a sum of £1 pound into the pool. For every ton by which a firm falls short of its percentage it draws a sum of 10s. from the pool. We were informed that the association made no attempt to fix or regulate the total output of the industry, leaving that perfectly free to expand or contract according to the demand. All that is fixed is the percentage on the total production for each firm. The ratio of output as between the different firms is never exactly maintained. We were informed that it paid some firms to exceed and pay the penalty and it paid some firms to fall short and receive compensation, and that in this respect the arrangement made for efficiency, for the inefficient man who could not make a profit equal to the compensation preferred to let his business go to the more efficient firm and draw from the pool. One firm that joined the association had entirely ceased to manufacture from that time, but had ever since continued to draw a handsome income from the pool.

In some of these associations regulations are enforced for the purpose of eliminating outside competition by imposing restrictive conditions upon purchasers, for example, by allowing special discount rates or deferred rebates only to those customers who undertake to purchase goods manufactured by members of the association exclusively, or by refusing to purchase semifinished products from manufacturers except on the terms that such manufacturers should agree to supply exclusively the members of the association. In the case of one trade organization now possessing a monopoly of at least four-fifths of the supply of shoe machinery in Great Britain we found that the monopoly enjoyed had been largely created and maintained by the use of an ingenious and elaborate method of leasing shoe machinery under which the user of any machine made by the company became restricted not merely as to the hire or purchase of similar machines but was also debarred, for all practical purposes, from purchasing any other machinery necessary for the purpose of his business from any firm other than the organization in question.

One large association of metal manufacturers, in effect, imposes an effective restriction upon foreign competition by an agreement made between the association and a federation of distributors or wholesale merchants whereby the federation agrees not to import any foreign goods of the kind manufactured by the association and receives in exchange a guaranty of a larger distributor's profits than was previously current in the trade. A further restriction upon the possible competition of British manufacturers outside the association is secured by the action of the Merchants' Federation, who give rebates on discounts to the retail trade conditional on exclusive dealing with members of the federation, who in their turn only stock the goods manufactured by members of the association. In the case of a large amalgamation controlling a great proportion of the supply of an article in domestic use all sale contracts with retailers contain a stipulation that the retailer shall not sell any other make of the goods in question at

a lower price. This leaves it open for a competing manufacturer to sell to the retailer at a lower price than the amalgamation, but deprives him of the possibility of endeavoring to create a public demand for a new brand by undercutting the price of that handled by the amalgamation. But in a large proportion of the associations with regard to which evidence was laid before us so great a proportion of the particular trade is included in the combine (in some cases as much as 98 per cent) as to render it unnecessary to impose restrictive conditions in order effectively to maintain a practical monopoly.

Many of these associations appear to have been created as a result of a temporary depression in their trades. One witness stated as his opinion that it was "seldom that an association came into being until a trade was faced with all-around disaster if it did not combine."

4. There was considerable evidence before us that the growth and power of these associations has been greatly strengthened during the period of the war, and that this result appears to have come about primarily from the novel circumstances of war, under which the Government, acting through the ministry of munitions or other departments, found it necessary sometimes to consult the most informed opinion in a trade and sometimes to ration material through an organization representative of the trade. Unassociated firms which found themselves not consulted by the Government were thus led to join existing associations, or in some cases to form representative groups for the purpose of advising the Government on matters concerning the trade.

There appears to be no doubt that a large number of definite trade associations have been formed during the war which may certainly be expected to control and regulate prices and the conditions of industry in the same manner as the prewar associations were already doing, and it is also probable that the habit of cooperation and discussion on matters of common concern, which has been the result of the formation of purely advisory groups of manufacturers or distributors for the purpose of the war, will lead to a transformation of at least a part of such advisory groups into definite trade associations as soon as the Government control over trade or industry is withdrawn. The advisory committees will disappear, but will reappear in the form of new trade associations.

5. We found a unanimous opinion on the part of members of these associations that their effect is not only beneficial to the efficient carrying on of business but essential in many cases for the maintenance of export trade and for effectively meeting foreign competition.

Three important associations submitted to us a joint memorandum of evidence in which the advantages are thus stated:

"Apart from associations which exist for negotiating with labor, the regulation of wages, and the settlement of disputes, the simplest form of association, and the one most common in this country, is the class of association which is concerned with the regulation of prices."

"In the absence of any association, it is the experience in our various trades that, as the result of unrestricted competition of British manufacturers and of importers, prices are driven down to the lowest possible level, and profits frequently reach a vanishing point.

"In the absence of profit, manufacturers are discouraged, if not absolutely prevented, from reorganizing their plant, expending money upon improvements, and introducing new methods, and thus unrestricted competition may, and frequently does, result in an increase in cost of manufacture, and to that extent to the actual detriment of the consumer. A further evil flowing from unrestricted competition is the tendency for manufacturers, in the struggle for orders, to supply commodities of the lowest and cheapest quality which consumers can be induced to accept. Consumers are in many cases unable to judge by mere observation the relative value of commodities, and this must tend to drive superior goods off the market, to the direct disadvantage of the consumers themselves.

"Where price associations exist, all members having to quote the same price, the competition among the manufacturers, parties to the association, becomes one of quality, and one direct and important result of these price associations is undoubtedly a tendency to rise to a general higher level in production in this respect. The elimination of competition results in a higher level of price and the provision of additional profits, whereby the manufacturers are encouraged and enabled to improve their processes, and, by scrapping old plant, the installment of new machinery, and the adoption of new methods, to reduce appreciably their costs of manufacture."

There was general agreement among the witnesses representing associations that no danger of excessive prices being imposed on consumers need be feared as a result of the development of trade associations in this country.

"We understand," said a chairman of one important trust, "that fear has been entertained by some people that large combinations and associations might abuse their powers, but we do not believe that there is the slightest fear that this would happen in this country. Some combinations and associations of considerable size have been in existence for many years without any suggestions that their powers have been abused."

6. No definite evidence was brought before us that up to the present excessive charges have been made by these combinations. It was, however, made plain to us that the distributors and producers do not in all cases share the confidence so expressed.

An important distributing agency furnished us with the following opinion with regard to one of the associations which has been already referred to:

"The combination in question has not been of any advantage to the retailer or to the public. They hold a very strong position in the trade, and one of the great resulting evils is that competition in the goods referred to is greatly curtailed. As a rule, when this happens the consumer suffers."

The same distributing agency, referring to another combine of an important character, says:

"This is one of the most complete monopolies in the United Kingdom. In our opinion, such a point as this is inimical to the public interest and the initative that follows from competition; it starves its distributors, its huge profits are a heavy toll on the wages of the poor, and the public's necessity becomes their opportunity."

ASSOCIATIONS ENCOUNTERED BY MINISTRY OF MUNITIONS.

7. On inquiries made through the ministry of munitions we learnt that the ministry had experiences of many associations in the course of war, among them being the following:

The North-East Coast Steel Makers' Association, the Railmakers' Association, the Ingot Makers' Association, the Billet Makers' Association, the Brass Wire Association, the Brass Rod Association, Birmingham Cold Rolled Brass Association, Birmingham Rolling Mill Combine, Brass and Copper Tube Association, Manufactured Copper Association, United Kingdom Rosin Importers' Association, Cotton Duck Manufacturers' Association, Balata Belting Manufacturers' Association, the United Kingdom Lead Manufacturers' Association, the White Lead Convention, the Lead Oxide Convention, the National Federation of Associated Paint, Color, and Varnish Manufacturers of the United Kingdom, Tinplate Trade Association, Tinfoil Association, Tinfoil Paper Association, Capsule Trade Association, Collapsible Tube Association, Britannic Metal Association, Master Silversmiths' Association, Wrought Iron Hollow-ware Trade Association, Copper Rollers' Association, Brass Sheet Rollers' Association, Spelter Manufacturers' Association, Copper Producers' Association, Zinc Producers' Association, United Kingdom Rosin Distributors' Association, Brass Strip Association, Copper Tube Association, Copper Band Association, National Light Castings Association, Tube Makers' Association, Wagon Repairers (Ltd.), British Chemical Ware Manufacturers' Association, British Lamp-blown Scientific Glassware Association, British Flint Glass Manufacturers' Association, Association of Glass Bottle Manufacturers of Great Britain, Lancashire Glass Bottle Manufacturers' Association, Yorkshire Glass Bottle Manufacturers' Association, Scottish Glass Bottle Manufacturers' Association, London Glass Bottle Manufacturers' Association, Manchester Glass Workers Employers' Association, Northern Association of Pressed Glass Manufacturers, Tungsten Lamp Manufacturers' Association, Carbon Lamp Manufacturers' Association, British Electrical and Allied Manufacturers' Association, British Laboratory Ware Association, British Optical Instrument Manufacturers' Association, British Nautical Instrument Makers' Association, British Photographic Manufacturers' Association, the Cordite Ring, Association of British Chemical Manufacturers, Fertilizers Manufacturers' Association, Sulphate of Ammonia Association, Industrial Spirit Supply Association, Methylators' Association, Wire Weavers' Association, Wire Drawers' Association, Dry Plate Makers' Association, Tube Ring and Electrical Contractors, Tar Distillers' Association, Machine Tool and Engineering Association (Ltd.), Scottish Iron Founders' Association, Textile Machinists' Association, West Gas Co. (the Tank Hull Combine), British and Foreign Supply Association, Lancashire Clog Makers' Association, Lancashire Boiler Makers' Association, Keg and Drum Association, Calico Printers' Association, Fine Cotton Spinners' Association, British United Shoe & Machinery Co. (Leicester), Leicester District Armament Group, West Wales Engineers' and Founders' Association, London Building Trades Association, Fuse Makers' Association, London Jewellers' Association, Gauge Makers' Association, Magnet Makers' Association, Accumulator Association, Cable Makers' Association, Association of Aeroplane Engine Manufacturers, Rolled Brass Association, Hot Rolled Copper and Brass Sheet Association, Wire Weavers' Association, Power-Loom Manufacturers' Association (Ireland), Spinning Association (Ireland), Society of British Aircraft Constructors, Drop Forgings' Association.

We were furnished with detailed reports through the various departments of the ministry with regard to their experiences in dealing with these and other associations. To a very general extent these experiences appear to have been of a character satisfactory to the Government. Considerable advantages were recognized in dealing with combinations and associations for war purposes. It was found that the influence of larger-minded and more moderate men had a beneficial effect upon the attitude of the trade as a whole, that the best technical advice was more easily available, and that on the whole the trade associations, and especially trade committees created for war purposes, were of the greatest possible assistance to the ministry. On the other hand, certain officers of the department laid criticism before us with regard to the effect of such associations on prices. We were informed that trade associations, in fixing the price for an article, naturally keep in view the fact that the cost of manufacture of the article varies with the description and size of the manufacturer's works, some firms having a large and up-to-date plant, while others may have a small and more or less obsolete plant. Hence a price which would give the former a handsome profit might be just sufficient to keep the latter going, and, conversely, a price which would secure a reasonable profit for the latter would give the former an excessive return on their manufacturing outlay.

It was alleged of one association that it had endeavored to fix very exorbitant prices, and that arrangements for the control of prices had been discovered which had in fact led to a rise of prices to an excessive extent. These were, however, individual cases, and generally the officials of the ministry appeared to be of opinion that the associations had made for more economical production and for an improved quality and variety of output, and for a very beneficial interchange of technical knowledge, and that, although most associations regulated prices, the consumer in general had not suffered through such regulations.

It was, however, pointed out by another official from the ministry that in dealings with the department the knowledge that resort could be had to the defense of the realm regulations in case of need has no doubt exerted a considerable influence. Moreover, the department had acted in some cases practically as a consumers' combine.

"This will not apply after the war, and the consumer will, no doubt, be at a disadvantage in dealing with such combinations of producers. On the other hand, when it comes to foreign competition, there is no doubt that such combinations are extremely beneficial. It will probably be necessary, however, in the interests of the home consumer, for the Government to take powers of investigation and regulation within limits."

8. There was a general agreement among representatives of associations before us that one of the beneficial results of the formation of associations sufficiently powerful to control and maintain prices in the home market was that it enabled British manufacturers to extend their output by selling their products at a lower price, or even at a loss, in foreign markets. The chairman of an important metal association stated that—

"The cause of the formation of the association was the fact that this industry in Great Britain had been very unremunerative for many years, and had stood in danger of being crushed out of existence by foreign competition and by too much competition among manufacturers at home, and it was realized that if the industry was to be saved at all the manufacturers would have to come together and form an association. * * * By securing remunerative prices in the home market they could make a successful bid against foreign competition in the export trade. They had a fund—a fighting fund—for the special purpose of subsidizing members who found it necessary to sell at less than an economic price in order to cut out foreign competitors. That might be called meeting dumping by dumping, but he would not agree that British firms dumped in the aggregate much more than foreign firms. They had dumped in Belgium as a reprisal against Belgian dumping here."

The chairman of a number of important associations stated that—

"In the past it had paid Germany handsomely to export a large part of her steel products at a loss. In the future it will pay this country to do the same. He had no doubt at all that it would be a sound

policy to sell in foreign markets at a loss. It was true that 80 per cent of their output went abroad, so that it was not any matter of dumping an occasional surplus that the home market could absorb, but a large proportion of their exports went to our own colonies, and by getting some little preference there and sufficiently good prices at home the industry would be able, as organized in its conference, to undersell Germany or America in such markets as South America, even if that meant selling at a loss. About 60 per cent of their output was sold within the Empire and 40 per cent outside. A slightly increased preferential price on the 60 per cent would enable them to hold the 40 per cent against competitors."

9. As regards the effect of associations and combines upon conditions of labor, we found a difference of opinion. In some associations conciliation boards and industrial councils have been established and excellent relations with labor have been maintained.

On the other hand, complaints were made that members of the staffs of different companies which acted in associated circles are deprived of freedom of action when they desire to change from one firm's employment into the service of another which is in the same association. It was complained that, although the change might be desired by a man in order that he might improve his position, or for some equally good reason, by reason of the understandings existing between associated firms, such an application for transfer could not be made without his employer's knowledge, and he might thereby be prevented from securing an appointment.

We recognize that, so far as an association created to maintain or raise profits is successful in that purpose, it must to that extent be in a position to deal more generously with the demands of labor if it chooses to do so. But we were informed by a representative of the ministry of munitions that—

"In the recent industrial unrest it was generally the large firms which experienced the most trouble. The tendency of these large aggregates is necessarily to become impersonal and to make the worker feel that he is dealing with a vast machine not amenable to ordinary persuasive influences, against which his only weapon is to strike."

A representative of one of the large associations stated that—

"From a social point of view, the bigger the employers the more detached they are from the men they employ. One of the difficulties with labor is the very fact that a man is no longer so closely associated with the men as he used to be in the old days, when he mixed with his hands and called them by their Christian names."

The view of the trade-union organizer was expressed to us in the following letter:

"In reply to yours of the 7th instant, may I be allowed to suggest that I am heartily sick and tired of Government committees, commissions, inquiry committees, and investigations. In my judgment, trusts and organizations exercising powers of monopoly are vicious things in themselves. I am prepared to admit, as a trade-union official, that it is easier to get fairly good conditions for workpeople employed by comprehensive and powerful trusts than it is from bodies and associations who are denied the advantages of monopoly and the consequent power of exploiting the consumer; but it is fairly evident that what we gain as producers we more than lose as consumers. Trusts, again, tend to promote a semblance of efficiency in production and distribution, but, having wiped out competition, they in their turn tend to become static and to resist any comprehensive development in their own sphere. * * *"

There can be no doubt, and it was generally admitted by the representatives of associations, that there is a great deal of public distrust with regard to the operation of trusts, combines, and associations, and we have no doubt that the novel experiences of the past four years, the disclosure of the war profits made by certain firms, and the repeated allegations of exorbitant profiteering on the part of capitalists during the war, whether true or false, has tended greatly to aggravate existing suspicion and distrust on the part of the public with regard to the operation of associations and combines. We are unable to share the optimism of those representatives of associations who were of opinion that under no circumstances was there any possibility of their operations leading to excessive prices or to the detriment of the public. While fully recognizing the honesty with which the great bulk of business in this country is conducted, it is obvious that a system which creates virtual monopolies and controls prices is always in danger of abuse. We are confirmed in this view by a survey of the operations of similar combines and associations in other countries.

THE AMERICAN MEAT TRUST.

10. As an illustration of the extent and effect of a trade combination in one industry, affecting both this country and America, we desire to refer to the summary of the report of the Federal Trade Commission on the meat-packing industry issued by the Federal Trade Commisison at Washington on the 3d of July, 1918, in which much interesting information is given as to the activities of the five principal meat-packing corporations in the United States, which are commonly known as the Meat Trust, or the "Big Five." The summary shows:

First. The magnitude of the large meat-packing companies, the extensive ramifications of their interests, and the instruments by which they have established and maintain control.

Second. The nature of their combination, with details of the various agreements and combinations.

Third. The practices of the combination and their social and economic effects.

Fourth. The remedy proposed.

The report contains a summary of findings, from which the following paragraphs are taken:

"Five corporations—Armour & Co., Swift & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co.—hereafter referred to as the 'Big Five' or 'the packers,' together with their subsidiaries and affiliated companies, not only have a monopolistic control over the American meat industry but have secured control, similar in purpose if not yet in extent, over the principal substitutes for meat, such as eggs, cheese, and vegetable-oil products, and are rapidly extending their power to cover fish and nearly every kind of foodstuff.

"In addition to these immense properties in the United States, the Armour, Swift, Morris, and Wilson interests, either separately or jointly, own or control more than half of the export production of the Argentine, Brazil, and Uruguay, and have large investments in other surplus meat producing countries, including Australia. Under present shipping conditions the big American packers control more than half of the meat upon which the Allies are dependent.

"The monopolistic position of the Big Five is based not only upon the large proportion of the meat business which they handle, ranging from 61 to 86 per cent in the principal lines, but primarily upon their ownership, separately or jointly, of stockyards, car lines, cold-storage plants, branch houses, and the other essential facilities for the distribution of perishable foods.

"The control of these five great corporations, furthermore, rests in the hands of a small group of individuals, namely, J. Ogden Armour, the Swift brothers, the Morris brothers, Thomas E. Wilson (acting under the veto of a small group of bankers), and the Cudahys.

"A new and important aspect was added to the situation when the control of Sulzberger & Sons Co. (now known as Wilson & Co. (Inc.)) was secured, 1916, by a group of New York banks—Chase National Bank; Guaranty Trust Co.; Kuhn, Loeb & Co.; William Salomon & Co.; and Hallgarten & Co. The report of the committee appointed by the House of Representatives to "investigate the concentration of control of money and credit" (the Pujo Committee) states (p. 59): 'Morgan & Co. controls absolutely the Guaranty Trust Co.' The Chase National Bank, a majority of its stock being owned by George F. Baker, is closely affiliated with the First National Bank. William Salomon & Co. and Hallgarten & Co. are closely affiliated with Kuhn, Loeb & Co. Thus we have three of the most powerful banking groups in the country, which the Pujo Committee classed among the six 'most active agents in forwarding and bringing about the concentration of control of money and credit,' now participating in the rapidly maturing food monopoly above described. The entrance of the bankers into the packing business, it should be noted, was not at all displeasing to the big packers. J. Ogden Armour and Louis F. Swift were frequently consulted during the negotiations, and Paul D. Cravath is quoted by Henry Veeder as giving assurance that the final arrangements would be 'more than satisfactory' to Armour and Swift.

"The menace of this concentrated control of the Nation's food is increased by the fact that these five corporations and their five hundred and odd subsidiary, controlled, and affiliated companies are bound together by joint ownership, agreements, understandings, communities of interest, and family relationships.

"The combination among the Big Five is not a casual agreement brought about by indirect and obscure methods, but a definite and positive conspiracy for the purpose of regulating purchases of live stock and controlling the price of meat, the terms of the conspiracy being found in certain documents which are in our possession.

"There are undoubtedly rivalries in certain lines among the five corporations. Their agreements do not cover every phase of their manifold activities, nor is each of the five corporations a party to all agreements and understandings which exist. Each of the companies is free to secure advantages and profits for itself so long as it does not disturb the basic compact. Elaborate steps have been taken to disguise their real relations by maintaining a show of intense competition at the most conspicuous points of contact.

"The Armour, Swift, Morris, and Wilson interests have entered into a combination with certain foreign corporations by which export shipments of beef, mutton, and other meats from the principal South American meat-producing countries are apportioned among the several companies on the basis of agreed percentages. In conjunction with this conspiracy, meetings are held for the purpose of securing the maintenance of the agreement and making such readjustments as from time to time may be desirable. The agreements restrict South American shipments to European countries and to the United States.

"Since the meat supplies of North and South America constitute practically the only sources from which the United States and her Allies can satisfy their needs for their armies, navies, and civil populations, these two agreements constitute a conspiracy on the part of the Big Five, in conjunction with certain foreign corporations, to monopolize an essential of the food of the United States, England, France, and Italy.

"The power of the Big Five in the United States has been and is being unfairly and illegally used to manipulate live-stock markets; restrict interstate and international supplies of foods; control the prices of dressed meats and other foods; defraud both the producers of food and consumers; crush effective competition; secure special privileges from railroads, stockyard companies, and municipalities; and profiteer.

"The packers' profits in 1917 were more than four times as great as in the average year before the European War, although their sales in dollars and cents at even the inflated prices of last year had barely doubled. In the war years 1915 to 1917 four of the five packers made net profits of $178,000,000.

"Foreign interests: The investigation of the foreign interests of the American packers is not yet complete. The following list of those companies which thus far have been identified as subsidiary to or affiliated with the Big Five is indicative of the extent of their activities abroad:

"Armour: Armour & Co. of Australia (Australia and New Zealand); Armour & Co. of Uruguay (Uruguay); Compania Armour do Brazil (Brazil); Frigorifico Armour de la Plata (Argentine); Dominion Tanneries (Ltd.) (Canada); Armour Canadian Grain Co. (Canada); Allen & Crom (Ltd.) (Great Britain); Armour & Co. (Ltd.) (Great Britain); Fowler Bros. (Ltd.) (Great Britain); James Wright & Co. (Great Britain); Times Cold Storage Co. (Great Britain); Armour & Co. (Frankfurt) (Germany); Armour et Compagnie Societe Anonyme (France); Armour Societa Anonima Italiana (Italy); Armour & Co. (Ltd.) (Denmark).

"Armour and Morris: Sociedad Anonima La Blanca (Argentine).

"Cudahy: Cudahy & Co. (Ltd.) (Australia); the Cudahy Packing Co. (Ltd.) (Great Britain).

"Morris: Morris Beef Co. (Ltd.) (Great Britain); Haarers (Ltd.) (Great Britain).

"Swift: Australian Meat Export Co. (Ltd.) (Australia); Compania Swift do Brazil (Brazil); Compania Swift de la Plata (Argentina); Compania Swift de Montevideo (Uruguay); Compania Paraguaya de Frigorifico (Puraguay); Swift Canadian Co. (with its selling branches) (Canada); Libby, McNeill & Libby of Canada (Canada); Libby, McNeill & Libby of London (Great Britain); Curry & Co. (Ltd.) (Great Britain); Garner, Bennett & Co. (Ltd.) (Great Britain); H. A. Lane & Co. (Ltd.) (Great Britain); H. L. Swift Stall (Great Britain); Swift Packing Co. (Ltd.) (France); Franklin Land & Investment Co. (Great Britain); Swift Beef Co. (Ltd.) (Great Britain).

"Wilson: Frigorifico Wilson de la Argentine (Argentina); Archer & Co. (Ltd.) (Great Britain); Nuttall Provision Co. (Ltd.) (Great Britain)."

In transmitting this report to the President of the United States, the Federal commission states:

"As we have followed these five great corporations through their amazing and devious ramifications, followed them through important branches of industry, of commerce, and of finance, we have been able to trace back to its source the great power which has made possible their growth. We have found that it is not so much the means of pro-

duction and preparation, nor the sheer momentum of great wealth, but the advantage which is obtained through a monopolistic control of the market places and means of transportation and distribution.

"If these five great concerns owned no packing plants and killed no cattle, and still retained control of the instruments of transportation, of marketing, and of storage, their position would not be less strong than it is.

"The producer of live stock is at the mercy of these five companies because they control the market facilities, and, to some extent, the rolling stock which transports the product to the market.

"The competitors of these five concerns are at their mercy because of the control of the market places, storage facilities, and the refrigerator cars for distribution.

"The consumer of meat products is at the mercy of these five because both producer and competitor are helpless to bring relief."

COLONIAL AND FOREIGN LEGISLATION.

11. In the United States of America and in most of the British colonies the same growth of combines and associations which is now proceeding with increasing rapidity in this country has already led to drastic legislation, which has been considered to be necessary to safeguard the interests of the public. In the United States of America the Sherman Act has in recent years been supplemented by the Federal Trade Commission Act and the Clayton Antitrust Act.

The Federal Trade Commission Act of 1914 creates a permanent commission to investigate and report on the operations and activities of corporations engaged in commerce. The Clayton Antitrust Act of 1914 is intended to render illegal combinations, arrangements, or contracts which have the effect of substantially reducing competition or which tend to create monopolies.

In addition to these Federal antitrust laws there is an enormous mass of State legislation in America having for its object the regulation or prevention of trade associations or combinations framed to restrict competition or control prices.

The constitution of New Hampshire declares that "free and fair competition in trade and industry is an inherent and essential right of the people, and should be protected against monopolies and conspiracies which tend to hinder or destroy it."

Similar provisions are contained in the constitutions of other States. Many other States have similar laws in force.

Even New Jersey prohibits combinations or agreements between corporations, firms, or persons intended—

(1) To increase the price of any merchandise or of any commodity.

(2) To fix at any figure whereby its price to the public or consumer shall in any manner be controlled, any article or commodity of merchandise, produce, or commerce intended for sale, use, or consumption in this State or elsewhere.

In Canada the combines investigation act became law on May 14, 1910. By that statute it is provided that where six or more British subjects of full age and residents of Canada believe that a combine exists, and that prices have been enhanced or competition restricted thereby to the detriment of consumers or producers, they may make application in writing to a judge for an order directing an investigation, setting forth in the application the particulars of the case. Upon such application the judge is required to give a hearing, and if it appears to him that there are reasonable grounds for the charge and that it is in the public interest to hold an investigation, he shall order one to be made by a board. Such board consists of three persons, one nominated by the complainants, one by the parties complained of, and the third is a judge chosen by the other two. This board has the power to summon witnesses and to compel the production of books and papers.

In Australia the interstate commission act of 1912 creates a commission consisting of three members, one of whom is called the chief commissioner, appointed by the Governor General for terms of seven years each. The commission is charged with the duty of investigating from time to time matters which in the opinion of the commission or in the public interest ought to be investigated, affecting (a) the production of and trade in commodities; (b) the encouragement, improvement, and extension of Australian industries and manufactures; (c) markets outside Australia, and the opening up of external trade generally; (e) prices of commodities; (f) profits of trade and manufacture; (g) wages and social and industrial conditions; (h) labor, employment, and unemployment; (i) bounties paid by foreign countries to encourage shipping or export trade; (j) population; (k) immigration; and (l) other matters referred to the commission by either house of the Parliament, by resolution, for investigation.

In New Zealand the monopoly-prevention act of 1908 is a combination of two earlier acts—the agricultural implements, manufacture, and sale act, 1905, and the flour and other products monopoly prevention act, 1907. Under the second part of this statute powers are given to inquire into the reasonableness of prices for flour, wheat, potatoes, and other foodstuffs.

By the commercial trusts act, 1910, of New Zealand:

(a) Every person commits an offense who gives a rebate or discount, etc., in connection with the sale of goods, on the express or implied condition that the person receiving the same will deal exclusively with the vendor for such goods, or generally, or will not deal with others, or will become a member of a commercial trust or act in obedience to directions from such a trust. (Sec. 3.)

(b) Every person commits an offense who refuses to sell or to supply another person either absolutely or on relatively disadvantageous conditions because he will not deal exclusively with such vendor in that article, or generally, or will not become a member of a commercial trust or follow the directions of the same in respect to the sale, purchase, or supply of goods. (Sec. 4.)

(c) Any person who conspires to monopolize wholly or partially the demand or supply of goods in New Zealand, or any part thereof, is guilty of an offense if such monopoly is contrary to the public interest. (Sec. 5.)

(d) Every person commits an offense who sells, supplies, or offers goods at an unreasonably high price if the price is directly or indirectly controlled or influenced by a commercial trust with which he is or has been connected. It is also an offense if he commits the same act at the suggestion of a commercial trust, even though he is not connected therewith, and the price is not controlled by such trust. (Sec. 6.)

(e) If a commercial trust sells, supplies, or offers any goods at a price which is unreasonably high, every person who is a member thereof, or if it is a corporation, the corporation also commits an offense. (Sec. 7.)

(f) Every person who aids, counsels, or procures the commission of an offense under this act, or the doing of an act outside of New Zealand which if done in New Zealand would be such an offense, is to be deemed to have committed such offense. (Sec. 9.)

In the Union of South Africa, the meat trade act of 1907 provides that—

"Every act, contract, or conspiracy in unreasonable restraint of the trade of a butcher is hereby declared to be illegal, and every person who shall commit any such act, or make any such contract, or engage in such combination or conspiracy shall be guilty of a criminal offense, and subject on conviction to a penalty not exceeding £500, and in default of payment thereof to imprisonment, with or without hard labor, for a period not exceeding 12 months."

Germany and Austria have no laws comparable to those in operation in the United States and in British colonies, and German law appears to favor the operation of trade combinations. The potash industry has, indeed, been compulsorily syndicated by the law concerning the sale of potash, of May, 1910.

In France, such combinations appear to contravene a provision of the penal code.

In Russia, the criminal code of 1903 provides that—

"A merchant or manufacturer who increases the prices of victuals or other articles of prime necessity in an extraordinary degree, in accord with other merchants or manufacturers dealing in the same articles, shall be punished with imprisonment."

In Japan there is no law specifically relating to trusts or combinations, but article 48 of the commercial code is as follows:

"If a business association act contrary to the public order or good morals the court may dissolve it."

The law of China appears to regard trade combinations with disfavor. A recent work on Chinese criminal law (Alabaster: Notes and Comments on Chinese Criminal Law) informs us that—

"Arrangements to artificially influence the market are contrary to law. For a person to unduly depress or raise prices to suit his own convenience entails a penalty of 80 blows, and undue profit arising therefrom will be treated as theft."

CONCLUSIONS AND RECOMMENDATIONS.

12. In the United Kingdom, combinations operating in restraint of trade are, though not criminal, unlawful if shown to be against public policy, as public policy is understood by the English courts, where these words are construed in a somewhat narrow and technical sense.

We are unanimously of opinion that it would be desirable to institute in the United Kingdom machinery for the investigation of the operation of monopolies, trusts, and combines, similar to the commissions and other tribunals created for that purpose in the United States of America and the British colonies above referred to. The problems to be considered, before any just conclusion can be arrived at with regard to the actual existence of abuses tending to the detriment of the public, or with regard to a form of safeguard or control which it would be practical to adopt to prevent such abuses, if proved, are not matters on which it is possible for a committee such as this to form any final or considered judgment. But we are satisfied that trade associations and combines are rapidly increasing in this country, and may within no distant period exercise a paramount control over all important branches of the British trade.

We are satisfied that considerable mistrust with regard to their activities exists in the public mind, and that the effect of such mistrust may be equally hurtful to the political and social stability of the State, whether or not the public mistrust and resentment be in fact well founded. We consider that it is desirable that means should be provided whereby the fullest information as to the activities of trade associations may be made available to the public, and complaints may be promptly and thoroughly investigated, so that doubts and suspicions may be dispelled, or, on the other hand, the true facts ascertained as to evils for which a remedy is required. We believe that it will be found necessary ultimately to establish further machinery for promptly and effectively dealing with such abuses as the tribunal of investigation may discover.

We recommend that—

(a) It shall be made the duty of the board of trade, or such department as may hereafter exercise surveillance over trade and commerce, to obtain from all available sources information as to the nature, extent, and development of trusts, companies, firms, combinations, agreements, and arrangements connected with mining, manufactures, trade, commerce, finance, or transport having for their purpose or effect the regulation of the prices or output of commodities or services, produced or rendered in the United Kingdom, or imported into the United Kingdom, or the delimitation of markets in respect thereof, or the regulation of transport rates and services, in so far as they tend to the creation of monopolies or to the restraint of trade.

The board of trade shall present annually to Parliament a report upon the nature, extent, and development of such forms of organizations.

(b) It shall be made the duty of the board of trade to make preliminary inquiry into any complaints which may be made with regard to the existence or action of any organization specified in (a).

(c) In the event of the information obtainable by the board of trade being, in the opinion of that department, insufficient to enable it to discharge its duties under (a) or (b) above, or if, in the opinion of the board, as the result of investigations undertaken on its own initiative or on complaints made to it, there is prima facie evidence that the public interest is adversely affected by the operation of any monopoly, combination, or agreement, the board of trade shall be empowered to—

(1) Apply to the tribunal hereafter provided for an order to such companies, firms, or individuals as may be specified in the application, to furnish such information as may be specified thereunder; or

(2) Refer the whole matter to the said tribunal for investigation and report.

(d) There shall be established a tribunal consisting of a person of legal qualifications, as permanent chairman, and not less than two, or more than seven, other members selected by him from time to time from a panel appointed for the purpose by the president of the board of trade after considering nominations made by representative trade organizations, including the cooperative movement and trade-unions, which tribunal shall have power—

(1) On the application of the board of trade, to make orders of the kind specified under (c) (1) above; and

(2) On reference from the board of trade to investigate the operation of any organization specified in (a), and for that purpose to call for all books and papers, to take evidence upon oath, and to adopt such other measures of inquiry as it may deem necessary to elicit the facts; and when it shall be proved that acts injurious to the public interest have been committed, such facts as are relevant to the particular offense shall be published immediately on the conclusion of each inquiry.

(e) It shall be the duty of the board of trade to make recommendations as to State action for the remedying of any grievances which the tribunal may find to be established.

We wish to place on record our appreciation of the great services which have been rendered to the committee by our secretary, Mr. John Hilton, whose comprehensive study of combinations we have printed as an appendix to this report.

ADDENDUM.

(By Mr. Ernest Bevin, Mr. J. A. Hobson, Mr. W. H. Watkins, and Mr. Sidney Webb.)

We have signed the above report because we find nothing to disagree with in its recommendations, but we feel that it does not adequately express the gravity of the situation and that the proposals fall far short of what—in the terms of reference to the committee—will be necessary to safeguard the public interest.

The fact is that free competition no longer governs the business world. The common assumption that the rivalry of traders affords a guaranty that the price of commodities will oscillate closely about the necessary cost of production, whatever may have been its degree of truth in the past, is now in this country nowhere to be implicitly relied on. It is nowadays open to doubt whether we ever buy anything at the cost of production. We find that capitalist combination, in one or other form and at one or other stage of production, transportation, and distribution, now leads in varying degrees the price of practically everything that we purchase.

Such a conclusion has momentous implications. The consumer can not be sure that he is charged no more than is required to defray the necessary costs of production and distribution. The wage earner can not be convinced that any reduction in the expenses which may be effected by labor-saving machinery or other improvements will be reflected in a fall in price to the consumers. The Government has no assurance that any new tax will not be made a pretext for the levy on the public in enhanced prices of much more than the return to the exchequer. The primary object of combination or association between businesses in a trade is to raise the level of profits by eliminating competition among the various firms. The larger gains, which are admittedly thus obtained, are attributable mainly to three sources: (1) The saving of wasteful costs of competition, (2) the reduced expenses of production by better technical and business organization, (3) the monopolistic fixing of prices at "what the trade will bear." We may observe that this last source of gain, involving usually an actual rise in prices, almost always and of necessity involves a lower aggregate production than would have emerged had the arrangement not been made. It amounts, in fact, to restriction of output.

The importance of the first and second gains suffices to explain why combination is not always followed by an actual increase of selling prices, but sometimes even by a reduction. An effective monopoly may sometimes find it more profitable to abstain from a reduction of prices that it could well afford to make than to raise prices, which would cut down its sales and lessen the economy of large scale production. In general, however, it is found that the formation of a combination or agreement is attended by a "regulation" of output and an actual rise of prices, due to the fact that most of the organizations control articles or services so essential to the community that the elasticity of demand is slight.

These surplus gains, whether due to an actual rise of price or to a failure to reduce price in correspondence with reduced costs, are got at the expense of the whole public of consumers, whose interests the committee is enjoined to safeguard. We believe that they amount in the aggregate to a very large sum annually.

We do not suggest that any action should be taken to prevent or obstruct combination or association in capitalist enterprise. Apart from the experience that no such interference can be made effective, we have to recognize that association and combination in production and distribution are steps in the greater efficiency, the increased economy, and the better organization of industry. We regard this evolution as both inevitable and desirable. It is, however, plain that the change from competitive rivalry to combination calls for corresponding developments to secure for the community both safeguards against the evils of monopoly and at least a large share of the economic benefits of the better organization of industry which it promotes.

It has not been possible for the committee in the time and with the means at its disposal to work out a program of what will in the near future be required for these purposes. We think that this task should be the first duty of the suggested trusts and combinations department of the board of trade. We may, however, indicate the following directions, in which, as it seems to us, remedy might be sought:

I. Profiteering may in some cases be kept in check, without preventing the better organization to be obtained by combination, by the existence of a rival who can not be persuaded to enter the combination and who can be relied upon to serve only the public interest. The cooperative movement, which returns to its customers in proportion to their purchases all the surplus that it makes over cost, serves incidentally as a check on profit-making combinations, into none of which will it ever consent to enter. The national factories have been found by the Government extremely valuable in this respect during the war. If they could be continued in peace for the production of certain essential commodities, for the protection of the public of consumers, their value in serving as a check upon capitalist combinations might be considerable.

II. In considering the prevalence of capitalist combinations in British industry it is impossible to leave out of account the check upon profiteering which may be afforded by foreign imports. This operates, however, only so long as the foreign producers are not also brought within the combination. Whilst the imposition of import duties would increase the power of combinations to raise prices, "free trade" is not in itself a complete safeguard against it.

Nor is the objection to the profiteering of capitalist combinations removed by the imposition of a tax which diverts to the exchequer some or all of what is unnecessarily extracted from the consumer. Such a tax, whilst levied apparently upon profits, may be held to make the Government particeps criminis in these overcharges. Such a tax has the further evil that the Government has even an interest in the increase of his gains. It may be better to have an excess-profits duty than not to have it when there are excess profits about, but it would be far more profitable to the community, and therefore also to the exchequer, if there were no excess profits to tax.

III. The only effective safeguard against the absorption by a capitalist combination of more than the necessary return appears to be the control of prices. We regard the experience during the war of the full and precise "costing" of every part of a commodity as affording valuable suggestions for the future fixing by Government departments of a maximum price for particular articles which can be standardized. Where, as in the case of gas and electricity, such a prescribed price can be made to vary with the amount of profit taken by the capitalist producers, such a "sliding scale" of prices and dividends appears a useful expedient. It involves, it will be noted, the full application of two principles, which may be destined to ever wider application in business, but to which the business world is at present hostile, namely, publicity and measurement.

IV. Where, as is evidently the case in various highly organized capitalist enterprises, competition is being rapidly displaced by combination, largely monopolistic in its structure and powers, and tending to restrict output, with a view to raising prices or preventing their fall, we hold that it is contrary to the public interest to allow such enterprises to remain in private hands. In some cases their functions may more advantageously be assumed by the cooperative movement. In others their place may be taken by municipal enterprise. Where the enterprise is national in scope, and especially where its product enters into practically universal consumption, we see no alternative to State ownership. But State ownership does not necessarily imply State management. In some cases it may be preferable to lease the enterprise, with prescribed schedules of price and wages, and other necessary conditions, for management either by a local authority, a cooperative society, or a joint-stock company. The subject, in our view, urgently needs further study.

NOTE BY MR. PERCY ASHLEY.

Whilst I have been glad to assist the committee in their inquiry, so far as I could, it appears proper for me, in view of my official position, to refrain from expressing any opinion as to the conclusions and recommendations of my colleagues which raise questions of public policy, which will require consideration by the board of trade.

PERCY ASHLEY.

APRIL 24, 1919.

A STUDY OF TRADE ORGANIZATIONS AND COMBINATIONS IN THE UNITED KINGDOM.

(Prepared for the Committee on Trusts by John Hilton, of the Garton Foundation, based upon evidence given and documents laid before the Committee on Trusts. This memorandum was prepared at the request of the committee by the secretary, who is solely responsible for the opinions expressed.)

SECTION I.—FROM COMPETITION TO COMBINATION.

Labels endure long after they have ceased to be descriptions, and the system under which goods are produced, distributed, and bought is still referred to as the "competitive system." For the last half century and longer the economic order has been changing its constitution, but the terminology of the mid-nineteenth century remains and obscures the fact that the economic doctrines of that period are not applicable to the conditions of to-day.

The law of supply and demand: According to those doctrines evolved in the course of the industrial revolution, supplies, prices, profits, and wages could safely be left to adjust themselves. Leave the business world to its own devices, and competition would insure that all was for the best. Competition would harmonize supplies and requirements; would lead to the survival of the most efficient business concerns; and would insure that the level of wages, prices, and profits in any trade or industry would always be "just about right." The reasons given were as follows: (a) If demand exceeds supply, competition between buyers sends up the price; (b) a relatively high price spells a relatively large profit; (c) a relatively large profit attracts capital and enterprise to the business; (d) supplies increase; (e) competition between sellers brings down the price to normal; and (f) in the struggle between sellers each endeavors to improve his processes and methods, the more capable succeed, incompetents are driven out, and the general level of economy and efficiency is raised throughout the industry. This competitive theory is still for many an article of faith. It is still conventionally accepted that if any industry is yielding more than average profits, capital and enterprise, attracted by the prospects of abnormal prices, will make their way toward that industry, supplies will increase, and competition between the rival producers or traders will in the natural order of things bring down prices and profits to the normal level. On these assumptions it is still widely taken for granted that competition is an adequate safeguard against extortion and is a driving force sufficient in itself to produce a continuous movement toward the highest efficiency.

The passing of competition: The assumptions are, however, no longer valid. In the modern industrial and commercial world competition, which, indeed, never was wholly "free," is becoming less free with each passing year. In very many branches of trade and industry business concerns whose intercompetition is conventionally supposed to maintain prices at a competitive level have, in fact, working arrangements of one kind or another which prevent competition. Again, in some branches of trade amalgamations of erstwhile rival firms have taken place, with the result that in some cases so large a proportion of the whole trade is in the hands of one firm, or financially interwoven group of firms, that an effective monopoly is obtained. Where either of these conditions is reached the cycle of automatic impulses and checks can no longer be relied upon to insure that either prices or profits are "just about right." There is no longer competition between the associated manufacturers or merchants in those lines of industry or trade; prices are no longer subject to the law of supply and demand; enterprise and capital no longer flow without impediment to where profits are above the average. In these circumstances it is within the power of the group of associated firms or the single consolidated concern to control supplies and regulate prices—within limits which will be discussed later—and that being the case, a new order of problem has come into being.

The good in competition: Competition has, and always will have, its place and value in the industrial process, but its form and sphere of action are changing. As the old form passes, much that was of value in it passes also, and if the new order is to remain healthy and vigorous, equivalents will have to be found. Where there is struggle

for survival or supremacy among hosts of small concerns in the same line of business, each man knows what it is to carry the responsibility of a business and to stand or fall by its success or failure. The incentives to effort are strong. Each has a direct personal interest in improving methods, eliminating waste, reducing costs, and striking out in new directions. There is wide diversity and ample opportunity for experiment. Initiative and resource are developed in large numbers of individuals. There is, without doubt, something of an evolutionary struggle, in which those well endowed with the qualities that make for commercial success survive and the less competent, or worse equipped, or more sensitive go down and out. Again, the small man's independent business is a thing to himself, and, in a very real sense, a part of himself. The small business concern has personality. The employees of a small firm work for a person, and the relations between proprietor and workpeople, if not always cordial, are at least human relations. Business dealings with a small firm are dealings with a person, and there is little doubt that the personality of British industry in the past has been a powerful factor in its development. The type of character produced by these influences may not be wholly admirable, but it is at any rate strong, forceful, and self-reliant, and it is a commonplace that the great majority of those who are to-day organizing and directing "big business" acquired their ability and experience in "small business." As for the productivity of the competitive order, the enormous quantity and variety of goods thrown upon the markets of the world during the period in which competition was in the ascendant affords sufficient proof that, in its own time and sphere, individualism is not to be despised as a productive principle, and if the goods so produced tended to the "cheap and nasty," it will not be disputed that they were at any rate cheap, considering the costs of production and distribution.

The immorality of competition: Competition has vicious features to offset its virtues, and even its virtues are of limited range. It elevates self-interest into a gospel and makes "each for himself and the devil take the hindmost" the first rule of conduct. It applies "buying in the cheapest market and selling in the dearest" to human beings as well as to things, and makes "sweating" not shameful, but shrewd. Moreover, the creative competition which works for success through serving the consumer more acceptably than others easily degenerates into destructive competition aimed at the ruin of rivals, or into sharp practice at the expense of the consumer. The spirit and qualities and conduct evoked by competition are not wholly such as to make for either a worthy order of social life or even a serviceable order of industry.

The wastes of competition: For there is a point at which the continuance of competition along the old lines is no longer compatible with industrial efficiency and continued progress. Undercutting among rival manufacturers may lead to goods being sold at the lowest price at which they can be produced in the competing establishments, but it may well be that the price is still high in comparison with what it might be if the individual firms were in friendly communication or if the manufacture were being carried on in few instead of many establishments. Competitive production often means a wasteful duplication of activity and plant; it results in each firm working out its problems without help from the others; it allows each manufacturer to go in for many varieties and patterns and to specialize on none; it requires each firm to buy in small quantities, market in small parcels, and carry separate stocks; it leads to effort being given to fighting which might much more profitably be given to improving method and process; and it may place manufacturers at the mercy of middlemen. It may stimulate the will to improve and yet deny the means. For these reasons goods produced under a régime of free competition may be dear even though the competing producers are making less than a living profit.

The possibilities of combination: Great possibilities of industrial and commercial improvement lie beyond the confines of free competition and are only to be realized by combination in one or other of its several forms—by informal consultation and cooperation, by formal association, or by actual amalgamation. These may be tabulated as follows:

Buying (materials, plant, stores, etc.): Assured and steady supply of material, unification of buying departments and staffs, bulk instead of detail purchases, greater opportunity for comparison and selection, cheaper credit and better discounts, and standardization of materials.

Making: Standardization of product, specialization in product, improvements in plant, use of by-products, equalized distribution of work, and quality.

Selling: Transport economies, unification of selling departments and staffs, extension of export trade, collective advertising, and lower costs of distribution—fewer middlemen.

Knowledge: Interchange of data and experience, standardization and interchange of costings, collection and dissemination of trade statistics, and promotion of scientific and technical research.

The above are the possibilities of combination, not the necessary accompaniments or the invariable achievements. It should be stated at once that no association among the many hundred existing in the United Kingdom at the present time, and few of the numerous mammoth amalgamations, have come as yet anywhere near realizing them in full.

The impulse to combination: Neither should it be supposed that the movement toward association and consolidation has been primarily animated by the thought of the great economic possibilities which combination opens out. The reasons given for the formation of particular combinations almost always turn upon the desire to limit competition or, as it is more usually expressed, "to prevent cut-throat competition," with the object of securing higher prices and larger profits.

"There had been a period of very keen competition, with the result that most manufacturers were making little, if any, profit. Many were practically ruined. It was thought that if the existing works were bought up by a company the trade would be placed on a more stable basis."

"Our association was formed for the purpose of regulating the trade and avoiding unnecessary competition."

"Cooperation began among the manufacturers only after a period of severe depression and acute competition."

"Our association was formed for the purpose of agreeing on prices, and has been the means of preventing cutting, which went on very considerably before the association was formed, the result being that most of the firms were making no profits, or very small profits."

"Its immediate object was the removal of price-cutting which rendered unprofitable practically the entire industry."

"The first object of the association was to safeguard the trade against the losses that are often suffered at such times in consequence of selling prices lagging behind the rising price of materials."

"The amalgamation was due to a combination of circumstances. Owing to severe competition and cutting of prices, the manufacturers were so reduced in their margin of profit that some step had to be taken to prevent disaster."

"The amalgamation was primarily due to the keen competition which prevailed between the various works, as when trade was quiet almost any prices were taken by some of the firms. Price associations were in existence prior to the formation of the amalgamation, but these were not altogether successful, and it was finally felt that if the concerns were managed under one control it would be much better for the trade generally."

"The industry as a whole had been very unremunerative for many years and had stood in danger of being crushed out of existence by foreign competition and by too much competition among manufacturers at home, and it was realized that if the industry was to be saved at all the manufacturers would have to come together and form an association."

"Competition was so severe—both among the home manufacturers and from abroad—that no one could make anything out of the trade. Manufacturers were producing more than was really required, and were concerned only with cutting one another's throats. At first when an association was discussed some objected to losing their freedom, but things became so bad that these objections were overcome."

The statements quoted above, though made retrospectively, may be taken as substantially accurate accounts of the circumstances in which the vast majority of associations and amalgamations in this country had their origin, and the motives that prompted their formation. The picture conveyed of industries on the verge of ruin is hardly consistent, it may be said, with the income-tax returns for the years in question, but it is to be remembered that under conditions of free competition the fortunes of an industry are subject to great fluctuations. The final impetus to combination has almost always come in the slump years. "Most associations were born of dire necessity; it was seldom, indeed, that an association came into being until the trade was faced with all-round disaster if it did not combine." In these circumstances it is natural that the immediate objects of combination should mainly relate to the limitation of competition and to the increase of prices and profits. If play be made of the fact that there is in these statements a notable absence of any idea of promoting efficiency and improving organization for the general benefit, it may be answered that the average business man responds more readily to a "paying proposition" than to a vague ideal, and even where the prime movers in an association have had larger purposes in view first place has had to be given to the inducement of improved prices and profits. "It was as far as we could get the trade to go at that time." In several cases associations formed primarily for restraining competition and securing more profitable prices have become, after formation, active instruments working for better organizations and improved technique throughout the industry. This is well exemplified in the following:

"Although the control of prices was a substantial part of the arrangement, that was only a means of attaining the real object of the association, which was the creation of a complete organization whereby our section of the country's trade could be made more efficient and consequently more prosperous and strong. What we have done in this direction is on record; it could not have been done apart from the regulation of prices. We have already gone a long way beyond our original program and are planning further developments."

"The association was formed after a long period of severe depression. There was a great lack of effective organization in the industry, and what did exist was wasteful and extravagant. All the worst features of unrestricted competition were present, duplication of patterns and plant, which were only intermittently employed, duplication of selling organizations to an extent which did nothing to increase sales, but served only to render more acute the depression from which the trade was suffering. The result of these conditions was that the resources of the industry were so depleted as to hamper and restrain development in improved methods of production and to discourage the introduction of more modern machinery upon the capital cost of which there was no prospect of any adequate return."

So long as the individual will to survive is stronger than the instinct of common danger, and the hope of coming out on top in the industrial scrimmage counts for more than the sense of common interest, competition will hold the field; but when self-preservation and self-interest are seen to be in line with the general interest, competition is abandoned and cooperation begins.

SECTION II.—TYPES OF COMBINATION.

British trade organization: The last 20 years have accordingly seen a steady transition from competition to combination in all the leading industrial nations. The movement has accommodated itself to national conditions and characteristics. In Germany and the United States it has culminated in the kartell and the trust, each in its way emblematic of the national character. In this country great consolidations have hitherto been less formidable than in America, and associations of independent manufacturers have in no single case been developed to anything like the same logical outcome as in Germany. Yet it should not be too readily assumed that British industries lag far behind those of other countries in effectiveness of internal organization. Individuality has counted for more in British manufacture than in foreign, and if amalgamation has proceeded cautiously there has been reason in the caution. British combines and consolidations may not rank as prodigies, but among them are some that can vie in efficiency with any in the world. British trade associations make little parade of their existence or achievements, but there are few corners of British industry in which some kind of trade association is not to be found, and some of them can show a thoroughness of organization not easily surpassed. What is notable among British consolidations and associations is not their rarity or weakness so much as their unobtrusiveness. There is not much display in the window, but there is a good selection inside.

Combination for other than trade regulation: Trade associations in the United Kingdom vary widely in character and functions. In most of the great industries there are employers' federations, formed primarily for dealing with labor questions; and there is a wide network of associations concerned with safeguarding and promoting the general interests of traders in particular lines of business or in particular localities, of which chambers of commerce and chambers of trade are outstanding examples; but these are not combinations in the sense in which the word is here used—they do not regulate prices or output or set up any arrangement for the concerted restriction of competition. They may render many of the valuable services that have been catalogued as appertaining to combinations in their full development, but they interfere hardly at all with the individual firm's freedom to buy, manufacture, and sell as it likes.

Honorable understandings: As already indicated, combination of the kind under notice can be effected without any formal association. The simplest though not necessarily the most primitive type of combina-

tion is that which occurs where a number of manufacturers or traders, who would otherwise be competitors, meet from time to time and arrive at an "honorable understanding" or "gentlemen's agreement" in regard to prices, output, division of business, etc. Such arrangements are essentially informal and temporary. There are no documents; there is no association; there is no bond except that of good faith. Combinations of this kind, which may be termed "understandings," are a common feature of local trade, a familiar instance being the occasional informal consultation between coal dealers or other tradesmen of a locality as to the prices to be charged by all, or the districts which each shall serve, but evidence of similar understandings in respect of trade operations on a national and even international scale is not lacking. While "understandings" may serve a useful purpose in restraining cutthroat competition and avoiding the overlapping of services, they more easily lend themselves to the exploitation of the public than to the improvement of trade organization and technique.

Associations for the regulation of trade: The second kind of combination is that in which a large proportion of the manufacturers or traders in a particular line of business form an association for the purpose of regulating the trade. Associations are properly constituted bodies having rules, constitution, officers, subscriptions, entrance fee, etc. The methods of trade regulation are various. Some associations simply fix a schedule of prices to which all must conform; others have arrangements in regard to tenders for contract work; others regulate output by allotting to each member a fixed percentage of the total production, whatever that total may be, with penalties for exceeding the quota and compensation for falling short. Some partition out the home market, or the foreign trade, among the members, and some have from time to time reinforced their control of the markets by agreements with similar foreign associations as to the amount which shall be exported from each country to certain markets. The distinguishing feature of the association is that each component firm remains a financially separate business concern, with full freedom of action in all matters that are not ruled by the association. It is in the industrial sphere what a treaty alliance between sovereign States, as distinct from a federal union or an empire, is in the political sphere. If under stress of circumstances or for reasons of internal jealousy it should break up, the constituent firms revert to their original unfettered sovereignty.

Associations regulating output: A more advanced type of association is that undertaking the regulation of output, or, as it is usually expressed, the "prevention of overproduction." The problem of output regulation is one of great difficulty, and considerable ingenuity has been applied to its solution. Any project for fixing in advance what the output of a given industry shall be requires in the first place for its success that the whole of the firms in the industry shall be in the association, otherwise whenever, through miscalculation or design, the supply was short of the market demands, business would flow to the nonassociated firms. But even where the association comprises the whole industry it is not easy to forecast market requirements with sufficient nicety to make the operation safe. Again, even when the exact volume of output requisite to the needs of the case has been estimated, there remains the further problem of dictating what proportionate part of the total each firm in the association shall do and of enforcing penalties for excess. Unless this is done on a systematic and rigid basis, without any room for suspicion or quibble, the association is not likely to hold together for long.

The pool system: The plan adopted by the most highly developed of those associations which undertake the regulation of output is as follows: The principals of the different firms in the trade having been brought together and having decided to form an association, a secretary is appointed. He must be some one in whom all can have absolute confidence as regards capability, impartiality, integrity, and discretion. (There are firms of accountants in London and the Provinces who specialize in this work, and one accountant may act as secretary to a dozen or more associations.) Each firm gives the secretary full access to its books that he may ascertain what its sales have been over an agreed period. Having obtained the necessary particulars from all the members, the secretary determines what proportionate part of aggregate trade was done by each in that period. A meeting of the members is then called, and the secretary then hands to each a sealed envelope containing a slip stating his percentage. This allotment the members have pledged themselves to accept, and it constitutes the basis of all subsequent arrangements. Thenceforward, at the end of each month, the secretary receives from each firm particulars of its output or sales during the month, particulars which again he will check at the end of the trading year. By adding these amounts the total output of the members for that month is ascertained. The secretary then calculates what percentage of the total each firm has done, compares that actual percentage with the allocated percentage, and informs each member by how much he has exceeded or fallen short of his quota. If he has exceeded, he pays a sum equal to an agreed percentage of his excess into a "pool"; if he has done less than his quota, he draws a sum equal to an agreed percentage of his deficiency from the "pool." In practice the payments in respect of these "penalties" and "compensations" are not made monthly, but are entered to the debit and credit of the firm, and the balance at the end of the year is paid into or received from the association's "pool" fund. On receiving its monthly notification from the secretary each firm can see by how much it must increase or reduce its output in succeeding months if it wishes to come out square at the end of the year when the "pool" is balanced up. It will be observed that no member of the association knows any other member's quota, much less his output or profit. He knows only that his own quota is so much of the total output of all the members.

Variations on the pooling system: The features of the "pool" system as thus far described are in broad outline common to all "pooling" associations, but in two other respects there are differences of practice. Some associations, besides allotting the percentage of output, fix the price of the product, this being the practice more especially where the goods manufactured are complex and varied; but in the case of more simple and uniform products the regulation of price as well as the allotment of percentage has been found to offer no advantages. In one case a minimum price for the commodity was fixed at the outset, but the actual selling price straightway rose above the minimum, and the fact that increased sales effected by cutting price meant not only a needless loss on the price but a penalty on the excess output was found a sufficient preventive of price cutting. The other respect in which pooling practice differs is that in some associations the compensation is the same pro rata as the penalty, while in others it is only one-half. In the former case the reserve fund of the association is built up by a payment by each firm of an annual contribution equal to perhaps 1 per cent of its sales; in the latter case it is built up from the difference between penalties and compensations.

The tendency of the pooling system would seem to be to stereotype what may be called the ground plan of the industry. If it should turn out to be advantageous for the whole of the production to be concentrated in a smaller number of establishments or in one large establishment, the penalty would certainly act as a drag on any tendency to a change in that direction. Similarly, if any one firm introduced a greatly improved process or organization the penalty would react against its taking a larger share of the trade. These factors do in practice introduce an element of tension into the prolonged working of pooling associations, and the question of periodical revision of the quotas is raised from time to time. But the experience of the German cartels show that the anticipation of such revision leads to all manner of maneuverings for position, and the readjustment of quotas strains the relations of the members almost to breaking point. It may be surmised that when the original quotas under a pooling arrangement are no longer tenable, the only course is for the association to dissolve and after a lapse of time re-form. Cases are on record, however, of an association arranging in special cases for the submission of a grievance in regard to an allotted quota to some independent arbitrator.

Tendering arrangements: Where the association is that of a trade in which work is undertaken on contract (as in branches of the iron and steel, engineering, building, printing, and other trades), arrangements among members in regard to tendering are common. In some cases the members agree to submit all tenders in the first instance to the association, where the estimates are confidentially registered, and either a percentage, to be subsequently paid in and divided, added to each, or a tender price decided upon which each shall quote on the understanding that the firm receiving the contract shall pay an agreed percentage into the pool. Another and less questionable method in wide use is for the firms to send in their individual tenders and at the same time notify the secretary the price they have quoted, whereupon the secretary sends back to each tenderer a list showing, not the figure each has quoted, but the order in which the quotations run, the object being to prevent the common practice of going to the lowest tenderer and saying, "We should like to give you the contract, but we have a lower estimate; if you will take 10 per cent less you can have the job." Having received his list, the lowest tenderer knows he is lowest and can hold out for his price. Where this method is practiced it is usual for the successful tenderer to pay a sum equal to 5 per cent of the contract to the association, which retains one-quarter for association expenses, divides one-quarter forthwith among the tenderers, and puts one-half to reserve in the names of the respective tenderers. The added percentage and the flat quotation system undoubtedly raise prices against the customer, but the notification method, it is claimed, has no such effect; it merely prevents unfair bargain driving. The 5 per cent paid into the pool and divided is stated to do no more than cover the cost of making out specifications.

Legal status of associations: By section 16 of the trade-union act, 1876, any combination for imposing restrictive conditions on the conduct of any trade or business is a trade-union, and the courts will not entertain any legal proceeding instituted with the object of directly enforcing or recovering damages for the breach of any of the following agreements: (1) Any agreement between members as such concerning the conditions on which any members for the time being shall or shall not sell their goods, transact business, employ or be employed; (2) any agreement for the payment of any person of any subscription or penalty; (3) any agreement for the application of the funds; (4) any agreement made between one trade-union and another; or (5) any bond to secure the performance of any of the above-mentioned agreements. The trade associations here under discussion, being wholly or partly concerned with the regulation of prices or output by the restriction of competition, come under the above definition, and are under the disabilities mentioned. Membership in the association is not unlawful, neither is the making of the above-named agreements, but such agreements can not be enforced in a court of law. Associations are precluded from registering under the companies acts or the partnership acts, but they may, and the majority do, register as trade-unions. They thereby enjoy the immunities of trade-unions, but their position is precarious in that any member may break away and reenter into competition whenever he chooses, or flagrantly break the rules to which he has subscribed, and their activities are circumscribed by their being able to pursue only certain objects as prescribed by statute. One method of overcoming these disabilities has been found in the formation of "a properly constituted limited liability company for the investment of all moneys received from the members," having as one of its articles of association a provision that the company may by a three-fourths majority vote of its members determine that the shares of any member may be sold by the company to the other members at a nominal price. Registration under the companies acts was obtained in 1912 for a limited liability company having such a provision as one of its articles, and in 1916 the company went through the test of the courts up to the court of appeal, and was there pronounced a legal association.

Precariousness of associations: Associations are not formed without a good deal of persuasion, are not easily held together, and are not always successful in their objects. Separatism runs strong in the blood of the British business man. In the judgment given by Mr. Justice Peterson in the case mentioned above, some light is thrown upon the tendencies to disruption which are inherent in every association. At a critical juncture in the existence of the association, some three years after its formation, a general meeting was called, at which the chairman "laid great stress on the difficulties of the executive, and stated that unless it was the unanimous wish of the federation, they were not able to continue the business of the federation. This also was the position of the various committees. Passive opposition was rendering all the work done nugatory. The only alternative was open competition, which would be disastrous to all concerned. It appeared to him that the position they were drifting into in January, 1912, when this federation was formed, had been forgotten. Some members had come to the conclusion that, as the federation had not increased their profits, its was of no use to them. The committees thought that a period of 12 months' open competition might put the matter in a new light. It was pointed out that the outside competition was the least of the troubles; most of the opposition was from within. The constant breaking of the rules in the spirit of refusal to give any information promptly and freely would be the real break-up of the organization."

The combine: A more advanced type of combination is that commonly known as the "combine." In the combine a number of previously financially separate firms engaged in one line of business enter into an arrangement whereby they become financially and commercially interconnected under some form of central organization. The component firms may continue to be separate registered companies, or they may, while carrying on business as separate concerns, be in fact financially merged in one holding company. In either case the former proprietors

of the merged businesses hold shares in the combine, and may also have a bonus on the earnings of their former businesses, which remain under their direction, subject to financial and other control by the combine. In combines of the more loosely connected type the buying and selling may remain wholly or partly in the hands of the component firms, but in the more compact combines the whole of the business is done by the central organization and the separate establishments work entirely to the orders of the central office. Combinations of the combine type in the United Kingdom are found mainly in the textile industries (bleaching, dyeing, and spinning) and in the wall-paper and cement industries.

Typical combines, I: One of the most highly developed and efficiently conducted combines in the United Kingdom is composed and conducted as follows: The combine was originally one of 22 firms, all of which were limited companies. Since then other businesses have been purchased, and there are now 47 subsidiary companies in existence. Of these, 15 companies are not actually working, owing to names being changed or businesses being closed down, but the name is kept alive for the sake of the trade-marks and in case it should be desired to revive the business. These various properties are held by the combine, which stands in the position of lessor and provides all the necessary premises, plant, and other requisites constituting the capital assets of the subsidiary companies, whilst all the business is conducted by the subsidiary companies, each being a separate joint-stock company, with a nominal capital of £1,000. The managing director, who is responsible for the general management of the combine and its trading, is assisted by an executive committee of six directors, to each of whom is delegated specific duties. The trade and working of the combine is divided into sections, with an individual member of the executive committee primarily responsible for the general results from the section with which he is associated. One member of the executive is in control of the commercial and marketing arrangements. The central administration, financial, statistical, and labor sections, are under the supervision of other members of the executive committee. The subsidiary companies are conducted by branch directors acting semi-independently, but under the guidance and supervision of the member of the executive committee to whom the duty has been delegated and under the control of the managing director.

Typical combines, II: Another well-known combine, capitalized at over £8,000,000, which was formed some 20 years ago, is constituted and worked as follows: A limited liability company was formed to acquire the firms and undertakings which had agreed to enter the combine. These were taken over by the acquiring company on a profit basis—on the average profit of the preceding three years—no valuations of any sort being made, excepting as regards the stock in trade. Payments were made on this basis in shares and debentures in the central company, the share capital being divided into ordinary, preference, and debentures in equal proportions. Each component firm is run as a separate entity with a responsible director or manager, and is expected to control the quality of its product, to sell the same, and generally to look after its well-being; but the small board of executive directors is in close daily touch with the entire business and gives constant advice and criticism to assist the management on these points. The entire control of finance, the purchase of raw material, stores, etc., and the general control of the policy of the combine, both as to buying and selling, is in the hands of the executive board, assisted by the advice of committees of the mill directors it calls from time to time as occasion may demand.

Typical combines, III: An example of successive developments of a combine culminating in practically the whole of an important industry coming under concerted control is as follows: Twenty years ago the industry comprised some 70 independent firms distributed all over the country. In 1900 arrangements were made for the formation of a limited company to acquire 27 of these businesses. The issued share capital of the acquiring company was approximately £7,000,000. These 27 firms represented 40 per cent of the national output. In 1912 a second company promoted by the first to acquire 32 other firms not included in the original combine. The issued share capital of this second combine was nearly £4,000,000. The purchase of the businesses taken over was effected partly by outright sale of the works concerned, in which cases the original companies were wound up and now trade in common as units of the second combine, and partly by the purchase of controlling interests, in which cases the concerns still trade as separate businesses, usually under their original name. The first combines hold 70 per cent of the shares in the second and is represented on its directorate by 10 members of its own board, but the two trade as distinct concerns. The two together cover 80 per cent of the total capacity of the industry. As for the remaining 20 per cent, there have for many years been local alliances concerned with settling for the districts concerned all terms and conditions of trade, and recently a federation comprising the two combines and the outside alliances has been formed. With this final stage of development the whole of the combined and associated groups in the trade are brought into close cooperation.

The consolidation: The distinctive mark of the combine, as already stated, is the formation of a company to acquire a number of firms in the same line of business, the proprietors being given in exchange an interest in the acquiring company. In a somewhat different category stand the numerous cases in which two or more firms become merged in one. To these it may be convenient to apply the term "consolidation." Combinations which by origin and organization belong to the "consolidation" type are more familiar in the iron and steel, mining, chemical, soap, and sewing-cotton industries. Combines are almost invariably of the "horizontal" class, i. e., are formed of firms engaged in the same line of industry and at the same stage of production, though it is not uncommon for a flourishing combine later to acquire interests in companies producing or importing its raw material or manufacturing its plant. Consolidations, on the other hand, are often of the vertical class, being fusions of firms representing successive stages of production. This is particularly the case in the iron and steel industries.

Example of a consolidation: A good example of the consolidation is afforded by the history of a concern which is at present responsible for at least 90 per cent (probably much more) of the whole British production of the commodity on which it is engaged. About 30 years ago two of the largest manufacturers in the industry agreed to form a central organization to control the distribution and sale of their various lines in home markets. This central selling organization was managed by delegates—one from each firm—the leading idea being to conserve to each firm its proportionate share of the business which it had acquired in each market on an agreed basis and its natural increase. It employed wherever possible one set of agents and travelers, centralized depots and staffs, and the whole cost of its operations was divided in proportion to turnover. Subsequently another firm in the same line of business desired to take advantage of the organization and was included in its operations on similar conditions. After seven years of this joint selling it was decided that the three concerns should be amalgamated, and this was accomplished by the predominant firm acquiring the shares of the other firms, representatives of the latter being added to its board. A few months later another substantial concern in the same line was acquired by an exchange of shares. The subsidiary companies have been continued as separate organizations, but the local managements are guided and controlled by the central board. The financial operations of the whole are controlled and conducted from headquarters. The selling organization is still maintained, and besides distributing the products of the amalgamated firms, sells goods manufactured by two outside companies, whose products, though in the same line, are not to any large extent in direct competition with the amalgamation. These two outside companies have no voice in the management of the selling agency, but fix the prices and conditions of sale of their own goods and pay their proportionate share of the working expenses. Since its formation this consolidation has built, purchased, or acquired a controlling interest in many other concerns, both in the United Kingdom and abroad. The volume of the home trade represents a comparatively small percentage of the total, much the greater proportion being done in foreign countries. Of the establishments now comprised in this consolidation, the following three classes are distinguished:

(a) Establishments in this country which make for the home trade and for export to those foreign countries which are not directly served abroad.

(b) Establishments in foreign countries which belong entirely to the consolidation.

(c) Establishments in other foreign countries which are owned jointly by the consolidation and by other persons in these countries.

Establishments of the (b) class are wholly controlled by the consolidation, whilst those in the (c) class are managed by their own directors, who, however, are said to solicit, obtain, and generally follow the firm's recommendations in dealing with matters which do not depend upon merely local conditions or circumstances. All foreign plants of the (b) class send reports to the central office and are under its direction. The selling prices for all markets entered for by the mills of (a) and (b) classes are regulated from headquarters. The companies in the (c) class fix their own prices after studying the conditions in their respective markets and consulting headquarters as to the effect which the prices may exercise upon other markets.

Other forms of combination: The understanding, the association, the combine, and the consolidation cover by far the greater part of the whole field of that industrial combination in the United Kingdom which results in the concerted regulation of trade, but they are not quite exhaustive. There is still to be mentioned the control exercised over output and prices by the interchange of shares between nominally independent and competing companies, almost invariably accompanied by arrangements whereby directors of one concern sit upon the board of the other. Numerous examples of this are to be found in the coal-mining industry. Neither has anything here been said of local associations of retailers, of merchants' associations and alliances, of the multiple shop system, of the tied-house system in the licensed trade, of the recent great amalgamations in the financial world, of the control exercised over tobacco, meat, and other commodities by interests outside the United Kingdom, nor of the rings and conferences in the shipping industry.

SECTION III.—THE EXTENT AND SIGNIFICANCE OF COMBINATION.

Relative influence of combination: Such are the principal shapes which combination has taken in this country. As to the extent to which concerted control has ousted competition as a ruling factor in the determination of price and output, and in the evolution of trade and industry, it is impossible to speak with any exactitude. Associations concerned with the regulation of price or output, or both, are to be found in almost every branch of British industry. Their number can not be computed, for many are not registered either as companies or trade unions, and some are purposely carried on as secretly as possible. It may be taken, however, that there are considerably more than 500 associations, all exerting a substantial influence on the course of industry and price, in being at the present time in the United Kingdom. The most painstaking inquiry yet undertaken into combination in any section of British industry is that made in respect of building materials, and the conclusion there reached was that 25 per cent of the materials that go to the building of an average house are subject to full control and 33 per cent are partially controlled. If particular industries in which combination has made most headway be taken, it transpires that in innumerable lines of manufacture anything from 80 to 100 per cent of the whole national output of the articles concerned is either in the hands of one dominant consolidation or of manufacturers grouped together for purposes of concerted price and other control in a trade association. It would, however, be fallacious to take these latter as typical of the whole range of industry. There are many industries, trades, and services, great as well as small, in which combination has made hardly any headway, and competition is still the determining factor in the fixing of price. The shipbuilding industry may be quoted as a case in point. In a recent report it is stated that most of the shipbuilding and marine engineering firms in this country are independent, and there is no community of financial interest between them as an industry. Competition is always keen, and shipowners have no difficulty in getting numerous offers at all times when they issue specifications. During dull times competition by every means becomes acute, each firm of shipbuilders or marine engineers does its best to obtain orders without reference to its neighbors, firms lacking orders for their own specialties plunge into other markets, and contracts are accepted at prices below cost of production. Other industries and trades are to be found in which the rival manufacturers or traders are hardly on speaking terms, much less at that stage of mutual confidence which permits concerted regulation of the trade. These extremes of competition are to be set against the extremes of combination in forming any estimate of the relative value of the two factors over the trade and industry of the country as a whole. That relation can not be expressed in figures; it must suffice to say that competition is no longer a reliable regulator of prices over a very considerable field.

Influence of war conditions on combination: Moreover, there can be no question that the whole trend of industry and commerce is toward combination. "The movement, indeed, is inevitable, for what machinery and invention have done in the past for production this disposition of smaller bodies to consolidate in larger units is doing for administration." Within recent years the number of trade associations in this country has increased enormously, and under the influence of war conditions not only have numbers of existing listless bodies been galvanized into greater activity and enterprise and the membership of others been increased but many new associations have been formed, some at the instance of the Government departments, since it was found easier to deal with a group than with separate firms. Still

more, the necessity for fixing the prices of many articles and materials required by the State during the war and the need for rationing materials has compelled the Government to call representative conferences of manufacturers in many industries, and to impose on them duties which have entailed frequent consultations and meetings, and when people who, before the war, were competitors have been thus compelled to meet and discuss common arrangements, it is inevitable that they should discover the advantages of working in concert and establish relations which will make for concerted working for the future. Again, the war period has been marked by a remarkable increase in the number of amalgamations. One effect of the excess-profits tax has been to encourage the buying up of unprofitable businesses by highly profitable concerns, for such purchases were in effect paid for by moneys which would otherwise have gone in excess-profits duty to the revenue. Another war influence making for the extension of combination after the war is the enormous development of standardization and repetition manufacture. The lessons learned in this connection during the war will not be lost in the change back from war to peace production, but their application to peace production will necessitate collaboration among the various firms composing the particular branch of industry, and collaboration for specific purposes prepares the ground for combination for the regulating of trade.

States within the State: It is to be anticipated, therefore, that the immediate future will see a marked acceleration of the movement toward concerted organization and control which had already, before the war, become a formidable feature of the economic system. Large branches of industry, acquiring that strength which comes of unity, will no longer be subject to any "law of demand and supply" as regards the prices at which their products are sold to the consumer. A group of manufacturers in any branch of industry, having command or influence over the sources of material and the channels of distributing trade, may be in a position to constitute themselves a close corporation from which would-be intruders can be excluded. The prospect opening out is thus one of a series of industrial monarchies or republics, enjoying a sovereignty of their own as regards the amount they will allow to be produced and the prices at which they will sell within the political realm. Here is indisputably a problem which the State in this country has not as yet faced. The current demand for the removal of all "controls" usually carries the implication that, in the absence of public control, supplies and prices adjust themselves and automatically assume that condition which is "just about right." It is evident, however, that over an increasingly large field there can be no question of "free" adjustment or development in the old-fashioned sense. Freedom from public control will there mean not free competition but concerted or unified control by private interests.

Benefits and dangers of combination: It has been made sufficiently plain that combination has two important aspects which, while they may usefully be distinguished in considering the problems raised by the movement toward combination, are, in fact, closely interconnected and may be in large measure interdependent. These are:

(a) Improved organization, affording possibilities of economies in some directions and greater efficiency in others.

(b) The limitation of competition, with the resultant power to control prices, output, and development.

It will be evident that, in considering the dangers arising from (b), account must be taken of the advantages resulting from (a), and in considering public policy in regard to (b) it must be asked whether action which was desirable in itself might not adversely affect the general advantage arising from (a).

Before these factors can be weighed and a provisional conclusion reached, light is required upon two questions of fact: Firstly, how far are the theoretical gains of combination realized in practice? And, secondly, how far can a compactly organized industry exact in practice monopoly prices and profits from the consumer? Not until an opinion has been formed on these points can a conclusion be reached as to how far the public advantage resulting from improved organization outweighs or is outweighed by the disadvantage of monopoly prices, or as to whether the benefits of combination could still be obtained if power to exact monopoly prices were curbed.

It will be convenient to examine, in light of the known achievements of British combinations, how far the possibilities of economy and efficiency, in regard to materials, manufacture, and distribution, tabulated on an earlier page, have been realized in practice.

SECTION IV.—THE ACHIEVEMENTS OF COMBINATIONS.

(A) BUYING.

Control of the sources of raw material: The method of securing adequate supplies of raw materials by "vertical" consolidation has already been mentioned, as also the occasional instances in which combines have acquired substantial interests in undertakings engaged in the production of materials, plant, and stores used by the combine. An early instance of otherwise unconnected firms and interests collaborating under State auspices in the promotion of schemes for increasing the production of industrial material within British territories is that of the Imperial Cotton Growing Association; a later instance is to be seen in British Dyes (Ltd.). The most noteworthy modern case of similar developments carried on by a single consolidated interest is to be seen in the great soap and allied products consolidation which is responsible for the organized development of large areas in various parts of the world for the production of oil-bearing seeds and nuts, but activities of a similar kind are by no means uncommon among the great British consolidations.

Foreign supplies: Where an essential material of an important industry comes mainly or entirely from overseas, the question of the location and control of that source becomes a political as well as an economic consideration. The situation in the early months of the war taught all the belligerents that it is impolitic to remain dependent for essential materials on sources of supply situated in what may at any time be an enemy country, and that a temporary breakdown of supplies may occur even when the sources are in allied territory, should the undertaking have been under enemy control. If war should continue to be an ever-present possibility, the control of sources of industrial material will become more than ever before a political consideration. On economic and political grounds it has recently been recommended by the committee on industrial and commercial policy that an organization cooperative in character be formed among British iron and steel manufacturers for the purpose of securing supplies of suitable iron ore. It is suggested that this organization might ultimately become the owner of large deposits or gain absolute control of them in such a way as to secure continuous and uninterrupted supplies to the British manufacturer. It is further suggested that there should be established a powerful national organization, formed by a combination of the interests concerned, to secure supplies of nonferrous metals. The committee pronounce themselves of opinion that every encouragement should be given by the Government to the formation of combinations of manufacturers and others concerned to secure supplies of materials, and that, where it appears expedient that the control of mineral deposits in foreign countries should be obtained, all practical support should be given. Developments in this direction will hardly fail to be accompanied by a unification of interests and policy in respect of commercial matters generally.

Monopoly of material: The control of raw materials by an association promoted specially for the purpose may and doubtless would be so constituted as not to shut the door on aspirants to the industry, but where the control is exercised by a powerful consolidation and covers a large proportion of the available supplies it increases the difficulty of independent capital and enterprise entering the industry.

Associations hampered by status: Little has been done by associations in this country in the way of centralized or concerted purchasing of materials. There are instances of the executive or some other committee of an association being empowered to buy and contract for supplies on behalf of each of its members, but it is complained that any considerable extension along these lines is hampered by reason of associations being a trade-union in the eyes of the law, and consequently debarred from entering into enforceable contracts. It would seem that attention is required to the question how trade associations in the United Kingdom are to develop this unquestionably beneficial side of their potentialities.

Economies in buying by consolidations: The economies effected by the unification of buying departments and staffs is not one of the major inducements to amalgamation, but it is a minor one of some consequence. More important is the greater efficiency of the buying. Purchases are made in gross instead of in detail, on better terms and with some reduction in transport charges. Again, the larger orders can be placed direct with the producer or first agent and the toll exacted by a number of middlemen can be avoided. Centralized buying also affords greater opportunity for comparison, selection, and elimination as regards the materials bought, and by standardizing materials larger orders are placed for one line and better terms secured on that account. Yet, again, a large and substantial concern obtains easier credit terms and larger discounts than would be given to a smaller concern struggling against many competitors; and even where the concern is not so much an amalgamation as a financial inter-connection, the resources of the larger unit can be placed at the disposal of smaller associated firms by guaranteeing bank accounts and affording other facilities for the improvement and expansion of their business.

(B) MANUFACTURING.

The advantages of standardization: Of all the means by which the cost of production can be lowered, none holds greater possibilities than the standardization of types, patterns, and sizes in all such articles as are mechanically produced and lend themselves to repetition manufacture. The adoption by an industry of common standards for component parts of fittings, machines, and structures enables a maker of such parts to put through a straight run of 10,000 pieces where otherwise he might have to break the run a dozen times with a dozen resettings and a dozen sets of specifications, drawings, jigs, and gauges. Such standardization gives the machine-tool maker the opportunity of producing automatic machines specially adapted to one particular job; it is of advantage to the distributing trade in that it reduces the amount and variety of stock to be carried and it is a boon to the user in that the fittings of one maker are interchangeable with those of another.

Standardization and combination: The resistance to standardization comes in part from the customer, who will not consider the advantage to himself and the maker alike of designing his apparatus or structure so as to embody the largest number of stock parts, but must have each element slightly different from anything in common use; but it comes even more from the exclusiveness and nearsighted policy of manufacturers themselves. Combination in the sense in which the word is here used is not a necessary preliminary to agreement upon the adoption of common standards, as witness the excellent work done by the British Engineering Standards Association, which has created and secured the adoption of standards among manufacturers uncombined as well as combined, but there can be no doubt that where a strong association exists, or where the bulk of the trade is in the hands of one dominant interest, the adoption of standards is much facilitated. The regularizing of specifications and designs is declared to have been one of the principal objects which led to the formation of associations among the constructional engineering, electrical, and cable-making concerns. In another important association of manufacturers making a line of articles of endless variety and pattern, where the standardization of parts has already been promoted to some extent, "a scheme is at present going forward for the standardization of all sizes and gauges throughout the industry, so that one maker's parts will be interchangeable with those of all the other makers. This will prove a great convenience in the foreign trade, as one series of parts stocked abroad will serve for the products of all the makers, and even if the products of two different works get mixed at the other side, they can be assembled without trouble." The same association has another scheme afoot. "At the present time each works makes its own tools and dies, but we are endeavoring to set up a central tool shop which should make for the whole trade, so that the best up-to-date machinery can be installed, and the work can be done much better and cheaper than when split up among the separate establishments. Further, we shall then be able to secure that every tool, die, and gauge is of exactly the same size and pattern. This, along with the other intended standardizations of material, will be of great advantage to trade and public alike."

Specialization: If arrangements can be made among the manufacturers in a given branch of industry whereby, instead of every firm covering the whole ground, each devotes itself to one particular section, great economies and improvements in production will result, for in that case each can install specialized equipment for its particular line and for that only, each acquires specialized experience and skill, and each can have longer runs on one class of work. Free competition, while making for specialization of this kind up to a point, has in practice failed to secure its progress beyond that point even when great economic advantage was on the side of further developments.

Specialization and combines: It has been the foreknowledge of the gains to be secured from these further developments of specialization that has inspired, perhaps more than anything else, the formation of the great combines in the textile and other industries. The degree to which the prospective gains have been there realized are indicated in the following passages taken from statements furnished by four large combines:

"Soon after the formation of the combine the managing directors decided to concentrate different classes of work in separate works, and with this object in view large sums were spent in reconstructing differ-

ent works. Prior to the formation of the combine many different classes of business were carried on in the same premises, with the result that on much of the work that was done no profit was made. In those days a man who might do a bulk trade in certain classes of work sometimes had to take small quantities of work for which he was not altogether fitted, owing to the merchants insisting upon him doing so, with the result that excessive expense was incurred in changing apparatus and running through small lots. The combine has gradually sectionized work until, as a rule, only two works within the combine do the same class of trade. It would probably be more economical to have only one works for each class, but it was recognized that it would facilitate smooth working with the merchants if they had an alternative to go to should they be dissatisfied with the work or have some difficulty with the manager of any particular works, and in practice this system has been found to work very well. The result, of course, is that each works has a longer run of one class of material with the less use of wares and greater rapidity of output."

"It stands to reason that if a works can be kept continuously to one class of work the output must be far greater than if a number of different classes of work were done there, and that consequently the cost of production of the one class will be much less than what it would have been had that particular class been included along with a number of other classes at the same works."

"There is no pooling of orders in the ordinary sense of the term within the combine, as each works has its own travelers, who call upon the merchants soliciting orders. If a merchant asks a traveler to arrange for goods which the works he represents do not undertake, he informs the merchant which works could do it and is expected to advise the traveler of such works to call upon the merchant."

"The advantages of specialization are secured by the avoidance of overlapping in styles produced at our various mills, with the consequent result that longer runs were obtained of the particular patterns produced and the cost of manufacture thereof correspondingly decreased. It was also possible to concentrate the production of specialties where only a limited demand was required and thus save dispersion of effort. Being a fancy trade, the company was able to allocate the class of work according to the suitability of the works under their control and to specialize at any one mill with regard to any specific product."

Specialization by associations: Specialization is carried out much more easily where all the firms in a trade are working as one financial unit, and the records of measures taken by associations are scanty. It is, however, fairly common for members of associations whose orders in some lines are small to arrange for some other member who specializes on that line to manufacture for them or to take over that part of their trade on agreed terms, and there are some cases of small firms ceasing manufacturing altogether and becoming virtually agents, all their orders being executed with products obtained from other members. There is also at least one instance (in the machine-tool industry) of an association being founded for the specific purpose of enabling each firm to concentrate on one narrow range of specialties. But these are rare instances. Taking the whole range of trade associations in the United Kingdom, it may be said that very little has been done as yet in the way of either standardization or specialization, and a wide field offers for progress along these lines in the future.

Limiting factors: Both standardization and specialization have their dangers. If adopted prematurely or carried to excess, they may prove an obstacle to improvement and exert a narrowing influence on the minds and lives of those engaged in the industry. But in most industries there is a long way yet to go before any such stage is reached, and, provided standards are periodically thrown open to revision and specialized branches are kept in intimate association with other branches, the dangers can be permanently avoided.

Plant: In all industrial undertakings the erection and laying out of the factory or works should be planned so as to secure that the premises are constructed in the most efficient manner for obtaining the maximum of output with the greatest economy, and experience shows that the combine or consolidation can yield considerable advantages in this respect. One powerful amalgamation has a central expert department, to which all proposals for the extension of or alteration to any of their works or those of the associated companies are referred for consideration and advice. This department has special knowledge of the various processes involved in the manufacture of the various commodities sold by the different companies, and it also has the advantage of the views of the management of all the companies, so that it is able to put forward a scheme which will embody the latest and most up-to-date construction. The same considerations also apply with regard to the erection of plant and machinery, all questions relating to these matters being referred to a central engineering department. It has been found possible, by means of standardization of buildings and plant, greatly to increase the output of associated companies and thereby reduce the cost of production.

By-products: A group of manufacturing firms is also in a much better position for dealing with by-products arising during the course of manufacture, as such by-products can be collected for treatment at one or more works, whereas the small quantity of by-product of a single manufacturer, coupled with the expense of the necessary plant, may prevent the manufacturer from dealing with the article on a commercial basis.

Equal distribution of work: One frequently recurring accompaniment of competitive industry is the unequal distribution of work among the firms that compose the industry, leading to the firms in one center working overtime while those in another are on short time. In the combine or consolidation the prevention of this condition of affairs is a part of the daily routine. It is less easy for an association to provide effectually against unequal distribution of work unless there is a close community of financial interest among the members, but there is testimony to the effect that in the case of associations working on a pooling arrangement the tendency is for the majority of the members to have at all times a proportionate part of the trade with a minimum of short time and overtime.

Effect on quality: One noteworthy effect of suppressing competition in price is to bring competition in quality into relief. It is regrettable, but true, that where the public, in choosing between the goods of rival manufacturers, has to take both price and quality into account, difference of price is apt to sway the choice more than difference in quality, the reason being that price comparisons are more simple than those of quality. Once price differences are eliminated the customer is left to make his choice on the sole ground of quality, and the competition of the associated manufacturers for his custom becomes quality competition. The way in which this factor works out in one association is related as follows:

"If the standard specification and the minimum selling price be considered together, the effect on the maintenance of quality will be seen. The association publishes a standard specification for every staple type of product, a specification providing for a reliable and creditable article. There is no compulsion on any member of the association to manufacture to that specification, but if he turns out an inferior article he is not allowed to sell it at less than the standard price; consequently, since the standard specification is well known throughout the distributing trade, if he does not work up to it he can not sell his goods. Taking these arrangements all together, it can be seen that there is no inducement to turn out rubbish, but every inducement to turn out a sound article, and, in fact, quality has been so standardized in this way that at present practically all makers, whether in or out of the association, work to the standard specification."

(C) SELLING.

Transport economies: One considerable economy open to firms in combination is that of arranging that orders shall be executed by the firm nearest the customer. Cases are quoted of firms in the Midlands, prior to the organization of the industry, regularly delivering goods to Glasgow, while a firm in Glasgow was delivering precisely the same goods into the Midlands. Combines and consolidations are in a position to prevent this particular form of waste and, where the product is a staple or standardized article, have done so to a considerable extent. The influence of associations in this connection is less clear. An association that does no more than fix a schedule of uniform prices for delivery at customer's works must make it immaterial to a customer in Birmingham whether he places his order with a Birmingham firm or a Glasgow firm. The incentive to buy near home is destroyed. Many associations, however, have understandings, if not arrangements, for the demarcation of territories. In one such case the English and Scottish groups in an association have a general understanding that "each shall respect the other's home districts and deliver at equal prices into certain intermediate areas." When a number of firms form themselves into an association "poaching" comes to be considered bad form.

The central selling agency: Reference has already been made to the one important example in the United Kingdom of financially independent firms marketing their goods through the medium of a joint selling agency. In that case the arrangement developed into amalgamation of the original concerns, and though the agency still handles the sales of two independent firms, their goods are not to any large extent in competition with those of the dominant concern by which the agency is run. Thus there is at present no counterpart in Great Britain of the German kartell, with its central agency marketing the goods of the financially independent but associated members. As already described, combines and consolidations employ the principle of centralized selling more or less, according to the nature of the industry, but associations have, with few exceptions, left the members free to seek and execute their own orders independently of the rest. A good deal of discussion is, however, being given to the question of creating a central selling agency among the members of some associations, and in a few cases tentative steps are being taken in that direction. The project is principally considered in reference to foreign trade, and the issue resolves itself mainly into whether the present merchant system is the most effective agency for promoting sales abroad that could be devised. It is felt that in practice a central selling agency would supplant all merchants, and though it is recognized that there are many useless and parasitic merchants, whose establishments are a desk and a chair, and who never see the goods they handle, the bulk of the trade is done by well-established and useful merchants, carrying large stocks, whose profits are considered to be not disproportionate to the services they render. The question is one to be decided by the firms and associations themselves. Meanwhile it may be noted that the committee on the iron and steel trades have recently made proposals of a still more ambitious nature. They recommend that "a national selling organization be formed for the purpose of marketing British iron and steel products in an efficient and economical manner."

Determining factors in central selling: The factors entering into the question of centralized versus individual selling as applied to the operations of combines are well set out in the following statement by the head of one of the principal combines in the textile industry:

"If the articles produced at each works are identical, or differ only in qualities dependent upon mechanical or chemical science, then great economies can be effected in this respect. It is difficult to generalize on this point, so much depends upon the commodity sold—whether it is sold direct to a retail or wholesale customer, whether it is what can be described as a luxury, whether the material in the semimanufactured state belongs to the seller or to the buyer, whether the cost of the article sold depends on the degree of mechanical skill, or whether its value depends upon something much less tangible, namely, the changeable taste of the public. If all the works in a combine are producing the same article made from raw or partially manufactured material owned by the seller, sold direct to the retailer and advertised to the public, large saving can be effected; but a change in any one of these conditions renders the saving more difficult, and if they are not present, the saving becomes problematical, or at the best is very slow."

Agents or representatives abroad: The advantages of direct representation abroad, which is open only to a substantial concern, as compared with sale through commission merchants or general agents through whom the small manufacturer has to work, have been stated as follows:

"Careful study of the markets, their requirements and demands, is essential, and here lies one great advantage of amalgamation, as small firms can not afford to have sole representatives in each market, and therefore must depend on agents or merchants advising them as to the value and suitability of their products. An agent may be acting for firms representing many different trades, and know little about any one of them. A commission merchant is chiefly interested in securing business for the trades which give him the best return, and withholds the information he obtains as much as possible, using it often in a way which will push the products of the weakest seller. To some markets the manufacturer is also the shipper, to others the manufacturer sells through commission merchants. A combine can at once derive benefit by direct and sole representatives, as it can afford to send out men from its own staff and so gain knowledge at first hand of the requirements of the markets."

The advantages of large consolidations and combines over smaller manufacturers, whether acting individually or in concert, in the matter of export business is well exemplified in the two following extracts:

"Our trade covers markets in every part of the world, differing in climate, language, coinage, purchasing power of the population, popular taste, and so on. It follows, therefore, that the manufacturer requires to be served by highly trained, educated men, who have made a special study of their subject. We have established an extensive expert selling and advertising organization through which they have been able to obtain exact information as to the peculiarities and requirements of each market abroad. This organization has been placed at the disposal of the manufacturers associated with us, and the result has been that

British goods have been exported to outlying districts in various parts of the world at prices within the purchasing power of the various populations who are themselves better served than if each individual firm were trying to do the trade direct, with all its difficulties and expense. By means of the economies effected by association and with the advantage of the organization already built up, the associated companies have been able to increase largely their export trade. The value, therefore, from a national point of view of the extension of this organization to the associated businesses will be obvious, as by this export trade is obtained the ideal of exchange of British manufactured products for the imported raw materials used in their manufacture. There is also the advantage that the association companies can show their samples in the various branches and salerooms that have been established abroad by us, whilst their interests in regard to trade-marks and customhouse, shipping and banking requirements can be protected by the one organization.

"A central export department with specially trained staff has been set up, direct representatives are sent to overseas markets, attempts are made to study the markets of the world on a large scale and direct touch is endeavored to be obtained with all avenues of trade opened up by the chamber of commerce, the board of trade, the overseas, and other associations; selection of suitable samples for each market are made from the combined productions of the company instead of reckless general and ofttime resultless sampling of every mill's productions regardless of the needs of the particular market involved."

Collective advertising: Where competition among manufacturers has given place to combination, there is no longer excuse for competitive advertising, and publicity expenditure can be more usefully directed to the object of keeping the product itself before the notice of the prospective customer, or at least of booming the product of the particular group as against that of rival groups. This is of especial moment in the foreign trade, and some progress has been made by associations and by publicity bureaus supported by particular industries toward proclaiming the superiority of the British as against the foreign article. In many branches of industry, again, the most fruitful kind of publicity is that directed to informing the customer as to ways of using the commodity. This can be done to some extent by individual firms, but better by firms in combination.

(D) KNOWLEDGE.

Interchange of data and experience: In combines and consolidations knowledge as to the best practice in the various branches is available for all the branches. Associations have as yet gone but a little way toward securing a similar free interchange of information among the members, but regular meetings, often accompanied by a lunch or dinner, of those who would otherwise be jealous competitors, conduce to a friendly atmosphere in which exchange of views upon all matters concerning the trade take place. Naturally information as to economical methods and processes is thrown into the common stock much more readily where there is some community of financial interest such as that afforded by a pooling system. Where there is an association it appears to be much more common for manufacturers to visit each other's works.

The standardization and interchange of costings: Many of the unpleasant features of the competitive system are to be attributed not so much to inherent weaknesses as to the fact that most manufacturers have had no precise knowledge of what any particular article cost to produce. Consequently they have been dragged at the tail of something called "current price," and have stood out for more or taken less for this or that article, without knowing whether they were losing or gaining on the order. The result has been to place industry at the mercy of bluff and chance, and the industrial death rate has been high. Apart from any question of combination, the standard of practice in this respect was improving, but the improvement has been much accelerated in those branches of industry that have coalesced into combines or consolidations, for in a large concern accurate costing is a condition of existence. Moreover, in such concerns it is necessary that costings at all the branches shall be made on a uniform basis, and when that is achieved comparisons are easy and it is possible to see at a glance from the costing sheets where costs are excessive, while the lowest costs recorded give a standard to which the whole can be brought. It is open to the smallest manufacturer to institute an accurate costing system, but without combination the advantages of comparison can not be secured. The more advanced and progressive associations have already done a good deal in the way of introducing standardized costing systems among their members, and steps have been taken in some cases, if not for the general circulation of detailed costs in the various works, at any rate for the circulation of attainable costs calculated on the average of several of the more efficient firms. With this schedule at his disposal, the less efficient manufacturer can compare his own costs item by item with those given and see just where his methods are at fault. But as regards the vast majority of associations the improvement of the general level of knowledge and efficiency, either by standardization or interchange of costings, has not yet been attempted.

Scientific and technical research: More and more industry is coming to wait upon scientific research and technical experiments, requiring expenditure on a scale far beyond the means of any except the largest and wealthiest firms. To such industries combination in some form is essential if British products are to hold their own in world trade. Many of the large combines and consolidations have their extensive laboratories and experimental workshops, one British firm being known to spend £20,000 a year under this head. Research on such a scale is far beyond the range of any trade association thus far organized or conceived, but the department of scientific and industrial research, working in conjunction with the professional institutes and the university laboratories, will enable independent firms to collaborate in promoting research, the results of which can be placed at the disposal of the whole industry.

Collection and distribution of statistical information: It is essential to the efficient and stable conduct of an industry that some central bureau shall be charged with the duty of following the course and prospects of the trade generally and keeping the component firms of the industry informed of its broad features. A service of this kind can be cooperatively conducted apart from any combination for the regulation of the trade, but where there is such combination particulars of trade done and orders in hand are more readily obtainable, and the information circulated is consequently of greater value.

SECTION V.—THE DANGERS OF COMBINATION.

Pitfalls and drawbacks: Combination holds great possibilities of economical and efficient production and of improved distribution at lower cost, but it does not invariably or necessarily insure their attainment. It brings in its train dangers, weaknesses, and drawbacks which under ill leadership or misguided policy may produce injurious effects, outweighing the benefits. Even on the score of productive efficiency the passing of independent firms under unified or concerted control is not all gain. Where a working unit grows beyond the compass of one man's personal detailed direction "system" must replace that direction, and system can easily degenerate into bureaucracy and red tape. What is gained in power and knowledge at the center may be lost in freedom and strength at the circumference, and the overgrown unit is in constant danger of becoming inefficient and reactionary. That individual initiative and enterprise which went to the making of the independent businesses now amalgamated in one giant concern may no longer be stimulated or find expression when the former proprietors become salaried officials, even though they have seats on the board. Independence being destroyed, self-reliance may be weakened. Again, behind the shelter of monopoly a comfortable somnolence may descend upon the whole concern; the fear of change is a well-known characteristic of large administrations, and the large unit may become stagnant or even reactionary. There is a danger of all higher direction passing into the hands of old men and of young minds and ideas being smothered, whereupon it ensues that young men of the best type are not attracted to the business and the level of the higher personnel may gradually decline. The combine and the consolidation have as yet barely spanned a generation, and it is a commonplace that they are still trading upon the momentum of energy and business acumen developed in the formerly separate businesses under competitive conditions; whether the succession can be maintained from men brought up within the combine is a question never long absent from the minds of those upon whom the responsibility for large businesses rests.

Means of defense: Whether combination results in improved economy and efficiency or not depends upon how far the persons concerned set to work to realize the possibilities it offers; but combination implies a limitation of competition, and where competition is effectively suppressed and a virtual monopoly is established it is within the power of the combination to raise prices above the competitive level of "just about right." Where a large concern has what amounts to a virtual monopoly of a trade it can make profits that are not the outcome of efficiency and can use its financial strength against any would-be rival. There are limits to the extent to which this can be done, but a powerful monopoly must be far gone and the capital at the disposal of the newcomer must be large before an attempt at setting up a rival establishment can be made with reasonable prospect of success. A combination can fortify its position against intruders. It can come to terms with merchants or retailers that they shall not handle any but its own goods, and enforce those terms by conditional commissions and deferred rebates. It can go out to attack with "special fighting lines" anyone who tries to interfere with its trade and drive him out by undercutting or compel him to join the combination and conform to its schedule of prices.

The raising of prices: Most associations have been formed with the declared or implicit object of raising prices. In one important case it is bluntly said that "the object the association has in view is that of raising or keeping up the price to the buyer * * *" but for the most part a modified phraseology is used, such as "preventing price cutting," "avoiding cutthroat competition," "securing fair and reasonable prices," "agreeing on prices," "placing the trade on a more stable basis," "providing a fair return on capital and energy," the contention always being that prior to the formation of the association prices were lower than they ought to have been. Any desire to raise prices above what is "fair and reasonable" is invariably disavowed. "It should be clearly understood that the objects of the association have not been to obtain unduly high prices, but to secure a reasonable profit to the manufacturer." It is explained in some cases, rather by way of afterthought, that larger profits need not in the long run entail higher prices to the customer, but may be secured as a result of economies in production and distribution, but the immediate object and the incentive held out to manufacturers reluctant to come in has been higher prices. There is nothing inherently improbable in the claim that certain industries at certain times have been underremunerated, and no blame attaches to manufacturers for combining to improve their position. But the fact that combination can be used to raise prices from low to medium suggest that it can be used to raise them still further from medium to high.

Price associations: Associations which confine their activities simply to the fixing of prices are doubtless advantageous to the manufacturers or traders who comprise the association, and they may result in some advantages to the public generally, in that the fluctuations of trade and waste of effort attendant upon fierce price competition are eliminated. They make a certain appeal to the contractor and retailer, in that each has an assurance that his competitor is buying at the same price as himself, and all can depend in sending out estimates on a reasonable stability of the price of materials. Again, if the regulation of price by an association results in prosperity and security to an industry it is possible that the increased profit may be spent upon improvements, so that in the long run the public may gain the advantage of cheaper goods. But unless there is community of financial interest over and above price regulation among the members, there is still competition, for it is to the advantage of each to increase the volume of his trade at the expense of the rest. Prices being uniform, competition becomes a matter of quality, and still more of publicity and sales effort, and expenditure in these directions can be afforded most largely by those firms whose costs of production are low. It follows that a firm that knows how to produce good articles at a low cost will keep its knowledge to itself. The fixing of prices adds little to the influences making directly for efficiency and ultimate lower cost.

Price comparisons deceptive: The immediate effect of price associations has avowedly been to "improve" prices. Whether in the long run the prices so raised have remained above a "reasonable" level is a question that can not be answered. There is no standard of "reasonableness." (A definition of "reasonableness" has been given in parable form thus: A publican, who had the painters in, sent along to them some beer which had gone off a little. Inquiring later how they found it, he was told it was "just right." He said, "How do you mean, just right?" They said, "Well, Guvnor, if it had been any better we shouldn't ha' got it, and if it had been any worse, we couldn't ha' drunk it, so what we say is, it was just right.") Moreover, figures afford little guidance as to how far prices were raised as a result of association, for the reason that the price of materials and labor and the condition of the markets is constantly changing. If materials are going down and improved plant is being introduced, it does not suffice for an association to say "we have not raised the price." The question is whether, as a result of combination, prices were higher than they would otherwise have been. This point will be of especial importance should there be a fall in the general level of prices during the next few years. Instances can, of course, be quoted of rings of manufacturers, carriers, or traders deliberately conspiring to extort in an emergency fantastic prices

from the public or the Government, but we are here concerned with associations presiding over, or consolidations engaged in, steady trade in normal times, and in that connection little more can be said than that the power conferred by monopoly is capable of being used to exact immoderate prices.

Price and cost of production: Where an association fixes prices, and stops at that, there is unquestionably a strong tendency for prices to rise, for they will be fixed at such a level as to enable the least efficient firm of the group to pay its way. But where an association goes further, and works for the raising of efficiency throughout the industry as near as may be to the standard of the best, the schedule price may be no higher than the average of what would have ruled under continued competition.

Profits depend upon the margin between the cost of production and the selling price. Although exceptions are not wanting, it may be said generally that the result of combination has been to increase profits. The spokesmen of combinations are at no pains to extenuate this fact—they rather point to it as evidence that combination justifies itself. The manufacturer, they explain, is an important member of the community, and it is in the national interest that his services should be adequately remunerated. They contend, further, that an ample margin of profit is indispensable to the proper conduct and development of a manufacturing business, in that it encourages and enables the manufacturer to improve his processes and methods, scrap old plant and install new machinery, undertake structural alterations and general reorganization, and thereby result in his being able to reduce appreciably his costs of manufacture. Although the assumption made here that profits are mainly expended on improvements is by no means universally true, it is doubtless often the case that works which, in the absence of a decent margin of profit, go from bad to worse would be brought up from bad to better if the profits would allow of the necessary expenditure; but the suggestion that high prices at present are justified, in view of the low prices they will permit in the future, has something in it of the "jam to-morrow" argument which Alice found so unsatisfying.

Stability and uniformity of prices: Reference may be made in passing to the good influence exerted by combinations upon the steadiness of prices and the advantages that follow from all customers knowing that they are buying on the same terms. The following extracts will serve to illustrate this:

"The builder, plumber, or joiner, etc., prefer regular prices, because, in tendering for a contract, they know that their competitor can only procure these materials at the same price as themselves, and they are in no danger of being out of the running through some rival having made a fortunate purchase of the raw material.

"Buyers have frequently told me that they prefer to have uniform and stable prices, and to be assured that they can buy their goods as favorably as their competitors.

"We have been asked whether we have got any objection or whether we have found any disadvantage from prices being fixed by the association. Our answer to that question is, generally speaking, that we do not. We feel that it is an advantage to our trade as consumers and contractors to have the price steadied. It is much better for us to know what we have got to pay for stuff ahead, and have the thing properly regulated, than it is for us to be at the mercy of all sorts of jumps in prices or drops in prices, neither of which is conductive to the best interests of our trade; and, of course, it is of advantage to us financially to know what our costs are going to be and be able to make our arrangements accordingly.

"As you know, perhaps, I am associated more or less with the steel trade, although our main interest is the engineering trade, and I have known cases where, but for the combination in the steel trade, prices would have jumped about very considerably to the disadvantage of the trade. There have been times when the prices ought to have been put up because they have been too low, but the steel trade association has felt that it would be better to steady the position rather than to put the prices up."

Effect on output: Differences of opinion as to the effect of combination on volume of output arise from failure to perceive the difference between "supplying the demands of the market in full" and "supplying what the market will take at the price." As regards the great bulk of manufactured articles, the latter phrase alone has meaning. The records of combination naturally provide no case of manufacturers in combination curtailing the output of their wares, except for the purpose of preventing the slump in prices that would result from a glut, or of raising prices by creating a comparative scarcity. Limitation of output is quite consistent with supplying the effective demands of the consumer in full, for demand is conditioned by price, and if the price is raised by limitation of output, demand is to a greater or less degree depressed. This is accepted as a matter of course when the evils of over-production, and the useful part played by combination in preventing it, is under discussion. "More was being produced than was really required, and prices were at the lowest ebb." But there is a reluctance to acknowledge that when prices are raised the effect is likely to be a reduction in the amount produced. The effect of price on demand is, of course, uncertain and variable. The sales of some commodities, for instance, are influenced not nearly so much by their own price as by the price of the finished article, of which they form part. "The consumption of cement is not determined by its selling price at the works of the manufacturer, but by the total cost of the finished work of which cement forms but a small part." Yet over the whole range of manufactures demand, and consequently output, are conditioned by price. Thus, while it may be said that the main effect of combination on output is not so much one of restriction as of regulation and that its main tendency is to keep productive capacity roughly equal to effective demand and to distribute work with rough equality throughout the industry, yet the restrictive effect of higher prices on demand can not be left out of account, and it must be recognized that in so far as combinations raise prices they occasion what amounts to a restriction of output.

Effect of the quota system on output: It is confidently asserted by the promoters of "pooling" associations that the effect of the system is not to diminish output. It is explained that under the system the total output is neither fixed nor even regulated, but is free to expand or contract in accordance with the total demand. It is difficult, however, to accept this view without some reservations. Since those who increase their output beyond the average are penalized and those who fall below the average are rewarded, it would appear that the aggregate output must tend to be less than it would have been in the absence of any "pool." Yet such statements as "there has never been a time when we have failed to supply the utmost demand of the market" are doubtless made in good faith and have a certain truth. What happens is that under the influence of the penalties and rewards prices rise, and though the whole demand at the increased price may be met, it is a demand depressed to some extent by the greater costliness of the article. This appears in every way likely to be the immediate effect of the pool system; but against it may be set the consideration that in the long run the gains of steady and equalized production in the various works composing the industry and the greater efficiency due to the removal of obstacles to the interchange of knowledge may accrue to the public in the shape of lower prices, whereupon demand may recover and output increase.

Effect of the quota system on efficiency: It is further contended that the pool system makes for more efficient production in that it provides an inducement to the less efficient manufacturers to let their business, or at least that part of their business for which they are worst equipped, go to the more efficient. Attention is particularly directed to the fact that the ratio of output between the different firms working under a pooling arrangement is by no means exactly maintained. The margin of profit that can be made by an inefficient firm may be so small that it will choose to close down and draw the compensation, while the firms that are manufacturing most economically may find it well worth while to do more than their quota and pay the penalty. This transference of work from the less to the more efficient firms does in fact take place to a considerable extent, and it can not be doubted that as a result production is carried on to greater advantage, but it is not so clear that much of the advantage accrues to the general public, since the greater part of the gains of increased efficiency go in the form of compensation to the less competent producers. Free competition, it may be suggested, equally leads to business passing from the less to the more efficient, with the advantage that the retirement of the incompetent is effected without compensation. To this the reply is made that in practice the ill-endowed and ill-circumstanced manufacturer, and particularly the ill-placed small man, clings tenaciously to life and struggles along on the brink of ruin year after year, a source of weakness and danger to the whole industry and of expense and waste to the community at large. It is asserted that, with a vexatious disregard of the laws of economic science, he refuses to be eliminated and that in practice it is quicker and cheaper to pension him off than to starve him out.

SECTION VI.—CIRCUMSTANTIAL SAFEGUARDS.

What constitutes an effective monopoly: It has been made plain that where associations, combines, or consolidations have an effective monopoly of a trade competition can no longer be relied upon to insure that the prices charged and the profits made are "just about right." It is not necessary for a combination to comprise the whole trade to exercise an effective monopoly. It is stated by those who have had to do with the formation of combinations that an association or a consolidation can not effectively dominate prices unless it has at least 80 per cent of the output within its jurisdiction. Under this percentage the competition of the "outside" producers will rule price; above this percentage outside firms will follow the price of the association or dominant firm. Practically all the associations here considered comprise this 80 per cent or more, otherwise they could not exist as price associations, and there are many combines and consolidations which embrace more than the prescribed percentage. It may now be inquired how far outside circumstances and considerations impose limits on the power of combinations to raise prices against the consumer. When the safeguard of competition is no longer operative, are there other natural safeguards which come into action to protect the public against extortion and to check any tendency to abuse?

There is unanimous testimony from those connected with combinations having an effective monopoly to the effect that "we would not if we could, and we could not if we would, raise prices above what is fair and reasonable." This claim demands careful consideration, for if it can be established there is no menace in combination and no legislative or administrative safeguards are required against abuse of what would appear to be monopolistic power. The reasons advanced in support of this position come under seven heads, as follows:

Effect on volume of trade: It has been suggested that the raising of prices above what is reasonable would defeat its own object in that the volume of trade would shrink, plant would be idle, dead oncosts would be incurred, and the yield from the higher prices would be more than offset by the reduction in the gross earnings. This is certainly a factor to be reckoned with in calculating what price will yield the largest measure of profit, but in most industries, assuming an effective monopoly, an enormously higher price could be exacted before the higher profits on the smaller output totaled less than the smaller profit on the larger output. Consideration for the effect on sales is not in itself a dependable safeguard.

Collateral competition: There may be an effective monopoly in one article, but if some other article can be used in its stead the undue raising of the price of the first will tend to drive customers to the second. Timber, steel, brick, stone, and concrete can be substituted each for the other to some extent in building, and if one becomes disproportionately dear another will be used in its place. Galvanized sheets are in competition with composition roof material and with tiles. Wood bedsteads are in competition with metal bedsteads. This "collateral competition," as it is termed, undoubtedly acts as a check on the raising of prices to a point which would encourage the use of the nearest alternative, but it does not insure that the most desirable article will be sold at a just price. It is, moreover, an easy step from the monopolistic control of one article to concerted control of two or more articles that might be in collateral competition with each other. Collateral competition is a safeguard of limited range and reliability.

Potential competition: The reason advanced most frequently and with most assurance—why a combination can not raise prices above a reasonable level—is that the result of so doing would be to bring new people into the trade; in other words, the surest safeguard against abuse of combination is competition. Many facts can be adduced in support of this contention. Cases can be quoted in which the mere formation of an association, by rousing expectations of higher prices, has brought new firms into the business; as also of small firms being started for the very purpose of compelling a large consolidation to buy them out. But the efficacy of potential competition depends upon how easily new people can start up in the industry, and a combination which is so minded can make it not at all easy. Various obstacles can be placed in the way of a would-be entrant. The channels of the distributing trade can be closed against him by exclusive-dealing contracts secured by deferred rebates. The sources of materials and plant used in the industry may be fenced off against him by similar arrangements and understandings. Again, the inducement to start in the trade may be considerably damped by the fear of a concerted underselling or boycott campaign on the part of the combination. Yet, again, the industry may be such that a small working unit has no chance against a large, and if a large consolidation is already in possession of the bulk of the trade it may be exceedingly difficult to raise capital for a rival venture in view of the fact that a battle royal with heavy

losses on both sides must ensue. In the face of these handicaps and hazards it may well be that though a profit of 10 per cent would be enough to make new capital and enterprise look longingly at an industry it would require a profit of 30 per cent to induce anyone to start up against an existing monopoly. Still further, it is a commonplace that where an outside firm does establish itself efforts are sooner or later made to take it into the combination, whereupon competition again ceases. Representatives of combinations set great store by the safeguard of competition and have explained that they take no action against independent rivals "so long as they do not interfere unfairly with our trade; if they do that, we take steps, of course, to defend it," but "unfair interference" turns out on inquiry to mean "selling at less than our prices." Distinctions of the same kind are drawn between "legitimate" competition, which should be tolerated, and "illegitimate" competition, which should be suppressed. "If our customers are satisfied with our goods and prices and some one comes and tries to take our trade by offering at lower prices, that is illegitimate competition, and we are justified in taking action against it." There can be no doubt that potential competition is always present in some degree as a restraining influence against extravagant prices and profits, but it can not be considered an effective safeguard against monopolistic exactions of a "moderate" kind.

Balance of power among combinations: Where one powerful combination (as of steel makers) supplies its products to another powerful combination (as of bridge builders) the second can bring restraining influences to bear against any tendency to extortion on the part of the first. One large user of steel has stated, for example, that from time to time the steel associations had put up the price to what he considered an unreasonable one, and when that had happened he had gone to the steel makers and told them that unless they could show good reason for the price they were asking he and other users would join together and put up a works of their own. With that resource in hand he had always, he said, got satisfaction. As the movement toward combination proceeds this "balance-of-power" factor will increase in range and moment. There appears to be some possibility, however, where effective monopoly exists of users of semimanufactured products regarding undue prices with a tolerant eye by reason of their being able to pass the charge on to the public. Some traces of this attitude are to be found in another statement on the same point: "Even if we had to pay rather higher prices people who had learned the benefits of their own association would not object to paying a little more to another."

Cooperative competition: Combinations of producers or traders can be balanced to some extent by combinations of consumers, and the spread of the cooperative movement, with the possibilities it holds of wider applications, provides one check to the undue raising of prices by the makers and distributors of certain classes of goods. Hitherto the cooperative movement in this country has been concerned mainly with the retail distribution of goods bought in the ordinary way from commercial producers, but manufacture by the societies, whether individually or in federation, of the goods they retail is a natural development and one that has made considerable headway. Any tendency to monopolistic extortion by the manufacturers of such goods must accelerate the movement, and that fact constitutes an ever-present check on abuse; but the principal is not of unlimited application, and where large-scale production is attempted the cooperative organization tends to get out of the control of the heterogeneous body of consumers and itself to partake of the nature of a combination worked in private, or at least in bureaucratic, interests.

Sense of equity and prudence: A reason frequently put forward why a combination "would never put up prices beyond what was reasonable" is that "it wouldn't be right, and what isn't right doesn't pay in the long run." There is something more in this than the fear of drawing competition. It is a feeling that the combination must keep in the good graces of merchants, retailers, and public, or there will be disgruntlement and friction, which will result in losses outweighing the ill-gotton gains. The combination must "keep a good name"; and, above all else, anything like a public agitation or a scandal must be avoided. "We have to think not only of the moment but of the future," and prudence enjoins that gross advantage shall not be taken of any momentary power to fleece the public. Sensitiveness on the score of equity is not easily squared with the commercial ethic which makes buying in the cheapest market and selling in the dearest one of the prime virtues, and self-restraint by combinations is more probably due to prudence. It would appear that prudence has, in fact, governed the conduct of most combinations in the past, but public feeling is roused not by what is but by what is known, and unless means are taken to make public the facts as to cost of production in relation to prices and profits, camouflage may prove an easy substitute for self-restraint.

Foreign competition: There is ample evidence that in industries subject to foreign competition that competition acts as a check upon any tendency on the part of combinations in the home trade to raise prices unduly. But its importance can easily be overestimated. Industrial combination has no frontiers. Before the war British and foreign manufacturers of many staple articles had their understandings, agreements, and associations embodying arrangements for the regulation of prices and the delimitation of markets. In respect of other commodities, associations of manufacturers in this country have come to terms with the whole body of British merchants handling their product whereby foreign goods, whatever their price and however free their entry, were shut off the British market; and in the case of more than one British consolidation, the ramifications of the firm are so wide throughout the world that any question of foreign competition in the home market is meaningless. Foreign competition has acted, and will again act, as a check upon any tendency to abuse of monopoly power in certain branches of manufacture, and that factor should be taken into account among others in considering fiscal policy, but its sphere of influence, never so wide as popularly supposed, will in all probability be narrowed still further in the years immediately ahead.

Circumstantial safeguards inadequate: These "circumstantial safeguards," as they may be termed, have undoubtedly some considerable measure of restraining influence over the exercise of monopoly power in particular cases, but even when the fullest consideration and weight are given to each and all, it remains evident that when competition is limited or suppressed as a result of combination there remains a variable but often wide margin of price and profit within which the combination, if it cares to use its powers, can enrich itself at the expense of the public. But over and above the menace of extortion there is the menace inherent in all great aggregations of wealth and centralizations of power. Large areas are being carved out of the industrial domain and formed into autonomous industrial states ruled by industrial magnates, whose word is economic law and whose warrant runs as far as the industry reaches. By the exercise of monopoly power they may not only levy tribute on the people but by their influence and wealth they may bring undesirable pressure to bear upon the administration. It is not necessary to say that combinations have, in fact, thus used their powers. Allegations are made of particular combinations maintaining large secret-service funds for the purpose of "obtaining subsidies, strengthening their monopoly, and acquiring a hold over the press by methods of bribery and corruption," and of combinations in general "exercising great influence where their interests are at stake * * * resulting in the maintenance of prices to the consumer and the direct or indirect influencing of concessions by political and semipolitical means," while inability to get information in regard to combinations is explained on the ground that "there is great reluctance on the part of individual traders to appear formally in opposition to powerful interests." Without entering into the question of the truth of these allegations, it suffices to say that the power to do these things is inherent in monopolistic combinations, and that power constitutes a social and political problem of the first magnitude.

Combinations of workpeople: The fact that great, powerful organizations of workpeople—the trade-unions—exist alongside the combinations of manufacturers and traders does not affect the general truth of the above account of the position toward which the economic system is tending; it merely introduces into the problem of monopoly a supplementary issue as to the proportions in which any gains derived from the exercise of monopolistic power will be divided as between employers and workpeople. Testimony to this is to be found in the fact that on the employers' side separate and distinct organizations exist in many industries for the regulation of trade and for dealing with labor questions. The counterpart of the trade-union on the employers' side is the employers' federation; those two being paired off, the trade association stands as an organization that can justly be considered separately. Yet, where trade combination amounting to monopoly exists, the trade-unionist, by exacting higher and higher wages, can increase his earnings beyond any "just-about-right" level at the expense not of the employers but of the general body of consumers. Only the traditional belief in the opposed interests of employers and employed has prevented in the past employers and workpeople in industries enjoying a monopoly from conspiring to exploit the rest of the community for their joint advantage, but occasional instances are on record of trade-unions agreeing with the employers that in consideration of higher wages being paid they would safeguard the employers' monopoly by forbidding their members to work for any new firm that might attempt to cut into the trade. Such cases of direct collusion are rare, but much the same result accrues indirectly where wages are paid on a sliding scale so as to vary with the price of the product, for where that obtains labor can satisfy its demands much more easily by forcing a higher price to the consumer than by fighting the employer for a larger slice of the existing earnings of the industry. As the control of industry by joint councils of employers and workpeople on the lines of the Whitley committee recommendations becomes a reality—i. e., is extended to matters of price, output, limitation of competition, and the regulation of the trade generally—the problem of monopoly will assume yet more formidable proportions. It may be suggested that if and when that happens the problem will provide its own solution, for once industry is fully organized in democratically controlled groups, the equitable apportionment of the gains of industry within each group will be provided for, and there will be a balance of power as among the groups which will prevent any one getting more than its fair share of the national dividend. We appear to be moving toward such a condition, but balance of power among the industrial groups is not likely to prove more satisfactory than has been balance of power among national groups. The duty of adjudicating upon the contending claims of the groups must fall, therefore, upon the State.

SECTION VII.—SPECIAL CASES AND ASPECTS.

Before proceeding to inquire into the various ways in which the community can safeguard itself against the abuse of monopolistic power one or two special cases and aspects of combination call for notice.

Deferred rebates: Mention has been made in earlier pages of the use by combinations of the deferred rebate as a means of maintaining monopoly and keeping out would-be competitors from the trade. The system is in extensive use in all branches of industry. It consists in returning to the customer (merchant, retailer, or actual user, as the case may be) at the end of each 6 or 12 months a rebate equal to 10, 12, or 15 per cent on his purchases, the condition attached to the refund being that he shall not, during the period, have bought any of the goods produced by the combination from anyone except the combination.

The effect of the arrangement is that if at any time during that period the customer is offered an article of better value by an outside maker or by a new firm starting in the industry, the buying of that article will cost him anything from 1 to 12 months' accumulated rebates. The result in practice is that he can not by occasional trial and gradual change transfer his custom from the combination to the outsider. It must be one or the other. If he desires to change over he must do so at a stroke, and in making the decision he has to consider that he will be no longer able to get anything from the combination except at a premium of 10 or more per cent. The reasons advanced by combinations for the use of the deferred rebate are not altogether reasons of monopoly. They contend that steadiness and continuity of custom are essential to economical manufacture; that by maintaining an even level of prices (which as the market fluctuates may be temporarily underprofitable as sometimes overprofitable) they are serving the best interests of the customer; and that these mutual advantages can not be secured if the customer is left free to "jump about all over the place," trading with the combination when its prices are below average and going elsewhere when they are above. The most notable example of the use of deferred rebate is to be found in the case of the shipping companies operating liner services, where the fluctuating competition of the "tramp" and the great importance of securing a steady volume of freights if a regular service is to be maintained lends particular weight to the arguments quoted above. In the manufacturing industries there is less agreement among members of combinations as to the advantage of the deferred rebate, and there are some recent instances of the system being voluntarily abandoned.

The tying-clause system of leasing machinery: A remarkable and ingenious method of binding customers to one source of supply is to be found in the case of the boot and shoe machinery industry. The system was invented and first developed in the United States, and was introduced into this country some 20 years ago, since when it has made great headway, the company employing it being to-day responsible for at least 80 per cent of the British output of boot and shoe manufacturing plant. Under the system a machine is not sold, but leased for a term of years, and the conditions attached to the lease are embodied

in a legal document running to something like 10,000 words. In substance, the conditions are that a fixed rent (say, 10 shillings per month) shall be paid for the use of the machine during the continuance of the lease, and a further variable rent, based upon output (perhaps 1 halfpenny per pair of boots handled by the machine). It is further stipulated, and these are the critical conditions, that where there are machines of other makes in the factory the leased machines shall always have preference over the others when work is short; that no other machines of the kind shall henceforward be obtained from anyone but the lessors; that the preceding and subsequent operations on any shoes placed on the leased machines shall be done on machines obtained from the lessors: and that if, on the expiry of the lease, the lessee is not willing to take out a new one for a further period on the same terms he shall pay a lump sum (say, £140) to the lessors. These conditions would give pause to most free business men, for it will be evident that the hiring of one machine must lead, in a progressive business, to the subsequent hiring of others, and the signing of one lease must result in a succession of leases, each tying the manufacturer to the lessors until he is bound to them hand and foot. But the manufacturer can not well help himself. The leasing firm holds patents for certain machines and devices (some acquired from the foster-parent American firm, some of British origin) without which a manufacturer is to some degree handicapped, and the bait of the patented specialties covers the barb of the tying clauses. Again, the efficiency of the firm's organization and the quality of its machinery are beyond question, and an excellent service of operator-tutors, machine tuners, and itinerant operators is maintained, so that the advantages of connection with it are not to be foregone lightly on the score of regard for personal freedom. But once inside the network of the tying clauses escape is difficult. There is indeed a legislative provision that any lessee wishing to terminate his lease and be relieved of his liabilities under it may apply for an arbitrator to be appointed by the board of trade to fix the amount of the compensation he must pay; but in practice the company fixes the amount and the lessee pays it, for in the one case in which a lessee insisted on arbitration his costs alone amounted to five times the compensation demanded. The difficulty of terminating a connection once established is increased not only by the lump sum to be paid whenever a lease ends and a new one is not taken up, but even more by the fact that as lease after lease is taken out on one machine and another the periods overlap, and there will never in the future be a date on which all the leases come to an end and the shoe manufacturer can pay his deferred rents and be clear of his connection. Neither can he escape by dying, for each lease is made binding upon "his heirs, executors, administrators, and assigns." An attempt to mitigate any coercive element there might be in this system was made in the patents act of 1907, wherein it was stipulated that a lessee before signing any lease containing restrictive clauses must be given the option of taking the machine without such restrictive clauses on terms and conditions which he admits to be reasonable, and must declare in signing the tying-clause lease that he has elected to take that "in the exercise of a free and uncontrolled option"; but as the payments under the free lease are always higher, sometimes very much higher, than those under the tying-clause lease, and since the shoe manufacturer making the higher payments has to compete with rivals making the lower payment, advantage is not often taken of the option.

The position at present, therefore, is that 80 per cent of the shoe factories of this country are tied houses, as regards their machinery, to one machinery firm, and for all practical purposes they are tied in perpetuity. It is difficult to say that any section of the community has up to the present suffered pecuniarily in consequence. Contradictory evidence is offered as to the effect of the system on the cost of production of boots and shoes and the price at which they can be sold to the public. At the most, the difference one way or the other is not more than a few pence. It is held on the one hand that the dominant firm has improved shoe machinery and revolutionized organization to such purpose that this country can now compete effectively with America, and has largely increased boot and shoe production by enabling new men to start up in the business who could not otherwise have done so for lack of capital to equip a factory. On the other hand, it is held that improvement and invention would have gone forward in any case, and that what the dominant firm has done has been merely to use its position and power to buy up inventions, develop what seemed likely to suit its own interests, and sit on any that might render its existing machines prematurely obsolete. There is no evidence that the company in question has up to now made inordinate profits, though there is some obscurity in regard to its earnings; but the point is of little significance as compared with the position it is building up for the future, in which connection it may be noted that the corresponding shoe machinery company in America has now a monopoly of 98 per cent of the total output of that country. None of these issues need, however, be decided here; the importance of the tying-clause lease system lies in the fact that it could be applied to other things than shoe machinery. Given the means of getting an initial grip on manufacturers by the possession of some indispensable device or material or component, a sufficiently energetic group of machine makers could, by means of tying-clause leases, bring the whole industry under their domination and hold it and the general public in fee. It may be desirable that the whole of the manufacturers in certain industries should be served by one machine maker. There are possibilities of great economy and advantage. But the method of attaining it by reproductive legal instruments is one that neither the manufacturers nor the public can regard with complacency.

Imports controlled by combinations abroad: In the case of many commodities which are wholly or mainly imported into this country from abroad the price and supply is controlled by combinations in the country of origin. Imported meat is an outstanding example. In the year before the war nearly 60 per cent of the imported beef supply of the United Kingdom was controlled at its places of origin by the American Meat Trust, which further had a considerable hold on the meat-distributing trade in this country, having 144 wholesale branches in 64 towns and about 1,000 retail shops. True, the beef controlled by this foreign combination was not more than one-fifth of the total amount marketed in this country, and the competition of home-produced beef and of beef imported from sources not controlled by the American group was an effective safeguard in normal times against gross manipulations of the general level of prices; but the intervention of a group so powerful between the British consumer and the foreign producer of meat made it unlikely that the British consumer would get the benefit of cheap meat production abroad. The American trust, having acquired a virtual monopoly in the Argentine, was in a position to underpay the Argentine farmer, overcharge the British consumer, and pocket the difference, and the experiences of the war period have shown how far that power can be exercised in a time of scarcity. No legislative measures taken here can curb the power of combinations operating in this way in foreign countries. Import duties might serve to relieve the combination of some of its gains, but discriminatory import duties are difficult to work and precarious in effect. Diplomatic representations can be made, but the method is not likely in normal times to be either desirable or efficacious. The question of the control of international trade by private interests is eminently one for international action.

SECTION VIII.—SAFEGUARDS.

The facts and tendencies, with their implications, reviewed in the preceding pages lead irresistibly to the conclusion that while the growth of combinations is in many ways desirable, some kind of safeguard or check is required to prevent the monopolistic power which combination gives being used detrimentally to the public interest. It remains to ask what form such safeguards or checks should take.

Incentives and rewards: It is to be remembered that the one dominant incentive to industrial enterprise has been the incentive of private gain. It has been with the object of making an increased profit (or of avoiding financial loss) that these combinations, with their attendant advantages, have been formed. Any proposal which denies an adequate portion of the gains of combination to those who have the wit to see its advantages and the energy and ability to achieve them would defeat its own object. A distinction must be made, therefore, between the economic gains of combination, in which those who combine can rightly claim a share by way of reward, and the tribute levied upon the community over and above that reward by the exercise of monopolistic power. If the first is interfered with, the tendency toward beneficial combination may be checked; but steps may be taken to prevent the second without fear of untoward reactions. This does not mean that a combination or consolidation may properly take to itself the whole of the advantages resulting from the saving it affects. Under the competitive system a producer or trader had to offer the consumer some share in the benefits of his superior organization or process. It is not enough for the combination to say that "it has not raised the price." If it has reduced waste, increased efficiency, and is producing at less cost, some part of that benefit is due to the rest of the community.

Repressive action undesirable: Legislative action in respect of monopolistic combinations can take one of two directions. It can be aimed at preventing combination with the idea of preserving competition as the natural and proper order of industry, or it can take the tendency to combination for granted and concern itself with preventing and penalizing any use of the power derived from combination which may prove to be inimical to the public interest. The first may be called "repressive" legislation; the second "policing" action. Monumental examples of the first kind are the American antitrust laws, notably the Sherman Antitrust Act of 1890, which "prohibited, under severe penalties, every contract or combination in restraint of interstate and foreign commerce and every monopolization or attempt to monopolize such commerce," and the Clayton Antitrust Act of 1914, prohibiting certain practices, which were regarded as lessening competition or tending to lessen competition, such as price discrimination tending to monopoly, tying contracts, the holding by one company of stock in another company, and interlocking directorates. Sweeping judgments as to the results produced in practice by this kind of legislative action are not to be lightly made; but the conclusion to which competent critics are forced is that anticombination laws have proved thus far worse than futile. They have produced interminable litigation which has for the most led nowhere; by making combinations of independent manufacturers criminal conspiracies they have encouraged the fusion of firms into great amalgamations; and they have driven combination underground, where its worst qualities have thriven and its best qualities declined. It has failed to break up the huge combination which it has itself indirectly promoted, for, as has been said, "You can not unscramble eggs"; and it has prevented the realization of the beneficial possibilities which aboveboard combination holds.

Associations or trusts: That ill-advised action in this country against associations formed for the regulation of trade would encourage the amalgamation of the now separate firms into great financially consolidated interests is a matter to which the spokesmen of associations call particular attention. They point to the importance rightly attached in this country to the preservation of the "small" man; and insist that his continued existence can be assured only by association—without that aid he must inevitably go down before the "big" concern. Combination, it is argued, in one or other of its forms is inevitable, and the choice before the country is not between free competition and competition restrained by associations, but between associations and consolidations; and the association, if welcomed and encouraged, would have all the advantages of consolidation without its dangers. Association, it is admitted, has in many cases led directly to consolidation, but the reason given is that the public has hitherto looked askance at associations, the law has allowed them no proper status, and amalgamation has been thereby encouraged.

Possible courses of action: The experience of repressive legislation in other countries, and the consideration set forth in the preceding paragraph, lead to the conclusion that any action in this country directed toward preventing combination or limiting the size of corporate business would produce evils worse than any it might cure. The ground is thus cleared for a consideration of the various ways in which combinations might be controlled or supervised to prevent abuse of monopolistic power and to safeguard the public interest, while being otherwise left free to achieve all those economies and improvements which combination alone can furnish.

Nationalization of monopolies: Where industries are by nature monopolistic, e. g., railways, or where in any industry combination has proceeded so far that the whole of the industry is under the control of one corporate interest, nationalization suggests itself as a practicable recourse. Whether it is deemed desirable in any particular instance must depend upon a multitude of considerations, of which the possible abuse of monopoly is but one. Without entering into the general question of nationalization, it is sufficient in the present connection to say that nationalization is not the only alternative to untempered control of monopolistic consolidations by private interests and is hardly applicable to industries in which combination takes the form of associations, agreements, or understandings.

State control of monopoly prices: Much experience of the control of prices by the State has been gained during the war period. The results have not been such as to leave any widespread desire for its general continuance after the balance of supply and demand has been restored. But since the abuse of monopoly power mainly finds expression in prices being raised or kept above the level at which they would otherwise have stood, it is arguable that the State should retain per-

manently the control of prices in all cases where, as a result of association or amalgamation, there is effective monopoly. But the difficulties of applying any such partial control of prices are great. Monopoly gains are so mixed up with ability rewards and other factors that without painstaking analysis it is impossible to distinguish them except in glaring instances, but unless a fairly definite line can be drawn, the partial application of price control is hardly practicable. Again, monopoly may be local as well as national. The village shopkeeper who has "no opposition" can, and often does, take advantage of his monopoly. Would his prices be subject to departmental regulation? The difficulties inherent in partial price control may not be insuperable, but they do not offer a patently simple way of dealing with monopoly.

Public competition: Where it appears that a combination is so entrenched in a position of monopoly or so favored by circumstance that private enterprise can not well enter the field in competition, it is possible for the State or a public authority to do so. The war period has furnished many examples of the application of this check, and attention has been called to the fact that the chief lever by which the Government obtained the most substantial reductions in the price of war material was the experience gained of the actual costs of production in national factories. It has to be borne in mind that in these cases the State was producing for its own use and not for sale, and the extension of the principle to marketable goods in normal times would in most cases necessitate the setting up of machinery of distribution as well as of production, but it will offer itself as an alternative to nationalization should that policy be under discussion in respect of any undertakings which are not natural monopolies.

Profit limitation: Since the real object in monopoly prices is to increase the profits of the persons wielding the monopoly, the fixing of a maximum rate of profit suggests itself as a possible safeguard against abuse of power. If the proposal be to apply such maximum rate only to industries in which monopoly exists, the difficulties of demarcation already referred to are again encountered. But a more perplexing question, one arising immediately whether the profit limitation be partial or general, is "profit on what"? If 10 per cent be fixed as the permissible maximum, is it to be 10 per cent on share capital—which may be merely nominal or heavily watered—or on share and loan capital; or on the assessed value of the business, with or without good will; or on turnover; or on ascertained costs of production; or on prescribed costs of production? Of these various bases for any all-around scheme of profit limitation to be applied to individual businesses, cost of production is the only one that seems likely to bear examination, but among the items that make up cost of production are wages, salaries, commissions, and fees, and unless these were regulated not only could they be increased at discretion but the higher they rose the larger would the allowed "profit" be. The anomalies that have resulted during the war from the application of the cost-of-production-plus-10-per-cent principle, even as applied to the repetition manufacture of standardized articles, such as shells and standard ships, are well known; it is not seriously believed that the principle could be applied in peace time to the endless kinds and varieties of articles produced for civil use. The amount of accountancy and inspectorship required would probably discount many times over any advantage accruing from the prevention of undue prices.

Sliding-scale profit limitation: The application to industry generally of the "gas-works clause," which provides that any increase in dividends paid shall be accompanied by a pro rata reduction in price, has been suggested. But a gas works, like a railway, is in its nature monopolistic, and in virtue thereof such enterprises require parliamentary sanction and must accept legislative control. Even in such cases the effects of control on the quality and price of the services rendered is a subject of contention; but the fact that the enterprise will have a virtual monopoly is not in dispute, and it is agreed that control, whether for good or ill, is necessary. But to apply the principle to all firms in all industries is a proposition of another order. To apply it to firms or associations which are believed to be in a position of monopoly is again to encounter the difficulties of demarcation, while the question of the difference between share capital and the actual value of the business remains.

Profit limitation by averages: A formidable objection to most schemes for profit limitation is that they tend to disallow any rewards for superior ability of management and even to penalize efficiency. But a scheme of considerable ingenuity which, it is contended, would not have this effect has been put forward. It is suggested that, assuming the majority of the firms in any industry to be in an association, the average rate of profit of these firms should be limited to a certain percentage; rate of profit being understood to mean the percentage added to the gross cost of production (including material, labor, salaries, rent, rates, taxes, etc.) in fixing selling prices. Thus, suppose the maximum average rate of profit were fixed for a given industry at 10 per cent. If at the end of a financial year it were found that the average rate actually made worked out at 12 per cent the State should require each firm to pay the treasury a sum equal to 2 per cent of the cost-of-production value of its output. To facilitate this arrangement the State should require the association to introduce a uniform costing system for the industry. The advantages claimed for this scheme are, first, that it would avoid all the pitfalls of taxing or limiting the rate of profit on capital employed; and, second, that it would not place all the firms in an industry on one flat rate of profit, but would leave the efficient individual firm free to make a much higher rate of profit than the inefficient individual firm. It is further suggested that the scheme would result in the maintenance of reasonable prices, and, consequently, increased output, for if the association found that the rate of profit was running too high it would order prices to be lowered, since it would be more advantageous to get a larger turnover at the lower price and pay no tax than to have a larger profit on a small turnover and pay tax. The scheme further provides that the limit should be imposed individually on all firms not in the association. This would compel all efficient firms in the industry to join the association—otherwise they would be individually limited to 10 per cent profit on turnover. It would induce inefficient firms to join the association because if they remained outside they would not get the benefits of association and would still have to pay any tax levied, because the industry as a whole was exceeding the limit. It would prevent the association being endangered by "black-leg" firms undercutting in quality or price. The principle would apply equally to monopolistic combines and consolidations. These would suffer no hardship if they were compelled to increase their income by increasing output instead of by increasing the profit margin. It is recognized that the maximum profit allowed would have to vary from trade to trade, according to risk and nature of business. The scheme has much to commend it, but it has many weaknesses and drawbacks. It would force, even more than at present, the industries to which it was applied into groups of ironclad combinations. It would require cohorts of inspectors and accountants, men of high business faculty, who might otherwise be employed in constructive work, to spend their energies in testing accounts and in opening out the burrows in which businesses might conceal some part of their gains. The fixing of the average rate would in practice be a matter not of calculation but of political pressure, and thereafter the whole of the industry would be interested in throwing dust in the eyes of the official investigators. Moreover, cost of production is no more absolute than capitalization as a basis of profit estimation, and the rate of wages and salaries would still have to be prescribed. No scheme of profit limitation as yet put forward appears to afford a practicable safeguard against the abuse of monopoly power.

Profit taxation: The appropriation by the State of four-fifths of the "excess profits" of business concerns, as practiced during the war, suggests itself as a possible permanent method of relieving combinations of a substantial part of the gains of monopoly. But if it were proposed to retain the excess-profits tax permanently, a different basis would have to be found. The datum from which excess profits were to start was fixed for the period of the war at "the average profit of any two of the three prewar years." Only in an industrially petrified world could that basis serve for more than a short term; but immediately the replacing of the fortuitous war datum by a prescribed "reasonable" datum is attempted, all the difficulties already enumerated arise. But even were the permanent taxation of excess profits feasible, it is a wholly objectionable method of raising revenue, for it works out in practice as nothing other than an indirect tax on the consumer. No solution of the problem of safeguarding the public interest against the abuse of monopoly lies along the way of excess-profits taxation.

Publicity: Public ownership, control, competition, profit limitation, and profit taxation are limited in scope, difficult of application, or hazardous in reaction, but if fuller publicity in regard to the conduct and earnings of business concerns generally, and of the working and effects of combinations in particular, could be secured, the desired object would be in great measure achieved. Greater publicity would serve three useful purposes. By making known the profits of business concerns, it would stimulate the flow of enterprise and capital into industries in which the demand was greater than the supply; by bringing the operations and effects of combination into the light, it would relieve many unfounded or exaggerated suspicions on the part of the public; and by insuring that extortion should be publicly pilloried, it would do much to prevent its being practiced. In quite respectable business conduct, as in other human affairs, many things are done which would not be done if there were a greater probability of their being made known. "Light is the sovereign antiseptic, and the best of all policemen."

Obviously it is not practicable to require that every business concern shall publish the details of its finances, costs, etc., to the world. The suggestion has been made that all business concerns (one-man businesses and private companies included) should be required to publish balance sheets after the manner of public companies. The provision in the latter case was originally made for the protection of the shareholder, and it is agreed that now the interests of the public are seen to be no less involved, the distinction should be swept away. Some gain would doubtless follow, though at considerable cost, from such a measure; but the great majority of the firms constituting combinations are already public companies, and, further, more intimate information than any balance sheet affords is required for the investigation of suspected cases of monopolistic extortion.

Public supervision: The conclusion therefore reached is that there should be established a department of State charged with the duty of informing itself as to the nature, extent, and development of combination of all kinds in so far as they tend to the restraint of trade and the creation of monopolies, and of making preliminary inquiry into complaints made in regard to them; and that a tribunal should be set up to which the department could apply for powers to obtain particular information, and would refer for full investigation cases in which combinations appeared to act injuriously to the public interest. The requisite publicity would thereby be secured in two ways—the relevant facts as to offenses proved before the tribunal would be made public and the department would present annually to Parliament a report upon the nature, extent, and development of combinations. Publicity thus secured would not only be in itself a considerable safeguard against the abuse of monopolistic power, but it would serve to reveal actions and developments for which publicity alone was not a sufficient safeguard and against which further action should be taken, whether in the form of nationalization, public competition, or the control of prices or profits.

—

Notes as to the law relating to combinations.

(Prepared for the committee on trust by Sir John Macdonell.)

I. STAGES IN THE HISTORY OF THE LAW.

Before making suggestions as to the changes desirable, in view of existing economic conditions, in the English law relative to combinations, I may very briefly describe the stages through which it has passed.

I exclude the subject of labor combinations, which are, I understand, held to be outside of the committee's field of inquiry, and which involve many special considerations.

These stages are not entirely distinct; they overlap. As to all of them one observation, on the whole, holds good. In developing the law as to combinations, the courts have been mainly, though not avowedly, guided by the economic theories prevalent from time to time—perhaps, to be more accurate, by the political economy of a past age, for it will be found that the courts are rarely abreast of the latest economic teaching.

(1) The first stage was one in which was hostility to monopolies, especially those created by royal grants; a period in which was passed the Statute of Monopolies (21 Jac. I. c. 3); and in which was decided the case of Monopolies (VI. Reports 159), containing the classical exposition of English law on that subject.

In this period there was a tendency, not very strong or logically carried out, to recognize certain services as of the nature of public services in the sense that they were essential to the community, and that they tended to be of the nature of monopolies. Such services, for example, as those of common carriers, owners of wharves, harbors, and ferries were regarded as subject to control in the interest of the public. (See Hale "de Jure Maris," "de Portubus," and "Concerning the Customs" (Cargrave MS.).

There was also a tendency to legislate with respect to certain commodities as necessaries, and to be, therefore, protected against "rings" or "corners," the outcome of which were statutes as to forestalling,

regrating, badgering, etc., the fears as to which Adam Smith compared to the popular terrors and suspicions of witchcraft (2 Book IV. C. V.).

There was a second period, which may be described as one of limited individualism, in which the efforts of the courts were to maintain competition. In this period the public interest, if at all considered, was supposed to be equivalent to that of the private. The courts acted in the spirit of Adam Smith's remarks:

"Every man, as long as he does not violate the laws of justice, is left perfectly free to pursue his own interest in his own way, and to bring forth his industry and capital into competition with those of any other men or body of men," a system productive, Adam Smith contended, of the maximum benefit to the individual and to society.

The tendency of the courts toward individualism was tempered by the fact that the guild system still subsisted, and was viewed as legal. See remarks of Parker, C. J., in Mitchel *v.* Reynolds (I. P. Williams, 181), where it is stated:

"Restraints by custom are of three sorts—

"(1) Such as are for the benefit of some particular persons, who are alleged to use a trade for the advantage of a community, which are good.

"(2) For the benefit of a community of persons, who are not alleged, but supposed to use the trade, in order to exclude foreigners, held good.

"(3) A custom may be good to restrain a trade in a particular place, though none are either supposed or alleged to use it.

"Restraints of trade by by-laws are these several ways:

"First. To exclude foreigners; and this is good, if only to enforce a precedent custom by a penalty. But where there is no precedent custom of the trade such by-law is void.

"Second. All by-laws made to cramp trade in general are void.

"Third. By-laws made to restrain trade, in order to the better government and regulation of it, are good in some cases, viz, if they are for the benefit of the place, and to avoid public inconveniences, nuisances, etc. * * * One end of all markets is that the commodity may be viewed; but then they must not make people pay unreasonably for the liberty of trading there.

"Voluntary restraints by agreements of the parties are general or particular. General restraints are all void. Particular restraints are either without consideration, all which are void, or with consideration, where a contract for restraint of trade appears to be made upon a good or adequate consideration so as to make it a proper and useful contract, it is good."

The judges of the eighteenth and nineteenth centuries, who quoted the dicta of the judges of the seventeenth century as to restraint of trade, often forgot that there then existed the guild system, under which labor was organized, and restraint of trade in certain forms and circumstances was legalized.

There was a third period—one of intense individualism—and it included the greater part of the nineteenth century, in which the efforts of the court were to maintain competition, it being assumed that profits and wages would in the long run under such a system be not unreasonably high or low, that the quality of the articles produced would be probably improved, and that the most efficient businesses would survive in the struggle between competitors.

Later the decisions of the courts show a perception that the interests of the parties to contracts and those of the public may not always coincide, and that competition may be accompanied or followed by serious disadvantages. The inapplicability of the common-law doctrine as to restraint of trade to labor was more or less recognized by the qualified legalizing of trades-unions. (Trade-union acts, 1871–1913.) Even as to combination in trade the law as to restraint of trade begins to be stated with modifications. The interests of the public are recognized. (See, e. g., Morris *v.* Saxelby, 1916, A. C., 688, and p. 708.) The necessity of the existence of certain monopolies become apparent. This may be designated the fourth period. It is one of transition; it is the present stage. (For other divisions of the development of the law, see Matthews and Adler "On Restraint of Trade" (2d ed., p. 6); Jolly "On Contracts in Restraint of Trade" (3d ed., p. 3).)

II. MODERN ECONOMIC CONDITIONS.

In proposing remedial or amending measures I assume that the law should be based on the existing economic order, and that it should take note of certain prominent facts, among them these—

That competition is often wasteful; that it leads to needless mutiplication of plants and staffs and standing charges; that it increases cost of distribution in many ways; that it is often short-lived and precarious; that it is generally followed by combinations; that competition is not an end in itself; and that the motives for encouraging it often cease.

That monopoly does not necessarily mean "artificial dearness" (Mill, 5th ed., II, 534), that monopoly in production and distribution may be attended by substantial advantages; e. g., economy and stability of prices, reduction of standing charges, facilities for standardizing; that there is a tendency toward larger units of production and distribution; that almost everywhere the tendency is toward production on a large scale and the suppression of small businesses.

That combination may facilitate interchange of experience and useful technical research work; that it permits of specializing in production and of reduction in the cost of advertising and marketing; that it is favorable to collective agreements and negotiation with labor representatives.

That after the war and for a long time there will be great need of economy and efficiency in production.

That the area of operations for the production and distribution of many commodities is no longer any one country; that "trusts" and other combinations control prices beyond national boundaries; and that it will be impossible without cooperation on the part of more than one State to deal with them effectively.

That vertical, as distinguished from horizontal, combinations exist on a large scale, and are favored by the existence of joint-stock companies which create subcompanies or dependent companies.

That besides combinations, open or secret, formal or informal, permanent of terminable, there exist understandings which have all the effect of agreements as to prices, output, etc.

That there is at present an increasing number of "public services" in the sense that they relate to matters of necessity as to which permanent competition is impossible.

That in the nineteenth century combinations on a large scale took, for the first time, the form of operations by joint-stock companies; that with all their obvious advantages joint-stock enterprises have drawbacks or disadvantages; that they often destroy the personal element; that they make capital impersonal and, so to speak, nonmoral; that they enable things to be done as a matter of business which an individual, subject to the control of public opinion, would not care to do; that they create, to use a common expression, irresponsible wealth.

That the formation of joint-stock companies has greatly affected the problem of combinations and has facilitated the formation of monopolies not so easily detected or controlled as when they were formed or worked by individuals.

That by control of shares, by common directors, or by the formation of subcompanies, there may be all the effects of combination without any agreements, open or secret.

III. PROPOSED AMENDMENTS OF THE LAW.

It is suggested that the law as to combinations should take note of all the above-mentioned facts. In the long run courts have followed, though slowly, the teaching of economists. It is suggested that they should come abreast of that teaching.

The remedies here proposed fall under four heads:

(A) Preventive.
(B) Disabling or disqualifying.
(C) Punitive or penal.
(D) Changes as to procedure and as to courts administering the law.

The remedies belonging to the first category, to which I attach more importance than to the others, are numerous. I do not profess to give a complete list. But they should, I think, include the following:

(a) Accurate and, as regards the chief articles of commerce, fairly complete statistics of prices, which would enable consumers to judge whether a particular combination is abusing its power and raising prices unduly.

It is at present often extremely difficult for private individuals to ascertain the effects of combinations upon prices over a long period.

As regards articles which these statistics did not cover, there should be machinery for ascertaining prices in some obviously fair manner. Whether a certificate as to such points from a public department (say, the board of trade) should be accepted in judicial inquiries as prima facie correct is a matter for consideration. There is, of course, the question, often difficult to solve, whether a monopoly is productive of deterioration in quality. Perhaps this difficulty might be met by the establishment of a bureau of corporations, such as was established in 1903 in the United States.

(b) The introduction in the case of joint-stock companies or public bodies engaged in production or distribution—compulsory introduction—of better systems of bookkeeping or "costing," which would disclose the true state of a company's affairs and render difficult the adoption of devices—e. g., by increasing capital—to conceal the existence of large profits. It is obvious that if companies may, when their shares reach a premium by reason of their making large profits, issue fresh capital, they may continue to exercise a monopoly while concealing the fact.

Manifestly there are very grave objections to extending this obligation to all producers or distributors. Probably the chief advantages would be gained if there was accessible information as to the large producers and distributors, for the most part joint-stock companies.

(c) As a supplement to this might be requisite a right to institute inquiries by commissions; permanent or appointed ad hoc; in other words, some such powers as are given by the Canadian act. In order to prevent harassing applications, it would be necessary to make the exercise of this right conditional on giving security for costs or establishing a prima facie case.

(d) Publicity in the sense that all agreements between firms or companies providing for limitation of output or undercutting, etc., be registered. Information should also be given as to interests in other companies or firms engaged in the same business or businesses supplying materials. It has been objected that this condition might be inconvenient in the case of agreements with foreign firms or companies. This objection would lose much of its weight if the information given to a public department were not generally disclosed.

It is obvious that to be at once of practical value and not highly embarrassing and oppressive, the terms and limits of such a provision would require careful consideration. Probably this provision by itself would have in many cases a very limited application. The agreements under which combinations actually work may be only honorable or general understandings; there may be no written agreement; the existence of a common directorate may have all the effect of a strictly legal agreement. The requirement as to filling of agreements might often be futile unless some tribunal had power to find on evidence as a fact that an agreement existed.

B. Public services: It is clear that certain services must be somewhat of the nature of monopolies. They include not merely railways and canals but, under modern conditions, transport services generally or what American lawyers term, "public utility services." Here may be noted an anomaly. While land transport is subject to control under the common law as to carriers or the railway and canal traffic regulation act, the state of the law as to transport by sea is different. No doubt, if the owner of a ship lays himself out as a common carrier, he renders himself subject to the common law relating to carriers. But he rarely does so. By the terms of the bills of lading he can generally impose any conditions which he thinks fit on his customers, and by the system of deferred rebates he can insure the continuance as customers even of those who object to this system. (See findings of Deferred Rebate Commission.) I may here note that the Congress in the United States has limited the right of the shipowner to contract himself out of liability (the Harter Act, 1893). The Supreme Court has interpreted the common law differently, and it is suggested with good reason, from the English decisions. (See Liverpool and Great Western Steamship Co. *v.* Phoenix Insurance Co. (129 U. S., 397).)

It is also suggested as a principle applicable generally that whenever it is proved that a monopoly does in fact exist courts shall be empowered to control charges or prices—that is, to insure that they are fair and reasonable; in other words, that the common law as to carriers' charges should apply; and also to insure equality of treatment; in other words, that there should be provisions corresponding in effect to those of the railway traffic and canal act as to undue preference.

(g) Joint-stock companies are, and must be for many purposes, treated as separate units. But it is a function not to be abused or blindly followed; the law should recognize that when the controlling interests of two or more companies are the same they should be treated as one.

(h) In view of the familiar facts above referred to as to the frequency of powerful international agreements, legislation confined to this country might often be futile unless it was accompanied by similar legislation elsewhere. International cooperation seems essential to prevent forms of monopoly. To quote the remarks of Mr. Waldorf Astor, M. P. (Cooperative Basis for a League of Nations), with reference to the Meat Trust:

"It is clear that the proper supervision of an international corporation, which is said to control half to three-quarters of the exportable world supplies of meat, and so is able to distribute enormous quantities of foodstuffs, becomes an international question. The trusts may have results inimical to the interests not only of consumers but of agricultural producers of meat in the United Kingdom and other European consuming countries. The question of how these interests are to be safeguarded by the importing countries presents great difficulties. So far no satisfactory solution appears to have been found. What is clear, however, is that in dealing with an organization with so many ramifications and such vast financial strength, isolated individual action by particular countries is not likely to have any large measure of success. The solution will probably have to be found in general international action. 'Peoples may have to choose between the domination of private international trusts and some supervision by an official body representative of their respective Governments.'"

C. Disqualifying or disabling measures: I may describe as such laws or binding judicial decisions which declare certain contracts to be illegal in the sense that courts refuse to give aid in carrying them out, or decline to intervene by injunction or otherwise to protect rights alleged to be acquired under such contracts. This is the main part of the English law affecting monopolies. Upon this matter the policy of the court has fluctuated much. The inclination for a time was to uphold such contracts if the restraint upon carrying on a trade was not larger than the protection of the party with whom the contract was made reasonably required. The interest of the parties to the contract was mainly, often exclusively, considered. In later cases there has been recognition of the interests of the public, and the law in its present form may be stated in the words of Lord Macnaghten's judgment in Nordenfelt *v.* Maxim Nordenfelt Co. (1894), A. C., page 565 (quoted in Mr. Wetton's statement, pp. 3, 4, and 10).

This forms a part of the larger subject of "public policy" generally, upon which these brief observations are submitted. As understood by our courts, "public policy" is not necessarily identical with the interests of the community. It is confined to certain heads or kinds of "public policy" which from time to time the courts have recognized. As Burrough, J., said in Richardson *v.* Mellish (2 Bing., 229, 252), "it is a very unruly horse, and when once you get astride of it you never know where it will carry you"; in fear of which the courts have narrowed the meaning of the phrase. (See Egerton *v.* Brownlow, 4 H. L. I.) So far as economical policy is concerned, the courts understand "public policy" as tantamount to freedom of trade, or disapproval of measures in restraint of trade. This limitation seems unreasonable. It is suggested that a wider significance should be given to the doctrine of "public policy," and that the economic effect of contracts and combinations should be examined by courts as they would be by trained economists. There is a recognition of this in the Australian industries preservation act, 1906–1910. Penalties are imposed upon any person who, either as principal or as agent, makes or enters into any contract, or is or continues to be a member of, or engages in, any combination in relation to trade or commerce with other countries or any State (a) in restraint of or with intention to restrain trade or commerce, or (b) to the destruction or injury, or with any intent to injure or destroy by means of unfair competition any Australian industry the preservation of which is advantageous to the Commonwealth, having regard to the interest of producers and consumers.

The present doctrine, which is that contracts in restraint of trade are against the interests of the community, is unsatisfactory in several respects. In applying that doctrine the courts do not and, as far as I can judge, may not inquire into the nature of the trade to which the contract relates. Yet obviously there are trades, parasitic or mischievous, which, though not illegal, should, as much as possible, be discouraged. (In recent cases there is a disposition to enlarge the conception of public policy. See in particular the decision of Sankey, J., in Trustee of Denny *v.* Denny and Ward (Weekly Notes, Feb. 15, 1919), and the remarks of Lord Haldane in Rodriguez *v.* Speyer Bros. (1919), A. C., p. 81.) One of the reasons for the present law, as stated in the leading case of Mitchel *v.* Reynolds, was that the public would be injured by "depriving it of a useful member"; a reason obviously not applicable to trades overstocked or of no or questionable advantage to the community, e. g., the trade of a money lender or bookmaker. Further, the argument generally used in support of the common-law doctrine, viz, that no one ought to be deprived of his skill, had much more force in days when the prevalent system of apprenticeship prevented persons freely moving from one trade to another.

The question whether a particular agreement is contrary to public policy often is, and must be, very complex and difficult. Yet for no apparent good reason it is treated as a question of law to be determined by the judge, not necessarily or probably conversant with economics, and generally without data necessary in the particular case upon which to form a sound opinion. See remarks of Bowen, L. J., in Davies *v.* Davies, in which he said, "We have got no material upon which we can, without leaping in the dark, assume that the present covenant is a benefit to the public." (36 Ch. d., p. 391.) (In Maxim *v.* Nordenfelt, etc. (1893, 1 Ch., p. 640), Bowen, L. J., remarks that judges have always treated the question as one of law.)

Assuming the question to be for the judge to determine, it is remarkable that the court can not hear evidence as to this matter.

NOTE.—It is right to mention that this has been doubted by some judges. But probably Bowen, L. J.'s, opinion is that most commonly entertained.

D. Punitive measures: Such measures were much relied upon in past times. The statutes against forestalling and regrating or badgering imposed severe punishments upon transgressors. Legislation in the United States (e. g., Sherman Act) punishes breaches by heavy penalties. So, too, does the corresponding Australian legislation. No doubt if the law such as is here suggested were broken, if exorbitant charges are exacted, or if there is unfair preference, fines proportionate to the gains acquired by such conduct ought to be imposed. But I am inclined to think that such punitive measures are of less consequence than the other remedies above suggested.

E. Unfair competition: One part of the subject not to be lost sight of relates to unfair competition. In every country has arisen the question: Is there any legal limit to competition? May it be carried on without infringing the law, however evil morally be the motive, so long as there is no injury or "tort" in the legal sense? May A, for example, by systematic undercutting of rates unremunerative to himself, destroy the business of B without legal remedy on the part of the latter? Upon this point there have been in England great differences in judicial opinion. But since the decision of the House of Lords in Allen *v.* Flood (1898, A. C., 1) and Quinn *v.* Leathem (1901, A. C., 495) the law appears to be that, whatever may be the motive of the person cartying on "unfair competition," no action will lie in the absence of injury in the legal sense. To quote Lord Lindley in Quinn *v.* Leathem, "an action will lie only if there is an unlawful act." (What is the real basis of the decision in Quinn *v.* Leathem—whether the existence of a conspiracy or the moral pressure exercised by mere numbers—is uncertain. (See Clerk and Lindsell, "On Torts," 6th ser., p. 25.)

Further, in deciding as our courts have done in regard to "unfair competition," they seem to be pursuing a course in conflict with the general policy of the law. By their decisions as to restraint of trade they have sought to maintain competition with a view to prevent creation of monopolies. On the other hand, by the principle laid down in the Mogul case and in Allen *v.* Flood, they have legalized what is in practice the most effective mode of destroying competition and creating a monopoly—i. e., undercutting and other devices for destroying rivals in trade.

This conclusion of the English courts seems contrary to decision arrived at in the United States and the Sherman Act, and to the German law, which allows the court great discretion as to "unfair competition." (See Dr. Ernest Shuster's evidence before the commission on deferred rebates.) It is also contrary to some modern legislation in the dominions. Thus the Australian industries preservation act, 1906–1910, makes destruction or injury to, or intention to destroy or injure, an Australian industry by "unfair competition" an offense. (See report on trust laws (1915, p. 529) on unfair competition.)

F. Tribunals and procedure: I attach greater importance to this class of suggestions than to proposals as to fines or other penalties. So long as the business of the courts is merely or chiefly to determine whether this or that contract, as tested by a long string of previous binding decisions, is in restraint of trade, the present procedure, the present form of judgment and the present courts, may suffice. But they would be inapt, it is submitted, if the questions to be investigated were, as they often must be, should the above suggestions be carried out, complicated economic problems. A judge with the usual experience obtained at the bar or on the bench would not presumably be qualified to conduct the necessary inquiry, still less a jury. It is suggested that, except for the simpler classes of cases, a tribunal framed somewhat on the lines of the Railway Commission would be most suitable. Perhaps in some cases a commission ad hoc would be requisite. The procedure of our courts is in many respects unsuited to the investigation of these questions. It should be simpler. Interlocutory applicants, always entailing expense and often delay, etc., should be discouraged.

The proceedings, it is suggested, should be in public, and reasons should be given for decisions of the tribunal; a useful safeguard against arbitrary action. It is essential, it seems to me, that there should be a frequent renewal of the composition of the tribunal. In view of the rapid changes in industry, it would be unfortunate if the character of the tribunal were stereotyped. Periodical infusion of new members would keep it in touch with trade or business as it is.

The above suggestions are mere outlines of proposed changes. They do not provide for many details of necessity to be carefully considered, among others, such matters as these: The precise alterations needed in the general law as to restraint of trade; how far the jurisdiction of the suggested tribunal should be exclusive or coordinate; what precautions should be taken in changing the law not to discourage or obstruct private enterprise.

REPORT PRESENTED TO THE COMMITTEE ON TRUSTS AND COMBINATIONS IN BUILDING MATERIALS TRADES.

(This report was prepared in the latter part of 1917, since when conditions in the building industry have materially altered.)

INTRODUCTORY.

The memorandum on housing in England and Wales (R. C. 89) issued by the reconstruction committee under date May, 1917, contains the following reference to the subject of trade combinations: "From information confidentially given it appears real difficulties may arise owing to the tight control of certain building materials by combinations of manufacturers."

The purpose of the inquiry here reported upon was to determine:

1. The extent to which building materials are subject to control by combinations among manufacturers and merchants.

2. The effect such control is having and may have upon the cost of building.

It should be stated that the investigation has been prosecuted without any preconceived bias against trade combinations, rather, possibly, with a suspicion that the information originally given tended to exaggerate their influence on building costs. A trade combination is not a feature of industrial development necessarily to be deprecated; indeed, for many reasons, it is to be encouraged and commended. But however legitimate the purpose for which it is originally formed, there is always a danger that if it becomes powerful it may be used against the interest of the consumer. In reviewing the whole question therefore, we must not only consider the present effect of trade combinations on prices and output, but their possible or probable future effect.

In conducting the inquiry, the first step we took was to interview the writers of certain articles which dealt with the serious effect of combinations among manufacturers and merchants upon building costs. A good deal of confidential information was obtained which had not appeared in the articles, along with the names of builders, manufacturers, and merchants who were in a position to furnish further information. A list of trade associations was also given us, with some information regarding their methods of working.

We consulted various individuals to whom we had been referred, and these mentioned others who they thought would be able to supply us with the information. Thus we have interviewed private builders, officers of building companies, architects, merchants, and manufacturers. Among the last two classes we have conferred, not only with those who are associated with others in combinations of one kind or another, but with those who, for one reason or another, have refused to enter into combinations. The latter naturally have spoken to us of the undesirable features of association, while the former have dwelt on its advantages. As we anticipated we have found the investigation by no means an easy task. Many of those whom we consulted have been unwilling to speak frankly, lest the fact of their having supplied information to us should in any way injure their trade interests. This has rendered it difficult to obtain exhaustive data, but we believe that our information fully justifies us in saying that there are, in the building trade, combinations which already affect the cost of building, and which are likely to affect it much more in the future if the conditions of the industry are such as to favor their development and to increase their power.

RESULTS OF INQUIRY.

Our investigation has shown, as was to be expected, that more materials are uncontrolled, some are partially controlled, and others fully controlled.

By "partially controlled" we mean that there are local or partial combinations amongst manufacturers or merchants, but that these are not sufficiently widespread or strong completely to govern output or prices in the country as a whole.

By "controlled" we mean not necessarily that every manufacturer or merchant is a member of a combination or association, but that the proportion acting in combination is sufficiently great virtually to determine prices, directly or indirectly, as well as to control the output of the whole industry.

The following is the list of materials, classified according to whether they are uncontrolled, partially controlled, or fully controlled:

Uncontrolled: Timber, including joinery and carpentry; breeze partition blocks; sundry materials, such as glue, oil, putty, etc.; minerals, such as ashes, hard bricks, sand, gravel, granite chippings, etc.

Partially controlled: Bricks, common building, etc.; Lime, plasters, and mortars; gas pipes and fittings (or electric light); metal goods, such as locks, latches, furnishing ironmongery, nails, screws, etc.; wrought-iron or steel cisterns and water tanks; slates; paint, varnish, etc., for painting and decorating.

Controlled: Tiles, roofing, ridging, etc., and chimney pots; glazed and floor tiles; earthenware pipes; sanitary earthenware; lead pipes, sheet lead, etc.; Portland cement; iron castings; wall paper; glass; wrought-iron tubes; boilers.

But it is not to be supposed that the foregoing classification is unquestionable or final, as there are difficulties in determining whether in marginal cases certain materials should be classified as controlled or partially controlled.

With the above information in our possession the next step was to ascertain what proportion of the materials used in the construction of cottages are subject to control. For this purpose we have analyzed the building costs of a number of groups of typical cottages, and found that on the average 42.07 per cent of the materials used were uncontrolled, 33.25 per cent partially controlled, and 24.68 per cent controlled. These proportions are shown in Table I, below. If, however, instead of taking merely the materials used in the construction of the cottages, we analyzed the total cost of the cottages, including labor and overhead expenses, but excluding the cost of the developed site, then the proportions of the total cost of the cottages affected by the trade associations were as follows: Uncontrolled, 24.94 per cent; partially controlled, 19.68 per cent; controlled, 14.64 per cent. These proportions, together with the proportion due to labor and overhead expenses, are shown in Table II, below.

TABLE I.—*Showing the extent to which building materials are subject to control.*

Uncontrolled	42.07
Partially controlled	33.25
Controlled	24.68

TABLE II.—*Showing the proportions when we include the cost of labor and overhead expenses, but exclude the cost of the site.*

Uncontrolled	24.94
Partially controlled	19.68
Controlled	14.64
Labor and overhead expenses	40.74

EFFECTS OF COMBINATION ON PRICES AND OUTPUT.

We must now try to analyze the effects of combination upon the trade as a whole. Roughly speaking, the purposes for which manufacturers and merchants usually combine may be classed under two heads:

1. To regulate selling prices by a severe restriction of competition and the monopolization of raw materials or means of production by limitation of output and maintenance or inflation of prices, restraint in regard to the channels of trade, by restrictions designed to prevent manufacturers or merchants from buying from or selling to nonassociated firms, by the pooling of margins, by means of which all firms tendering for contracts secure a proportion of profit, by prearranged plans to secure the award of contracts to a given member, by the offering of rebates or rewards on condition that the purchaser will deal or has dealt exclusively with members of a combination, by the system of boycotting, undercutting, or otherwise intimidating, in order to compass the suppression of a nonassociated competitor, etc.

2. To increase business efficiency by the regulation of the conditions of labor, traffic, and insurance, the promotion of uniformity in the customs of the trade, and the prevention of dishonest practices, the standardizing of materials, processes, or products, and of cost accounting, the publication of statistical data, technical information, cooperative advertising, purchase of raw materials, collective action for the purpose of developing foreign trade, etc.

In the course of our investigation we have come across no combination whose primary object is to increase the efficiency of business, but since our inquiry has not covered the whole ground, it is possible such may exist. In every case examined the primary object has been to regulate prices.

It should be here stated that the regulation of selling prices need not necessarily be opposed to the interests of the consumer. Without a doubt, within reasonable limits, manufacturers may combine to regulate prices with advantage not only to themselves but, incidentally, to that of the community. To maintain a fair minimum price, or to stipulate that a merchant or retailer shall sell again at a price which will insure a fair profit, can not be regarded as illegitimate unless the control exercised depends upon the use of questionable methods and involves disaster to competing firms.

The evidence we have received points, however, to the existence, in the case of certain combines, of practices which are now, or in the future may become, increasingly prejudicial to the interests of the consumer. The following illustrations of methods employed by combinations in the building trades are cited in this connection.

One of the most powerful associations, whose membership manufactures goods needed in the construction of workmen's cottages, had until recently, at the head of its rules:

"(1) The object the association has in view is that of raising and keeping up the price to the buyer of goods and articles made and (or) supplied by its members.

"(2) This shall be done by means of pooling arrangements so controlling production that prices will rise naturally and inevitably as they always must do when supply is brought into equilibrium with or is ever so little below demand."

This association has within its membership over 90 per cent of the manufacturers of the class of goods thus controlled in output and in price. It affords a concrete example of the operation of the first purposes of combination, viz, the limitation of competition, the control of output, and the increasing of prices.

A common practice on the part of the several associations is to offer substantial rebates to merchants provided that they sign agreements to the effect that during the term of the agreement they have not purchased from nonassociated manufacturers, nor sold goods at less than schedule prices.

In view of the secrecy which almost invariably characterizes these trade combinations, and the natural reluctance of persons bound by them to impart information for fear of injurious consequences, we can not say definitely how widely the above methods are practiced, or whether similar practices are in vogue of which we have not been informed. Yet the very fact that it is difficult to obtain reliable information is significant, and we are sometimes able to read between the lines. Speaking generally, there is no doubt that combinations have achieved the two ends for which they primarily existed. They have limited competition and raised the price of building materials against the consumer. Especially has this been the case where the modifying influence of foreign and colonial competition on the price of home products has diminished or has ceased.

The builders' merchant without doubt plays an important part in many associations, for while in some cases he may hold the position of a man tied by the policy of regulations of a manufacturers' association, through the membership of which alone he can get his supplies of materials, in others he is a willing cooperator in the policy of keeping up the price of materials to the builder and the public.

When we pass, however, from the policies of particular combines and consider the total effect of combination upon selling prices, it is impossible to speak with any degree of exactitude without making such a detailed examination of the books of manufacturers and merchants as would only be possible by means of a formal official inquiry. The difficulty of forming even the roughest estimate is enormously increased at present by the great and rapid changes in selling price due to altered prices of raw materials. Yet that high prices are partially due to combinations among sellers there can be no doubt whatever.

It is, moreover, important to recognize that the combinations of manufacturers or merchants are steadily gaining power, and when the demand for materials becomes acute they will occupy a very strong position. Having regard to the natural tendency of all traders, and the admitted first purpose of many of the combinations in the building trade, it is reasonable to assume that the powerful instrument which they possess will be used to attain the object for which it was primarily created. Depressed conditions in the building trade during the last 10 years or so have militated against strong action by combinations which, indeed, have sometimes broken up as the result of keen competition and a declining demand. Attempts to regulate prices, notably in the brick industry, have been made, but to a considerable extent have failed, owing to stagnation of trade, the scattered location of makers, and excessive competition.

But the brick industry, in common with the cement industry, is rightly anticipating a period of revival which will tend to make good the comparatively bad trade period of 1900 to 1914, and with an increasing demand and a buoyant market, endeavors to cooperate in the fixing of prices are much more likely to be effective. Doubtless, therefore, we may look for an extension of combinations. The same is true of other branches of the building trade. The vigorous demand for materials to carry through the Government housing program alone will suffice to arrest the forces of disintegration and stimulate combination.

Moreover, foreign competition in the past prevented the formation of any absolutely close ring, and has had a steadying influence upon prices; but the importation of supplies is likely to be checked during the early post-war period by the shortage of tonnage and the inability or unwillingness of foreign countries to export, owing to urgent home demands, and possibly by the imposition of tariffs upon imports. Thus, a valuable check on the artificial inflation of prices will tend to disappear.

Some idea of the possible effect of the various combinations on the cost of a cottage may be gained from the following table, which assumes that prices have been increased in varying proportions through the action of trade associations. In this table it is postulated that the total cost per cottage is £250, exclusive of the undeveloped site, and that prices have only been affected in the case of "controlled" materials; that is, we have disregarded any possible inflation in the case of prices which are "partially" controlled.

We take the proportion of 14.64 shown in Diagram II, as controlled and calculated the cost per cottage at £36 10s.

Assumed increase—

Of 5 per cent the cost per cottage is £1 16s. 6d. and per 300,000 cottages is £547,500.

Of 10 per cent the cost per cottage is £3 13s. and per 300,000 cottages is £1,095,000.

Of 15 per cent the cost per cottage is £5 9s. 6d. and per 300,000 cottages is £1,642,000.

Of 20 per cent the cost per cottage is £7 6s. and per 300,000 cottages is £2,190,000.

These figures indicate that even if the proportion of materials at present subject to full control is not increased, the effect of combinations in the building trade on the cost of cottage construction is probably substantial even now. It is hardly likely that associations whose primary object is the control of prices would continue to exist unless they could raise prices by at least 10 per cent.

PROPOSED ACTION.

Although we can not gauge the precise extent of the influence exerted upon free competition and prices, we are satisfied that it is already considerable and may easily increase in the future. In view of the importance of economy in the erection of working-class houses, any great inflation of the cost of building due to this cause should, if possible, be avoided. We have not regarded it as part of our duty to recommend how this should be done, but we are of opinion that the foregoing evidence points to the existence of conditions which would render it desirable to appoint a commission furnished with adequate powers of investigation, including the power to examine manufacturers' and merchants' books, with a view to gauging the present activities of various combinations in the building trade.

The subterranean methods employed by price-maintenance combinations can only be properly appreciated by full disclosures and a thorough examination of the regulations governing the associations and the books of the trades concerned. Many associations are promoted, organized, and controlled by accountants who have specialized in this class of business, and it would be necessary to examine them also. It is probable that disinclination to furnish information would arise even in the case of a commission of inquiry, and it might be necessary to give a com-

mission power to issue subpœnas to enforce the attendance of witnesses as well as to examine books and papers and, so far as possible, to protect witnesses against injurious consequences.

Such a commission should make recommendations as to any steps which might be taken to safeguard the interests of builders and of the public generally. Our case for recommending such a commission rests in the main on the following considerations:

1. The extent to which materials are already subject to control or partial control and the serious effect even a moderate application of a price-maintenance policy would have upon the cost of building.

2. The increasing tendency of manufacturers to combine primarily for the purposes of limitation of competition and maintenance of price.

3. The probable development of economic conditions favorable to the growth of combinations and to an increase in their power to control prices.

But although our inquiry has been confined to the building trade, it is well known that there has been an increasing tendency to amalgamation among manufacturers and merchants in many other industries, and probably if a commission were appointed it should not limit its investigations to one industry, but deal with the whole problem of combines, amalgamations, and trusts.

During the war period the unifying process has developed considerably among manufacturers and merchants both in anticipation of the future and through the force of existing circumstances. Employers, it is well known, have been urged to cooperate by the pooling of resources and in other ways, and it will only be the natural effect of the war upon trade if there is a continuous increase in combinations and a progressive tendency toward monopoly. The policy of cooperation will be strengthened by many factors, and there are many reasons, especially in connection with foreign trade, why it should be encouraged. It seems, then, an appropriate time for considering the whole question of the regulation of amalgamations and associations in the interests of the general community, both in respect of raw materials and manufactured articles.

While we strongly recommend the appointment of a commission of inquiry furnished with adequate powers, it would be a long time before it could complete its investigations, and still more time must elapse before any consequent legislation could become operative. We think, therefore, that it may be necessary to take other steps to prevent artificial inflation in the cost of building materials as soon as the trade becomes active at the close of the war. Doubtless it would be easy to arrange for some of the principal combinations to furnish goods at reasonable prices to the Government, but we think that any temporary arrangements should, if possible, be such as to safeguard the interests of the private builder and of public utility societies. By whatever agencies workmen's dwellings are likely to be erected in future, it must not be forgotten that almost the whole of the present supply of houses has been provided by private enterprise.

Memorandum on Industrial Combinations.

(Presented to the committee on trusts by Mr. Percy Ashley.)

INTRODUCTION.

Industrial combinations in the United Kingdom are of many kinds and have very diverse objects, but it is possible to reduce them to a comparatively limited number of types. The most elementary form is that of the employers' federations, which exist in most of the great industries for combined action in respect of wages and other labor questions. A more advanced type is that of the associations, of which there are a considerable number, formed for the purpose of watching over the general interests of particular branches of trade, in regard to such matters as proposals for legislation likely to affect the trade, railway rates and shipping freights, forms of contract and bills of lading, credit terms, the compilation of special statistics and trade information, and in some cases the discussion of technical questions. Examples of this class, of varying degrees of importance, are the Iron, Steel, and Allied Trades Federation, the High-Speed Steel Association, the British Electrical and Allied Manufacturers' Association, the various associations in the motor industry, the Master Silversmiths' Association (Sheffield), the Birmingham Silversmiths' and Jewelers' Association, the Flax Association, the Silk Association, the Agricultural Engineers' Association, the Paper Makers' Association, the Fertilizers' Association, the United Tanners' Federation, the Federation of Light Leather Trades, the Oil, Paint, and Varnish Trades Federation, and the recently formed British Flint Glass Association, and Chemical Manufacturers' Association. Thirdly, there are the combinations which are formed with the primary object of regulating trade, and it is with this class of combination that it is proposed to deal in the present memorandum.

I. The Principal Types of Combination for the Regulation of Trade.

Combinations of producers or distributors of goods formed for the purpose of regulating the course of trade may be classified as either (A) "Terminable" or (B) "Permanent."

"Terminable" combinations are combinations either formed for a definite period and continued only by positive agreement or formed without time limit but subject to withdrawal on due notice; they are based on agreements ranging from mere "understandings" to the most formal and detailed contracts, are usually restricted to certain clearly prescribed purposes in connection with a limited class of products, and do not necessarily or even frequently involve any direct financial interdependence of the parties to any particular combination. The "permanent" combinations, on the other hand, commonly take the form of a complete fusion of a number of firms or companies for all purposes, or, short of that, of the establishment of some measure of close financial interdependence—e. g., by interchange of shares—and coordination of management—e. g., by interlocking directorates.

(A) The terminable combinations, which it will be convenient to call "combines," though the term is sometimes used for actual fusions, are of varying degrees of economic significance: (i) They may aim primarily only at the fixation of prices, or (ii) they may concern themselves with the regulation of output, leaving the movement of prices to take its course; or (iii) they may both determine the output, regulating the production of their individual members, and also fix prices; (iv) or, in addition to controlling output and prices, they may undertake the selling of their members' products. When this last stage of development is reached individual members of the combine are left with little more than the technical and financial management of their respective enterprises; but it is important to observe that the constituent members still retain their independent existence; they have a voice in the management of the combine, and its terms are open to revision from time to time. It is consequently possible for a particular firm or company to take steps, whilst an agreement is in force, so to strengthen its position over against the other parties as to be able, when the time of revision comes, to insist on an improved status for itself or even to stand out entirely. The importance of this is particularly noticeable in German industry, which in some branches is so dominated by associations of the most advanced of the types indicated above that the "cartel" has come to be the characteristic form of German industrial organization, but in which the renewals of the combines give rise to great difficulties owing to the conflict of claims based on the development of the constituent firms or companies during the intervening periods.

Trade associations in the United Kingdom have seldom, if ever, taken the "cartel" form, and, as a broad general statement, it may be said that they have tended to limit their action to the fixation of prices, and that even in this respect their activity has been intermittent—it has naturally been most marked in periods of trade depression. In this connection it may be observed that the associations which exist primarily only for watching over the general trade interests of their members can frequently, when occasion arises, be utilized for securing some measure of common action in respect of prices or of output, and when the emergency has passed revert to their original limited purposes. It is thus difficult to draw any absolute line of division between associations for watching over the general interests of a trade and associations for regulating trade; admittedly associations whose constitutions are free from any suggestion that they can be utilized for any such purpose are sometimes effective instruments for the regulation of trade. More highly developed associations, definitely formed for the control of prices and output, are, however, numerous in British industry, and some indication of their range will be given in the next section of this memorandum. It need only be added in this place that such associations may enter, and in some cases have entered, into close relations with similar combinations of foreign manufacturers.

(B) The "permanent" combinations, which may conveniently be termed "consolidations," may be described as either "horizontal"—that is, consolidations of concerns engaged in the same stage of industrial production, or in approximately corresponding stages in respect of a number of allied products; or "vertical"—that is, consolidations of concerns engaged in successive stages of production (as, for example, coal and iron mining, pig iron, steel, shipbuilding). These consolidations may be formed by the establishment of a single company to acquire a number of existing companies; or by the acquisition by one company of controlling interests in a number of other companies; or by interchange of shares—with the consequential formation of interlocking directorates in the two latter cases. "Vertical" combinations, due largely to the desire to safeguard supplies of materials and obtain them at the lowest possible prices, have made some progress in British industry, where they are confined almost entirely to the iron, steel, and allied industries; "horizontal" consolidations, on the other hand, are very common and of great importance, and are to be found in almost every branch of production. The consolidation of "vertical" and "horizontal" combinations is a further development which is most conspicuously exemplified out of the United Kingdom by the United States Steel Corporation.

II. Terminable Combinations in the United Kingdom.

In the United Kingdom terminable combinations are characteristic particularly of the iron and steel industry, where they are very numerous, aiming at covering the whole of a particular branch of production, either throughout the United Kingdom or in defined areas.

A list of some of these associations is given in the report. In the more advanced and specialized branches of the iron and steel industry, and in the engineering trades, combinations of the kind now under consideration do not appear to be numerous. An association which is believed to regulate trade exists in the galvanized sheet industry, a branch of production of which a very large proportion is in the hands of a very small number of firms. Propeller shaftings were controlled before the war by a "ring," as were also armor plates. There is a combination of locomotive makers, of which little is known, but which is understood to control export prices (the home market for locomotives is very limited, owing to the practice adopted by the great railway companies of building their own engines). There are also the Edged Tool Manufacturers' Association (comprising some 50 firms), and the recently formed British Machine Tool Manufacturers' Association, which aims at the organization of the trade for both production and marketing; and such associations as the British Engineers' Association (a combination for the exploitation of foreign markets), the Agricultural Engineers' Association, and the various combinations in the motor industry. Most of these associations are, however, understood to be concerned more with general trade questions than with any attempt at the fixation of prices or regulation of output.

An example of elaborate organization is furnished by the Bedstead Makers' Federation, formed in 1912 (an association of different lines existed from 1893 to 1900) to put an end to price cutting, and stated to include four-fifths of the entire United Kingdom trade. Each member on entrance became entitled to a share in a "pool" according to his turnover for the year 1911 or his annual average for the five years 1907–1911; the accountants of the Federation ascertain monthly the turnover of each member, who then receives out of, or pays into, the pool, according as his output is below or above his proportion of the whole output of the Federation. The Federation regulates conditions and terms of delivery, and all selling prices; it occasionally undertakes combined selling, but this is infrequent; it sometimes also engages in the combined buying of supplies for its members. It collects information as to foreign markets, and particularly as to the credit standing of foreign buyers. The Federation has a joint trade-mark. A percentage contribution is levied upon the monthly sales by members, for the formation of a reserve fund, and the proceeds are invested in a special company, in which the members of the federation hold shares according to their contributions to the fund. These shares may be forfeited should a member voluntarily withdraw from the federation, and the reserve fund thus becomes in fact a monetary guarantee.

A less elaborate but nevertheless highly developed organization is the National Light Castings Association (which covers baths, taps, gas and steam pipes, heating and cooking stoves, gutters and rainpipes, gates, railings, and a wide range of similar commodities); it now includes about 100 firms, manufacturing in all parts of the country, and represents an advanced type of organization. The association has been especially successful in enforcing the system (which has been adopted by a number of combinations in recent years) of selling its goods to dealers on condition that they will not sell them again below a fixed price, the penalty for nonfulfilment of the agreement being the withholding of the "deferred rebates" to which otherwise the dealers would be entitled. The association has not hitherto served its members as a selling organization.

Of the nonferrous metal industries of the United Kingdom those concerned with brass and copper would appear to be the most highly associated. There are, e. g., the Manufactured Copper Association (6 firms), the Brass and Copper Tube Association (19 members), the Brass Wire Association (20 members), the Cold Rolled Brass and Copper Association (37 members), and the Brazed Brass Tube Association, and all of these work together as the Associated Brass and Copper Manufacturers of Great Britain. There are also the High Conductivity Copper Association, the Brass Fuse Rods Association, and the Scottish Brass Founders' and Brass Finishers' Association. It is understood that they are all in the nature of price associations.

There are associations in the white lead, sheet lead, and lead oxide industries.

The spelter industry was regulated by international arrangements imposed and controlled by a group of German interests.

In the electrical industries there are the British Electrical and Allied Manufacturers' Association, a very strong body which covers the whole trade (it has subsidiary sections for the various branches), and though not avowedly concerned with price regulation is believed to exercise considerable influence in this respect; the British Cable Makers' Association; the Tungsten Wire Lamp Association, whose control depends largely on the possession of certain patent rights; the Carbon Lamp Association; the British Ignition Apparatus Association; and the Electrical Instrument Makers' Association. The Cable Makers' and Tungsten Lamp Associations are avowedly organized for, inter alia, the control of prices, and the other three sectional associations named are believed to have the same purpose.

Terminable associations are comparatively infrequent in the textile industries, where, partly because of the immense range and variety of production and partly because of the peculiar economic structure of the textile trades of the United Kingdom, the principle of combination in any form has made relatively little progress except in certain special branches. As exceptions may be mentioned the Lancashire Cotton Piece Dyers' Price Association, a combination of firms not comprised in the powerful consolidations which dominate the piece-dyeing industry in this country; the Fine Cloth Manufacturers' Association (Huddersfield); the Midland Counties Lace Manufacturers' Association; and the six combinations which control the carpet and tapestry industry, namely, the Royal Axminster Association, the Victorian Association, the Brussels and Wilton Association, the Chenille Axminster Association, the Carpet Manufacturers' Association (composed of firms not in the first four associations, which are of much older standing and have practically identical membership), and the Tapestry Carpet Association. These carpet associations are understood to be practically comprehensive, since the few outside firms are engaged on specialities and are, therefore, hardly competitive. A combination in a connected branch of industry is the Linoleum and Floorcloth Manufacturers' Association. All of these are understood to be definitely price associations. The Flax Association of Great Britain and Ireland, on the other hand, is understood to be primarily a combination only for joint action in regard to more general trade questions.

It may be noted in connection with the textile trades that there is a Bobbin Manufacturers' Association and also a Shuttle Manufacturers' Association, both of which were formed for the restriction of competition and the control of prices.

In the chemical and connected industries there were in existence prior to the war a considerable number of arrangements of various kinds, some of which were of international scope. The comparatively small number of important concerns engaged in these branches of manufacture in this country both facilitated agreements of a more or less formal character and makes definite information difficult to obtain; but it is known that there were arrangements of one kind or another (in some cases only of a local character) in respect of a number of commodities. A convention of manufacturers of explosives has been in existence since 1907 for the regulation of prices, and its place has now been taken by a consolidation. The market for nitrates is controlled by an association of the Chilean mine owners, who also control iodine.

As regards building materials, associations exist in respect of bricks and tiles (local associations usually for local purposes only); stoneware pipes (an informal price "ring"); white lead; lead piping; sheet glass (there is understood to be a price agreement between the only two makers in the United Kingdom); and stoves, grates, iron gutters, pipes, baths, etc. (these are controlled by the National Light Castings Association, which has already been mentioned in connection with combinations in the iron and steel industries). It may not be out of place to mention here that among other commodities required for the erection of houses cement and wall papers are controlled by powerful consolidations (to be noted later) which are, in fact, quasi monopolistic.

The lighting oil and petrol supplies of the United Kingdom are at present almost entirely in the hands of certain powerful consolidations in which the controlling interests are entirely or mainly foreign. Prices were consequently the subject alternatively of fierce competition or of arrangement, the tendency being in the latter direction; and the price of petrol was regulated by agreement between combinations of the wholesale importers on the one hand and of the retailers on the other. The wholesalers had fixed prices to which the retailers were allowed to make a fixed addition—no less and no more than a prescribed amount per gallon—any departure being followed by blacklisting.

Finally, as a special example of combination, attention may be drawn to the fact that in the glass bottle industry of the United Kingdom there existed a powerful combination, itself part of an international combination whose position in the industry depends upon its right to use certain United States patents for bottle-making machinery.

III. PERMANENT COMBINATIONS IN THE UNITED KINGDOM.

Permanent consolidations of both the "horizontal" and "vertical" types are common in the coal, iron and steel, and shipbuilding industries in the United Kingdom, though none of these have attained to anything approaching a predominant position. An example of the consolidation of interests in the coal industry is furnished by the Consolidated Cambrian Co., which controls practically all the stock of four colliery companies and has other widespread connections. The development of vertical combinations is exemplified by the companies grouped round Dorman, Long & Co. (Ltd.), and other examples of the same kind are furnished by the consolidation of a group of companies of which Steel, Peech & Tozer (Ltd.) and Samuel Fox & Co. (Ltd.) are the most important, comprising steel and pig-iron works and coal and iron mines, and the process thus outlined has gone very far in the case of some of the great shipbuilding and "armament" firms. Palmer's Shipbuilding & Iron Co., Armstrong, Whitworth & Co., Vickers Sons, and Maxim, John Brown & Co. are all examples of wide-reaching vertical and horizontal combinations on a large scale.

Permanent consolidations of the "horizontal" type are of great importance in certain branches (other than weaving) of the textile industries. Thus in the spinning branches there are the Fine Cotton Spinners' & Doublers' Association (Ltd.) (an amalgamation originally of more than 40 concerns), with an issued capital of £5,700,000 and a debenture issue amounting to £2,750,000, and owning or controlling mills abroad and cotton plantations; the Linen Thread Co. (Ltd.) (issued capital, £2,750,000; debentures issued, £1,000,000); Messrs. J. & P. Coats (Ltd.) (issued capital, £10,000,000); and the English Sewing Cotton Co. (Ltd.) (issued capital, £2,000,000; debentures issued, £958,000). The two last-named companies, which are separately the outcome of very extensive amalgamations, are closely associated and are believed to control together the whole sewing-thread industry of the United Kingdom, with the exception of a certain amount of specialized trade, and are also in a powerful position abroad.

The dyeing and printing branches of the cotton and woolen industries are dominated by a small number of powerful consolidations, of which the chief are the Bradford Dyers' Association (a combination originally of 22 firms), with an issued capital of £3,856,000 and debentures to the amount of £1,455,000; the British Cotton & Wool Dyers' Association (Ltd.) (46 firms), with an issued capital of £387,083 and debentures to the amount of £620,000 (it may be noted that this association holds shares in the Bradford Dyers' Association); and the Calico Printers' Association (formed originally of 59 firms), with an issued capital of £5,027,000 and outstanding debentures amounting to £3,200,000. The Bradford Dyers and the British Cotton & Wool Dyers are essentially "commission dyers," dyeing to order; the Calico Printers' Association, on the other hand, is an ordinary manufacturing company.

Of a similar character to the Calico Printers' Association is the United Turkey Red Co. (Ltd.), with an issued capital of £1,264,870; and it may be added that these two companies are jointly interested in and control the British Alizarine Co. (Ltd.), the only maker in the United Kingdom of the very important class of alizarine dyes. Three other consolidations of commission dyers, smaller but nevertheless of substantial importance, are the English Velvet & Cord Dyers' Association (23 firms), issued capital £502,000 and debentures £209,000; the Yorkshire Indigo, Scarlet & Colour Dyers (Ltd.) (11 firms), issued capital £77,600 and debentures £114,000; and the Leeds & District Worsted Dyers & Finishers' Association (Ltd.) (10 firms), issued capital £163,000 and debentures £28,000.

Important consolidations in other branches of the textile industries are the Bleachers' Association (Ltd.) (57 firms), with an issued capital of £4,823,000 and debentures to the amount of £2,250,000; Woolcombers (Ltd.) (41 firms), with an issued capital of £260,000 and debentures £325,000; and the United Velvet Cutters' Association (6 firms).

Turning to other branches of industry, the following are examples of consolidations of a horizontal or semihorizontal type:

The Associated Portland Cement Manufacturers (Ltd.) (27 concerns), with an issued capital of £4,207,000 and debentures to the amount of £4,527,000, controls the output of the Thames and Medway district, the chief area of production; and the British Portland Cement (Ltd.) (authorized capital, £2,800,000) controls the remainder of the United Kingdom output. These two combinations practically control the industry, though there are substantial concerns outside; and they work in close cooperation.

The Salt Union (Ltd.), with an issued capital of £1,400,000 and debentures £1,200,000; it is closely connected with the North Eastern Salt Co. (Ltd.), a sales association regulating output and distribution, in which practically all the British producers are included.

Borax Consolidated (Ltd.), a combination originally of 12 firms; the issued capital is £2,300,000 and the outstanding debentures £1,952,000.

Wall Paper Manufacturers (Ltd.), a combination of makers of wall papers, beginning with eight firms and an authorized capital of £4,000,000, which has gradually secured complete dominance of the trade in the United Kingdom. The output of wall papers not controlled by the combination is insignificant.

The Imperial Tobacco Co. (of Great Britain and Ireland) (Ltd.), a consolidation formed in 1901 to resist the attack on the United Kingdom markets by the United States tobacco interests. The issued capital is £15,647,000. The combination was successful in its purpose, and has established a very substantial mastery of the home market, but the tobacco industry is essentially one of specialties (the sales of goods are largely dependent upon names), and this fact has operated to prevent the establishment of an absolute monopoly by the Imperial Tobacco Co., as it has enabled a small number of firms possessing popular brands to maintain their independence.

In the chemical industries there are three powerful consolidations which should be noted:

The United Alkali Co. (Ltd.), a consolidation of 48 concerns engaged in various parts of the country in the manufacture of heavy chemicals. Its issued capital is £3,425,000, and debentures outstanding amount to £2,750,000.

Brunner Mond & Co. (Ltd.), issued capital £4,598,000. The company has acquired the soap-making concerns of Joseph Crosfield & Sons (Ltd.), and William Gossage & Sons (Ltd.) is directly or indirectly largely concerned in the Mond Gas Co. (Ltd.), and the Mond Nickel Co. (Ltd.), and has recently effected an exchange of shares, with consequent consolidation of interests, with the Castner-Kellner Alkali Co. (Ltd.), the next most important chemical concern in the United Kingdom, with the possible exception of the United Alkali Co.

Lever Bros. (Ltd.), with an issued capital of £15,143,000, which holds inter alia practically all the ordinary capital of the Vinolia Co. (Ltd.), R. S. Hudson & Co. (Ltd.), has a large holding in A. & F. Pears (Ltd.), and has secured in West Africa important concessions securing sources of supply of the oils requisite for soap manufacture.

Finally, reference may be made to the British Oil and Cake Mills (Ltd.), a combination of 17 firms, formed in 1899, with an issued capital (debentures, preference, and ordinary shares) of £2,336,428. It acquired from the companies which it absorbed refineries and crushing mills capable of dealing with over one-half of the oil seeds imported into the United Kingdom in the preceding year.

IV.—BRITISH PARTICIPATION IN INTERNAL COMBINES.

It has already been stated that in a number of instances combinations of British manufacturers were parties to international agreements; and this was the case also with individual firms. The following are some typical examples:

(A) THE INTERNATIONAL RAIL MAKERS' ASSOCIATION.

A Steel Rail Makers' Association of Great Britain was formed in 1884, and as a result of negotiations with the rail makers of Germany and Belgium, the only two important exporting countries at the time, an international association was formed, with the object of dividing all export orders for steel rails, each national group undertaking not to quote for work for use in the countries of the other groups. This

agreement continued until about the middle of 1886, and then lapsed with the termination of the British combination. In January, 1896, the present British Rail Makers' Association was formed, and in 1904 it entered into negotiations with the German and Belgian steel-rail makers, who had just established central selling organizations, and an agreement was reached, to which the French makers were also parties, in the latter part of that year. Under this agreement each group retained the exclusive right to its own home markets, and the export trade was allocated in certain definite proportions between the four national groups, the French being guaranteed a minimum tonnage.

Meanwhile the American steel-rail makers had combined, and in the same year, 1904, they entered the International Rail Makers' Association, one of the conditions being that the British makers gave up the exclusive right which they had obtained under the original agreement to supply the requirements of Canada and Newfoundland. The British makers agreed that the Americans should participate in the orders from those two Dominions, and it is stated that as a result they took practically all the orders therefrom. Subsequently arrangements were made between the International Association and groups of makers in Spain (who were given the exclusive right to the Spanish market) and in Italy (the association agreeing not to sell steel rails for the Italian home market and the Italian rail makers agreeing not to export; this arrangement, which was subsequently slightly modified, terminated in 1909).

The German group, acting on behalf of the international association, also entered into arrangements at various times with Austro-Hungarian makers for the mutual protection of the home market of each group and the division of orders for the Balkan States. Subsequently arrangements were made between the international association and certain Russian makers whereby the latter were allotted a fixed quantity of steel rail export business on certain conditions. The international association was renewed for five years in 1907, and in 1912 for three years to the end of June, 1915. At the last renewal, in 1912, the British group were allocated 33.63 per cent of the export trade, the Americans 23.13 per cent, the Germans 23.13 per cent, the Belgians 11.11 per cent, and the French 9 per cent. It is stated that the International Rail Makers' Association worked on the whole smoothly, having regard to the divergent interests of the national groups, but there was no machinery for the enforcement of the observance of its rules, and there were from time to time instances in which the spirit of the agreement was not observed by the German group. The general effect of the agreement was gradually to restrict the activity of the British makers to British colonial markets. Their annual average orders for elsewhere than the United Kingdom and British possessions fell from 257,000 tons for the period of 1901 to 1905 to 56,000 tons for the period 1911 to 1914, their average annual orders for all markets having fallen from 917,000 tons in the first period to 646,000 tons in the last period.

(B) THE INTERNATIONAL ANILINE CONVENTION (TO WHICH GERMAN AND ENGLISH MAKERS WERE PARTIES).

This was based upon the world's consumption of aniline oil delivered by the parties to the convention, each member in each country being given a quota based on the average total deliveries for a three-year period. Sale prices were fixed for each country, and sales to dealers were barred, members of the convention being allowed to sell only to consumers, and only for the quantity actually used. In the event of any of the members being overdeliveries, they had to take from the underdeliveries at the latter's works the quantity of aniline oil which they had overdelivered at a price equivalent to that which they had received. No member could enter into a sale contract for a period of more than 12 months; there was a committee to watch the progress of new companies and to take steps to prevent them coming into competition; and instances occurred where the members of the convention had to share in the loss incurred in delivering aniline oil to meet the competition of such companies.

(C) THE INTERNATIONAL GLASS BOTTLE ASSOCIATION.

The formation of this association was the result of the introduction by an American company of an automatic bottle-making machine known as the "Owens machine," which greatly reduced the cost of manufacture. It became evident to the European makers that they would not be able to compete unless they could obtain the right to use this machine, a right for which the American company asked a very large price. National associations were formed of the manufacturers in the United Kingdom, Germany, Austria, Holland, Norway, Sweden, and Denmark—that in the United Kingdom being known as the British Association of Glass Bottle Manufacturers (Ltd.)—and these national groups then formed an international union, the European Association of Glass Bottle Manufacturers (Ltd.), with an office in Berlin, and subscribed in certain proportions the necessary capital to enable this central association to acquire the right to work the American patent, the consideration being the sum of £600,000. An arrangement was subsequently made whereby the continental manufacturers were prohibited from selling bottles in the United Kingdom at a lower price than that fixed for the time being by the association of British manufacturers, but it is alleged that by various means continental manufacturers have, in fact, succeeded in obtaining large contracts in this country ostensibly at the prices and on the conditions offered by British manufacturers, but in effect at a lower price. Nevertheless, at the outbreak of war the division of the United Kingdom trade between British and continental makers was substantially the same as in 1907, and in view of the progress which German and Austrian competition was making in this country prior to 1907 the British association is understood to have been not dissatisfied with the effect of the international arrangement. It may be added that the European makers were allowed to export bottles manufactured under the patent to all countries except the United States, Canada, and Mexico, these markets being reserved for United States makers.

(D) THE BRITISH-AMERICAN TOBACCO CO.

By the year 1901 the manufactured-tobacco industry of the United States had come under the domination of the American Tobacco Co. and some affiliated companies, which were later merged. The American Tobacco Co. had developed a large export trade in cigarettes, and for the purposes of both foreign marketing and of manufacture abroad had established a number of subsidiary companies. It then turned its attention to the United Kingdom market. The following extract from Part I of the Report of the United States Commissioner of Corporations on the Tobacco Industry sufficiently describes the subsequent course of events:

"In the fall of 1901 the tobacco combination entered upon a campaign designed to secure it a powerful position in Great Britain. For this purpose it bought control of Ogden's (Ltd.), a leading English manufacturer, paying therefor over $5,000,000. The Ogden Co. at once offered most liberal inducements to the trade. This entrance of the American Tobacco Co. interests into Great Britain alarmed the other tobacco manufacturers there, and almost immediately, in self-protection, 13 of the most important established a great combination, the Imperial Tobacco Co. The American and the Imperial waged a competitive warfare of extraordinary vigor for nearly a year. Toward the end of 1902, however, an agreement between the two interests was effected.

"By this agreement the American Tobacco Co. and its affiliated concerns relinquished their entire business in Great Britain and Ireland to the Imperial. The latter company agreed, on the other hand, not to manufacture or sell tobacco in the United States or its dependencies or in Cuba. The American and Imperial interests then joined in the organization of a third company to exploit the tobacco business of the world outside of Great Britain and the United States. This company, the British-American Tobacco Co., was incorporated under the laws of Great Britain in 1902. The American Tobacco Co. and its affiliated concerns were given substantially two-thirds of its stock and the Imperial Tobacco Co. one-third. The Imperial and American both turned over their export factories, their subsidiary companies in foreign countries, and their foreign trade generally to the new corporation. The British-American has since greatly extended its business and has acquired interests in numerous additional tobacco manufacturing and marketing enterprises in foreign countries."

(E) INTERNATIONAL METAL COMBINATIONS.

An international aluminum syndicate for the regulation of prices was formed in 1912 of all the chief producers in Europe (French, Swiss, and English), and it is understood to have entered into arrangements with the Canadian company producing aluminum, which is believed to be controlled by the Aluminum Co. of America. The world's trading and industry in a number of other base metals were largely controlled before the war by a powerful group of German interests, operating in conjunction with, but dominating, local financial interests in a number of countries. The center of this combination was the Metall-Gesellschaft of Germany, with which were affiliated through stock holdings the Merton Metallurgical Co. and the American Metal Co., and all three concerns were interested in the Metallbank und Metallurgische Gesellschaft of Germany. The group of companies thus closely interrelated were affiliated by actual ownership, by stock holdings, by interlocking directorates, or in other ways with, and, in fact, controlled, companies engaged in metal dealing, refining, or mining in Germany, the United Kingdom, France, Belgium, Switzerland, the Netherlands, Spain, Australia, the United States, and Mexico.

Two other important German metal concerns—Beer Sondheimer & Co. and Aron Hirsch und Sohn—had also control over a number of subsidiary companies, the former in Germany, Austria, Belgium, Italy, Australia, and France, and the latter in Germany, the United States, Mexico, and Australia; and were closely associated with the Metallgesellschaft and each other in various syndicates and combinations. Dominated by these German interests were (1) the Lead Convention, including all the principal producers of soft pig lead, which was formed in 1909—the selling of soft pig lead was handled by the Metallgesellschaft on the Continent and the Merton interests in the United Kingdom; and (2) the Spelter Convention, formed also in 1909. For the latter there were three groups—one of the German and certain Belgian makers, whose output was regulated and sold by a joint office; another of French and certain Belgian makers, who sold independently but were subject to the regulation of output; and the third consisted of the British makers, who were in the same position as the Franco-Belgian group. Stocks were taken monthly, and when they amounted to 50,000 tons and the average London market price had for two months been below £22 a ton restriction of output came into operation.

The international combinations which have been cited are only examples of those as to which some details are more or less public property. It is known that a number of other international agreements existed for price regulation, the restriction of output, or delimitation of marketing areas in respect of various branches of production, but for obvious reasons it is almost impossible to obtain definite information as to their precise nature and extent.

V. INDUSTRIAL COMBINATIONS IN GERMANY AND THE UNITED STATES.

Germany: In 1913 there were over 500 "cartels," or trade associations, in Germany; they covered coal and briquets, iron ore, pig iron, wrought iron, steel, tinplate, rod iron, tool steel, hoop iron, pipes, tubes, rolled wire, woven wire, wire netting, wire cables, skates, chains, screws, rivets, hardware, cutting tools, drills, anvils, axles, hollow ware, copper sheets, wire and tubes, zinc, white lead, lead pipe, rolled lead and lead wares, red lead, tinfoil, brass, enameled ware, wood screws, silverwares, rail carriages and wagons, machine tools, stoves, pumps, brewing machinery, printing presses, bottle, plate, and wired glass, brushes, matches, wall paper and printing paper, linoleum, cork manufactures, cotton yarns and other branches of the cotton industry, woolens, linen, hemp, silk, velvet, ribbons, umbrella cloth, jute, boots and shoes, potash, saltpeter, spirits, benzol, axle oil, sugar, potato flour, yeast, cement, tiles, bricks, building stones, slates, granite, marble, and many other commodities; in fact, it is difficult to find any branch of German industrial production which is not subject to control by a combination or agreement of some kind. In one very important branch of German industry, the manufacture of synthetic dyestuffs, drugs, photographic developers, and other chemicals, the agreements which are understood to have existed between the six powerful companies which dominate the trade have been replaced recently, during the war, by a formal combination.

The cartels fall into three main classes:

(1) Combinations or agreements limited to such matters as credit terms, etc.

(2) Combinations formed for the regulation of prices and the delimitation of selling areas.

(3) Combinations having a central selling agency and generally regulating production.

The combinations of the last-mentioned type, of which the German Stahlwerksverband is the most conspicuous example, aim at providing for (a) the avoidance of competition, (b) the regulation of prices and output, (c) the distribution of orders in such a way as to enable the constituent works to specialize on particular branches of production, (d) joint selling representation and propaganda at home and abroad, with resultant reduction in individual selling coats, (e) forced export sales ("dumping") when necessary to relieve the home market, (f) technical research.

As already remarked, the most conspicuous and most elaborate cartel in Germany is that known as the Stahlwerksverband, which was first constituted in 1904 by the merger of three previously existing combinations on somewhat similar lines. The 28 firms who formed the new combination united (1) to set up a joint selling agency, with a small capital, which should determine prices and receive and allocate orders;

and (2) to regulate production. For the latter purpose the products of the combined concerns were divided into two groups—"A" products (comprising ingots and blooms, slabs, billets, bars, railway rails and sleepers, shapes, and sections) and "B" products (plates and sheets, tubes, axles, tires, forgings, and castings). For "A" products the output was regulated, the quotas of the constituent works were fixed, and orders were to be received and distributed and prices fixed by the Verband; for "B" products the output was regulated, but the constituent concerns were left entirely free in respect of marketing, except in so far as they chose to enter into any special syndicate in respect of any one product. Each concern was to pay into a common fund a fixed amount in respect of each ton produced in excess of its quota, and any concern producing less than its quota was entitled to receive the same amount for each ton of deficiency.

The Verband was renewed in 1907 for a period of five years, and again for a similar period in 1912. At each period of renewal there were great difficulties, chiefly on the question of production quotas. There was always a tendency for the various concerns to push on with extensions of plant and output as the time for renewal approached, so as to establish claims for larger quotas; and the position was complicated by difficulties between the "pure" works—i. e., those engaged exclusively in manufacturing more finished goods from "A" products—and the "mixed" works—i. e., those manufacturing more finished goods from steel of their own production. The "pure" works were dependent on the syndicated products of the Verband, whilst they were without security as to the prices of their own manufactures; the "mixed" works, on the other hand, using steel of their own production, were in fact independent of the prices fixed by the Verband. Consequently the "pure" works, in order to secure their position, tended to combine with steel-making concerns or themselves to erect steel plants—that is, to pass into the category of "mixed" works—the results being an increased output and competition for quotas in respect of "A" products, and a relative increase in the proportion of "B" products in the total output of the Verband. In 1904 "A" products were 58.7 per cent of the total output, but in 1912 they were only 50.3 per cent. It may be added that throughout the history of the Verband there have been attempts to extend its control to the marketing of "B" products, but without success; schemes with the same object have been put forward during the war, but so far do not appear to have met with any general approval.

As regards export trade, the German cartels have consistently followed a twofold policy: (1) Those which produce semifinished commodities and sell them to other manufacturers for working up into finished goods commonly grant a rebate on ordinary prices for home consumption in respect of their products used for the manufacture of goods for export. Thus, the coal syndicate gave a rebate of a fixed amount per ton of coke used in the making of pig iron for export or for use in manufactures for export; the pig-iron syndicate gave a rebate in respect of pig iron utilized in the production of half-finished goods for export or for use in manufactures for export; the wire rolling mills received export rebates in respect of their materials, and in turn gave export rebates to the wire-tack syndicate. The complications of this system led, in 1902, to the establishment of the clearing house for export bounties at Düsseldorf by the coal syndicate, the half-finished goods syndicate, and the girder syndicate, a measure which contributed to the formation of the Stahlwerksverband. (2) The other form of export bounty is the levy of a small fixed percentage on all sales by members of a combination in order to form a fund out of which compensation can be paid to any members who at any time are forced to accept unremunerative prices abroad in order to relieve the pressure on the home market and hold up prices there.

It may be added that the German combinations were, prior to the war, parties to a large number of international arrangements, notably with Austrian, Belgian, French, and Swiss manufacturers.

The United States of America: The form of association adopted in Germany, even in its most developed form, as exemplified by the Stahlwerksverband, though it may leave the constituent concerns with little more than the management of their works, does keep them in being as industrial units on nominally equal terms in the combination, and with some voice in its management, and the associations are terminable. But a completely satisfactory organization and regulation of output may be possible only with consolidated management, and the recurring renewals always give rise to prolonged uncertainty and difficult negotiations. The only method of securing unity of management and assurance of continuity is consolidation.

The earliest form of consolidation adopted in the United States was the "trust," a method by which the holders of controlling interests in a number of companies placed their holdings in the hands of trustees, who thereafter managed or controlled the management of those companies and paid to the original shareholders dividends on the trust certificates which they had received in lieu of their shares. The Sherman Act of 1890, however, declared illegal "every contract, combination, in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign countries"; and the resultant legal decisions, which dissolved some of the most conspicuous trusts, led to the adoption of the method of actual physical consolidation, by (a) the acquisition by a single company of a number of others and (b) the formation of "holding" companies to acquire the common stock of a number of concerns, and thereby to secure complete control without the necessity of purchasing preference shares or debentures.

The process of consolidation has proceeded very rapidly, until a very large portion of the field of the United States industrial production is dominated by powerful monopolistic or quasi monopolistic consolidations. A report of the Ways and Means Committee of the United States House of Representatives in April, 1913, enumerated some 224 consolidations of varying degrees of magnitude. Thus the United States Steel Corporation has acquired or controlled some 800 plants, and has an outstanding capital of about £300,000,000; and other examples are the American Agricultural Chemical Co. (45 plants, £9,500,000); the American Cotton Oil Co. (60 plants, £8,000,000); the American Hide & Leather Co. (22 plants, £6,000,000); the American Linseed Co. (30 plants, £6,500,000); the American Tobacco Co. (180 plants, £112,000,000); the American Sugar Refining Co. (70 plants, £28,000,000); the Central Leather Co. (40 plants, £22,000,000); the International Harvester Co. (33 plants, £31,000,000); the National Fire Proofing Co. (30 plants, £2,600,000); the National Lead Co. (15 plants, £11,200,000); the United Box Board Co. (28 plants, £3,000,000); the United Shoe Machinery Co. (15 plants, £7,600,000); the United States Rubber Co. (22 plants, £28,000,000); the General Electric Co. (30 plants, £18,000,000).

These are only a small and casual selection, and it has to be borne in mind that where a single consolidation in any particular branch of United States production has not secured a monopolistic position, but is exposed to competition from similar consolidations, there is frequently some agreement, commonly of an unrecorded kind, for the restriction of competition and consequently for the control of prices. This is exemplified by the history of the great United States meat corporations, which certainly acted for a long period in unison though without any formal agreement so far as is known. But the most striking illustration is furnished by events in the iron and steel industry, where the rise of powerful concerns and consolidations outside the United States Steel Corporation, and the resultant risk of unrestrained competition, led first to formal "pools," which had to be abandoned owing to their admitted illegality; then to trade meetings at which "understandings," as binding as formal agreements, were reached; and, finally, as the legality of these trade meetings was doubtful, to the "Gary dinners," given over the period from November, 1907, to January, 1911, by the president of the United States Steel Corporation to representatives of the concerns which had participated in the preceding "pools" or "trade meetings." It was estimated that the concerns participating in these gatherings controlled some 90 per cent of the total output of the United States steel industry.

The United States Steel Corporation is the most conspicuous example of "horizontal" and "vertical" combination. It was formed in 1901 to acquire the control of eight great companies, each of which was itself the result of far-reaching combination. Thus, among the companies acquired, the Federal Steel Co. had been the result of the merger in 1898 of the Illinois Steel Co., the Loraine Steel Co., and the Minnesota Iron Co. (the last named being an ore-mining concern in the Lake region, owning mines, an ore railway, and a fleet of ore steamers); the American Steel & Wire Co. had acquired almost all the United States works producing wire, wire nails, and other wire products; and the American Tin Plate Co. was an amalgamation of practically all the tin-plate works of the country. After its formation the United States Steel Corporation acquired yet other companies (such as the American Bridge Co., the Shelby Steel Tube Co., the Lake Superior Consolidated Mines, and the Bessemer Steamship Co.); and the results of these and subsequent developments is that through its constituent companies the corporation not only owns great steel plants, iron mines, and coal mines, railroads, and Lake steamships, but has large interests in subsidiary enterprises, such as gas and water companies. In 1911, the year of a special investigation by the United States Bureau of Corporations, its share of the pig-iron production of the United States was 45 per cent; of steel ingots, 54 per cent; of finished rolled products, 46 per cent; of wire nails, 54 per cent; of wire netting, 22 per cent; and of structural steel, 33 per cent. Its foreign trade is done through the United States Steel Products Co., which in 1912 had branches all over the world, maintained warehouses at a number of points of commercial strategical importance, and did between 80 per cent and 90 per cent of the total foreign iron and steel business of the United States. The relations between the corporation and its great American competitors, which have developed on much the same lines (though more vertically than horizontally) have been noticed already; it is only necessary to add that the Steel Products Co., though formed to market the corporation's goods, does undertake business for other manufacturers.

MARCH, 1918.

SUMMARY OF TESTIMONY AGAINST KENYON AND KENDRICK BILLS AT THE HEARINGS BEFORE THE COMMITTEE ON AGRICULTURE AND FORESTRY OF THE UNITED STATES SENATE, AUGUST 18 TO SEPTEMBER 13, 1919.

INTRODUCTION.

The hearings before the Committee on Agriculture and Forestry of the United States Senate, where the Kendrick and Kenyon bills for the regulation of the meat-packing industry were under consideration, began Monday, August 18, and closed Saturday, September 13. There were 195 persons before the committee. These came from 33 States and the District of Columbia and represented various lines of business.

Of this large number there were only about 12 who had any criticism to make of the larger packers, and some of these were opposed to licensing the packing industry.

The farmers, or producers, were the largest class represented at the hearings. Eighty-two were present. There were 21 small packers, more than a score of retailers, a good number of wholesalers, as well as representatives of civic and trade organizations, besides manufacturers, commission men, canners, editors, and other interests.

Those who appeared against the legislation were practical, representative and successful men. They were men of the highest character and standing in the communities from which they came.

I. BILLS BEFORE THE COMMITTEE.

Of the two bills that were before the committee, one was introduced by Senator Kenyon, of Iowa, and the other by Senator Kendrick, of Wyoming. Each seeks, in substance, to place the meat-packing industry under Government supervision and control.

On the opening day of the hearings, Senator Kenyon, in discussing the bills, spoke as follows:

"These bills seek to accomplish three things: First, control of the meat packers by a system of licensing; second, divorcement of the stockyards from packer ownership; and third, elimination of the refrigerator car privilege. They provide a new method of corporate control. They are radical bills; there is no doubt about that. They have teeth in them; there is no doubt or pretense they have not.

"The justification for any such measures as these at all is in the reports of the Federal Trade Commission, showing what has been done in the way of combination among the packers."

II. FEDERAL TRADE COMMISSION'S CHARGES.

W. B. Colver, of the Federal Trade Commission, occupied the entire opening day of the hearings. His testimony had to do with the reports of the Federal Trade Commission, which he elaborated on at great length. He declared that the small packers were "existing at sufferance" of the large packers, and that the live-stock producers are "at the mercy of the five great packing concerns."

The gist of the charges made by the Federal Trade Commission, and deliberately reiterated by Mr. Colver while he was on the stand, included the following:

That the small packers "are existing at sufferance" of the big packers.

That the stock producers are at "the mercy of the five great packing concerns."

That the packers have a monopoly in the packing industry.

That the packers are guilty of unfair practices in trading.

That the markets are not free and open at the stockyards.

That there is unfair competition in the selling end of the business.

That the five large packers deal in or manufacture more than 70[illegible] commodities.

All of the 21 small, or independent, packers disputed Mr. Colver's statements absolutely, and practically all of the 82 producers who appeared also declared that the report of the Federal Trade Commission and the statements of Mr. Colver were untrue.

The small packers vigorously denied that they "exist at the sufferance" of the large packers. Without exception, every one of them said there was no monopoly among the large packers nor any attempt by them to crush the smaller packers or drive them out of business. They declared also that the markets of the stockyards of the country are free and open, and that it is impossible for the big packers to control the markets if they wanted to. There are so many small packers and so many small buyers that they make the market many days themselves, their testimony showed. They further asserted that there were no agreements among the big packers in the purchase of live stock, and that there are no unfair practices by them, either in the buying of live stock or in the selling of meat products.

III. THE SMALL PACKERS' ANSWER.

It no doubt will be interesting to give a few salient points from the testimony of the small packers in answer to the charges of the Federal Trade Commission.

Howard R. Smith, president Jones & Lamb Co., Baltimore, said:

"The impression seems to be, among some people, that the large packers are simply monopolizing everything and driving the small packer out of business. We have been in the packing business for 15 years, and we have not been put out of business. We have grown right along and are now erecting a new plant."

Michael Ryan, president Cincinnati Abattoir Co.:

"I have been a competitor of the large packers for the last 40 years and I have never found a disposition on their part to crush competition. We independents have followed the lead of the larger concerns. Their houses and machinery have always been open to us. They have concealed nothing nor attempted any unfair practices that I know of."

T. Davis Hill, vice president Corkran, Hill & Co. (Ltd.), Baltimore:

"We have been in the packing business since 1886 and we have prospered and expanded. Our business has never been subjected to any undue interference by any other corporation. We buy our live stock on the open market at all the big yards, and our buyers have never complained at any time that they were hampered by anyone. The big packers can not control the market, for the reason that there are too many outside packers. Outside packers at Chicago some days purchase more than all of the large packers put together. In other words, some days the small packers make the market for the big packers. We have no fear of the big packers' competition. As to profits, I believe that during the past 25 years we have done a little better than the large packers. The large packers have never tried to undersell us or drive us out of business. We have in Baltimore 10 or 12 small packers. All of them are prospering and expanding."

H. C. Bertram, of D. B. Martin Co., Baltimore:

"Our company operates packing houses in Baltimore, Wilmington, and Philadelphia. We have grown very considerably during the last 15 years. We are meeting the big packers in competition, and we are growing larger every year."

James H. Cochrane, president Cochrane Packing Co., Kansas City:

"We have never had very much trouble competing with the big packers, either in buying or selling."

Walter H. Lipe, Beechnut Packing Co., Canajoharie, N. Y.:

"We have done business with the big packers 27 years and have made money. It doesn't seem that they have oppressed us."

G. H. Nuckolls, president Nuckolls Packing Co., Pueblo, Colo.:

"We are not existing 'at sufferance,' and we are perfectly able to take care of ourselves. Our business has been gradually increasing since 1880. We have never had any trouble in competition with the big packers. I know of no methods that have been adopted by the big packers which would be so radically unjust and unfair and monopolistic as to warrant legislation such as this. So far as profits go, my company has made a larger percentage on its turnover than any of the so-called Big Five. The profits were a little larger on the capital stock and surplus also."

James N. Doyle, Doyle Packing Co., Denver:

"I have been in competition with the Big Five packers for years, and my business has increased regularly. The big packers have never interfered with my business, and I have been able to do business in fair competition, both in the buying and selling end of my products."

P. Michaels, packer, Milwaukee:

"The Milwaukee stockyards are owned by Swift & Co. Trade is unrestricted. You can go out any day and buy what you want. There are about a dozen small packers operating at our yards, and none of them has any trouble in getting what live stock he wants for his packing plant."

W. N. W. Blayney, president Coffin Packing Co., Denver:

"It has been stated that the independent packers of the country 'exist at sufferance' of the so-called Big Five. This is not true. Anybody can compete with the Big Five packers. They have done much to build up the cattle industry, the packing industry, and business generally."

J. M. Emmart, Louisville Provision Co. (packers), Louisville:

"The small packer can make a success in the face of large packer competition. We started in business in 1910 with $50,000 capital stock. * * * Last year we did a business of $4,500,000. During these years we have made as much profit as some of the larger concerns. So far as I know the big packers never at any time have tried to put me out of business. We have expanded and are continually adding to our plant."

Patrick Brennan, president Independent Packing Co., Chicago:

"From its inception our company has been located within one block of the Union Stock Yards. * * * Our business has grown continuously from the beginning, commencing with sales of a little over $2,000,000 in 1906 and amounting to a little over $27,000,000 in 1918, each year showing a substantial increase. There is sharp competition between us and the so-called Big Five packers in the purchase of live stock, as well as in the disposal of our products."

W. R. Sinclair, manager Kingan & Co., packers, Indianapolis:

"I deny that there is any monopoly in the packing business, and I see no tendency in that direction. * * * It has taken 70 years to build up the packing industry to its present efficient state of operation, and we claim its efficiency is not surpassed by any other industry in the world to-day. Last year our turnover was $63,000,000. Our company is now and has been very prosperous."

J. Fred Shafer, president of the Jacob C. Shafer Co., Baltimore:

"I have been engaged in the packing business 20 years. We have been in daily competition with all the big packers and all the small packers, and we have always prospered. I have always found the big packers to be fair in their dealings with me. They have never been unreasonable, nor have they resorted to any unfair practices. I have never seen them at any time trying to put the small fellow out of business."

John J. Felin, president John J. Felin Co., packers, Philadelphia: (Mr. Felin represented seven other packers at the hearings before the Senate committee.)

"I wish to take exception to statements made by W. B. Colver, of the Federal Trade Commission, that the independent packers existed 'at the sufferance' of the large packers. I have known several of the independent packers of the country who have made a larger return on their capital than the Big Five, and we feel we have all prospered. I have known all the packers for years, and have never seen any unfair dealings on their part. I know of no methods that have been adopted by any of them that were unjust, unfair, or monopolistic. We are not 'existing at sufferance.' My company has made a larger percentage on its turnover than any of the so-called Big Five packers."

Edward Smith, president Edward Smith Packing Co., Buffalo:

"I have been in the packing business 30 years, and during the last 12 years have been in business for myself. Previous to that time I had been with Swift & Co. When Mr. Edward F. Swift learned that I had gone into business for myself he voluntarily let me have $5,000 to help establish myself. This would not indicate that he wanted to put me out of business. There is no combination or unfair practices on the part of the large packers."

Oswald Neesvig, president Madison Packing Co., Madison, Wis.:

"I have always found the big packers fair in their dealings with me. They have never been unreasonable, nor have they resorted to any unfair practices. I have never seen any attempt on their part to put the little fellow out of business."

Solomon Greenwald, president Greenwald Packing Co., Baltimore:

"I know that the big packers do not control competition in the stockyards. The yards are open to everyone. We bid against the big packers during the war, and had enough contracts for nine months to take care of a thousand cattle a month."

J. C. Dold, president of the Jacob Dold Packing Co., Buffalo:

"The Dold Packing Co. has been in business over 50 years. * * * Our expansion is indicated by the present large financial assets. And our steady progress has carried us to an output of nearly 1,000,000 head of live stock annually. Hundreds of the others of the small or independent packers have had the big packers for competitors, and during all these years we are forced to admit we can not point to a single act on their part directly tending to put us or, so far as we know, any small packer out of business. We are in touch with all the leading live-stock markets in the West every business day, and I recall no instance where we were ever hampered by any packer in the control of any stock or in the purchase of our supplies at competitive market prices."

The foregoing testimony of these substantial and representative business men seems to show conclusively the untruthfulness of the reports made by the Federal Trade Commission.

IV. THE PRODUCERS' ANSWER.

The 82 producers who testified came from all points of the compass. But from the cattle-producing States of Texas, Oklahoma, Kansas, Illinois, Iowa, Nebraska, Wyoming, Colorado, and Missouri came the strongest delegations. With the exception of two or three, all of them denied that they are "at the mercy of the five great packing concerns" and corroborated the statements of the small packers that no monopoly existed in the packing industry. They declared that the stockyards were free and open, and that they had always received fair treatment from the packers in disposing of their live stock.

Senator KENYON, author of one of the bills before the committee, was confronted by a delegation of his constituents. The witnesses who appeared are among the largest live-stock producers in the country. It is interesting to note the testimony of some of these men.

J. S. Blackwell, of Muscatine, Iowa:

"I am sorry that a Senator from a prosperous State like Iowa has to be the father of one of these bills," said Mr. Blackwell. "In view of the great prosperity we are now having I do not think that such legislation should originate from a State like ours. * * * Iowa's land values have increased by leaps and bounds within the last few years—from $50 to $500 an acre—and in some places more than that. This is due to the packers more than any single thing, and I will tell you why: Iowa is the greatest hog-producing State in the Union; besides it is one of the foremost cattle-producing States, as well as one of the leading States in the production of corn, poultry, butter, and eggs. Now, practically all of these products are sold to the packers at a ready cash market every day in the year.

"I am satisfied, Senator KENYON, that when you get a chance to come back home to Iowa and put your ear to the ground that you will want to get off of these bills as quickly as you know how. I do not find that you are getting any support from our people."

The other Iowa farmers substantiated Mr. Blackwell's statements, and declared they were opposed to licensing of business generally. They said the packers had treated them fairly.

J. P. Lynn, one of the several successful and prosperous producers appearing before the committee from Missouri, reflected the sentiment of his State when he said:

"There is not a stockyard in the United States where there is not competition in the purchase of cattle, no matter who owns them. As a shipper of long experience, I have never encountered any discriminating practices of combinations to control markets in any way whatsoever."

Similar testimony was given by the producers in connection with many other charges made by the Federal Trade Commission. Their denials of the commission's accusations were emphatic; they were without equivocation. Robert J. Kleberg, Kingsville, Tex., manager of perhaps the largest cattle ranch in the world, declared:

"I contend and believe that the producer of live stock who conducts his business properly has nothing whatever to fear from the packers. He needs the packer to prepare his product for market and distribute it. When a business is as big as the packers' business, that business has to be conducted properly and on businesslike lines and on principles of fairness toward the public. They can not afford in their own interests to conduct their business in such a way that it injures the great mass of people with whom they do business.

"I do not feel that there is any particular danger to this country from a monopoly of its food products. In fact, I have never considered it, because I do not think it is possible."

Maj. W. L. Brown, Kingman, Kans., one of the best known producers of pure-bred live stock in his State, said:

"We are wondering why it is necessary to change the whole system of marketing as is proposed. We have a large and growing market at Wichita. There is no complaint against the packers who buy on that market, because the people who ship their stock there have been treated fairly. But if you continue to hamper the meat-packing industry you will disturb the live-stock industry, and perhaps ruin the market facilities we have by trying to regulate an industry which we who supply its raw products have no complaint against."

F. R. Currie, Gard, Nebr., after experience covering 40 years in business, during which time all of his live stock was sold to the packers, gave the committee this opinion:

"I suppose if it were possible to have a monopoly of any particular line of business, it might be well to have it controlled. But a monopoly of the meat-packing business is absolutely impossible. It is impossible for the reason that no human being can forecast production. Nor can any man foresee what the demand will be. He can not tell where he will have to go for his raw supplies."

J. G. Imboden, Decatur, Ill., president of the Illinois Live Stock Association, expressed his views before the committee, as follows:

"I know of no industry which has been handled as intelligently and condemned as generally as the live-stock and meat industries of the Nation. * * * I have no complaint to make in regard to the market service as rendered either by the stockyards, commission firms, or packers. I have no absolute knowledge of the existing evils which are charged. Public sentiment has been created against the packing industry simply on account of the high prices the consumer has been forced to pay for his meats. There are, however, high prices charged for every article bought.

"I find that competition is keen. The men engaged in the industry on the average are satisfied with reasonable profits. I do not believe there is any semblance of monopolistic control."

I. C. Thurmond, cattle grower and banker of Oklahoma City, made this statement with respect to competition in the industry:

"There is most active competition in our territory. The people who produce cattle in my section of the country generally feel that the live-stock business should be encouraged. They believe that Congress is pursuing a wrong policy in attempting to hamper expansion of the packing industry, for the reason that it will reflect on the producer. They can not believe that a combination exists, for all of our live stock has been sold at good prices."

D. B. Zimmerman, Somerset, Pa., was introduced to the committee by Senator KENDRICK, who said that he was one of the very largest cattle producers in the country, having interests extending from Montana to Texas:

"The packing industry could not exist unless it had the producers; neither could the producers exist unless they had the packing industry and the markets to take care of their interests. We need the stockyards, we need the refrigerator cars, and we need the cold-storage plants. I would say that it is illogical to suppose that the packers would do anything to injure the producers, because it would be against their own interests."

Former Gov. E. M. Ammons, of Denver, headed a delegation of 18 men who represented Colorado at the hearings. Mr. Ammons advanced strong arguments in his attack on the legislation before the committee. He opposed the proposed bureaucratic control, the divorcement of refrigerator cars from packer ownership, and declared that the Government had gone far enough in its interference with business. He added:

"If there are any bad practices, I do not think there is a single one which is not covered by existing laws. I have seen no evidence of discriminating practices. I do know that we have plenty of competition and that the packers who own the Denver yards have given us more facilities and a larger market, as well as a surer market, with a satisfactory price than we could have had if such things as are charged had existed."

W. L. Richards, Dickinson, live-stock raiser and banker, presented to the committee the sentiment in North Dakota, Senator GRONNA'S home:

"In the country where I live," said Mr. Richards, "every man I have talked to, with the exception of one, is against such legislation as you have before you. I believe I could get a petition from every stock grower in our country to that effect.

"I sell my cattle in all of the central markets. Most of the time I have been present when my cattle were being sold and I always have seen competitive bidding. In my opinion the big packers have done more for the stockman than anyone else. And I do not believe that their reported profits are unjustified, for the small stockman has made proportionately as large profits on his investment."

V. ANOTHER CHARGE EXPLODED.

Another charge, made by the Federal Trade Commission, was that the five large packers were absorbing unrelated industries of every kind "at a rate that has become alarming." Besides small packers and producers, there were canners, retailers, wholesalers, manufacturers, commission men, representatives of the boards of trade, and live-stock associations who gave contradictory testimony to that charge.

H. H. Bergmann, secretary of the Missouri Carlot Poultry and Egg Shippers Association, of St. Louis, said:

"The packers do not have a monopoly of the egg business. They do not handle 5 per cent of the eggs of this country. We have never found them unfair in any way. They are not crushing anybody."

William T. Nardin, president of the Helvetia Milk Condensing Co., of St. Louis, who is one of the largest milk manufacturers of the country, said:

"The big five packers do not control 10 per cent of the milk business of the country. We have found no difficulty in packer competition in the milk business."

Frank Gerber, Fremont, Mich., president of the National Canners' Association, one of several canners who testified, said:

"None of the members of my organization has expressed any fear that the spreading out of the meat packers will drive them out of business. They feel they are able to take care of themselves."

James A. Anderson, of the Morgan Canning Co., Morgan, Utah:

"So far as the packers are concerned in the business that I am engaged in, there is absolutely no monopoly. There can be none."

A number of retailers averred that the packers were not unfair and that they had no fears of being put out of business.

T. G. Park, retailer, Tulsa, Okla.:

"I say give us more packers. Give us more Swifts, more Armours, more Wilsons. We need them."

E. A. Brown, retailer, Newport, R. I.:

"I have been a retailer for 34 years and have failed to discover any advantage taken of us by the packers. They are a great help."

Emmanuel Wasserman, retailer, Norfolk, Va.:

"We have been in business 47 years, and in all the dealings I have had with the packers they have been absolutely fair, and I have prospered since I have dealt with them."

Representatives of commission houses and stockyards unqualifiedly denied the charge of the Federal Trade Commission that the large packers controlled the market. They declared the yards are open; that there is free competition; and they said it was very seldom that they ever received a complaint from any shipper.

VI. PROFITS OF THE SMALL AND LARGE PACKER.

The question of profits of the small packers, as compared to the large packer, was in the foreground throughout the hearings. In nearly every instance the small packer said he made a larger percentage of profit on his turnover than the big packer. This was admitted by two members of the committee, Senators NORRIS and GRONNA.

Senator NORRIS said on September 12, the day before the end of the hearings, while this question was under discussion:

"I think the evidence before the committee—at least in the other hearings—developed that a great many of the small packers made more money in proportion to the amount invested than the big packers."

The chairman, Senator GRONNA:

"I think, Senator NORRIS, we had a great many more witnesses this time than we did last winter, and I think I may say that the testimony has been that they have been very successful."

This would seem to further discredit the Federal Trade Commission's charge that the small packers are "existing at sufferance," and to show that they are not being held in the hollow of the hands of the big packers.

VIII. COMMISSION'S METHODS EXPOSED.

The Federal Trade Commission's report was not received with the acclaim expected by the progenitors of the radical bills. Charges that the commission had been unfair; that it was biased; that it was incompetent; and that its investigations of the five larger packing companies was one-sided came not only from the smaller packers but dozens of men representing the very backbone of the live-stock industry.

Of all of the testimony discrediting the Federal Trade Commission's findings in the meat-packing investigation, the most sensational, perhaps, came from a constituent of Senator KENDRICK. Dr. J. M. Wilson, McKinley, Wyo., member of the executive committee of the American National Live Stock Association and one of the largest ranch owners of his State, openly accused the commission of conducting the investigation in the interests of a "small group of men who constitute the market committee of the American National Live Stock Association."

Dr. Wilson related in detail the story of relations between the Federal Trade Commission and the market committee. He declared that "the facts point very clearly and unmistakably to where the Federal Trade Commission got its original recommendations." The witness gave some startling details regarding the activities of H. A. Jastro, E. L. Burke, and Ike Pryor, who, he said, were the moving spirits in urging the investigation. He showed how anxious these men were about "finances," and called especial attention to the report of the market committee at the Cheyenne convention, in which the following statement was made in the report of the market committee:

"We are dealing with the biggest and most complicated economic problem of our day, namely, the proper handling of the meat supplies of the Nation. We are playing for big stakes, but the reward is great in proportion as the game is hard."

In commenting upon this statement, Dr. Wilson insisted it was proof sufficient that the motives behind the investigation were not altogether unselfish. He charged that the market committee had started originally with the idea of investigating the whole live stock marketing problem, but that later it was changed in its course and only the meat packers were subjected to the inquiries. He declared that the "finances" about which members of the market committee were so solicitous at the various conventions of the organization were used solely for propaganda purposes against the packers.

But the most striking feature of Dr. Wilson's testimony was in connection with a speech made by W. B. Colver, of the Federal Trade Commission, before the Denver convention of the American National Live Stock Association, last January. The witness quoted from Mr. Colver's speech as follows:

"It is a pleasure, as well as an honor, to come out here to talk to you and in a measure make a report on the progress that has been achieved on the job in which you were instrumental in starting us. You started the row; then you put us into a cage and went away and left us. I might say it has been a most interesting proceeding ever since. We did what you told us to do after you went away and left us."

This language clearly indicated, Dr. Wilson declared, that Mr. Colver never looked upon the proceedings in any other light than a row. He asked the Senate committee what it thought of the appalling admission. He also called attention to Mr. Colver's further statement that the "buck is now passed straight up to Congress." Such relations between the market committee and the Federal Trade Commission demonstrate how thoroughly the commission had joined in plans of the small group of members of the live-stock association, according to Dr. Wilson's views.

J. S. Blackwell, one of the largest farmers and producers of Iowa, also severely criticized the commission's activities. He declared:

"There is a feeling in the country that the legislation is based on the one-sided report of the Federal Trade Commission. * * * I do not know what was behind this report, but there is evidently some ax to grind at the expense of the live-stock producers. * * * Common talk out our way is that the Federal Trade Commission ought to prove something or shut up. Its system of starting out and trying cases in the newspapers is just another aid to the unrest of this country."

P. W. Olsen, Cokeville, Wyo., one of the largest sheep and wool growers in that country, said:

"The Federal Trade Commission charges that the packers have a monopoly. I have been in the stock business 36 years and I have to have more evidence than that charge that a monopoly exists."

Marion Sansom, among the largest live-stock producers and probably one of the best-known citizens of Texas, related an interesting experience he had with the Federal Trade Commission during the war. He said he was a member of the committee appointed by President Wilson to make a recommendation on the Federal Trade Commission's report on the packing industry.

"From what I heard," said Mr. Sansom, "I concluded that the Federal Trade Commission was a little bit stronger as a prosecutor than it was as an agent of the Government. I took it the commission was after the packers pretty strong. It made what looked to me like

some extreme recommendations. At that time, the commission's proposition was to take over the packers' stocks, their banks, and their stock and cattle loan companies. I thought that was a pretty strong recommendation."

W. J. Vereen, cotton manufacturer, of Moultrie, Ga., told the committee of the attitude of investigators which the Federal Trade Commission sent to Moultrie to investigate Swift & Co.'s plant there.

"I just want to bring to the attention of the committee," said Mr. Vereen, "the type of investigators, or rather not the type—well, we will let it go that way. Three gentlemen came down to Moultrie to investigate Swift & Co.'s plant. In the course of the conversation with them I paid a compliment to Swift & Co. as to how they had helped in the development of our section of the country. Immediately, these men showed very clearly they were prejudiced against the big packers and that they went there prejudiced. Of course, the report they made will be brought here, as well as other information. If I were to pass upon that information, I would not pay any attention to it because I would not have any confidence in it. If you see fit, you might look into the men who are making these investigations."

W. C. Swayze, of the Colorado State Grange, told the committee that—

"The National Grange has refused to adopt a resolution indorsing the report of the Federal Trade Commission. Thirty-five States are represented in the National Grange, and each State has two votes. Of the total 70 votes, there were only 3 in favor of indorsing the commission's report about the packing industry."

James A. Anderson, president of the Morgan Canning Co., Morgan, Utah, criticized "the arbitrary methods" which the Federal Trade Commission used in his factory.

"The report they made about my factory was absolutely wrong, and I can prove it by actual figures shown by an expert public accountant," Mr. Anderson said. "They used arbitrary methods and seemed to be determined to make the costs such and such whether they actually existed or not. * * * And I have this to say:

"That they are either incompetent in their way of arriving at the actual facts or else they do not care for actual facts. I would rather give them the benefit of the doubt and say they were incompetent."

W. B. Tagg, Omaha, former president of the National Live Stock Exchange, disclosed that new packing company schemes were being exploited as a result of the report of the Federal Trade Commission.

"They are selling millions of dollars' worth of stock out through our country," said Mr. Tagg, "based on the report of the Federal Trade Commission and the great profits alleged to have been made by the big packers. * * * And they are exploiting the commission's report for the purpose of selling stock. I am afraid it will cost the American people millions of dollars."

W. R. Martineau, secretary of the Live Stock Producers' Association of Oklahoma, criticized the way in which the Federal Trade Commission published its report. He declared it amounted to a trial in the newspapers.

Ward A. Neff, of Chicago, vice president of the Corn Belt Farm Dailies, challenged the statements made by the Federal Trade Commission and asserted that none of the papers for which he appeared is now or has been owned or controlled by any packer.

L. D. H. Weld, manager of the department of commercial research for Swift & Co., showed conclusively that Mr. Colver's statement, as well as the report of the Federal Trade Commission, contained many glaring misstatements, many inconsistencies, and many insinuations. He criticized the misuse of the words "control," "monopoly," and "Big Five" by those who were attacking the packing industry. He said, for example:

"If an employee or an official or a director of a packing concern owns a few shares of stock in a railroad, the insinuation is put forth that he is trying to control that railroad so as to get favorable treatment for himself or unfavorable treatment for his competitors.

"If he owns a few shares in a bank, the insinuation is put forth that it is done to control credits.

"If he owns a few shares in a cattle-loan company, the insinuation is put forth that it is to control the cattlemen to sell their cattle to his company. There is nothing, of course, of this sort at all."

Mr. Weld cited similar insinuations with regard to poultry and hides.

"Everything that we do is misconstrued, both by Mr. Colver and by the Federal Trade Commission," Mr. Weld continued. "If prices go up, some fellow has tried to sell his product at a big profit; if prices go down, we are trying to do this, that, or the other. That sort of thing is downright persecution of one of the leading and most vital institutions in the United States."

Mr. Weld then called attention to the fact that Mr. Colver had failed to mention that there are over 200 interstate slaughtering houses outside of those owned by the Big Five packers, and that there are nearly 1,000 packers in all in the United States. He showed the unfairness and what would seem to be deliberate attempts of the commission to misrepresent the facts, when he referred to the Federal Trade Commission's charge that the packers handled 639 commodities, and which Mr. Colver in his recent testimony said were "more than seven hundred."

"In the first place, over half of the products enumerated are meat and animal by-products," Mr. Weld said. "Seventy items in that long list are merely supplies which are not sold to the trade outside at all. They are bought at a central depot—for example, in Chicago—and distributed to the branch houses and to the plants."

Referring to other items on the lists, Mr. Weld declared:

"They list as separate items beef tongue, fresh beef tongue, cured beef tongue, ox tongue, pickled tongue, potted tongue, and smoked tongue. These are shown by the commission as distinct products in its list of nearly 700 items handled."

Other instances of the same nature were cited by Mr. Weld, including beef sides and dressed beef—one and the same thing—and flour and wheat flour. He mentioned that the list contained 37 kinds of sausages, including duplications. The list, he declared, contained dried sausage and dry sausage as two separate and different products. This padded, duplicated list, Mr. Weld insisted, demonstrated the unfairness and the glaring misrepresentations by the commission.

Mr. Weld then took the commission to task for its statements that the packers controlled the leather industry. He submitted figures and statements to show that the five larger packers together handle only 19 per cent of the total output of the country.

In connection with the commission's report on fertilizer which alleged that the five larger companies controlled that business also, Mr. Weld showed that the four large companies which make fertilizer handle only 19 per cent of the total output of the country.

He demonstrated with figures from the Trade Commission report that the five large packers handle only 7.8 per cent of the total output of crude cottonseed oil, and only 31.8 per cent of the refined. The most important packer in this field, in competition with all others, handles only about 10 per cent of the total. This was in answer to the commission's charge that the five great packing concerns controlled the cottonseed oil industry also.

IX. PACKERS AID SOUTHERN STATES.

That the Southern States are greatly interested in the development of the live-stock and packing industries, and that they appreciate what the larger packers have done, in establishing packing plants in their section of the country, was forcibly brought out during the hearing. This was especially true of the Southeastern States.

C. B. Caldwell, secretary of the Colquit County Chamber of Commerce, Moultrie, Ga., related to the committee how the citizens of his community persuaded Swift & Co. to go to Moultrie and take over their local packing plant, saying they wanted experienced men in the packing business to develop it.

"So we set out to get a packer to take over the packing house," said Mr. Caldwell, "which Swift & Co. did in 1917, and they have since made an investment of something like $1,000,000 in the development of the plant there.

"We regard the taking over of our plant by Swift & Co. the largest contributing factor in practically everything which helped us to swing the average farmer away from the one-crop farming system and threw him into the diversified manner of farming in which he grows more foodstuffs."

Mr. Caldwell said that Swift & Co. were the pioneers in the South in the development of live-stock production, as all the packing plants in that part of the United States have been the outgrowth of the plant at Moultrie.

W. J. Vereen, a cotton manufacturer, also of Moultrie, substantiated Mr. Caldwell. He said:

"Our experience with Swift & Co. has been that they are progressive and that they take care of the situation with us and we consider them the biggest single asset we have got, so far as developing the farming section of our part of the country is concerned."

C. E. Thomas, a producer, and William Howard Smith, a large shipper, both of Alabama, told the committee of the development of the live-stock industry in their State, and that the establishment of the packing house at Andalusia by Swift & Co. had not only stimulated live-stock production, but that real estate values had increased tremendously, as a result of the packing plant being established there.

Herbert H. Ruch, of Louisiana, said that until Morris & Co. bought the local stockyards and packing house at New Orleans there was practically no market there.

"Since Morris & Co. have been operating at New Orleans," said Mr. Ruch, "the market for cattle has increased 100 per cent over what it was before. Friends of mine who do cattle raising and feeding tell me they would be glad to see more packers come south."

Mr. Ruch went on to say that before Morris & Co. took hold of the plant at New Orleans there were glutted markets, and that shippers many times would have to sell their live stock at a discount or take it back home.

R. E. Power, of Nashville, Tenn., gave similar testimony:

"The farmers throughout the Southeast have diversified their farming from cotton to live stock since packing plants have been established here. This was the beginning of their career with live stock, and they are still in their infancy in that country. The big packers have, I understand, plants at Moultrie, Ga., Andalusia, Ala., and Jacksonville, Fla. I know those packing plants there have created a home market for, I should say, 75 per cent of the live stock that is offered for sale at those packing houses."

N. J. Harsh, a large farmer and feeder, of Sumner County, Tenn., declared:

"The packing business is one of the biggest and most important industries in the country, and we have got to have it unless some interest comes along to take care of the situation." He said the packers had been a great benefit to his section of the country.

J. H. Nail, one of the larger farmers and cattle growers of Texas, traced the development of the industry in his State and told of the benefits that resulted from the entrance of the large packers into the field. He said:

"I think that Gustavus F. Swift was one of the greatest benefactors this country has ever known. He made it possible for me to get between 40 and 45 products out of my cattle and put the food in half-pound tins and send them around the world."

Sam Davison, Fort Worth, Tex., told the committee that until Swift & Co. and Armour & Co. went to Fort Worth and established up-to-date packing houses there that the people of Texas were compelled to ship their live stock hundreds of miles to Kansas City, St. Louis, and Chicago. But now they have a splendid market at Fort Worth, and that about 500,000 head of cattle a year are slaughtered there, and that they receive practically the same price as is paid at the other markets.

Other witnesses from Texas testified that until these packing houses were established at Fort Worth very few hogs were raised in that State, but the coming of the packing plants has stimulated that industry until now there were many thousands of hogs sold at Fort Worth every year.

X. PROPAGANDA.

A great deal has been said, and especially before the hearings began, about "packer propaganda." Senator Kenyon made mention of this several times in the Senate. But developments during the hearings revealed that other interests were carrying on a propaganda as widespread and as direct as any with which this country is familiar. This was especially true of the Southern Wholesale Grocers' Association. The publicity man for the association, L. H. Haney, was present at many sessions of the committee and was frequently issuing statements to the press in Washington. He formerly was connected with the Federal Trade Commission.

Mr. Haney's activities in behalf of the proposed legislation were brought out forcibly by J. P. Lightfoot, general counsel for Wilson & Co. He inserted in the record of the hearings a letter issued by Mr. Haney showing the style of propaganda used by his organization. Here is a part of one of Mr. Haney's "bulletins":

"Having just returned from Washington for a few days, I desire to make some suggestion as to what you can do to help secure proper regulation of the meat packers' monopoly. * * *

"For the present it seems best for the wholesale grocers to assist the cause of competition and equal opportunity by securing petitions and letters from those who honestly believe that a monopoly of food products is dangerous and should be subjected to reasonable regulation. I suggest * * * that you secure signatures to the petition which is inclosed. It will be well to secure petitions in duplicate. When you have obtained a list of 20 or 30 names, send one of the copies to your

Senator and the other to your Congressman with the request that he introduce it at his early convenience, and that he send you a copy of the CONGRESSIONAL RECORD in which his action is recorded. Be sure to follow it up.

A letter with the bulletin states that every community should be canvassed, and that the leading citizens, "especially farmers," should be interviewed with regard to their signatures. Mr. Lightfoot further revealed that many such bulletins have gone out from the headquarters of the Southern Wholesale Grocers' Association during the hearings, thus showing that the campaign inaugurated by that organization was unusually widespread.

Dr. J. M. Wilson, who told of the efforts of a few members of the American National Live Stock Association with the Federal Trade Commission, told also of the propaganda carried on by members of the association's market committee against the packers. He referred to the propaganda of Senator KENDRICK, who is not only president of the American National Live Stock Association, and as such a member of its market committee, but also a member of the Senate Agricultural Committee. According to Dr. Wilson, Senator KENDRICK'S envelopes bear the following:

"Whether or not the operations of the packers are in all respects fair and honorable, whether or not they allow the law of supply and demand full play in the markets, the fact remains that the power they exert over the food supply of a population of more than 100,000,000 is altogether too great to be vested in the irresponsible hands of a few private individuals. There is no divine right in industry."

Of Senator KENDRICK'S propaganda, Dr. Wilson said:

"Sending to the producers of this country this propaganda against the packers and in favor of these bills, under a senatorial frank, discounts everything in the way of propaganda which the ingenuity, efficiency, or the economy of the packers have devised."

It would seem from the foregoing that the much-talked-of "packer propaganda" was amateurish and inconsequential in comparison with that of the proponents of the bills.

XI. SENATOR HARRISON'S RESOLUTION.

Another outstanding development of the hearing, due to the disclosures made by the witnesses, was when Senator HARRISON introduced a resolution which provided that the Senate committee make its own investigations of the meat-packing industry.

Senator HARRISON said it was growing irksome to have witnesses continually coming in and giving evidence which differed entirely from the reports made by the Federal Trade Commission.

His statements quickly brought forth invitations from Henry Veeder, general counsel for Swift & Co.; M. W. Borders, general counsel for Morris & Co.; J. P. Lightfoot, general counsel for Wilson & Co.; and Charles J. Faulkner, jr., general counsel for Armour & Co., for such an investigation to be made.

The attorneys each assured the committee that their clients welcomed an investigation by "competent, certified public accountants, who knew their business."

XII. COUNTRY OPPOSED TO LICENSING.

If the evidence submitted at the hearings can be taken as any criterion, there is practically a unanimous sentiment throughout the country against the licensing of American business. All of the witnesses who testified were almost of one mind on that question. They declared that the experiment was too drastic and was dangerous.

Government control of the railroads and telegraph and telephone lines was constantly cited as an experience with Government regulation "of which we want no more." These same witnesses saw grave dangers in any attempt of the Government to manage the packing industry, and various reasons were advanced against the licensing feature. Some of these were:

That there are already enough laws on our statute books to take care of any evils, if any exist.

That the licensing of business is a step toward Government ownership.

That it is socialistic and un-American and would destroy initiative and creative genius; it would blight ambition.

That the proposed legislation would put too much power into the hands of one man; it would be autocratic and the power might be used for political purposes.

That such legislation would be the opening wedge for the licensing of all business.

That such legislation would hamper and reduce the efficiency of the meat packers, thereby injuring the live-stock producers; this would limit the output which in turn would decrease the amount of food products for the consumer with a resulting increase in price.

Resolutions were presented to the committee from farmers' organizations, boards of trade, chambers of commerce, and other civic and trade associations vigorously protesting against the licensing proposal.

The fact that the Government has supervision and inspection of the banks of the country was cited by several members of the committee as an argument for similar control of the packing industry. Various witnesses explained that the two businesses were not at all similar.

Henry L. Prewitt, Mount Sterling, Ky., a banker and lawyer, showed most clearly the difference between banking and meat packing. His explanation was as follows:

"As I see it, there is a very great difference between a banking house and a packing house. The stockholders of a packing house are interested only in the financial end of the packing business. A bank is at least, I will say, half for the public. The public is directly interested. Its money is deposited there. It is an entirely different case.

"The packing business is organized to do business in a commercial way. The banks are only supervised and inspected so far as their rates of interest are concerned and to determine whether they are solvent. This is to keep them from charging usurious rates of interest and to protect against failure. * * * The two cases are not analogous at all."

XIII. THE STOCKYARDS.

A study of the testimony discloses that in most cases there was no objection to the ownership of the stockyards by the packers. Many witnesses declared they preferred packer ownership to private ownership, and set forth reasons which can be summarized as follows:

The charge of the Federal Trade Commission that the packers controlled the stockyards, to the detriment of everyone except themselves was denied by practically every witness who testified.

The testimony was overwhelming from small packers, producers, and shippers, commission men and others that the markets at the yards were free and open, and that the so-called big packers never made any effort to dictate or control in the marketing of live stock.

The packers must provide sufficient and well-managed marketing places, or else the shippers will patronize other yards; in other words, the interests of the packers and of the producers are identical.

In matters of convenience to the shippers, care of their live stock, and the providing of equipment with which to meet all needs of the shippers, it was clearly shown that the packer-owned yards or yards in which the packers were interested could hardly be improved upon.

Instances were cited of how the yards had been improved and marketing facilities increased after packers had acquired interests in them. In Fort Worth, Denver, Oklahoma City, Wichita, Omaha, and South St. Paul, the improvements have been most noteworthy, according to witnesses. It was brought out that nearly all of the earnings of different yards had been used for improvements and additions. In many cases the testimony showed the result of packer ownership of the yards has been improved conditions and satisfied shippers.

XIV. THE REFRIGERATOR CAR.

Of the nearly 200 witnesses who were before the committee, the record of the hearings show that there were only a few witnesses who were in favor of taking the refrigerator cars away from the meat packers. The fact that the packers had to build their own refrigerator cars, because the railroads did not or would not build them, was forcibly brought to the attention of the committee.

The producers especially were very much opposed to forcing the meat packers to give up their refrigerator cars. They argued that to eliminate packer ownership meant a total disruption of the packers' distributing system. They said that if you take away this avenue of outlet for the finished product they feared it would mean a curtailment in the amount of live stock the packers would purchase.

Various witnesses declared that to take away the refrigerator cars from the packer would be as foolish as to take away their knives or their slaughtering plants or their office buildings.

It was also brought out that if the railroads were to take over the refrigerator cars they did not have organizations or trained men to distribute and handle these cars as is necessary in the shipping of perishable products.

It was suggested that if there were not sufficient refrigerator cars that the railroads should be compelled to build and furnish them, or that the Government furnish them.

CONCLUSION.

Senator KENYON said the only justification for this legislation "at all is in the reports of the Federal Trade Commission." These reports were discredited by practically all of the witnesses, men of the highest character and integrity. They said they were absolutely untrue. The men who gave this testimony are in almost constant touch with the large packers, either as small packers who are in competition with them, as producers who sell their output to the packers, as retailers and wholesalers who buy the packers' products, or as live stock and commission men who are at the markets every business day of the year. All of them opposed the licensing feature, saying it was neither practicable or desirable.

The witnesses showed the Federal Trade Commission's reports to be false and not founded on fact. If their testimony is to be given credence, then there is no longer any reason for the proposed legislation, since the evils alleged do not exist.

WITNESSES WHO APPEARED BEFORE THE SENATE COMMITTEE ON AGRICULTURE AUGUST 18 TO SEPTEMBER 13.

Alabama (2): C. E. Thomas, producer and banker, Prattville; William H. Smith, producer, Prattville.

California (4): Henry W. Lynch, producer, Monterey County; Joe D. Biddle, producer, Hanford City; W. E. Premo, producer, Porterville; Vernon Campbell, general manager the California Cooperative Canneries, San Jose.

Colorado (18): E. M. Ammons, producer, former governor, Denver; W. A. Drake, producer, Fort Collins; Charles Clayton, producer, Denver; J. M. Williams, producer, Steamboat Springs; J. D. Mallon, producer, Denver; R. E. Vickery, producer, Grand Junction; E. E. Stepp, producer, Berthoud; W. C. Swayne, Colorado State Grange, Denver; Ben M. White, producer, Eagle; G. H. Nuckolls, Nuckolls Packing Co., Pueblo; W. N. W. Blayney, Comin Packing Co., Denver; James N. Doyle, Doyle Packing Co., Denver; Frank J. Dennison, producer, Denver; C. A. Rodgers, producer, Denver; Arthur C. Johnson, Daily Record-Stockman, Denver; J. E. Zahn, manufacturer, Denver; A. G. Prey, Denver Live Stock Exchange, Denver; John Grattan, producer, Broomfield.

District of Columbia (2): William B. Colver, Federal Trade Commission, Washington; William W. Williams, Department of Agriculture, Washington.

Florida (4): J. D. Baker, chain-store operator, Tampa; Lewis K. Riley, jr., wholesaler and jobber, Jacksonville; Lewis H. Haney, director of publicity Southern Wholesale Grocers' Association, Jacksonville; James Lasseter, vice president W. B. Johnson Wholesale Grocery Co., Jacksonville.

Georgia (2): C. B. Caldwell, secretary Colquitt County Chamber of Commerce, Moultrie; W. J. Vereen, cotton manufacturer, Moultrie.

Illinois (19): W. C. McLean, president Chamber of Commerce, East St. Louis; Ross Bowles, secretary East Side Employers' Association, East St. Louis; C. B. Heinemann, secretary National Live Stock Exchange, Chicago; Everett C. Brown, president National Live Stock Exchange, Chicago; J. G. Imboden, president Illinois Live Stock Association, Decatur; Patrick Brennan, president Independent Packing Co., Chicago; L. F. Gates, president Board of Trade, Chicago; Ward A. Neff, editor Daily Drovers' Journal and Corn Belt Farm Dailies, Chicago; L. D. H. Weld, director of commercial research, Swift & Co., Chicago; P. S. Haner, producer, Taylorville; Roy A. Johnson, producer and banker, Taylorville; E. M. Boddington, Associated Serum Companies of America, Chicago; Frank X. Mudd, president Live Poultry Transit Co., Chicago; C. R. Hillyer, counsel Live Poultry Transit Co., Chicago; Henry Veeder, general counsel Swift & Co., Chicago; J. P. Lightfoot, general counsel Wilson & Co., Chicago; M. W. Borders, general counsel Morris & Co., Chicago; E. G. Robson, producer and secretary Farmers' Cooperative Elevator, Watago; J. M. Chaplin, chief accountant Swift & Co., Chicago.

Indiana (5): Horace H. Fletcher, president Indianapolis Live Stock Exchange, Indianapolis; Charles A. Neimeier, chain-store operator, Princeton; C. M. Beall, producer, Clarksburg; Frank Offutt, producer, Arlington; W. R. Sinclair, manager Kingan & Co., packers, Indianapolis.

Iowa (12): John Waters, producer and representing Farmers' Cooperative Society, Postville; Thomas Dealtry, Sioux City Live Stock Exchange, Sioux City; Charles R. Brenton, producer, Dallas Center; S. D. Hockett, district sales manager Armour & Co., Des Moines; J. S. Blackwell, producer and banker, Muscatine; T. B. Nichols, producer, Nichols; C. H. Wills, producer, Muscatine; J. J. Legler, producer, Muscatine; L. B. Metcalf, producer, Nichols; R. G. Hoskins, producer, Earlham; E. M. Thomas, producer, Earlham; Henry C. Wallace, editor Wallace's Farmer, Des Moines.

Kansas (8): J. H. Mercer, secretary Kansas Live Stock Association, Topeka; James F. Cochrane, president Cochrane Packing Co., Kansas City; George T. Donaldson, president Kansas Live Stock Association, Greensburg; Fred Garland, retailer, Wellington; W. A. Giffen, retailer, Sedgwick; J. E. Wood, live-stock commission man and producer, Wichita; Maj. W. L. Brown, producer, Kingman; Andrew G. Muir, producer, Stockton.

In the Supreme Court of the District of Columbia.

The United States of America, petitioner, *v.* Swift & Co. and others, defendants. No. 37623. Equity.

DECREE AND CONSENTS.

This cause having come on to be heard on this 27th day of February, in the year 1920, before the Hon. Walter I. McCoy, chief justice, and the petitioner having appeared by the Hon. A. Mitchell Palmer, Attorney General of the United States, by its district attorney, John E. Laskey, and by Isidor J. Kresel, John H. Atwood, and Joseph Sapinsky, special assistants to the Attorney General, thereto duly authorized, and having moved the court for an injunction in accordance with the prayer of its petition; and it appearing to the court that the allegations of the petitioner state a cause of action against the defendants under the provisions of the act of July 2, 1890, entitled "An act to protect trade and commerce against unlawful restraints and monopolies," and acts amendatory thereof and supplemental or additional thereto, and that the court has jurisdiction of the persons and the subject matter; and the several defendants having accepted service of process and having appeared and filed answers to the petition, which answers are on file in the office of the clerk of this court; and the parties having this day entered into a stipulation in this action, which stipulation is on file in the office of the clerk of this court, and from which it appears, among other things, that while the defendants and each of them, maintain the truth of their answers and assert their innocence of any violation of law in fact or intent, they nevertheless, desiring to avoid every appearance of placing themselves in a position of antagonism to the Government, have consented and do consent to the making and entry of the decree now about to be entered without any findings of fact, upon condition that their consents to the entry of said decree shall not constitute or be considered an admission, and the rendition or entry of said decree, or the decree itself, shall not constitute or be considered an adjudication that the defendants or any of them have in fact violated any law of the United States.

Now, upon the petition, the answers of the defendants, and the aforementioned stipulation and consents of the parties, all on file in the office of the clerk of this court, and on motion of the petitioner, it is ordered, adjudged, and decreed as follows:

First. That the corporation defendants and each of them be, and they are hereby, jointly and severally perpetually enjoined and restrained from, either directly or indirectly, by themselves or through their officers, directors, agents, or servants, in any manner maintaining or entering into any contract, combination, or conspiracy with each other, or with any other person or persons, in restraint of trade or commerce among the several States, or from either, directly or indirectly, by themselves or through their officers, directors, agents, or servants, either jointly or severally monopolizing, or attempting to monopolize, or combining or conspiring with each other, or with any other person or persons, to monopolize any part of such trade or commerce.

Second. That the defendants and each of them be, and they are hereby, jointly and severally perpetually enjoined and restrained from owning, either directly or indirectly, individually or by themselves, or through their officers, directors, agents or servants, any capital stock or other interest whatsoever in any public stockyard market company in the United States, or in any stockyard terminal railroad in the United States, or in any stockyard market newspaper or stockyard market journal published in the United States, except in so far as the court may permit any of the individual defendants to retain any such interests upon the conditions and in such circumstances as are provided for in paragraph tenth of this decree; and said defendants and each of them are hereby further enjoined and restrained from accepting or permitting to be given, directly or indirectly, on any pretext whatever, to any of them, or to any of their officers, directors, servants, or employees, for the use and benefit of the corporation defendants or any of them, any capital stock or other interest in any public stockyard market company, stockyard terminal railroad, or stockyard market newspaper or stockyard market journal.

Third. That the corporation defendants and each of them and their successors and assigns be, and they are hereby, perpetually enjoined and restrained from, either directly or indirectly, by themselves or through their officers, directors, agents, or servants, through any device or arrangement whatsoever, using or permitting any other person, firm, or corporation to use their distributive system and facilities, including their branch houses, route cars, and autotrucks, or any of them, in any manner for the purchase, sale, handling, transporting, distributing, or otherwise dealing in any of the articles or commodities named and described in paragraph fourth of this decree, except in so far as permitted in said paragraph fourth, and except refrigerator cars, when in good faith leased to common carriers, or furnished to them for their use as common carriers.

The corporation defendants, or any of them, may from time to time lease, sell, or otherwise dispose of any of the items of their distributive system free from any of the restrictions of this decree when they have a surplusage thereof or when such items have become obsolete or are otherwise not required for the business of the defendants, or any of them. But no sale, lease, or other disposition of a substantial part of defendants' respective distributive systems or such distributive system as an entirety shall be made without submitting the same to the court for the court's investigation and determination as to whether said proposed sale, lease, or other disposition is in accordance with the spirit and purpose of this decree, and without notice of the application for such approval first given to the Attorney General. Nothing herein contained shall be construed to prohibit the defendants or any of them from mortgaging or otherwise creating liens on said distributive system or parts thereof.

Fourth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, in the United States, either directly or indirectly, by themselves or through their officers, directors, agents, or servants engaging in or carrying on, either by concert of action or otherwise, either for domestic trade or for export trade, the manufacturing, jobbing, selling, transporting (except as common carriers), distributing, or otherwise dealing in any of the following products or commodities, except when such products or commodities are purchased, transported, or used (1) as supplies in operating their packing houses, branch houses, or other facilities used by them, or as an incident in the processes of manufacturing soap or packing-house products; (2) in the construction and physical maintenance of their packing houses, branch houses, or other facilities used by them; (3) in the operation of their restaurants, laundries, or other conveni-

ences, primarily for the benefit of their employees; or (4) in combination with meat, to wit:

1. Fresh, canned, dried, or salted fish, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Canned oysters; canned mackerel; bulk mackerel; bulk, canned, and cured herring; canned salmon; canned sardines; canned shrimp; canned tuna fish.

2. Fresh, dried, or canned vegetables, except in combination with meats, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Asparagus, navy beans, lima beans, peas, beets, corn, okra, potatoes, tomatoes, celery, garlic, horse-radish, pumpkins.

3. Fresh, crushed, dried, evaporated, or canned fruits, including therein, but in nowise limiting the foregoing general description, the following, but not including the same when used as an ingredient of mincemeat, to wit:

Ginger, cherries, apple butter, apricots, blackberries, peaches, pineapple, raspberries, currants, figs, gooseberries, oranges, strawberries, apples, prunes, raisins, dates.

4. Confectionery, sirups, soda-fountain supplies and sirups and soft drinks (grape juice is not included in this paragraph 4; see paragraph 14), including therein, but in nowise limiting the foregoing general description, the following, to wit:

Apple cider, cherry juice, Coca Cola, creme de menthe, crushed-nut frappe, ginger ale, green pineapple sirup, lemon extract, marshmallow topping, orange extract, root beer, vanilla extract, vin fiz.

5. Molasses, honey, jams, jellies, and preserves of all kinds.

6. Spices, sauces, condiments, relishes, and sauerkraut, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Catsup, chili sauce, cinnamon, cloves, mustard, mustard seed, olives, oyster cocktail sauce, pepper, pickles, spinace chili, tomato catsup.

7. Coffee, tea, chocolate, and cocoa.

8. Nuts, including therein the following, to wit:

Almonds, pecans, walnuts.

But not including peanuts.

9. Flour, sugar, and rice.

10. Bread, wafers, crackers, biscuits.

11. Cereals, including therein, but in no wise limiting the foregoing general description, the following, to wit:

Grits, oats, hominy, hominy feed, horse feed, brewers' flakes, brewers' grit, brewers' meal, buckwheat, canned hominy, clipped oats, corn grits, ground meal, ground oats, ground corn, cracked corn, crushed white oats, feed barley, feed meal, feed wheat, rolled oats, standard middlings, standard spring bran, spaghetti, vermicelli, macaroni, corn flakes, wheat foods.

12. Grain.

13. Miscellaneous articles, to wit:

Cigars, china, furniture, bluing, starch, fence posts and wire fences, alfalfa meal, babbitt, bar iron, binding and twine, brass castings for heavy ordnance, brick, builders' hardware, bumping posts for railroads, cement, lime, plaster, doors and windows, dried brewers' grains, lath, pitting and fruit-handling machinery, roofing, sand and gravel, shingles, soda fountains or parts thereof, structural steel, tile, waste.

14. Grape juice.

And the corporation defendants, and each of them, be, and they are hereby, further perpetually enjoined and restrained from owning, either directly or indirectly, severally or jointly, by themselves or through their officers, directors, agents, or servants, any capital stock or other interest whatsoever in any corporation, firm, or association, except common carriers, which is in the business, in the United States, of manufacturing, jobbing, selling, transporting, except as common carriers, distributing, or otherwise dealing in any of the above-described products or commodities.

Fifth. That the individual defendants, and each of them, be, and they are hereby, perpetually enjoined and restrained from, in the United States, either directly or indirectly, by themselves or through their agents, servants, or employees, owning voting stock which in the aggregate amounts to 50 per cent or more of the voting stock of any corporation, except common carriers, or any interest in such corporation resulting in a voting power amounting to 50 per cent or more of the total voting power of such corporation, or which interest by any device gives to any such defendant or defendants a voting power of 50 per cent or more in any such corporation, or a half interest or more in any firm or association which corporation, firm, or association may be, in the United States, in the business of manufacturing, jobbing, selling, transporting, distributing, or otherwise dealing in any of the following products or commodities, to wit:

1. Fresh, canned, dried, or salted fish, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Canned oysters, canned mackerel, bulk mackerel, bulk (canned and cured) herring, canned salmon, canned sardines, canned shrimp, canned tuna fish.

2. Fresh, dried, or canned vegetables, except in combination with meats, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Asparagus, Navy beans, lima beans, peas, beets, corn, okra, potatoes, tomatoes, celery, garlic, horseradish, pumpkins.

3. Fresh, crushed, dried, evaporated, or canned fruits, including therein, but in nowise limiting the foregoing general description, the following, but not including the same when used as an ingredient of mincemeat, to wit:

Ginger, cherries, apple butter, apricots, blackberries, peaches, pineapples, raspberries, currants, figs, gooseberries, oranges, strawberries, apples, prunes, raisins, dates.

4. Confectionery, sirups, soda-fountain supplies, and sirups and soft drinks, not including grape juice, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Apple cider, cherry juice Coca Cola, creme de menthe, crushed nut frappe, ginger ale, green pineapple sirup, lemon extract, marshmallow topping, orange extract, root beer, vanilla extract, vin fiz.

5. Molasses, honey, jams, jellies, and preserves of all kinds.

6. Spices, sauces, condiments, relishes, and sauerkraut, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Catsup, chili sauce, cinnamon, cloves, mustard, mustard seed, olives, oyster cocktail sauce, pepper, pickles, spinach, chili, tomato catsup.

7. Coffee, tea, chocolate, and cocoa.

8. Nuts, including therein the following, to wit:

Almonds, pecans, walnuts.

But not including peanuts.

9. Flour, sugar, and rice.

10. Bread, wafers, crackers, biscuits.

And further perpetually enjoining and restraining said individual defendants and each of them from individually or jointly, either directly or indirectly, by themselves or through their agents, servants, or employees, adopting any device or arrangement which by reason of the relation of said individual defendants or any of them to the corporation defendants or any of them would have the purpose or effect of giving to such business of dealing in the articles hereinabove in this paragraph mentioned and described, in which business such individuals or any of them may be substantially interested, an advantage over their competitors similar in purpose or effect to any advantage now enjoyed by any of the corporation defendants through their distributing system.

Sixth. That the defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, in the United States, owning and operating or conducting, either directly or indirectly, severally or jointly, by themselves or through their officers, directors, agents, or servants, any retail meat markets in the United States: *Provided, however,* That nothing contained in this decree shall prohibit said defendants or any of them from continuing to conduct the retail meat markets located at their several plants and maintained by said defendants primarily for the accommodation of their own employees as long as said retail meat markets shall be continued to be operated for that purpose.

Seventh. That the defendants and each of them be, and they are hereby, perpetually enjoined and restrained from owning, directly or indirectly, jointly or severally, by themselves or through their officers, directors, agents, or servants, any capital stock or other interest whatsoever in public cold-storage warehouses in the United States: *Provided, however,* That nothing herein contained shall be construed to prevent the defendants or any of them from owning capital stock or other interests in any corporation, firm, or association owning or operating, or from themselves owning or operating, the public cold-storage warehouses now maintained by the defendants or any of them at stockyards where said defendants or any of them now maintain packing plants, nor to prevent any of said defendants, directly or indirectly, from establishing, owning, maintaining, or leasing, necessary cold-storage facilities or space required in good faith for the storage of commodities in which they or any of them may be interested, nor from renting space in any cold-storage warehouse directly or indirectly owned or leased by any of them to the public whenever such space is not in good faith required or needed by the defendants for their own use, nor from storing products for the public whenever the space used for that purpose is not in good faith required by the defendants for their own use.

Eighth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from engaging in the United States, either directly or indirectly, jointly or severally, by themselves or through their officers, directors, agents, or servants, in the business of buying, collecting, selling, transporting, except as common carriers, distributing or otherwise dealing in fresh milk and cream, and further perpetually enjoining and restraining said defendants and each of them by themselves or through their directors, officers, agents, and servants, from either directly or indirectly owning any capital stock or other interest in any corporation, firm, or association engaged in the business of buying, collecting, selling, transporting (except as common carriers), distributing, or otherwise dealing in fresh milk or cream; provided, however, that nothing herein contained shall be construed as preventing the corporation defendants or their subsidiaries from buying, collecting, and transporting fresh milk and cream to be used by them or any of them in manufacturing condensed or evaporated or powdered milk or oleomargarine or other butter substitutes, or butter, ice cream, cheese, or buttermilk, or to be used as feed or in combination with any commodity not specifically mentioned and described in paragraph 4 hereof; and further provided that nothing herein contained shall be construed as preventing said defendants from selling or otherwise disposing of milk and cream bought or collected for manufacture, when such sale or disposition is necessary to avoid waste.

Ninth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, jointly or severally, by themselves or through their officers, directors, agents, or servants, engaging in, carrying on, or using any illegal trade practices of any nature whatsoever in relation to the conduct of any business in which they or any of them may be engaged.

Tenth. That within 90 days after the entry of this decree such of the defendants as have interests in public stockyard market companies, stockyard terminal railroads, or market newspapers, shall file in this court, for the court's approval, a plan or plans for divesting themselves of all ownership or interest in (1) public stockyard market companies; (2) stockyard terminal railroads; (3) market newspapers; provided, however, that the court may, in the event that it deems such provision necessary in order to enable the defendants to divest themselves of their interests in public stockyard market companies and stockyard terminal railroads, upon reasonable terms, permit the individual defendants, or some of them, to retain an interest by way of stock ownership, or otherwise, in any public stockyard market company or stockyard terminal railroad, or in any corporation organized to take over such public stockyard market companies or stockyard terminal railroads or the stock thereof; but no defendant or defendants shall at any time, either individually or jointly, own a controlling interest in any such stockyards or stockyard terminal railroads. Within such period of time after the entry of this decree and the approval of said plan or plans as the court may determine the defendants shall, in good faith, completely divest themselves of all such ownership or interests in public stockyard market companies, stockyard terminal railroads, and market newspapers. If within the time so fixed the defendants shall not have disposed of said interests ordered by the court to be disposed of, and the court upon application shall determine that the defendants have been unable, despite due diligence, to dispose of the same upon reasonable terms, the court may extend the time during which such ownership, control, or interest may continue until the same can be disposed of.

Eleventh. That immediately upon the entry of this decree the defendants shall in good faith and with due diligence proceed to dispose of their interests in, and shall completely divest themselves (to the extent required by this decree) of, all ownership of or interest in all public cold-storage warehouses and retail meat markets; but in no event shall the defendants, or any of them, make final disposition of any of their interests in such public cold-storage warehouses and retail meat markets without first obtaining the court's approval of such final

disposition. If, within nine months after the entry of this decree, the defendants shall not have finally disposed of their interests in public cold-storage warehouses and retail meat markets, the Attorney General may apply to the court for an order specifying the time within which the defendants shall finally dispose of all said interests.

Twelfth. That immediately upon the entry of this decree the defendants and each of them shall commence to dispose of such commodities owned or handled by them as are described in paragraphs fourth and fifth of this decree and which are to be disposed of by them under this decree, and shall likewise immediately upon the entry of this decree commence to divest themselves of all interests which are to be disposed of by them as and to the extent required by this decree in firms, corporations, and associations, including departments of the business of any of the corporation defendants when any of such departments is sold as a going concern, manufacturing, selling, or otherwise dealing in any of the commodities so mentioned and described in paragraphs fourth and fifth of this decree, and shall continue in good faith to dispose of said commodities required to be disposed of hereunder, and to divest themselves of such interests required to be disposed of hereunder as rapidly as may be consistent with the nature of the business and the seasonal nature of the merchandise involved, and that in any event the defendants and each of them shall completely dispose of said commodities and shall cease to manufacture, job, sell, transport, except as common carriers, distribute, or otherwise deal in the same, and shall completely divest themselves of said interests within two years from the date of the entry of this decree: *Provided, however,* to the end that the provisions of this decree may be complied with, the approval of the court shall be obtained prior to the final disposition of said interests in firms, corporations, or associations manufacturing, selling, or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree. At any time within said two years the Attorney General may apply to the court for an order or orders to compel the defendants, and each of them, to make report to the court as to the progress being made by them in disposing of said commodities and in divesting themselves of said interests.

Thirteenth. That the purchaser or purchasers of the defendants' interests in any stockyard shall, as a part of said purchase, agree with such of the defendants as now maintain packing plants in said stockyards that for a period of at least 10 years after the date when such purchase shall be consummated said purchasers, their successors or assigns, will continue to maintain and efficiently operate such stockyards and each of them, and such of said defendants as now maintain packing plants at any of said stockyards shall agree with said purchasers that during the same period of 10 years said defendants, their successors or assigns, will continue to maintain and operate said packing plants at the points where the same are now located, unless strikes, shortage of supplies, or other causes beyond the control of either the purchasers, the stockyard companies, or said defendants shall prevent the carrying out of said agreement. Performance by either party shall be a condition concurrent to performance by the other.

Fourteenth. That nothing in this decree contained shall be construed to prohibit anything that may be otherwise lawfully done by the defendants, or any of them, in the United States in connection with or for the purpose of export trade or foreign commerce or business of the defendants: *Provided, however,* That nothing in this paragraph contained shall limit the effect of the injunction contained in paragraphs fourth and fifth of this decree.

Fifteenth. That nothing contained in this decree shall be held to preclude the petitioner from proceeding against any or all of the defendants, either civilly or criminally, for any violation of any law in connection with the carrying on by them of the business of buying and selling poultry, butter, eggs, and cheese, or any other business or activity not specifically mentioned in this decree; nor shall anything contained herein prejudice the Government in any such proceeding; nor shall this decree interfere with or prejudice any legal rights, business, or activity of the defendants, or any of them, not prohibited or covered by this decree.

Sixteenth. That for the purpose of (1) enabling the petitioner to ascertain whether the defendants are in good faith carrying out the terms of this decree; and (2) for the purpose of enabling the Attorney General to determine and advise the court whether in any transaction consummated or begun at any time prior to the entry of this decree the defendants, or any of them, have retained and now retain such an interest in or control over any public stockyard market company, stockyard terminal railroad, stockyard market newspaper, stockyard market journal, cold-storage warehouse, retail meat market, or corporation, firm, or association manufacturing, jobbing, selling, distributing, transporting (except as common carriers), or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree, which would constitute a violation of this decree if the retention of such interest or control had been the result of a transaction consummated or begun subsequent to the date of the entry of this decree; and (3) for the further purpose of enabling the Attorney General to determine and advise the court whether any leases, contracts, or arrangements concerning their, or any of their, distributing systems made or entered into by the defendants, or any of them, prior to the entry of this decree, and in force on the day when it shall be entered, are in violation of the terms thereof, then, in the event that the Attorney General in writing notifies the defendant or defendants concerned with respect to such alleged violation, reciting in reasonably specific terms the nature thereof, the corporation defendants are hereby directed to make full and complete discovery to the petitioner with respect thereto, and the corporation defendants are further directed to submit to the Attorney General or to any Assistant Attorney General by him duly authorized all of their books, records, correspondence, or other documents in so far as the same refer to the alleged violation, and to furnish all information concerning the same.

Seventeenth. That all sales, transfers, or other disposition made by any of the defendants since the 1st day of October, 1919, of any of their interests in public stockyard market companies, stockyard terminal railroads, stockyard newspapers or journals, public cold-storage warehouses, and retail meat markets, or incorporations, firms, or associations manufacturing, jobbing, selling, transporting, except as common carriers, distributing or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree, and all leases, contracts, or arrangements or other disposals made by any of the defendants since the 1st of October, 1919, affecting their delivery systems, shall be submitted by the defendants to the court for its investigation and determination as to whether the same were made in accordance with the spirit and purpose of this decree, in the same manner and with the same force and effect as though the said sales, dispositions, leases, contracts, or arrangements had been made subsequent to the entry of this decree.

Eighteenth. That jurisdiction of this cause be, and is hereby, retained by this court for the purpose of taking such other action or adding at the foot of this decree such other relief, if any, as may become necessary or appropriate for the carrying out and enforcement of this decree and for the purpose of entertaining at any time hereafter any application which the parties may make with respect to this decree.

WALTER I. McCOY,
Chief Justice.

FEBRUARY 27, 1920.

—

The defendants, Western Meat Co., Oakland Meat & Packing Co., Nevada Packing Co., and Fred L. Washburn, appear herein generally by Henry Veeder, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in this cause without further notice.

HENRY VEEDER,
Attorney for above-named defendants.

Dated 27th day of February, 1920.

—

The defendants, Wilson & Co., Inc. (N. Y.); Wilson & Co. (N. J.); Wilson & Co., Inc., of Calif. (Nev.); Wilson & Co., Inc., of Louisiana (La.); Wilson & Co., Inc., of Okla. (Oklahoma); South Dakota Provision Co.; Gotham Hotel Supply Co., Inc.; Standard Beef Co.; Stiefel-O'Mara Co., Inc.; Drexel Packing Co.; Albert Lea Packing Co., Inc.; Mississippi Packing Co., Inc.; Morton-Gregson Co.; Paul O. Reymann Co.; Standard Provision Co., Central Products Corporation; Thomas E. Wilson; Arthur Lowenstein; Jacob Moog; Ponce De Leon Skipworth; Arthur L. Smith; James A. Hamilton; George D. Hopkins; Adolph E. Peterson; George H. Cowan; William C. Buethe; Carl F. Burrell; James C. Good, appear herein generally by Jewel P. Lightfoot, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in this cause without further notice.

JEWEL P. LIGHTFOOT,
Attorney for above-named defendants.

Dated Washington, February 27, 1920.

PETITION.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co.; Armour & Co.; Morris & Co.; Wilson & Co., Inc.; and the Cudahy Packing Co., et al., defendants, in equity, No. 37623.

To the honorable judges of the Supreme Court of the District of Columbia, sitting in equity:

The United States of America, by John E. Laskey, its attorney for said district, and by Isidor J. Kresel, John H. Atwood, and Joseph Sapinsky, special assistants to the Attorney General, they being severally duly authorized to act in said capacities by proper lawful authority, acting under the direction of the Attorney General of the United States, brings this proceeding in equity against Swift & Co., a corporation organized under the laws of the State of Illinois; Armour & Co., a corporation organized under the laws of the State of Illinois; Morris & Co., a corporation organized under the laws of the State of Maine; Wilson & Co. (Inc.), a corporation organized under the laws of the State of New York; the Cudahy Packing Co., a corporation organized under the laws of the State of Maine (these corporations are hereinafter referred to as the parent companies), and the following-named corporations and individuals, to wit:

ARMOUR DEFENDANTS.

CORPORATIONS.

Armour & Co., a corporation organized and existing under the laws of the State of New Jersey; Armour & Co., a corporation organized and existing under the laws of the State of Kentucky; Armour & Co., a corporation organized and existing under the laws of the State of Texas; Armour & Co. (Ltd.), a corporation organized and existing under the laws of the State of Louisiana; The Anglo American Provision Co., a corporation organized and existing under the laws of the State of Illinois; The Colorado Packing & Provision Co., a corporation organized and existing under the laws of the State of Colorado; Fowler Packing Co., a corporation organized and existing under the laws of the State of Maine; Hammond Packing Co., a corporation organized and existing under the laws of the State of Illinois; The New York Butchers Dressed Meat Co., a corporation organized and existing under the laws of the State of New York; Atlantic Hotel Supply Co. (Inc.), a corporation organized and existing under the laws of the State of New York.

SWIFT DEFENDANTS.

CORPORATIONS.

Swift & Co., a corporation organized and existing under the laws of the State of West Virginia; Swift & Co. (Inc.), a corporation organized and existing under the laws of the State of Kentucky; Swift & Co. (Ltd.), a corporation organized and existing under the laws of the State of Louisiana; Swift & Co., a corporation organized and existing under the laws of the State of Maine; Swift Beef Co., a corporation organized and existing under the laws of the State of Maine; United Dressed Beef Co. of New York, a corporation organized and existing under the laws of the State of New York; J. J. Harrington & Co. (Inc.), a corporation organized and existing under the laws of the State of New York; Bimbler Co., a corporation organized and existing under the laws of the State of New Jersey; The G. H. Hammond Co., a corporation organized and existing under the laws of the State of Michigan; Omaha Packing Co., a corporation organized and existing under the laws of the State of Kentucky; Plankinton Packing Co., a corporation organized and existing under the laws of the State of Wisconsin; Sturtevant & Haley Beef & Supply Co., a corporation organized and existing under the laws of the State of Massachusetts; E. K. Pond Packing Co., a corporation organized and existing under the laws of the State of Illinois; Van Wagenen & Shickhaus Co., a corporation organized and existing under the laws of the State of New Jersey; Western Packing Co., a corporation organized and existing under the laws of the State of Colorado; Hammond Beef Co., a corporation organized and existing under the laws of the State of Michigan; Omaha Meat Co., a corporation organized and existing under the laws of the State of California; A. Caufield Commission Co., a corporation organized and existing under the laws of the State of New Jersey; H. C. Derby Co., a corporation organized and existing under the laws of the State of New York; Metropolitan Hotel Supply Co., a corporation organized and existing under the laws of the State of Maine; Vermont Supply Co., a corporation organized and existing under the laws of the State of Massachusetts; The Hotchkiss Beef Co., a corporation organized and existing under the laws of the State of New York; F. & C. Crittenden Co., a corporation organized and existing under the laws of the State of New York; George Nye Co., a corporation organized and existing under the laws of the State of Massachusetts; H. L. Handy Co., a corporation organized and existing under the laws of the State of Massachusetts; Swift Coates Co., a corporation organized and existing under the laws of the State of Massachusetts; New England Dressed Meat & Wool Co., a corporation organized and existing under the laws of the State of Maine; North Packing & Provision Co., a corporation organized and existing under the laws of the State of Maine; The Sperry & Barnes Co., a corporation organized and existing under the laws of the State of Connecticut; John P. Squire & Co., a corporation organized and existing under the laws of the State of Maine; John P. Squire & Co. (Inc.), a corporation organized and existing under the laws of the State of Massachusetts; John P. Squire & Co. (Inc.), a corporation organized and existing under the laws of the State of Rhode Island; Springfield Provision Co., a corporation organized and existing under the laws of the State of New Hampshire; White, Pevey & Dexter Co., a corporation organized and existing under the laws of the State of Maine.

MORRIS DEFENDANTS.

CORPORATIONS.

Morris Packing Co., a corporation organized and existing under the laws of the State of Maine; Morris & Co., a corporation organized and existing under the laws of the State of New Jersey; Morris & Co., a corporation organized and existing under the laws of the State of Louisiana; Morris & Co., of Pennsylvania, a corporation organized and existing under the laws of the State of Pennsylvania; Joseph Stern & Sons (Inc.), a corporation organized and existing under the laws of the State of New York; Brooklyn Beef & Provision Co., a corporation organized and existing under the laws of the State of New York; Condit Beef & Provision Co., a corporation organized and existing under the laws of the State of New Jersey; Corwin, Wilde Co., a corporation organized and existing under the laws of the State of Massachusetts; Donnelly & Co. (Inc.), a corporation organized and existing under the laws of the State of Massachusetts; National Hotel Supply Co., a corporation organized and existing under the laws of the State of Illinois; Chamberlain & Co. (Inc.), a corporation organized and existing under the laws of the State of Massachusetts; J. M. Wilson Co., a corporation organized and existing under the laws of the State of Massachusetts; Middletown Beef & Provision Co., a corporation organized and existing under the laws of the State of Massachusetts; Glenn & Anderson Co., a corporation organized and existing under the laws of the State of Illinois.

WILSON DEFENDANTS.

CORPORATIONS.

Wilson & Co., a corporation organized and existing under the laws of the State of New Jersey; Wilson & Co. (Inc.), a corporation organized and existing under the laws of the State of Nevada; Wilson & Co. (Inc.), of Louisiana, a corporation organized and existing under the laws of the State of Louisiana; Wilson & Co. (Inc.), of Oklahoma, a corporation organized and existing under the laws of the State of Oklahoma; South Dakota Provision Co., a corporation organized and existing under the laws of the State of South Dakota; Gotham Hotel Supply Co. (Inc.), a corporation organized and existing under the laws of the State of New York; Standard Beef Co., a corporation organized and existing under the laws of the State of New York; Stiefel-O'Mara Co. (Inc.), a corporation organized and existing under the laws of the State of New York; Drexel Packing Co., a corporation organized and existing under the laws of the State of Illinois; Albert Lea Packing Co. (Inc.), a corporation organized and existing under the laws of the State of Virginia; Mississippi Packing Co. (Inc.), a corporation organized and existing under the laws of the State of Virginia; Morton-Gregson Co., a corporation organized and existing under the laws of the State of Delaware; Paul O. Reymann Co., a corporation organized and existing under the laws of the State of West Virginia; Standard Provision Co., a corporation organized and existing under the laws of the State of New Jersey; Central Products Corporation, a corporation organized and existing under the laws of the State of Virginia.

CUDAHY DEFENDANTS.

CORPORATIONS.

Cudahy Packing Co. of Nebraska, a corporation organized and existing under the laws of the State of Nebraska; Cudahy Packing Co. of Alabama, a corporation organized and existing under the laws of the State of Alabama; Cudahy Packing Co. of Louisiana (Ltd.), a corporation organized and existing under the laws of the State of Louisiana; Nagle Packing Co., a corporation organized and existing under the laws of the State of New Jersey.

OTHER DEFENDANTS.

CORPORATIONS.

Western Meat Co., a corporation organized and existing under the laws of the State of California; Oakland Meat & Packing Co., a corporation organized and existing under the laws of the State of California; Nevada Packing Co., a corporation organized and existing under the laws of the State of Nevada.

These corporations are hereinafter referred to as the subsidiaries defendants.

ARMOUR DEFENDANTS.

INDIVIDUALS.

J. Ogden Armour, Charles W. Armour, A. Watson Armour, Laurence H. Armour, Arthur Meeker, Robert J. Dunham, F. Edson White, George M. Willetts, Frederick W. Croll, George B. Robbins.

SWIFT DEFENDANTS.

INDIVIDUALS.

Louis F. Swift, Edward F. Swift, Charles H. Swift, Gustavus F. Swift, jr., Harold H. Swift, Alden B. Swift, George H. Swift, Laurence A. Carton, Frank S. Hayward, Charles A. Peacock, Wilfred W. Sherman, Wellington Leavitt, John M. Chaplin, William B. Traynor.

MORRIS DEFENDANTS.

INDIVIDUALS.

Edward Morris, Nelson Morris, Louis H. Heymann, Charles M. Macfarlane, Harry A. Timmins.

WILSON DEFENDANTS.

INDIVIDUALS.

Thomas E. Wilson, Arthur Lowenstein, Jacob Moog, Ponce De Leon Skipworth, Arthur L. Smith, James A. Hamilton, George D. Hopkins, Adolph E. Peterson, George H. Cowan, William C. Buethe, Carl F. Burrell, James C. Good.

CUDAHY DEFENDANTS.

INDIVIDUALS.

Edward A. Cudahy, sr., Edward A. Cudahy, jr., Guy C. Shephard, John E. Wagner, Andrew A. Anderson, Emil A. Strauss, Frank E. Wilhelm, George Marples.

OTHER DEFENDANTS.

INDIVIDUALS.

Fred L. Washburn.

These defendants are hereinafter referred to as the individual defendants.

COURT'S JURISDICTION.

The parent companies, either directly or through subsidiaries, are engaged in interstate and foreign commerce in (a) the purchase and slaughter of live stock; (b) the preparation and manufacture of dressed meats and edible by-products of the slaughter; (c) the curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animal; (d) the production and sale of nonedible by-products and of articles in the manufacture of which these nonedible products are largely used; (e) the manufacture, canning, or otherwise preparing for the market, sale, and distribution of food supplies other than meats (these are hereafter referred to as substitutes for meat foods); (f) the manufacture and sale of various other articles commonly purchased and used either by the producer of live stock, the companies transporting the live stock or dressed meats, or the competitors of the parent companies (these are hereinafter referred to as unrelated commodities).

By the unlawful means and methods hereinafter set out and complained of, the parent companies and the subsidiaries, defendants, acting by and through their principal officers, who have been made defendants herein, have attempted to dominate, control, and monopolize a very great proportion of the food supply of the Nation and have thereby built up an unlawful monopoly and control over divers and sundry products and commodities herein referred to, and which are necessary to the life, health, and welfare of the people of the United States. And by the same or similar methods the said parent companies

and the subsidiaries defendants are attempting to increase and extend said monopoly, and are enabled thereby and do artificially control the supply and the price of the food supplies of the Nation.

The Government in instituting this proceeding invokes the general equity powers of this court in addition to the authority conferred upon it and contained in the act of Congress dated July 2, 1890, and entitled "An act to protect trade and commerce against unlawful restraints and monopolies," said act being commonly known as the Sherman antitrust law, and further conferred and contained in acts amendatory thereof and supplemental or additional thereto, and particularly the act known as the Clayton Antitrust Act, dated October 15, 1914, being entitled "An act to supplement existing laws against unlawful restraints and monopolies and for other purposes," which said acts by special provisions give to this court jurisdiction in all such matters as are set out in the following petition.

OBJECT TO BE ATTAINED.

This petition is filed and these proceedings are instituted to put an end to any and all monopolies which the defendants may have created or obtained in the interstate trade or commerce of live stock, meat products, and substitute foods, and to prevent the continuance of unlawful monopolies by the defendants, in the aforesaid trade or commerce in the products and commodities so described, and to deprive said defendants of certain instrumentalities, facilities, and advantages by which they have been enabled heretofore to more effectively perfect their attempts to monopolize; to compel the defendants to desist from dealing in certain of the substitute foods and certain of the unrelated commodities; to limit in the manner hereinafter set forth the interests which the individual defendants may have in corporations handling certain substitute foods and unrelated commodities; and to dissolve any and all contracts, combinations, and conspiracies in restraint of trade or commerce between the several States, which contracts, combinations, or conspiracies are more fully hereinafter described, and to prevent said defendants from maintaining said contracts, combinations, or conspiracies with each other, or from entering into further contracts, combinations, or conspiracies with each other or with other persons.

THE NATURE OF THE BUSINESS AND METHOD BY WHICH IT IS CONDUCTED.

The principal business of each of the parent companies, conducted by each company directly or through its subsidiaries, is the slaughter of live stock, consisting of cattle, hogs, sheep, and calves, the dressing of the carcasses, and the distribution of the dressed meat in interstate commerce through various means by which the dressed meat reaches the retail butchers and is by the retail butchers sold to the consumers.

Each of these concerns is the successor or natural outgrowth of concerns of many years' standing. In their inception these concerns devoted themselves exclusively to the slaughter of live stock, the dressing of the carcass, and the sale of the dressed meat to retail butchers or consumers. The invention of what are known as route cars and refrigerator cars, by means of which the dressed meats might be hauled long distances and preserved for a considerable length of time, free from decay, enabled the parent companies to widely extend their market so as to make it nation-wide, and further enabled them to slaughter the live stock near the source of supply.

As the demand for live stock grew in volume the institution known as the stockyard was evolved.

THE STOCKYARDS.

The stockyard was and is in theory a public market place to which all who wish to either buy or sell may have free access and right to trade. The stockyards afford to the cattle raiser the opportunity to dispose of his live stock for an immediate cash price. Contiguous to such stockyards commission men, dealing exclusively in the sale of live stock, locate themselves. These commission men attend to the care of the live stock upon its arrival, effect the sale of the stock so consigned, attend to its weighing, collect the proceeds of the sale and remit to the consignor after deducting customary commission.

Stockyards render certain services to the shipper, for which they make charge, to wit, yardage (furnishing the facilities and performing the services of placing and keeping the animals in pens and watering them), feeding, and selling food, weighing, dipping, bedding cars, and often loading and reloading.

The yardage charges are ordinarily based upon an arbitrary price per head for each kind of stock, but in some instances they are based upon the hundredweight. The charge for feed is fixed by the stockyards and includes the services rendered in feeding. The amount of the charges made or to be made for the other items of services or materials furnished is also fixed by the stockyards or those who are in control of the yards.

In connection with each stockyard there is need for certain facilities and conveniences for the benefit of either the shipper or the buyer of the live stock. The stockyards, by reason of its dominating position, control these conveniences and facilities.

CONVENIENCES AND FACILITIES CONTROLLED BY STOCKYARDS.

PACKING-HOUSE SITES.

In furtherance of the tendency to centralize the market, it became of advantage to establish the slaughterhouses and packing plants either in, or immediately adjacent to, the stockyards. The stockyard companies generally own or control all the available land within the yards, and at most of the important yards the land surrounding the yards is owned by companies controlled by the stockyard company or its principal stockholders. New packing companies, as a rule, can secure desirable packing sites only from the stockyard companies or from these land-development companies. The owners of stockyard companies are, therefore, in a position to determine what packing companies and how many plants shall be established at the yards.

SITES FOR STOCKYARD BANKS AND CATTLE LOAN COMPANIES.

The cattle raiser is in many instances dependent upon banks or loan companies to finance him in the rearing of his live stock and until such times as the stock shall have been sold. From the nature of the business it is a great advantage to these banks to locate in or near stockyards. It therefore lies within the power of the owner of the stockyard companies to designate how many and which banks or loan companies may establish themselves at the yards.

RENDERING PLANTS.

While in transit or after reaching the yards live stock often die, either from disease or accident. The stockyard companies, by virtue of their agreement with the commission men, are permitted to determine who shall buy the dead animals and the price which shall be paid therefor. This monopoly power has generally resulted in the establishment of only one dead rendering plant at each of the important yards.

COMMISSION MEN'S OFFICE SPACE.

The commission men and traders at the stockyards must have offices in or near the yards. They can get such accommodations only from renting or leasing from the stockyard companies. For the purpose of furnishing such office space each yard has a large building or series of buildings in which offices are leased to the commission men. The commission men are allotted pens, and inasmuch as it is of great advantage to commission men to be able to dispose of their customers' live stock at the earliest possible hour, location of pens most favorable to the prospective buyer is of great advantage.

TERMINAL RAILWAYS.

The centralization of the market at one site and the resultant growth of the packing houses in or about the market of necessity require terminal railways to facilitate the switching of cars from the railroads to the stockyards, from the yards to the packing plants, and from the packing plants to the railroads. These terminal or stockyard railways are usually owned by the stockyard companies or by those in control of the stockyard companies. Control of these railways carries with it the power to grant or withhold sidings, spurs, or other accommodations which may be required by the packing house, and those in control of said terminal railways are thereby in a position to discriminate against other packers or independent buyers by practicing delay in loading the animals bought by said packers or independent buyers and in switching the loaded cars to the connecting lines.

MARKET PAPERS AND JOURNALS.

In addition to having a free market in which to dispose of his live stock, the cattle raiser requires full, accurate, and unbiased reports of the demand for live stock, the prices prevailing, and the character and kind of stock required, together with such other information as to market or trade conditions. The cattle raiser, of necessity, is located at places remote from the market, he rarely accompanies his shipment to the market, and by reason of the cost of shipment and of feeding in transit, and while being held for sale, it is imperative that he dispose of his stock when once he has shipped. For his guidance the cattle raiser relies largely upon the trade papers and journals. Control of these papers and journals furnishes a means whereby the flow of stock to the market may be increased or decreased to the benefit of the slaughterer.

It is, therefore, evident that control of the stockyards and of the other facilities appertaining to the stockyards carries with it:

(a) A profit derived from the meat industry levied upon it and collected before the animal is slaughtered, all of which profit, however, evidences itself in the ultimate cost which the consuming public must pay for the dressed meat.

(b) A potential means of favoritism in dealing with commission men and of influence over them, a power to grant monopolies—carrying with it consequent profit—to banks, cattle-loan institutions, rendering plants, to concerns supplying food for live stock, and to others.

(c) A means to prevent the establishment of new packing plants and to hamper the growth of those in existence.

(d) A means to prevent the development and limit the number of new markets and to centralize and restrict business to the stockyards so controlled.

(e) Peculiar and exclusive access to information concerning the receipts and sale of live stock, its disposition, and the dissemination of information to the producer.

BRANCH HOUSES, ROUTE CARS, AUTOTRUCKS, AND COLD-STORAGE WAREHOUSES.

BRANCH HOUSES.

The primary means adopted by the parent companies in the distribution of their dressed meats are the branch houses. These houses are storage stations located in the cities and larger towns. They are equipped with facilities for cooling and preserving the meats, and each is under the charge of a branch-house manager, under whose direction the branch-house sales organization sells to retail and wholesale butchers, to purveyors, hotels, restaurants, and other similar large consumers. The parent companies maintain 1,120 branch houses in various large towns and cities throughout the United States, as against which all other interstate slaughterers, independent of the parent companies, maintain only 139.

ROUTE CARS.

The route cars supplement the branch houses. They serve the purpose of reaching these small communities where the trade is not sufficiently large to justify investment in a branch house. These route cars travel over what are known as car routes. Orders are taken in advance, and the route cars reaching specified towns on specified dates serve the requirements of the smaller communities. The starting point for the route cars is usually the packing plant, though in some instances the route car starts from a branch house. The parent companies operated as of June, 1918, 1,297 route cars, which constituted 90 per cent of the total number operated in the packing industry. Said route cars reach and serve dealers in 37,176 towns and operate in 37 of the States of the United States.

AUTOTRUCKS.

This is a further development of the route-car plan. It had its origin in the development of the motor truck, and because of its freedom from railway limitations and schedules it is enabled to reach a wider radius and smaller towns than is the route car.

The autotrucks have been adopted primarily by Armour & Co. as a supplement to the car routes. These autotrucks reach and serve a total of 20,836 towns throughout the United States.

COLD-STORAGE WAREHOUSES.

The cold-sforage warehouses were in the beginning adopted as an instrumentality for enabling the parent companies to extend the volume of their slaughter of live stock and sale of dressed meat. In the first instance they were used for chilling meat in connection with the packing business. Then they were constructed in connection with the branch houses, so that they might be used for storing and holding the finished meats until they were sold. Later they were either built or acquired in the large eastern seaboard cities for long-time storage and for storing for export. As will be more fully set forth hereafter in discussing the control of substitute foods, these storage warehouses were later employed to store nonmeat-food products. Later control was acquired over public storage warehouses where surplus space was leased or let to others. Later it will be pointed out how control of this public-storage warehouse was employed to aid in control of the price of meats and substitute foods.

THE PARENT COMPANIES' ACQUISITION OF ABOVE-DESCRIBED FACILITIES AND THEIR PURPOSE IN DOING SO.

The parent companies and their controlling heads, appreciating the advantages which were to be gained by controlling the stockyards and the facilities pertaining thereto, the terminal railways and market papers and trade journals, and realizing that the requisition of such instrumentalities might thus enable them to obtain a primary profit not only out of the sale of live stock purchased and slaughtered by them but also on that purchased and slaughtered by their competitors, and realizing the opportunities thereby to repress and discourage the development of independent packers and slaughterhouses and to control the shipments of meat to the various markets, set about the acquisition of the various stockyards and the appurtenances and privileges incidental thereto. This in many instances was done by a concert of action and pursuant to a common understanding. In most instances the acquisition of control of the aforesaid stockyards by any one or more of the parent companies was acquiesced in by the others and in all instances the ownership or control of stockyards by other packers or by any one in fact other than the parent companies or one of their members or their controlling heads was discouraged and opposed.

In pursuance of a common purpose, plan, and design, outside investors and independent packers have gradually been forced out as dominating factors both in the ownership and management of most of the important stockyards and have been replaced by the parent companies or their representatives. This acquisition has been accomplished by various methods: In the earlier years by exacting stock donations under threats of moving away their packing plants; later by cash subscriptions for stock, generally below par; and in other instances by voluntary reorganization of stockyard companies in order that the parent companies and their controlling heads might gain a controlling or dominating power in the yards and thus be induced to continue to maintain their packing plants therein. By these various means the parent companies directly, or indirectly through their controlling heads, have been enabled to obtain control of substantially all of the large stockyards of the country. They now have, either jointly or separately, a controlling interest in 22 of the 50 market stockyards in the United States.

The parent companies have availed themselves of the control so acquired by them in the stockyards aforesaid to elect the officers and directors of said stockyards and to dominate and control the policies thereof. They have granted exclusive privileges, such as the right to purchase dead animals, the right to furnish supplies and facilities and the location of cattle banks and cattle loan companies, to concerns and corporations in which they or some of them or individuals who are stockholders in said parent companies hold the controlling stock, and they have otherwise, acting in concert, employed the powers and privileges more specifically set forth and discussed under the heading, "Nature of the business and method by which it is conducted"; all of which has been done with the intent and purpose of, and has had the effect of, discouraging and suppressing the establishment of independent packing establishments and dwarfing the growth of such independent packing companies as might then be in existence, and to enable said parent companies, their subsidiaries, or the individuals who own and control the parent companies and their subsidiaries, to obtain vast profits from the management of the stockyard and the granting of the privileges appurtenant thereto, which profits are realized not only upon the live stock purchased by the packers but upon that purchased by their competitors. These methods have thus enabled them to enjoy and realize such profits without the same appearing or being disclosed in the profits of the parent companies; they have also furthered the attempt of said parent companies to monopolize the meat industry of the country and to artificially control the ultimate price which the consumer pays for meat and meat products.

CONTRACTS IN RESTRAINT OF TRADE.

The parent companies have entered into certain unlawful contracts and combinations to restrain trade and commerce and to artificially prevent between themselves competition in the prices for which meat and meat products are sold.

The most important of said contracts and agreements is what is known as the percentage purchase arrangement. This arrangement, though applied primarily in the purchase of live stock, had as its ultimate object the elimination of competition, not only in the purchase of live stock, but also in the sale of dressed meats. It is a well-established commercial principle that a limitation upon the source of supply and the consequent limitation upon volume of business are the easiest means of removing all incentive to reduce prices.

The simplest way to limit the volume of dressed meat is to limit the purchase of live stock.

Recognizing these principles, the parent companies thereupon agreed upon and thereafter recognized between themselves certain percentages or proportions to which they deemed that each company was entitled, and they thereafter so gauged their purchases that annually their respective purchases approximated actually or substantially the percentages so agree upon.

As a means of perfecting this arrangement divers percentages, varying at different stockyards, were agreed upon, and understandings were had that certain of the parent companies should buy in certain yards or should refrain from buying in certain stockyards. In order to prevent such plans from being disarranged by outsiders, agreements were made with such outsiders by which purchases between the parent companies and the independents were effected upon a percentage basis similar to the above.

Means were adopted and by virtue of the parent companies' control over many of the stockyards were easily executed by which sales to outsiders or independents were controlled by the parent companies.

Control over the stockyards, the stockyards loan institutions, the terminal railways, and other privileges and perquisites has discouraged any opposition by either commission men or independent packers.

CONTROL OF SUBSTITUTE FOODS.

Having eliminated competition in the meat products, the defendants next took cognizance of the competition which might be expected from what we here refer to as substitute foods. Their experience had taught them that if meat prices advanced out of proportion to that of other substitute foods the consuming public manifested a tendency to turn to such substitutes. To prevent this the defendants set about controlling the Nation's supplies of fish, vegetables, either fresh or canned, fruits, cereals, milk, poultry, butter, eggs, cheese, and other substitute foods ordinarily handled by wholesale grocers or produce dealers. To accomplish this purpose the defendants availed themselves of the advantages afforded by the refrigerator cars, route cars, auto trucks, branch houses, and storage warehouses owned or controlled by them. These facilities intended primarily for the sale of meats were employed with comparatively no increase of overhead in the distribution of the substitute foods and unrelated commodities. The defendants were enabled thereby to reach remote spots. This advantage was also employed temporarily to fix prices so low as to gradually eliminate competition.

These attempts to monopolize have resulted in complete control in many of the substitute food lines. They have made substantial headway in others. The control is extensively and rapidly increasing. New fields are gradually being invaded, and unless prevented by a decree of this court the defendants will within the compass of a few years control the quantity and price of each article of food found on the American table.

EXTENT TO WHICH THE MONOPOLISTIC ATTEMPTS HAVE BEEN SUCCESSFUL.

FINANCIAL GROWTH, PRESENT NET WORTH, AND VOLUME OF BUSINESS.

In the 15 years from 1904 to 1919, Swift & Co., Armour & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co., according to their financial reports, grew from a net worth of approximately $92,000,000 to a net worth of approximately $479,000,000, and in this same period they paid in cash dividends $105,000,000. Only $80,000,000 of their increased worth represented new capital. Though always asserting a very low rate of profit on sales, the five parent companies have grown so rapidly that their combined net profits for 1917 have equaled nearly the amount of their total net worth in 1904. Sales in 15 years have increased until for the fiscal year 1918 they reached the vast sum of $3,200,000,000. This was realized from meats, substitute foods, and unrelated lines, as hereinabove set forth. In stating these figures account has been taken only of the profits and sales of the parent companies and subsidiaries included by them upon their books. No account has been taken of the many corporations which are owned or controlled by the same family or financial interest as own or control the parent companies.

In addition to these profits, there have been other vast profits, difficult of ascertainment, realized by the individuals by virtue of either their personal control of other packing houses and slaughtering companies or their interests in stockyards, terminal railways, rendering companies, cattle-loan institutions and banks, and other corporations, all of which corporations have their inception and depend for their prosperity upon advantages or privileges growing out of the interlocking control of the stockyard and stockyard appurtenances.

NUMBER OF CONTROLLED COMPANIES.

The parent companies or the individual defendants and their families maintain and control 574 corporations or concerns, including 131 trade names. They have a significant minority stock interest in 95 others and an interest of unknown extent in an additional 93. Thus the total number of concerns in which they have control or interest is some 762. In the years that are past the parent companies have acquired or organized many other concerns and have maintained them so long as they were useful for their purposes. When no longer useful those concerns, so acquired or organized, have been dissolved and their businesses have been merged into that of the parent companies or that of other subsidiaries. Such dissolved corporations and concerns are omitted in the above compilation except in those instances where their names have been continued as trade names. The total of 762 above stated, therefore, falls far short of representing the number of concerns that corporate and individual defendants have acquired or have organized in furtherance of the general scheme and plan of action already explained.

EXTENT OF INDUSTRIAL CONTROL IN THE SUBSTITUTE FOODS AND UNRELATED COMMODITIES.

It would be an enormous undertaking to determine the degree of control exercised by the defendants in all of these various industries. Enough has been ascertained to indicate that the growth has been rapid and that if permitted to continue unchecked in a matter of a few years the control will be complete.

In 1916 the business of Armour & Co. in canned fish, vegetables, and sundries, canned and dried fruits, fruit preserves (soda-fountain supplies), and grape juice amounted to $6,396,036.73; in 1918, two years later, the same company's volume of business in these items was $39,820,000, over a sixfold increase. While part of this increase of business may be attributed to the increase of population and the consequent increase in consumption, the greater part thereof was acquired at the expense of competitors. Of the corporations which have been acquired by the parent companies in recent years, a large number are concerns manufacturing or selling these substitute foods or unrelated commodities. This fact, together with the increased activities of the parent organizations themselves in these lines, indicates a well-defined purpose on their part to secure control of the market for meat-substitute foods. In addition to the companies whose control has been acquired by outright purchase, the parent companies have, in a large number of instances, contracted for the exclusive output of many other companies engaged in the production of the substitute foods and the unrelated commodities. The outputs of these plants are marketed by the parent companies or by their subsidiaries through the distribution facilities of the parent companies. In this fashion the parent companies control the output of these concerns and the market price of their products as completely as though they themselves owned the producing companies.

INDIVIDUAL DEFENDANTS.

The individual defendants are either officers, directors, agents, or employees of the parent companies or their subsidiaries or large stockholders of parent companies and subsidiaries who are otherwise affiliated in commercial operations with the active heads of the parent companies. These individual defendants are in their individual capacity financially interested to a great extent in the stockyards, terminal railways, cattle loan banks, rendering companies, and other institutions interrelated with the stockyards. They, or some of them, control the corporations dealing in the substitute foods and the unrelated commodities. In many instances, in addition to their individual holdings, they hold stock in these corporations for the benefit of the parent companies. The control by these individuals of the facilities or instrumentalities of the meat business and their interest in concerns dealing in the substitute foods and the unrelated commodities enable the parent companies to carry out the purpose of the combinations hereinabove described, and are now and will continue to be a sinister and ever-present means of furthering the attempt to monopolize and perfect it to such a degree that the parent companies or their subsidiaries will have complete control not only of meat products but of all substitute foods consumed in the United States.

SUBSIDIARIES DEFENDANTS.

These comprise many, but not all, of the subsidiaries owned or controlled by the parent companies. Only these subsidiaries, which are

substantially 100 per cent parent-company owned and which are engaged either in the slaughtering, packing, or selling of meats, have been made parties defendants. It is the plan and scheme of this petition and the prayer for relief that the corporations which in themselves own the facilities more specifically described above or deal in the substitute foods and unrelated commodities shall not be made parties defendants in the first instance or until it appears that they are necessary parties defendants, but that the parent companies, the subsidiaries defendants, and the individuals should be compelled to divest themselves of all interest in or connection with the subsidiaries owning the facilities or dealing in the substitute foods or commodities referred to.

PRAYER.

Wherefore, petitioner prays:

I. That the defendants, and each of them, be forever enjoined from continuing any contract, combination, or conspiracy in restraint of trade or commerce in the purchase of live stock, or the purchase, sale, or distribution of dressed meats or other products or commodities now handled by them, or any of them, among the several States or foreign nations, which contract, combination, or conspiracy may now exist between them, or any two or more of them, or from doing any act pursuant to or in furtherance of any such contract, combination, or conspiracy, and that they be enjoined from entering into any other or further contract, combination, or conspiracy, either among themselves or among any two or more of them, or with any other person or persons whatsoever, in restraint of trade or commerce between the several States and foreign nations.

II. That they, and each of them, be enjoined and forever restrained from monopolizing, or attempting to monopolize, or conspiring to monopolize, the trade or commerce between the several States or with foreign States in the purchase, sale, or distribution of live stock or the commodities aforesaid.

III. That the defendants, and each of them, be required to divest themselves to such extent and upon such terms and conditions as the court may deem proper from such interest in or control over public cold-storage warehouse, retail meat markets, stockyards, terminal railways, market or trade journals, or such other facilities as are connected with or are appurtenances to the stockyards, in such instances as the court may deem that such instrumentalities constitute a means of facilitating the formation or continuance of monopolies in the purchase of live stock or the sale of the commodities aforesaid.

IV. That the corporation defendants, and each of them, be perpetually enjoined from permitting their refrigerator cars, route cars, auto trucks, or branch houses, or other distributive facilities to be used for the distribution or sale of commodities of the character and kind hereinbefore generally described as substitute foods and unrelated commodities in such instances and to such extent as the court may deem necessary for the purpose of preventing the aforesaid defendants from acquiring a monopolistic control over the trade or commerce in such commodities, or a control which may enable them to restrain the trade or commerce or artificially affect the price of any commodities in which the aforesaid defendants now deal.

V. That the defendants and each of them be required to divest themselves of all stockholdings or other interests in any corporation, partnership, or association now dealing in any of the food substitutes or unrelated commodities hereinbefore more specifically described, and that wherever said defendants own, operate, or control a department buying, selling, or otherwise distributing substitute foods, unrelated commodities, or any of them, that they be required to discontinue the aforesaid department, and that the defendants and each of them be restrained and perpetually enjoined from hereafter acquiring any stockholdings or interests of the character hereinbefore described, in any corporation dealing exclusively or partially in the said substitute foods or commodities hereinbefore referred to, or from themselves engaging in such business, either directly or through a department.

VI. That the defendants and each and every one of them be perpetually enjoined from indulging in any unlawful practice or committing any act of unfair competition or any other act with the purpose of or which may have the effect of unduly restraining trade and commerce, or which may be indulged in or done with the purpose or effect of monopolizing said trade or commerce in the commodities now manufactured, bought, sold, or otherwise dealt in by the defendants or any one of them.

VII. That your petitioner be granted such other and further relief as the nature of the case may require and the court may deem just and proper in the premises.

To the end, therefore, that the United States may obtain the relief to which it is justly entitled in the premises, may it please your honors to grant writs of subpœna directed to each and every one of said defendants, commanding them and each of them to appear herein and answer, but not under oath (answers under oath being hereby expressly waived), the allegations contained in the foregoing petition, and to abide by and perform such order or decree as the court may make in the premises, and upon final hearing hereof to permanently enjoin each of the defendants as hereinbefore prayed.

Respectfully submitted.

JOHN E. LASKEY,
United States Attorney.

A. MITCHELL PALMER,
Attorney General.
ISIDOR J. KRESEL,
JOHN H. ATWOOD,
JOSEPH SAPINSKY,
Special Assistants to the Attorney General.

ANSWERS.

ANSWER OF SWIFT & CO. AND OTHERS.

In the Supreme Court of the District of Columbia.

United States of America *v.* Swift & Co. and others. In Equity, No. 37623.

The joint and several answer of the following-named defendants to the bill of complaint filed herein:

Corporations organized under laws of—

Swift & Co., Illinois; Swift & Co., West Virginia; Swift & Co. (Inc.), Kentucky; Swift & Co. (Ltd.), Louisiana; Swift & Co., Maine; Swift Beef Co., Maine; United Dressed Beef Co. of New York, New York; J. J. Harrington & Co. (Inc.), New York; Bimbler Co., New Jersey; The G. H. Hammond Co., Michigan; Omaha Packing Co., Kentucky; Plankinton Packing Co., Wisconsin; Sturtevant & Haley Beef & Supply Co., Massachusetts; E. K. Pond Packing Co., Illinois; Van Wagenen & Schickhaus Co., New Jersey; Hammond Beef Co., Michigan; Omaha Meat Co., California; A. Canfield Commission Co., New Jersey; H. C. Derby Co., New York; Metropolitan Hotel Supply Co., Maine; Vermont Supply Co., Massachusetts; The Hotchkiss Beef Co., New York; Western Packing Co., Colorado.

INDIVIDUALS.

Louis F. Swift, Edward F. Swift, Charles H. Swift, Gustavus F. Swift, jr., Harold H. Swift, Aiden B. Swift, George H. Swift, Laurence A. Carton, Frank S. Hayward, Charles A. Peacock, Wilfred W. Sherman, Wellington Leavitt, John M. Chaplin, William B. Traynor.

These defendants now and at all times hereafter saving unto themselves all and all manner of benefits and advantages of exception which can or may be had or taken to the many errors, uncertainties, imperfections, and insufficiencies in the complainants' said bill of complaint contained, for answer thereto or to so much and such parts thereof as these defendants are advised it is material or necessary for them to make answer unto, answering say:

"COURT'S JURISDICTION."

These defendants admit that Swift & Co. referred to in said bill of complaint as a parent company, either directly or through subsidiaries is engaged in—

(a) The purchase and slaughter of live stock.

(b) The preparation and manufacture of dressed meat and by-products of the slaughtered live stock.

(c) The curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animals.

(d) The production and sale of nonedible by-products and of articles in the manufacture of which these nonedible products are largely used.

(e) The manufacture, canning, or otherwise preparing for the market, sale, and distribution of certain food supplies other than meats.

(f) The manufacture and sale of various other articles commonly purchased and used either by the producer of live stock, the companies transporting the live stock or dressed meats, or the competitors of the parent companies.

But these defendants allege that the business and transactions in which said Swift & Co. is alleged in the bill of complaint to be engaged are not interstate or foreign commerce, and no facts are alleged in the bill of complaint which constitute interstate or foreign commerce.

These defendants deny that the various other articles described in said subdivision "(f)" as manufactured and sold by said Swift & Co., either directly or through subsidiaries, are articles or commodities unrelated to the business of said Swift & Co. as is impliedly charged in the bill of complaint.

These defendants deny that they or any of them have made any contract or in any manner or by any act, method, or means have engaged in or are or have been a party to any combination in the form of a trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign nations.

These defendants deny that they or any of them in any manner or by any act, method, or means have monopolized or attempted to monopolize, or have combined or conspired with any other person, persons, firm, or corporation to monopolize any part of the trade or commerce among the several States or with foreign nations.

These defendants deny that Swift & Co., one of the "parent companies," referred to in the bill of complaint, and its subsidiaries, together with the other so-called "parent companies" and their subsidiaries, or otherwise, acting by and through their principal officers or otherwise, have attempted to dominate, control, and monopolize a very great proportion of the food supply of the Nation and have thereby built up an unlawful monopoly and control over divers and sundry products and commodities, referred to in the bill of complaint, as charged therein.

These defendants deny that said Swift & Co. and its subsidiaries, together with the other so-called "parent companies" and their subsidiaries, or otherwise, are attempting to increase and extend said alleged monopoly of the products and commodities referred to in the bill of complaint, as charged therein; and these defendants deny that the said parent companies and their subsidiaries artificially control the supply and price of the food supplies of the Nation, as charged in the bill of complaint.

"OBJECT TO BE ATTAINED."

These defendants deny that they or any of them have created or obtained any monopoly in the interstate trade or commerce of live stock, meat products, and substitute foods, as charged in the bill of complaint; and these defendants deny that any monopoly by the defendants named in the bill of complaint exists, as is charged in the bill of complaint. These defendants deny that there has been or is in existence, as charged in the bill of complaint, any contract, combination, or conspiracy in restraint of trade or commerce among the several States.

On the contrary, these defendants allege that said Swift & Co. and its subsidiaries, and as they are informed and believe, and therefore allege, that each parent company and its subsidiaries described in said bill of complaint are in actual and keen competition with each and every other parent company and its subsidiaries, so that the extent to which these defendants may dominate, control, or monopolize the food supply of the Nation depends upon the volume of business done by said Swift & Co. and its subsidiaries compared to the total volume of business done by all engaged in supplying the food supply of the Nation.

These defendants allege that said Swift & Co. and its subsidiaries handle only approximately 12 per cent of the total meat supply of the country and only approximately 22 per cent of the output of meats and meat products of the numerous plants engaged in the meat-packing business which ship meat in interstate commerce, and allege that said Swift & Co. and its subsidiaries likewise handle only approximately 6 per cent of the total quantity of butter, eggs, and poultry which enters trade channels in the United States; and only approximately 15 per cent of all cheese sold in the United States; and only approximately 20 per cent of the total production of oleomargarine in the United States; and less than 15 per cent of the total quantity of lard substitutes sold in the United States; and less than 5 per cent of the total quantity of canned fruits and canned vegetables sold in the United States; and less than 15 per cent of the output of hides in the United States; and these defendants allege that the volume of business thus handled by said Swift & Co. and its subsidiaries is too small a part of the total volume of business in said respective lines of business to even suggest the possibility that Swift & Co. could dominate, control, or monopolize any or all of such lines of business, or could control or manipulate the prices charged and received by it in the sale of commodities in said business.

These defendants allege that even if the five parent companies mentioned in the bill of complaint and their respective subsidiaries acted in

agreement or combination (which these defendants deny), the business of said five parent companies and their subsidiaries would not and could not dominate, control, or monopolize the food supplies of the Nation, but, on the contrary, would be less than 40 per cent of the meat supply of the United States; and less than 15 to 20 per cent of the quantity of butter, eggs, and poultry which enters trade channels in the United States; and only about 3 per cent of the total sale of grocery products at wholesale in the United States; and not more than 45 per cent of the output of hides in the United States; and not more than 16 to 17 per cent of the cattle, calf, and sheep leather output of the United States.

These defendants allege that even if the five parent companies in said bill described acted together by agreement or combination (which these defendants deny), said companies so acting together would not and could not dominate, control, and monopolize said respective businesses or the food supplies of the Nation, nor could said five parent companies control or manipulate the prices of commodities sold by them, respectively; and therefore these defendants allege that it is obvious that there is and can be no danger whatsoever that "within the compass of a few years" the packers will "control the quantity and price of each article of food found on the American table," as charged in the bill of complaint.

These defendants allege that if any one or all of said defendants dominated, controlled, or monopolized a very great proportion of the food supplies of the Nation, such domination, control, or monopoly would necessarily appear in the profits made by such defendant or defendants upon the sale of their products. These defendants deny that such domination, control, or monopoly exists, and allege that said Swift & Co. is not a party to any such domination, control, or monopoly, and alleges that the profit of said Swift & Co. from all sources for the fiscal year 1919 was only 1½ cents on each dollar of sales and averaged only approximately one-fourth of 1 cent on each pound of all products of every description sold, and that such profit is so small as to have practically no effect on prices charged by Swift & Co. and its subsidiaries for their products; and, further, that said 1½ cents on each dollar of sales includes the profits received by said Swift & Co. and by all its subsidiaries upon all products sold by them, including meat products and by-products of every description. These defendants allege that neither these defendants nor any of them would be satisfied with such a nominal profit upon their business if they had the power through domination, control, or monopolization of trade to obtain a reasonable profit upon the sale of their products.

"THE NATURE OF THE BUSINESS AND METHOD BY WHICH IT IS CONDUCTED."

These defendants admit that the principal business of said Swift & Co., directly or through its subsidiaries, is the slaughter of live stock, the dressing of the carcasses thereof, and the sale of the dressed meat and of the by-products resulting from the slaughter of live stock, but these defendants deny that said business as described in the bill of complaint is interstate commerce.

These defendants admit that the invention of the refrigerator car made it possible to slaughter live stock and prepare the fresh meat thereof for market at or near the great sources of supply in the West and to preserve the meat in transit to the consuming public in the East, and these defendants allege that great losses from shrinkage in weight of, injury to, and death of the live stock in transit were thereby saved, which losses had theretofore been an incident in the shipment of the live animals; and further allege that the invention of the refrigerator car, by preventing such losses and by preventing other losses, such as bruises to the hides of animals shipped long distances, which materially reduce the value of such hides when cured, revolutionized the live-stock and fresh-meat business of the country, developed the live-stock industry, and cheapened the cost of meats and animal by-products to the consumer, and was therefore of incalculable benefit to the public.

These defendants deny that they have any exclusive right to or monopoly over refrigerator cars, which fact may be inferred from the allegations in the bill of complaint. These defendants allege that any and all who desire to do so may secure, own, and furnish such refrigerator cars to the railroads for the purpose of carrying their products under the same terms, conditions, regulations, and tariffs of the railroads that the railroads require of these defendants.

"THE STOCKYARDS."

These defendants admit that stockyards are public market places, to which all who wish may have free access and right to trade. These defendants allege that the stockyard companies do not buy or sell live stock at the stockyards or interfere with or affect in any way the trading between the live-stock raisers or their agents, on the one hand, and the buyers on the other.

These defendants allege that the defendant corporations or some of them, by purchasing live stock shipped to the stockyards adjacent to their respective packing plants, have afforded and do afford the opportunity to the cattle raiser to dispose of his live stock for an immediate cash price at any and all times, in times of glut as well as in times of scarcity, and said defendants have by this means established and developed such stockyards and encouraged the growing of live stock.

These defendants allege that they have likewise improved and made attractive to live-stock raisers the stockyards in which they have been interested by promptly furnishing at great expense all facilities and conveniences necessary or suitable to the receiving, caring for, and handling of live stock, and have thus developed and encouraged the growing of live stock.

"CONVENIENCES AND FACILITIES CONTROLLED BY STOCKYARDS."

"PACKING-HOUSE SITES."

These defendants admit that as to all stockyards in which they are interested the stockyard companies generally own all the available land within the yards. These defendants deny that at any stockyards in which they are interested all the land surrounding the yards is owned by companies controlled by the stockyard company or its principal stockholders. These defendants allege that in many instances stockyard companies or companies controlled by the stockyard company or its principal stockholders have bought some land adjacent to the yards for the purpose of providing for the growth of the yards and for the establishment of additional packing plants at said yards whenever such opportunity offered. These defendants deny that new packing companies, as a rule, can secure desirable packing sites only from the stockyard companies or from the companies owned or controlled by said stockyard companies or their principal stockholders; and these defendants deny that stockyard companies, as a rule, are in a position to determine what packing companies and how many plants shall be established at the various stockyards, as charged in the bill of complaint.

These defendants allege that it is necessary, in order to develop a market at stockyards and to encourage the owners of live stock to ship their live stock to the stockyards, that there be a number of packing companies or other purchasers ready to buy live stock presented for sale at said stockyards and ready to buy said live stock at all times, so that there will always be a steady, competitive, and attractive market to which live-stock producers may ship their live stock with the assurance that they will find a fair and prompt market therefor. These defendants allege that for said reasons it is to the interest of the stockyard company and its stockholders to establish new packing plants at or adjacent to the stockyards, and these defendants, therefore, allege that it is good business foresight to acquire in advance at least some available land at or adjacent to the stockyards.

"SITES FOR STOCKYARD BANKS AND CATTLE LOAN COMPANIES."

These defendants allege that banks and cattle loan companies are established for the purpose of supplying to live-stock producers funds which before the development of such specialized institutions as cattle-loan companies have not been easily available, and therefore it is to their interest and that of the stockyard companies to facilitate the establishment of such institutions at or adjacent to the stockyards.

These defendants admit that a stockyard company has the power to designate how many and which banks or cattle loan companies may establish themselves within the yards which the stockyard company owns, but these defendants deny that any stockyard company in which they or any of them are interested, or these defendants or any of them have ever exercised such power arbitrarily or to the detriment of the interests of the live-stock raiser or have ever exercised such power at all. These defendants take pride in pointing out the part they respectively have played in financing the live-stock industry through the encouragement of such live-stock banks and cattle loan companies.

"RENDERING PLANTS."

These defendants admit that the stockyard companies generally find it necessary to determine who shall purchase carcasses of animals which have died from disease or accident while in transit or after reaching the stockyards, but these defendants allege that the number of animals dying from disease or accident while in transit or after reaching the stockyards is generally not sufficiently large to attract capital or justify the existence of more than one company to handle such dead animals and generally no one company would undertake to perform the service or would invest the capital necessary to equip itself to perform the service of removing dead animals from the premises of the stockyards company if it were not assured of a sufficient volume of such business to justify such undertaking.

These defendants allege that the maintenance of a sanitary condition at the stockyards requires the prompt removal of such dead animals, and experience has shown that in order that such service may be rendered promptly and efficiently it is generally necessary to regulate such business and enter into an arrangement with any company seeking to perform such service, under which such company will agree to be ready at all times to perform such service promptly and efficiently. These defendants deny that the prices which have been fixed for such dead animals at stockyards where they or any of them have been interested are or have been arbitrary, unreasonable, or unjust.

COMMISSION MEN'S OFFICE SPACE.

These defendants allege that no one office can be leased and no one pen can be allotted to more than one commission man at a time; that necessarily some offices and some pens are more advantageously located than others; but these defendants deny the implied charge contained in the bill of complaint that there is discrimination on the part of any stockyard company in which they or any of them are interested in leasing office space and other accommodations and in allotting pens to commission men and traders at the stockyards.

TERMINAL RAILWAYS.

These defendants allege that the terminal railways, to facilitate the switching of cars from trunk-line carriers to the stockyards, from the stockyards to the packing plants, and from the packing plants to the trunk-line carriers, are common carrier railroads engaged in intrastate and interstate commerce, and that they are subject to the railroad commissions of the several States in which such railroads may be located and to the Interstate Commerce Commission of the United States; that under the laws of the several States and under the interstate commerce act of the United States it is illegal for such common carrier railroads to discriminate between shippers in the location of sidings, spurs, or other accommodations, and severe penalties are prescribed under the several statutes aforesaid for such discriminations.

These defendants deny that there is or has been any discrimination against any packer or buyer by any stockyard terminal railway operating at any stockyards, described in the bill of complaint, in which they or any of them are interested; these defendants deny that any such terminal or stockyard railway has practiced any discrimination in granting or withholding sidings, spurs, or other accommodations required by any packing house, or by delay in loading animals bought at stockyards served by said railways, or in switching; and these defendants allege that in the operation of the stockyards and terminal railways described in the bill of complaint, in which they or any of them are interested, service is given to all alike without favoritism toward any shipper, dealer, packer, or buyer.

"MARKET PAPERS AND JOURNALS."

These defendants deny that the control of trade papers and journals has been used by them or any of them as a means whereby the flow of stock to the market may be increased or decreased to the benefit of the slaughterer, and these defendants allege that the only object of these defendants, or any of them, in owning or controlling trade or market journals has been to furnish adequate market information, including accurate price statistics and quotations, which were not otherwise available.

These defendants further allege that the establishment of such trade or market journals has been an important factor in affording better and more accurate information to live-stock producers and shippers as to the conditions of the respective markets to which they desired to ship their live stock.

These defendants deny the inferential charge contained in the bill of complaint that it is unlawful or improper for the parent companies mentioned in the bill of complaint, or any of them, to own, operate, or control the stockyards and facilities appertaining to stockyards or to derive a profit from such ownership, operation, or control of such stockyards.

These defendants allege that the operation of stockyards cost large sums of money and requires the investment of large capital, whether such stockyards are owned by these defendants or by others, and the investors in such facilities must derive a profit if they are to continue

to keep their capital invested therein. These defendants further allege that the profits derived by these defendants, or any of them, from the operation of such facilities are only a reasonable return upon the investment and the capital employed and for the services performed; and these defendants deny that the charges made by the respective stockyards companies in which they, or any of them, are interested, for their respective services, would be lower were the stockyards operated by others than by these defendants. These defendants allege that the expense and the reasonable profits of operating such stockyards must enter into the final prices charged for meats, without reference to what interests own or operate such yards.

Said Swift & Co. alleges that it is to its interest and it desires to have well-equipped and efficiently operated stockyards in connection with and adjacent to its packing plants, so as to attract adequate supplies of live stock for slaughter in such packing plants.

These defendants deny that control of stockyards and facilities appertaining to stockyards is used by these defendants or any of them as a means of favoritism in dealing with commission men. They deny that such control of stockyards and other facilities appertaining thereto has resulted in any discrimination by these defendants in favor of banks, cattle loan institutions, rendering plants, and concerns supplying food for live stock, which are located at or near to any of the stockyards described in the bill of complaint.

These defendants deny that control of stockyards and facilities appertaining thereto has been used by these defendants, or any of them, as a means to prevent the establishment of new packing plants or to hamper the growth of those in existence.

These defendants deny that control of stockyards and facilities appertaining thereto is or has been used by the defendants as a means to prevent the development and limit the number of new markets or to centralize and restrict business to the stockyards so controlled. These defendants deny that the control of stockyards and facilities appertaining thereto affords peculiar and exclusive access by these defendants to information concerning the receipts and sale of live stock, its disposition, and the dissemination of information to the producer.

BRANCH HOUSES, ROUTE CARS, AUTOTRUCKS, AND COLD-STORAGE WAREHOUSES.

"BRANCH HOUSES."

These defendants deny that the branch houses operated by the said Swift & Co. are merely storage stations, but these defendants allege that such branch houses are established and operated for the purpose of facilitating the sale and distribution of products produced and sold by said Swift & Co. and its subsidiaries.

These defendants allege that Swift & Co. and its subsidiary companies own or operate approximately only 400 branch houses in the United States and that said branch houses are operated in actual and keen competition with all of the branch houses operated by the other parent companies and their subsidiaries described in the bill of complaint. These defendants further allege that the number of branch houses operated by the larger packers who are engaged in shipping commodities from one State to another is greatly in excess of the number operated by small packers doing a local business and not engaged in shipping their commodities from State to State and who, therefore, do not require branch houses in distant cities. These defendants further allege that a widespread selling organization is absolutely essential to the larger packer for the efficient marketing in the consuming markets of the East of the live-stock products which are produced in the West.

"ROUTE CARS" AND "AUTOTRUCKS."

These defendants allege that there is no significance in the fact that the five large packers operate 90 per cent of the car routes operated by the whole packing industry in the United States, for the reason that, and these defendants allege that, said car routes of the respective parent companies are operated in competition with each other, and further, that small packers doing a local business have no occasion and ordinarily do not undertake the distribution of their products by route cars to small towns at a distance from their packing plants.

"COLD-STORAGE WAREHOUSES."

These defendants allege that the cold-storage warehouses described in the bill of complaint are necessary adjuncts and facilities for the preparation, conservation, and distribution of the food products stored therein. One of the purposes in operating such storage warehouses is to conserve the surplus supplies of seasons of heavy production for use during seasons of light production, thereby furnishing a more uniform market for producers and supplying such products at lower prices to consumers during times of natural scarcity.

Said defendant, Swift & Co., alleges that it has provided only sufficient cold-storage warehouses and space for its own business and that of its subsidiaries. These defendants deny that such cold-storage warehouses or space has been operated or is operated in collusion, combination, or agreement with others of said parent companies or their subsidiaries, and these defendants deny that they have employed or that they do employ or they can employ such cold-storage facilities in aid of the control of the price of meats or substitute foods.

"THE PARENT COMPANIES' ACQUISITION OF ABOVE-DESCRIBED FACILITIES AND THEIR PURPOSES IN SO DOING."

These defendants deny that the parent companies and their controlling heads, by a concert of action or pursuant to a common understanding, or otherwise, set about the acquisition of the various stockyards and the facilities appurtenant thereto, the terminal railways and market papers and trade journals, for the purpose (implied in the bill of complaint) of obtaining a primary profit, not only out of the sale of live stock purchased and slaughtered by them but also on that purchased and slaughtered by their competitors, or for the purpose (likewise implied in the bill of complaint) of repressing and discouraging development of so-called "independent packers and slaughterhouses," or for the purpose of controlling the shipment of meat to the various markets.

These defendants are informed and believe, and therefore allege, that the following phrases "independent packers and slaughterhouses," "independents," "outside investors," or "outsiders," as used in the bill of complaint, mean and are intended to mean persons, firms, or corporations engaged in the meat-packing or other business other than the defendants in the bill of complaint, and that such phrases imply and were intended to imply, without expressly charging, that the defendants in the bill of complaint are not acting independently of and in actual competition with each other.

These defendants allege that they, or some of them, have invested their capital in, have acquired the ownership of, and have operated stockyards for the purpose of securing an adequate and satisfactory supply of live stock for the operation of their packing plants adjacent to such stockyards.

These defendants deny that in any instance the ownership or control by other packers, or by anyone in fact other than the parent companies or one of them or their controlling heads of any stockyards in which these defendants or any of them are interested, has been discouraged or opposed.

These defendants deny that in pursuance of a common purpose, plan, and design, or otherwise, so-called "outside investors and independent packers" have gradually been forced out as dominant factors in the ownership and management of most of the important stockyards in which these defendants or any of them are interested, as charged in the bill of complaint.

These defendants further deny the inference in the bill of complaint that the means whereby these defendants or any of them secured an interest in any of the stockyards described in the bill of complaint were illegal, reprehensible, or contrary to good morals, but on the contrary these defendants allege that the acquisition of such interests or of capital stock in said several stockyards, whether by way of purchase or gift, was lawful and proper.

These defendants deny that said Swift & Co. has availed itself of any control which may have been acquired by it in the stockyards companies mentioned in the bill of complaint, to grant exclusive privileges, such as the right to purchase dead animals, the right to furnish supplies and facilities, and the location of cattle banks and cattle loan companies, to concerns and corporations in which the parent companies or some of them, or individuals who were stockholders in said parent companies, held the controlling stock.

These defendants deny that said Swift & Co., acting in concert or otherwise, with any or all other of the "parent companies" described in the bill of complaint, has employed any power or privilege, as alleged in the bill of complaint, with the intent, purpose, or effect of discouraging, suppressing the establishment of, or dwarfing the growth of, so-called "independent packing companies" as might then be in existence, as charged in the bill of complaint.

These defendants deny that they or any of them have employed any power or privilege described in the bill of complaint to enable said "parent companies," their subsidiaries, or the individuals who, as alleged in the bill of complaint, own and control the "parent companies" and their subsidiaries, to obtain vast profit from the management of the stockyards or the grant of privileges appurtenant thereto.

On the contrary, these defendants allege that any profits realized by them, or any of them, out of the ownership or operation of said stockyards, or any of them, have amounted to only a reasonable return upon their investment in said stockyards and a reasonable compensation for the services rendered by and the facilities furnished at said stockyards.

These defendants deny that any profit received by said Swift & Co., or its subsidiaries, from any source whatsoever have been enjoyed or realized by said companies, or any of them, without the same appearing or being disclosed in the profits of the "parent company." On the contrary, these defendants allege that the profits of said Swift & Co. from each and every source are truthfully reflected in its balance sheets and financial statements, and such profits are annually audited and such balance sheets and statements are certified to be correct by independent and responsible certified accountants and are widely published and circulated.

These defendants deny that said Swift & Co., in combination, collusion, agreement, understanding, or otherwise, with any other "parent company" described in the bill of complaint, or with their subsidiaries, has in any manner attempted to monopolize the meat industry of the country, or artificially, or otherwise, to control the ultimate price which the consumer pays for meat and meat products, as charged in the bill of complaint.

"CONTRACTS IN RESTRAINT OF TRADE."

These defendants deny that said Swift & Co., in combination, collusion, agreement, understanding, or otherwise, with any other "parent company" described in the bill of complaint, has entered into any unlawful contract or combination to restrain trade and commerce, or to artificially or otherwise prevent, between themselves, competition in the prices for which meat and meat products are sold.

These defendants deny that they or any of them have entered into any contract, combination, agreement, understanding, arrangement, or practice, whether known as "the percentage purchase arrangement," as charged in the bill of complaint, or otherwise, which has as its ultimate object the elimination of competition not only in the purchase of live stock but also in the sale of dressed meats; and these defendants deny that the "parent companies" agreed upon and recognized between themselves certain percentages or proportions to which they deemed that each company was entitled; and these defendants further deny that said Swift & Co. so gauged its purchases that annually its purchases approximated actually or substantially the percentage so alleged to have been agreed upon. These defendants further deny that the purchases of live stock by Swift & Co. or by its subsidiaries has been made in accordance with or pursuant to any agreement, understanding, or arrangement in regard thereto.

These defendants deny that divers percentages covering purchases by the "parent companies" of live stock at the various stockyards were agreed upon; and these defendants deny that Swift & Co. or its subsidiaries has been a party to any understandings, agreements, or arrangements whereby certain of the "parent companies" should buy at certain yards or should refrain from buying at certain yards, as charged in the bill of complaint.

These defendants deny that any arrangements, agreements, or understandings were entered into with any so-called "outsiders" whereby purchases between the "parent companies" and such "outsiders" (also designated in the bill of complaint as "independents") were effected upon a percentage basis, as charged in the bill of complaint. On the contrary, these defendants allege that they are in actual and keen competition with all others engaged in the purchase of live stock and the slaughter and sale of meats, including the other "parent companies" and their respective subsidiaries described in the bill of complaint.

These defendants allege that Swift & Co. is constantly striving to increase its purchases of live stock, and they allege that Swift & Co. did increase its purchases of cattle nearly 3½ per cent in the four years ending with 1917.

These defendants allege that the "parent companies" and many other packing companies, which are not defendants in the bill of complaint, have long-established packing business and have been engaged for a great many years in the purchase of live stock at the respective stockyards in which the purchase of live stock is carried on in open markets, and in which each purchaser can see from day to day just what number and kind of live stock his competitors are purchasing, and all of said packing companies, large and small, are likewise severally striving to increase their respective purchases of live stock.

These defendants allege that such constant effort on the part of all packing companies to increase their respective volume of business tends to bid up the price for live stock to a point where the packing company can no longer afford to buy, for the reason that, and these defendants allege that, the packing company, whether large or small, can not afford to pay more for live stock than it can get from the consumer for the meat and the by-products of the live stock.

These defendants allege that such persistent, watchful, and keen competition prevents said Swift & Co. from increasing its proportion of the total live-stock purchases materially during any one year; but these defendants deny that such fact is evidence of or tends to prove any contract, agreement, or understanding between the "parent companies" for any apportionment of live-stock purchases among them; but, on the contrary, these defendants allege that such fact results from an economic law which is applicable to every established industry where competition exists, and is peculiarly true of the packing business for the reason that the well-known small profit of packing companies on the sales of their products (heretofore in this answer referred to) fixes a narrow range within which any packing company can afford to bid up the price of live stock in order to increase its proportion of the total purchases of live stock.

These defendants allege that by far the largest proportion of live stock for meat purposes is produced in the Western States, and particularly in the States lying west of Chicago, and that by far the largest proportion of the fresh meat and by-products resulting from the slaughter of such live stock is consumed in the Eastern States, and particularly in the New England and North Atlantic States; that as a result of the invention of the refrigerator car it is more economical to slaughter live stock in the West near the sources of supply and ship the fresh meat and by-products to the numerous consuming centers in the East than to ship the live stock from the West to such consuming centers in the East for slaughter.

These defendants allege that approximately 90 per cent of the meat derived from live stock slaughtered in the West is not sold or consumed at the place of slaughter, but is shipped long distances, the largest part thereof being shipped to cities and towns in the East, at which such fresh meat must be sold promptly for the best price there obtainable, for the reason that fresh meat is a highly perishable commodity and each succeeding day it is held it will bring a constantly lower price.

These defendants allege that no agreement or other arrangement concerning the purchase of live stock can have any effect upon prices which the fresh meat will sell for at the consuming centers, but that the price which can be obtained for the fresh meat is dependent upon the supply of meat and the demand for meat at the city or town where the meat is offered for sale.

These defendants allege that, even if the defendants should enter into an agreement or other arrangement affecting the aggregate number of live stock purchased, as charged in the bill of complaint, such agreement or arrangement could not change the then existing supply of fresh meat or affect the then demand for that supply of fresh meat at the local market in the East; and that if the local market in the East be glutted with fresh meat, prices will fall without reference to the quantity of live stock at that time being purchased in the West or the price paid therefor; and likewise if the local market in the East has less fresh meat upon it than there is demand for, prices for that limited supply of fresh meat in that market will rise without reference to purchases and prices of live stock in the West; and that no agreement or other arrangement can affect prices of fresh meats at the local selling points that does not operate upon the supply of meat or the demand for meat at that particular point.

These defendants deny that they or any of them are directly or indirectly a party to any such agreement, combination, or arrangement to directly or indirectly affect the supply or demand for meats; but they allege that the prices at which they buy live stock and sell fresh meats and all other commodities sold by them are determined solely by the economic law of supply and demand.

These defendants deny that means were adopted by them or any of them whereby and by virtue of the "parent companies" alleged control over many stockyards, as charged in the bill of complaint, sales to so-called "outsiders" or "independents" were controlled by the "parent companies"; and these defendants deny that such control as the "parent companies" have exercised over stockyards, stockyards' loan institutions, terminal railways, and other privileges and perquisites to the operation of such stockyards has discouraged opposition or competition by commission men or such so-called "independent packers," as charged in the bill of complaint.

"CONTROL OF SUBSTITUTE FOODS."

These defendants deny that they or any of them have eliminated competition in meat products, as charged in the bill of complaint. These defendants further deny that they or any of them set about to control the Nation's supplies of fish, vegetables, either fresh or canned, fruits, cereals, milk, poultry, butter, eggs, cheese, and other foods ordinarily handled by wholesale grocers or produce dealers, as charged in the bill of complaint. On the contrary, these defendants allege that Swift & Co. and its subsidiary companies entered upon the business of handling fish, vegetables, either fresh or canned, fruits, milk, poultry, butter, eggs, and cheese for the purpose of utilizing their distributive sales agencies economically, as they had a lawful right to do.

These defendants allege that the handling of such products through its branch houses enabled Swift & Co. and its subsidiary companies to dispose of a larger volume of products without a proportionate increase in expense; and has been in the interest and for the benefit of the consuming public, in that it has enabled the consuming public to receive said perishable products in a better condition for consumption than would have otherwise been the case. These defendants allege that the handling of said products has made it possible for Swift & Co. and its subsidiary companies to establish branch houses and car routes at points which would not support a branch house or a car route handling only meat products, thus reaching a territory and serving a consuming public theretofore without a satisfactory means of supplying its wants in said perishable products; and, likewise, furnishing a broader outlet for the farmers' products by reaching a broader consuming public.

These defendants allege that there is and can be nothing illegal or reprehensible in the defendants reaching "remote spots" as insinuated in the bill of complaint. On the contrary, these defendants allege that such reaching of "remote spots" is lawful and in the public interest. These defendants allege that they have had and have a legal right to handle said products and are economically justified in so doing.

These defendants deny that Swift & Co. or its subsidiaries ever employed their distributive facilities or otherwise to fix prices so low as to eliminate competition.

These defendants deny that they or any of them have attempted to monopolize commerce in any of the food products above mentioned, and they deny that any act or acts of these defendants have resulted in the defendants obtaining complete control of any food products, as charged in the bill of complaint. On the contrary, these defendants allege that Swift & Co. and its subsidiaries handle an amount of so-called "substitute foods" which is negligible in comparison with the Nation's supplies of such "foods."

These defendants deny that unless prevented by a decree of this court the defendants will, "within the compass of a few years, control the quantity and price of each article of food found on the American table," as charged in the bill of complaint.

"EXTENT TO WHICH THE MONOPOLISTIC ATTEMPTS HAVE BEEN SUCCESSFUL."

"FINANCIAL GROWTH, PRESENT NET WORTH, AND VOLUME OF BUSINESS."

These defendants allege that they have no knowledge in regard to the financial figures of "parent companies" other than Swift & Co., and therefore these defendants neither admit nor deny the averments contained in the bill of complaint in regard to the aggregate financial growth of the "parent companies," or in regard to the payment of cash dividends by said companies. These defendants deny that it is illegal, reprehensible, or contrary to good business morals, as impliedly charged in the bill of complaint, to reinvest earnings of the defendant corporations in their business. These defendants allege that the profits made by Swift & Co. and its subsidiary companies have been reasonable and have been the lowest possible consistent with a reasonable return upon the investment in the business, and have been so low as to practically not affect the prices at which its products are, or have been, sold to the consuming public.

These defendants deny that vast profits, whether difficult of ascertainment or otherwise, have been realized by the individual defendants by virtue of either their alleged personal control of other packing houses and slaughtering companies than the "parent companies" and their subsidiaries, or their interest in stockyards, terminal railways, rendering companies, cattle loan institutions, and other corporations, as charged in the bill of complaint. And these defendants deny that such corporations had their inception in, or depend for their prosperity upon, advantages or privileges growing out of interlocking control of stockyards and stockyard companies.

"NUMBER OF CONTROLLED COMPANIES."

These defendants have no knowledge of the number of corporations, trade names, or concerns in which other "parent companies" than Swift & Co. or their respective subsidiaries have an interest, and therefore they neither admit nor deny the averments contained in the bill of complaint in regard to the number of corporations and concerns, including trade names, which the "parent companies" or the individual defendants and their families maintain and control, as set forth in the bill of complaint; but these defendants deny that they have acquired or organized any concerns or corporations in furtherance of any scheme or plan of action, general or otherwise, for the purpose of restraining or monopolizing trade or commerce, as alleged in the bill of complaint.

"EXTENT OF INDUSTRIAL CONTROL IN THE SUBSTITUTE FOODS AND UNRELATED COMMODITIES."

These defendants deny that, if the growth of the parent companies and their subsidiaries is permitted to continue unchecked, they will within a few years completely control the various industries in which the defendants are engaged.

These defendants have no knowledge of the averments contained in the bill of complaint as to the value of business transacted by Armour & Co. in 1916, and therefore these defendants neither admit nor deny said averments.

These defendants deny that they, or any of them, have any purpose or intention to secure control of the market for "meat substitute foods," as charged in the bill of complaint.

These defendants deny that it is illegal, reprehensible, or against good business morals for the "parent companies" in a large number of instances to contract for the exclusive output of many other companies engaged in the production of so-called "substitute foods" and so-called "unrelated commodities"; or to market the outputs of such companies through the distributive facilities of the "parent companies" or their subsidiaries; or in this fashion for the "parent companies" to control the output of such concerns and the market price of their products as completely as though they themselves owned the producing companies; but these defendants deny that any of them is or has been a party to any combination, agreement, understanding, contract, or conspiracy to restrain trade or monopolize commerce in meat products or substitutes or other foods consumed in the United States.

"INDIVIDUAL DEFENDANTS."

These individual defendants admit that they or some of them are officers, directors, agents, employees, or stockholders of Swift & Co., described in the bill of complaint as a parent company, or of the so-called "Swift defendants," described in the bill of complaint as corporations, or some of them, or the so-called "other defendants," described as corporations in the bill of complaint; but they deny that they are officers, directors, agents, employees, or stockholders of any of the other so-called "parent companies" or their subsidiaries.

Said individual defendants admit that some of them are, in their individual capacity, financially interested in stockyards, terminal railways, cattle loan banks, rendering companies, and other institutions located at or adjacent to stockyards.

Said individual defendants allege that the corporations dealing in so-called "substitute foods" and so-called "unrelated commodities," referred to in the bill of complaint, are controlled by their respective stockholders acting by and through their duly elected directors and officers.

Said individual defendants admit that in many instances stock certificates representing capital stock of corporations which are owned by said Swift & Co. stand in their respective names as a matter of convenience to such "parent company," but that such stock certificates are owned and held by said "parent company"; and these individual defendants deny that there is anything illegal or reprehensible or contrary to good business morals in their said activities.

Said individual defendants deny that they have or exercise any control over the facilities or instrumentalities of the meat business other than as aforesaid, and they deny that by reason of their interests in such corporations dealing in so-called "substitute foods" and so-called "unrelated commodities" the parent companies are enabled to carry out the alleged purpose of the combination charged in said bill of complaint.

These individual defendants deny that their interests in such corporations hereinbefore described are now or will continue to be a sinister or ever-present means of furthering any attempt to monopolize or to perfect a monopoly, so that the "parent companies" or their subsidiaries will have or will ever have complete control either of meat products or of all so-called "substitute foods" consumed in the United States, as charged in the bill of complaint.

"SUBSIDIARIES DEFENDANT."

These individual defendants deny that New England Dressed Meat & Wool Co., a corporation organized and existing under the laws of the State of Maine; North Packing & Provision Co., a corporation organized and existing under the laws of the State of Maine; The Sperry & Barnes Co., a corporation organized and existing under the laws of the State of Connecticut; John P. Squire & Co., a corporation organized and existing under the laws of the State of Maine; John P. Squire & Co. (Inc.), a corporation organized and existing under the laws of the State of Massachusetts; John P. Squire & Co. (Inc.), a corporation organized and existing under the laws of the State of Rhode Island; Springfield Provision Co., a corporation organized and existing under the laws of the State of New Hampshire; White, Pevey & Dexter Co., a corporation organized and existing under the laws of the State of Maine, are subsidiaries of any "parent company" described in the bill of complaint, or that any so-called "parent company" has any ownership, interest, or title in and to any of the capital stock or property of any of the said companies.

These individual defendants further deny that Western Meat Co., a corporation organized and existing under the laws of the State of California; Oakland Meat & Packing Co., a corporation organized and existing under the laws of the State of California; Nevada Packing Co., a corporation organized and existing under the laws of the State of Nevada, are subsidiaries of any of the so-called "parent companies," or any of them, as charged in the bill of complaint, or that any of said "parent companies" has any ownership, interest, or title, directly or indirectly, in or to any of the capital stock or property of any of said companies.

CONCLUSION.

These defendants deny that they or any of them is or has been a party to any combination, agreement, understanding, contract, or conspiracy to restrain trade, or to monopolize commerce in meat products or "substitute foods" consumed in the United States.

These defendants allege that the allegations and charges in each of the paragraphs of the bill of complaint are not sufficiently definite and specific to constitute a violation of law, but are too general and vague.

These defendants allege that the bill of compaint does not allege acts or facts to constitute a violation of law, but that the charges contained in the bill of complaint and in each paragraph thereof are mere statements of legal conclusions.

These defendants deny that complainant is entitled to the relief, or any part thereof, as prayed for in its bill of complaint, and allege that complainant under the allegations of its complaint is without standing or right in this court or in any court of equity.

These defendants deny all and all manner of unlawful acts whatsoever whereof they are in any wise by the said bill of complaint charged; all of which matters and things these defendants are ready and willing to prove as this honorable court shall direct.

These defendants pray in all things the same benefit and advantage of this, their answer, as if they had pleaded or demurred to said bill of complaint.

Wherefore these defendants pray that the bill of complaint herein be dismissed with costs:

Swift & Co. (Illinois); Swift & Co. (West Virginia); Swift & Co. (Inc.) (Kentucky); Swift & Co. (Ltd.) (Louisiana); Swift & Co. (Maine); Swift Beef Co.; United Dressed Beef Co. of New York; J. J. By HENRY VEEDER,
Their Solicitor.

ANSWER OF ARMOUR DEFENDANTS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and Cudahy Packing Co., et al., defendants. In Equity, No. 37623.

The joint and several answer of Armour & Co., a corporation organized under the laws of the State of Illinois; Armour & Co., a corporation organized and existing under the laws of the State of New Jersey; Armour & Co., a corporation organized and existing under the laws of the State of Kentucky; Armour & Co., a corporation organized and existing under the laws of the State of Texas; Armour & Co. (Ltd.), a corporation organized and existing under the laws of the State of Louisiana; the Anglo American Provision Co., a corporation organized and existing under the laws of the State of Illinois; the Colorado Packing & Provision Co., a corporation organized and existing under the laws of the State of Colorado; Fowler Packing Co., a corporation organized and existing under the laws of the State of Maine; Hammond Packing Co., a corporation organized and existing under the laws of the State of Illinois; the New York Butchers' Dressed Meat Co., a corporation organized and existing under the laws of the State of New York; Atlantic Hotel Supply Co. (Inc.), a corporation organized and existing under the laws of the State of New York; and of J. Ogden Armour, Charles W. Armour, A. Watson Armour, Laurence H. Armour, Arthur Meeker, R. J. Dunham, F. Edson White, George M. Willets, Frederick W. Croll, and George B. Robbins, defendants to the petition or bill of complaint of the United States of America.

These defendants, for answer to the said petition or bill of complaint, or unto so much or such parts thereof as they are advised it is necessary or material for them to make answer unto, answering, say:

I.

They respectively admit, for all the purposes of this suit or proceeding, the organization and existence of the respective corporate defendants, and that they were organized respectively under the laws of the respective States as stated in said petition or bill of complaint.

II.

They respectively, for like purposes, admit that Armour & Co. of Illinois, referred to in the said petition or bill of complaint as the parent company, is, either directly or through subsidiaries, engaged in (a) the purchase and slaughter of live stock; (b) the preparation and manufacture of dressed meats and edible by-products of the slaughter; (c) the curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animal; (d) the production and sale of nonedible by-products and of articles in the manufacture of which these nonedible products are largely used; (e) the manufacturing, canning or otherwise preparing to a limited extent for the market and the sale and distribution of food supplies other than meats, such as referred to in said petition or bill of complaint as substitutes for meat foods, but deny that it is either directly or indirectly engaged in the manufacturing or canning or packing of fish, vegetables, or cereals; (f) the manufacture and sale to a limited extent and primarily for the purposes of its own business of various other articles commonly purchased and used either by the producer of live stock, the companies transporting live stock or dressed meats, or the competitors of this parent company, such as are in said petition or bill of complaint referred to as (but which these defendants respectively deny are) unrelated commodities, but these defendants deny that the allegations of said petition or bill of complaint in respect to the activities of said defendants show facts which constitute interstate or foreign commerce.

III.

These defendants respectively deny that by the supposed unlawful means and methods set out or complained of in the said petition or bill of complaint, or any or either of them, or by any other unlawful means or methods, or otherwise, this parent company and defendants referred to in the said petition or bill of complaint as its subsidiaries, or any or either of them—acting by or through their principal officers, who have been made defendants herein, or otherwise—have attempted to dominate, control, or monopolize a very great or any proportion or part of the food supply of the Nation (other or otherwise than as they respectively, lawfully, and properly carry on and so therein lawfully and properly dominate and control their own respective legitimate businesses, as they lawfully may); or that they, or either of them, have thereby or otherwise, or in any way, built up an unlawful monopoly or control over divers and sundry or any products or commodities in said petition or bill of complaint referred to, or of any products or commodities whatever.

These defendants, respectively, deny that this so-called parent company and the subsidiaries, defendants, or any or either of them, by the same or similar methods, or otherwise, are attempting to increase or extend any supposed monopoly such as referred to in said petition or bill of complaint or otherwise; or that there is or has been any such, or any monopoly; or that they or any or either of them are enabled thereby or otherwise to, or do, artificially control the supply and the price, or either of them, of the food supplies of the Nation, or of any part thereof.

These defendants deny that they either with the other defendants to said petition or bill of complaint, or any or either of them, or otherwise, have created or obtained, or that these defendants, or any or either of them, have attempted to create or obtain, any monopolies or monopoly in or of the interstate trade or commerce, or of any part of the interstate trade or commerce, in or of live stock, meat products and substitute foods, or any or either of them, or in any other products or commodities, or that they have acquired or have, or have ever had, certain or any instrumentalities, facilities, or advantages by which they have been or are or might be enabled to more effectively or otherwise, or in any way, monopolize, or that they have in any way monopolized or attempted to monopolize any part of the trade in such, or any, products or commodities, or that they are or have been engaged in any contract or contracts, combination or combinations, or conspiracy or conspiracies in restraint of trade or commerce among the several States, either with each other or with any other person or persons.

They deny that they have acquired or have any instrumentalities, facilities, or advantages other than such as are lawful, fair, and proper, and as have legitimately resulted and come, and do legitimately result and come from their industry, application, skill, experience, and efficiency in the proper organization and conduct of their business and trade and such as have been and are open to any others to possess or acquire and exhibit and apply.

IV.

These defendants admit that this parent company, Armour & Co., is the successor or natural outgrowth of concerns of many years' standing and that its principal business is the purchase and slaughter of live stock, consisting of cattle, hogs, sheep, and calves, the dressing of the carcasses and the preparation and distribution and sale as and to the extent of the dressed meat and food products, and the distribution of the dressed meat in interstate commerce (as well as in intrastate commerce) through various means, by which the dressed meat reaches the retail butchers, and is by the retail butchers sold to the consumers, and also including in their said business the saving and utilization for its most valuable uses of every part and portion of the slaughtered animal, and their preparation for market and their use in the manufacture or production of useful commodities in whole or in part therefrom, and the sale and disposition thereof.

V.

The invention and the use by these defendants of refrigerator cars, by means of which the dressed meats might be and are transported long distances and preserved free from decay during transit, have enabled them to widely extend their market for fresh meats, and to slaughter the live stock near the source of supply in the meat-producing sections of the West, and to sell the products thereof in the more densely populated and meat-consuming centers of the East, and thereby supply a greatly increased demand therefor and consumption thereof; and they say that this has resulted in a large economic saving to both producer and consumer and in a greater demand and a ready cash market for live stock to supply such demand for such meats, and an increase of live-stock production as a dependable source of supply of meat and products of meat animals.

The "route" refrigerator cars have been employed to carry such meat supply to the smaller towns and places which require smaller and less than carload quantities; and for the same purpose autotrucks have been introduced, when more prompt and efficient than railroad cars; to supply smaller towns and places or where the places are not reached by railroad service.

That the ownership and use of refrigerator cars by the defendants and of an efficient organization to handle them were and are necessary for the legitimate purposes of defendants' business aforesaid and the carrying on thereof and of preserving in transit the fresh meats

and commodities requiring refrigeration in order to prevent their quick decay and to enable their transportation in good, wholesome condition to the markets where they were to be disposed of and consumed; that such provision and ownership and handling and operation of such refrigerator cars by the defendants and other packers has been going on for many years and has been approved, authorized, and regulated by the Interstate Commerce Commission and its lawfulness, necessity, and economic utility fully established and recognized.

These defendants deny that through the ownership and use of said refrigerator cars or the operation of said route cars or otherwise they have or enjoy any unlawful rates, concessions, privileges, or advantages from the railroads or the carriers and say that they ship their products under tariffs and rates, rules, and regulations prescribed in valid, published tariffs on file with the Interstate Commerce Commission and pay the same rates and operate under the same rules and regulations as are lawfully prescribed for and paid and observed by or available to all others shipping the same or like commodities.

VI.

These defendants admit that such stockyards as are described in said petition or bill of complaint which are public stockyard markets are employed for the yardage and care of cattle, sheep, and hogs at places where such live stock are customarily offered for sale and sold and have been shipped for sale, and that customarily all who wish either to buy or sell such live stock have been and are given free access to and the privilege to trade in and buy and sell live stock in such yard. When and as the amount of business at such a stockyard has become or been large enough to call therefor men who are or become skilled therein have engaged and do engage in the purchase and sale of live stock at such yards as commission men for those who desire to purchase or have live stock for sale. The principal business of such commission men is the sale of live stock for producers or shippers who desire their services and do not wish themselves to trade in person at the yard. Such commission men customarily are the consignees, as well as the agents of the shippers of live stock whom they serve, and have no connection or affiliation whatever with the defendants, and have no need to have financial or other relationship with owners of the stockyards other than as tenants of offices and in dealing with the stockyard companies with respect to the yardage and care of live stock consigned to them and the allotment to such commission men of pens in the yards in which the live stock consigned to them is yarded and sold.

The sales and purchases of live stock at such yards customarily take place in, at, or near the respective pens in which the live stock dealt in are confined and in which they are shown to and examined by the proposed buyer.

The live stock are sold by weight per 100 pounds, and upon the sale are weighed by the stockyard company from seller (owner or commission men) to buyer, and the stockyard company makes and keeps a record of the sales and weights as well as of the receipt and yardage, feeding, and care of the live stock.

Statistics and data as to the market prices for each day, including numbers and kinds and grades of live stock received or to arrive on that day at that stockyard and at other yards and prospective receipts, are publicly posted by the stockyard company at the exchange building and usually at other well-known places in the yard.

While the stockyard company has and exercises such control of the yards and of its own provision and furnishing of the facilities which it provides as the performance of its function in those respects calls for and makes necessary, it makes no unjust or unfair discrimination, of which these defendants are aware, as between different companies or persons who make use of such facilities, either as to providing sites or locations for packing houses or among those desiring them or as to granting switch tracks or sidings or other accommodations, which are subject to the control of the public utilities commission or similar body in the State or of the Interstate Commerce Commission, or as to location of banks or loan companies or offices of commission men, or the allotment to commission men of pens, except that (as defendants are informed) there is or may be observed a long-standing custom of permitting commission men to retain their live-stock pens from year to year, as they do their offices.

These defendants say that if there is or has been any unjust, unfair, or intentional discrimination on the part of any stockyard company or of any terminal or other railroad at any such yard or yards toward or for or against any packers or buyers or sellers or commission men in any or either of the matters or respects aforesaid, or in or by practicing delay in allotting animals bought or in switching loaded cars to connecting lines, or in any other respect whatever, these defendants, as to any such case, have not, nor has any or either of them, been knowing or privy thereto or in any way whatever responsible therefor.

The statements in the said petition or bill of complaint of the character of services performed by the commission men and with respect to the services performed by the stockyards companies are believed to be accurate.

These defendants believe it to be true that the charge of the stockyard companies for yardage, feed, and other services and materials furnished by them are prescribed by the respective stockyards companies rendering such services. So far as these defendants, respectively, have any information or are aware of the services, facilities, and conveniences rendered by the respective stockyards or of the charges made by them therefor, they are rendered and made fairly and without any discrimination as between different shippers, commission men, companies, and persons to or for whom they are rendered or made. With respect to each and every such matter or thing, these defendants have not and have never had or exercised any control, interference, or say whatever to or toward the giving or showing any partiality or discrimination to or against one customer thereof against or to another.

These defendants deny that with respect to the allotment to or the seeking by any company or person, other than themselves, of packing sites or sites for packing houses, or with respect to the number of plants or packing houses that should be established at the respective stockyards or any or either of them, or with respect to the allotment to or securing by any banks or loan companies of locations or sites for their banks or offices, or of any or either of them in or near stockyards, or with respect to the designation of how many and which banks or loan companies might establish themselves at or near such yards or any or either of them, these defendants have not, nor has any or either of them, interfered or sought to interfere, or to direct or control the same.

Defendants deny that they have or either of them has jointly or severally used or exercised any power, control, or interest they may have in any stockyard companies to hinder, impede, or prevent the establishment, enlargement, or development of packing plants at any such yards, nor has there been any such hindering, impeding, or preventing, so far as they have any knowledge, information, or belief. The action of any such stockyard company or companies has been to encourage the establishment of such packing plants and businesses as would tend to develop and increase the legitimate business and business interests of such stockyard companies. That this same statement applies to the action of the stockyard companies with respect to sites for banks and loan companies.

While such banks and loan companies as are or may be located at or near the stockyards do a considerable business, according to the information and belief of these defendants respectively, the great bulk of such cattle paper is not held by such banks or loan companies, the principal business of which is not to lend money but to discount and guarantee the note of the live-stock producer or dealer, and thereby lend and pledge their credit to enable such live-stock producer or dealer to secure money from the eastern banker necessary for the purpose of his business, and any statement or inference in the said petition or bill of complaint that stockyard companies through control of bank or loan company sites can or do wield or have an influence or effect over stockmen or raisers of or dealers in live stock, in any way or sort whatever to the detriment or prejudice of such stockmen, raisers, or dealers, is untrue. Any statement or inference in the said petition or bill of complaint that these defendants, or any or either of them, have wielded or exercised, or do wield or exercise any such influence, or that they, or any or either of them, have attempted or do attempt to wield or exercise or have any such influence is untrue and baseless.

VII.

As to terminal railways: Defendants say that in order to facilitate the connection at stockyards with main or trunk line railroads, for the purpose of switching cars from such railroads to stockyards, from yards to packing plants, from packing plants to main or trunk line railroads, it is necessary and proper that terminal railways should be constructed for such purpose, and that stockyard companies have established such roads and have acquired an interest in and use such roads to promote the development and use of stockyards at a satisfactory and attractive market center for live-stock producers and shippers, offering and affording such producers and shippers adequate transportation service at such stockyards, and offering and affording all industries there located like service. These defendants deny that they, or any or either of them, have sought or acquired or exercised, through their interest in stockyard companies or otherwise, any interest or control in such terminal railways for the purpose of discriminating against other packers or independent buyers or engaging in, bringing about, or doing any improper or unlawful practices, or been responsible for any unlawful acts or conduct whatever in connection therewith.

VIII.

As to market papers and journals: Defendants say that producers of live stock require and should be furnished full, accurate, and unbiased reports of the demand for live stock, the prices prevailing at various markets, and such other information as to market or trade conditions as they may desire. These defendants deny that they, or any or either of them, now own any interest whatever in such market papers or journals, or that they have ever owned an interest in such papers or journals published at the larger and well-established markets, such as those at Chicago, Kansas City, or Omaha, and defendants say that such financial interest as they may have had in the past in market papers and journals at any of the smaller yards was acquired for the purpose of rendering aid to and was prompted by the desire to develop these places as market centers attractive to producers of live stock through proper publicity, and advertisement, and dissemination of accurate information, regarding market conditions, both local and general, and that such papers and journals are a necessary and proper adjunct to the building up and establishment of a live-stock market; that the statistical information therein published and disseminated is collected and secured from the records of the various stockyards, open and available to the public generally and others locally, and published in all daily papers where the yards are located.

IX.

As to rendering plants: It is true that while in transit and after reaching the yards live stock often die, either from disease or accident, and the stockyard companies, as a matter of proper regulation, arrange for the disposition of the same; and that there has customarily been only one such rendering plant at each of the important yards. Such regulation, which was the result of many years of experience, is primarily in the nature of a sanitary precaution, and it is essential that disposition of such dead animal bodies be prompt and efficacious, and the experience of many years has demonstrated that such prompt and efficient service can best be secured by the method followed at most of the stockyards of disposing of such animals to some one rendering company. These defendants say, however, that they have not, nor have any or either of them been, nor are they or any or either of them responsible for any improper practice therein or in connection therewith.

X.

Referring to the specification in the said petition or bill of complaint as to the consequences or results flowing from the control by the stockyard companies of the facilities pertaining to the stockyards, these defendants say (a) that of course a profit is properly derived from the live-stock industry by and from the services and charges rendered by the stockyard company to such industry, and these defendants assert such profit will be so properly derived therefrom whether these defendants or any of them own or control any interest in said stockyards or not; (b) that if there be a potential means of favoritism on the part of stockyards in dealing with commission men or influence over them or in the alleged power of the stockyard companies to grant monopolies, carrying with it profit to banks, cattle loan institutions, rendering plants, or sources supplying food for live stock and others; or (c) if there be a potential means to prevent the establishment of new packing plants or to hamper the growth of those in existence; or (d) to prevent the development or limit the number of new markets, or to centralize or restrict business to stockyards so controlled; or (e) if there be any such means of favoritism from having peculiar or exclusive access to information concerning the receipts and sale of live stock, its disposition and the dissemination of information to the producers or others, and these defendants assert that the receipts and sales of live stock are public records of the various stockyards companies, open and available to the public generally, and that such information is posted on bulletin boards at such yards and published in the daily papers where the yards are located; these defendants deny that their interest in or control of any stockyards has been used as a means of any such favoritism or discrimination or any or either of the evils or

improper practices so charged to be possible in the conduct or control of the existing stockyards, or any or either of them.

They respectively deny that they, or any or either of them, have at any time or in any way participated in or favored, or been privy to any such conduct in the control or operation of the stockyards or the facilities appertaining thereto, in any case.

XI.

As to branch houses, route cars, autotrucks, and cold-storage warehouses: Defendants are without information upon which to base a belief as to the total number of branch houses maintained by interstate slaughterers other than this defendant parent company.

The defendant parent company, Armour & Co., has approximately 400 of these branch houses located at or near the centers of consumption. These are necessary in order to enable it to properly handle a perishable product in such manner as to maintain adequate supplies at all times.

These defendants deny that said branch houses are cold-storage stations, but, on the contrary, assert that they are marketing and manufacturing facilities and are maintained for the express purpose of facilitating the distribution of its perishable products in such prompt and expeditious manner as will insure the same reaching the retail trade and ultimately the consumer in the best possible condition; that approximately one-half of these branch houses are equipped with refrigerating machinery, and that many of them located in the large centers are equipped with facilities for turning raw materials into the finished products—that is, smoking meats, boiling hams, and manufacturing sausage; that this is necessary in order not only to meet trade requirements but to place these defendants upon an equal competitive basis with local packers operating killing establishments; that they are maintained by these defendants for the purpose of marketing and distributing of their products and to afford to the local retail butchers the opportunity to make purchases of meat and meat products while in fresh, wholesome condition; and that such branch houses are equipped with only sufficient cooler space for the needs of their marketing facilities in the particular locality where they are located, the turnover of such branch houses in said products being usually every week or every two weeks at the most.

These defendants say, and they submit that it is obvious and not open to question, that such branch houses for the proper receipt, care, sale, and distribution of their products and merchandise are lawful and proper business facilities therefor and for supplying the wants of their customers and consumers. Defendants further say that direct and active competition exists between all of the various branch houses of this defendant corporation and those operated by each and all of the other defendant corporations named in this bill of complaint and between those operated by others engaged in the meat-packing industry and various commission merchants and others who have the necessary facilities for handling like products; that such branch houses are recognized by the various communities they serve as of great and permanent value to the members of such community, as well as of those resident in the immediate vicinity, as affording to the people of such communities and surrounding territory an opportunity to secure under competitive conditions meats, meat products, and other commodities while in a fresh and wholesome condition.

Route cars are refrigerator cars which travel certain routes at stated intervals, supplement the branch houses, and furnish prompt, efficient, and adequate service to such towns and places as are not of sufficient size in themselves to warrant maintenance of a branch house. These cars carry only such products as have been previously ordered and are needed to supply such orders. These defendants are without information upon which to base a belief as to the number of such route cars sent out by other defendants, or the number of dealers reached or the number of cars owned by such other defendant parent companies.

Motor trucks made possible the rendering of such service to many towns and places which are not reached or served by route cars, or by branch houses. These defendants deny that these defendants reach or serve with such autotrucks a total of 26,836 towns throughout the United States and say that the number of towns so reached is about 1,500.

As to cold-storage warehouses: These defendants say that cold-storage warehouses were first used in connection with the packing business for the chilling of meats and later were adapted to branch-house use so that meats and meat-food products might be kept in prime condition for sale to the retailer; that from the beginning, such warehouses have been, and now are, necessary instrumentalities in connection with the business of these corporation defendants in order that such business may be properly and efficiently handled and the volume of their slaughter of live stock and sale of dressed meat and meat-food products, for both domestic and foreign trade, extended to meet the constantly increasing demand therefor; these defendants further say that they have established or acquired an interest in cold-storage warehouses in large eastern seaboard cities and elsewhere where cold-storage facilities or space was required for the storage of commodities wherein said defendants were interested, and that these defendants have leased and do lease space therein to the public, where, owing to seasonal conditions or fluctuations in foriegn or domestic demand, it has not been possible completely to utilize such cold-storage facilities and space for defendants' then existing needs; these defendants deny that their establishment, use, or control of cold-storage warehouses was for the purpose, or has been employed or used to aid, or has aided, in any alleged control of the price of meats and substitute foods or any other commodity or commodities.

XII.

As to the acquisition by this defendant parent company of interest in or control of stockyards, or the facilities appertaining thereto, and their purpose therein:

As to stockyards: These defendants jointly and severally deny that through a concert of action or pursuant to a common understanding with or by acquiescence of any one or more of the parent companies named in said petition or bill of complaint or otherwise they, or any or either of them, set about the acquisition of the various stockyards and appurtenances and privileges incidental thereto for the purpose (as is implied in said petition or bill of complaint) of securing any such advantage or advantages as are alleged in said petition.

These defendants jointly and severally deny that there is or ever was any common purpose, plan, or design to which they, or any or either of them, were a party to force the withdrawal of outside or any investors or so-called independent packers, or any or either of them, as dominating or other factors in the ownership or management of most or any of the important or any stockyards, or that by or through any such purpose, plan, or design outside investors or so-called independent packers have been gradually or otherwise so forced out or been replaced by the defendant parent company, Armour & Co., or its representatives.

These defendants deny that they or any or either of them have availed themselves of any interest they may have in any stockyards or exercised any control they may have over such stockyards for the purpose of electing officers or directors or otherwise dominating or controlling the policies thereof for the purpose of granting exclusive privileges, such as the right to purchase dead animals or the right to furnish supplies and facilities and fix the location or give favorable sites for cattle banks or cattle-loan companies to concerns or corporations in which they or some of them or individuals who are stockholders in this defendant parent company hold the controlling stock or that they have, acting in concert or otherwise, employed any of the powers and privileges alleged in and more specifically set forth and discussed in said petition or bill of complaint under the title "nature of the business and method by which it is conducted" with the intent or purpose or effect of discouraging or suppressing the establishment of independent packing establishments or dwarfing the growth of such independent packing companies.

These defendants jointly and severally deny that this parent corporation, Armour & Co., or its subsidiaries, or the individuals who, as alleged in the bill of complaint, own and control this parent company and its subsidiaries were enabled by any of the alleged methods or means set forth in said petition or bill of complaint to obtain vast profits from the management of stockyards or granting of privileges appurtenant thereto; these defendants further deny that this parent company, Armour & Co., or its subsidiaries, have thus been enabled, as is alleged, to enjoy and realize or otherwise have obtained or enjoyed or realized such or any profits without the same appearing or being disclosed in the profits of this said defendant parent company; these defendants further deny that they or any or either of them have attempted thereby or otherwise to monopolize the meat industry of the country or artificially to control the ultimate price which the consumer pays for meat and meat products.

These defendants say that in the course of the growth and development of the live stock and producing and slaughtering and packing industries they have aided in the establishment of stockyards at points near or nearer the live-stock production than theretofore existing stockyards, and have taken over or assisted in taking over and developing what were small and inadequate yards at other points where they had been inaugurated, and have established at such places extensive and adequate packing plants, with the result that growers of live stock about or tributary to these localities now have properly equipped and efficiently operated marketing places so situated in relation to their farms and ranches as to afford them a ready market for the disposition of their live stock at a saving of freight, labor, cost, shrinkage, and other expenses. That the defendants have not heretofore in any way hindered, impeded, or prevented the establishment or operation of such or any stockyards by others, or the establishment thereat of any packing plants of others than themselves. That with respect to some of such yards others of the defendant parent companies have also joined or cooperated in the establishment and development of such yards and have established packing plants thereat.

That in the cases where these defendants, or any or either of them, have established or aided in the establishment of stockyards the motive of the defendants therein has been the proper motive of building up or developing, or aiding in the building up or development, of the industry and trade in live stock and the products thereof, as well as for the benefit and development of the live-stock producing industry as well as of their own packing industry, and in certain cases principally for the establishment and development of the live-stock producing industry, and to bring a market for the live stock near to the production thereof.

That so far and to such extent as any or either of these defendants have acquired and held or owned any capital stock or other financial or property interests in any or either of the live-stock yards or stockyard companies, such acquisitions and investments were and are held and owned for proper and legitimate purposes and from proper motives and considerations, and not otherwise.

These defendants say that the great industry in which they have been and are engaged of producing fresh meats and other products of slaughtered cattle, hogs, and sheep, and which was built up by the predecessors in the ownership and conduct of the defendant parent companies, and has been continued by the present owners and managers thereof, is and always has been properly allied with and dependent for its proper development and success upon live-stock raising and production, as well as upon the provision of adequate markets and facilities for the marketing of such live stock; and that in the interest of their own packing industry and the provision of markets and market facilities they have been guided and led into a proper interest in the development, maintenance, and carrying on of live-stock markets, and some of these defendants have, as they properly and lawfully might, acquired financial interests in the capital stock of certain stockyard companies. But at no time have they or any or either of them used or attempted to use the same in any way whatever to the prejudice or detriment of live-stock producing interests or other interests concerned in or affected by the operation, management, or conduct of any stockyards, or upon any other theory or conception than that their best interests in such stockyards and their investment therein call for and require such conduct and management thereof as would best serve and promote the interests of the live-stock producing industry and the extension and increase in the production of live stock, upon which the success of such stockyards depended, and the provision by and through such yards of the most efficient facilities and service for the receipt and care and marketing of such live stock.

These defendants—maintaining that the acquisition and holding by them or any or either of them of shares of the capital stock of stockyard companies as and for the purposes aforesaid and for investments and for the dividends or profits therefrom are lawful and proper and not against any public policy or ground for any just or fair animadversion or criticism—nevertheless say that they are entirely willing that such stockyards shall be controlled and the burden of their maintenance and operation assumed by others who will properly maintain and operate such yards in and for the best interest of the live-stock industry as market centers for the producers of live stock, with convenient, suitable, and efficient locations and facilities thereat or near thereto for the packing industry and the manufacture of live-stock products.

They maintain, however, that no other person or persons, company or companies are so much concerned in the establishment and in the proper conduct of such yards where needed for or for the building up

and increase of live-stock production as are the defendants and others in the meat-packing and live-stock industry, who also from their experience, as well as from their large interests in their own industry, are qualified for as well as so concerned in the proper conduct of stockyards.

XIII.

As to contracts in restraint of trade: These defendants deny that they, or any or either of them, have entered into or have any unlawful contract or contracts, combination or combinations, or conspiracy or conspiracies to restrain trade or commerce, or to artificially prevent between the defendants to the said petition, or any or either of them, or between these defendants, or any or either of them, or any other or others, or otherwise, competition in the prices for which live stock or meat or meat products or any other commodities are purchased or sold.

These defendants deny that there is any percentage-purchase arrangement between this defendant parent company and the other parent companies, or any or either of them, such as is referred to in the said petition or bill of complaint or otherwise. They deny that there is any such arrangement between this defendant parent company and the other companies, or any or either of them, having as its ultimate or other object the elimination of competition between them in the purchase of live stock or in the sale of dressed meats. They deny that there is any contract or agreement or arrangement or understanding to which these defendants, or any or either of them, are parties or privies for any limitation upon the source of supply, or upon the volume of business, or for limiting the purchase of live stock, or to limit the volume of their dressed-meat products.

They deny that these defendants, or any or either of them, are under any agreement or understanding for or concerning or recognizing certain percentages or proportions as between themselves or any or either of them, and any other defendant or defendants, to which they deem that each or any company was entitled, or that they, these defendants, or any or either of them, have any agreement or understanding to or do so gauge their purchases that annually, or at any time, their respective purchases should approximate actually or substantially the percentage so agreed upon or any percentage; or that as a means of perfecting said alleged arrangement or otherwise, divers percentages, whether varying at different stockyards or otherwise, are agreed upon, or that understandings have been had that certain of the parent companies should buy in certain yards or should refrain from buying in certain yards, or that in order to prevent such plans from being disarranged by outsiders, or for any other reason, agreements have been made, or any agreement has been made with such or any outsider by which purchases between this parent company, or any or either of these defendants, and the so-called independents, or any or either of them, were placed or were, or were or are to be, upon a percentage basis, whether similar to the above or otherwise.

These defendants further say that as between this parent company and each and all the other parent companies named as defendants herein, and all others engaged in the packing industry, there is now and at all times in said bill of complaint referred to has been active and unrestrained competition, both in the purchase of live stock and sale of dressed meats, meat products, and other commodities, and these defendants deny that any apparent or approximate uniformity of percentage of the receipts of live stock purchased annually by this parent company and its subsidiaries evidences or tends to prove any such contract or agreement between this parent company and all or any of the other parent companies as is alleged and referred to in said petition or bill of complaint. This parent company has the purpose and intention of securing in active competition with each and all of the other parent companies and other packers such quantity of live stock at the various stock markets that experience over a period of many years has demonstrated it must of necessity have in order to increase its volume of business and to provide for the needs of its trade, and that it may not lose that established position and trade it has taken years to gain.

These defendants say that during the year 1910 an indictment was returned in the district court of the northern district of Illinois against certain individuals who were then officers of the defendant parent companies, Armour & Co., Swift & Co., and Morris & Co., charging present petition or complaint that, among other acts, such defendants (who were therein alleged to be the principal owners and real managers of said companies) were engaged in a combination in restraint of trade and commerce, which combination was one for eliminating competition between the same defendant parent companies, Armour & Co., Swift & Co., and Morris & Co., in the purchase of cattle and the sale of fresh meat; that, in pursuance of such unlawful agreement, said defendants refrained from competing with each other in the purchase of cattle, and fixed the number of cattle to be purchased by or for each of said companies, and agreed upon the amounts to be bid for cattle from day to day, and fixed the prices at which fresh beef should be sold. The respective defendants named in said indictment entered a plea of not guilty, and upon trial of said cause the evidence concerning all and every the acts, transactions, or conduct of business which had been done or carried on by such defendants, or any or either of them, and which in the petition or bill of complaint herein are charged to constitute a contract, combination, or conspiracy in restraint of trade, or a monopoly of any part of said trade in or in respect of either the purchases of cattle or the sales of fresh beef—or acts, transactions, or conduct of business like in all respects to those done by these defendants and so charged in said petition or bill of complaint herein as constituting such alleged unlawful restraint of trade or a combination or conspiracy in restraint of trade or a monopoly thereof—was presented, adduced, and exhibited by the Government on said trial as constituting or showing the guilt of the respective defendants named in said indictment, and the said cause was, upon the evidence and testimony submitted, and the case made by the Government in support of said indictment, submitted to the jury—the defendants not introducing or offering any evidence, whereupon the jury, having been duly charged, retired and considered, and afterwards returned a verdict of not guilty, and thereupon said verdict was duly recorded and judgment thereon entered.

And these defendants maintain and charge that the said verdict and the judgment of said district court at Chicago, acquitting said defendants, constitute positive and incontrovertible proof and evidence that the acts, transactions, and conduct of their said business by these defendants which are referred to and complained of in the said petition or bill of complaint herein, which are like or similar to the acts, transactions, and conduct of such business in the said indictment referred to, or any or either of them, do not constitute any unlawful restraint of trade or commerce, or any combination or conspiracy in restraint of trade or commerce, or any monopolizing of or attempt to monopolize any part of such trade or commerce, but are lawful and proper.

These defendants respectively deny that means have been adopted by them, or any or either of them, or to which they or any or either of them, are parties, by which sales to outsiders or so-called independents or others were or are controlled by the parent companies or any or either of them.

These defendants respectively deny that control over the stockyards or stockyard-loan institutions, or terminal railways, or other interests, or any or either of them, has discouraged opposition by either commission men or so-called independent packers or others, or has existed.

XIV.

As to control of so-called substitute foods: Defendants admit that in dealing in and handling so-called "substitute foods" or "unrelated lines" these defendants availed themselves (as is alleged in said bill) of the route cars, auto trucks, branch houses, and storage warehouses owned or controlled by them, and that further (as is alleged in said bill) these facilities intended primarily for the sale of meat, were employed, with comparatively no little increase of overhead expense, in the distribution of so-called substitute foods and unrelated commodities, and the defendants were enabled thereby to reach remote spots.

Defendants allege that prior to the Great War the business of these defendants in canned vegetables, canned and dried fruits, canned fish, rice, beans, and other nonmeat foods was very limited and confined practically to local purchases by a few individual branch houses, usually as an accommodation to some of their customers, but when our country went into war and a survey of the meat-food situation of the world made it evident that the United States was to be (as it was) called upon to furnish practically the entire supply of pork product and the major supply of beef for not only our country but our allies, and everyone was urged to eat as little meat as possible, these defendants looked around for some products to sell to keep their enormous branch-house organization intact and employed (so far as not employed or used in such export and war business), and their cost to sell within reason, and largely increased these defendants' business in these lines. The reason for it was apparent when, as they allege upon information and belief, 35 per cent of defendants' entire production of meat food in this country was used by the allied Governments.

Defendants expressly deny, however, that they have at any time entertained the intention or purpose of controlling the Nation's supplies of so-called substitute foods or unrelated products, or any other commodity or commodities, but that, on the contrary, their purpose and intention in entering into and continuing in such lines of business and employing their organization and equipment therein was entirely lawful as a natural and legitimate extension of their business, and, moreover, based upon the soundest of economic grounds, to wit, the complete utilization of facilities and distributive organization necessarily required in the handling of meats and meat-food products and employed in connection with the marketing of so-called "substitute foods" and "unrelated lines" without placing upon the consuming public any burden of additional expense for the maintenance thereof.

Defendants further aver that the volume of business transacted in such lines amounts to but a small percentage of the total volume handled by wholesale grocers and other dealers in such commodities, and defendants allege upon information and belief that during the year 1918 the wholesale grocers throughout the United States handled more than $3,500,000,000 worth of wholesale grocery business, and that the total amount of such business in these lines handled by all the defendants named in said petition or bill of complaint, if combined, would not amount to more than 3 per cent of the entire total for the country; and further, that the amount of business handled by the defendant parent corporation, Armour & Co., during the year 1918 in canned fish, vegetables, and sundries, canned and dried fruits, fruit preserves, and grape juice amounted to 4.62 per cent of said defendant, Armour & Co.'s, total volume of business.

Defendants further allege that the increase shown in the volume of business handled in such lines was and is due to the fact that defendants were enabled to secure such business by reducing the costs necessary in connection with marketing such products through complete and efficient operation and use of their facilities and branch-house space, thereby rendering better and more efficient service both to the producers of said commodities and the consuming public. These defendants deny that the effect of their entry into such lines of business has been that of gradually eliminating competition, but are informed and believe and so allege that during the period 1907–1918, 1,101 wholesale grocers entered the highly competitive business of selling food products and further allege upon information and belief that during the year 1918 there were 3,887 wholesale grocers through the country, and that at present there are over 4,000 wholesale grocers in active competition with the defendants in such trade.

These defendants deny that they have eliminated or lessened, or sought to eliminate or lessen, competition in meat products.

These defendants deny that they have eliminated or lessened or sought to eliminate or lessen competition in so-called substitute foods, or that they have in any way sought to prevent the public from turning to or using substituted foods. They deny that they set about controlling or have sought to control the Nation's supplies of fish, vegetables, either fresh or canned, fruits, cereals, milk, poultry, butter, eggs, and cheese, or any or either of them, or other substitute foods, or that they or any or either of them had any such purpose.

These defendants deny that in their trade and business in so-called substitute foods they fixed or attempted to fix prices so low as to gradually or otherwise eliminate competition or that they fixed prices with any such purpose. They say that their prices were fixed with respect to the normal conditions and facts which govern or affect the market price of such commodities, such as supply and demand, costs and expenses, and fair profit. They maintain that their facilities for conducting such business, their organization, skill, industry, and business experience were all proper and lawful elements in securing trade; and that they had or exercised no unlawful discrimination or advantages in securing such business, and they maintain that any growth or increase in their business obtained in the manner aforesaid, in competition with others, was the result of fair competitive trade. They deny that the securing of trade in such manner is in any sense monopolistic or in violation of law or public policy; or that trade so secured, as their trade was secured, is or may be a monopoly within the meaning of the law or in fact.

XV.

As to the alleged monopolistic attempts of defendants:

These defendants respectively deny that they or any or either of them have in any way or at any time attempted to acquire, gain, or get any monopoly of or to monopolize any part of the trade or commerce.

The alleged comparison in the said petition or bill of complaint of the net worth of the defendant parent companies, so far as the same relate to Armour & Co. in 1904 and in 1919, is inaccurate and misleading as bearing upon this question.

In the first place, the values of the same properties of this defendant parent company employed in its business in 1904 and 1919 fairly bear no comparison, the normal and proper growth and increase in such values being very large. The value of materials and commodities in an inventory of 1904, or thereabouts, as compared with the value of the same or like commodities of the same amount in 1919 would be very small, or much smaller, and such comparison would be of no value upon the question here under consideration. Almost the entire net profits of the business of this parent company from year to year during the said period of 15 years have gone to increase the capital and have been invested and employed in the extension of its business and its facilities, a very small percentage of such profits having been drawn out, and the added and compounded earnings from such invested profits properly and greatly increased the net worth of said company.

The said company has been during said period a very large borrower of money upon its paper, its actual working capital at any period of time during said 15 years being thereby very greatly increased, and its earnings include its profits upon such actual employed capital. During said period of 15 years said company further added to its working capital the sum of $50,000,000, or thereabouts, received from the issue and disposition of that amount of its 4½ per cent bonds and was thereby enabled thus to increase its employed and working capital. During said period and in 1918 the said company issued and disposed of its convertible debentures to the amount of $60,000,000 and was thereby enabled to and did add that amount to its employed capital, and that of such convertible debentures so issued approximately $50,000,000 par value at the date hereof have been converted into the shares of the preferred stock of this parent company and constitute part of its permanent capital. That during the 10 years from 1909 to 1918, inclusive, the sales of said company increased from year to year from and through the extension of its business and trade from $225,000,000 in 1909 to $861,000,000 in 1918; that such increase during the Great War was exceptionally great, owing to conditions produced thereby. That the average net profit upon said sales during said period of 10 years was 2.48 per cent; that such rate of net profit was lower than or as low as in any other industry; that the net worth of this defendant company in 1904 was the sum of $45,000,000, or thereabouts, and that the net worth of said company at the end of 1918 was $173,000,000, or thereabouts, so that the net worth of said company at the end of said period of 15 years is less than four times its net worth at the beginning of said period; but in reckoning the value of the said company at the end of 1918 the increase in the values of commodities and property at the close of said period as compared with the values at its beginning amount to a large sum, and this should be taken into consideration in comparing the value of the company at the beginning with its value at the end of said period.

These defendants deny the accuracy of the statement in the said petition of the increase of the net worth of the said parent companies from 1904 to 1919, or the value or effect of the figures stated in said petition with respect thereto as showing or tending to show, and these defendants deny that they show or tend to show any attempts at monopoly on the part of the defendants.

The increase in the amount of the sales of this defendant parent company in the said 15 years, which has been large, has been due and owing to legitimate trade conditions and to the business skill and industry of the defendants and their officers and employees, and the increase and growth of its business thereby produced, and not to any other cause. These defendants deny that the growth, extension, and increase of the business so brought about and resulting is monopolistic or in violation of the Sherman or other antitrust acts, or their spirit, or their purpose. These defendants deny that their personal control of any packing houses or slaughtering companies, or their interest in stockyards, terminal railways, rendering companies, cattle-loan institutions and banks or other corporations, or in any or either of them, have or had their inception in or depend for their prosperity upon advantages or privileges growing out of the interlocking or any control of the stockyards or stockyard appurtenances.

These defendants have not information on which to state or base a belief as to the number of corporations or concerns or trade names maintained or controlled by the parent companies or the individual defendants (other than these defendants) or their families, or in which they have a significant or minority or other stock interest or an interest of unknown extent. But these defendants allege that any such facts or statement thereof are and is immaterial to this cause. They respectively deny that there is anything unlawful or against public policy or subject to challenge herein, in or from the fact, if and so far as it is a fact, of the maintenance or control by the parent companies (within their respective charter powers), or the individual defendants or their families, of business corporations or concerns or trade names, or in their holding minority or other stock interests or other interests in any such corporations or concerns, or in their having acquired or organized or maintained them so long as they were useful for their purposes, and when no longer useful dissolving such corporations or concerns. These defendants respectively submit that the allegations of the said petition in that behalf are immaterial. These defendants deny that they, or any or either of them, have acquired or organized, or become or are interested in any concerns in furtherance of any supposed general scheme or plan of action which is unlawful or against public policy or improper.

XVI.

As to the extent of industrial control of defendants in so-called substitute foods and unrelated commodities:

Defendants deny that the growth of the control of these defendants, or any or either of them, in all or any of the various industries in said petition referred to, if permitted to continue unchecked, will be complete.

With respect to the business in 1916 of this defendant parent company in canned fish, vegetables and sundries, canned and dried fruits, fruit preserves (soda fountain supplies), and grape juice, and the amount thereof in 1916, and in 1918, and the increase in the volume thereof in said two years, these defendants say that this increase in business was lawful and proper, and is to be attributed to the skill and energy and business ability, and proper business organization and facilities with which said business was conducted; and that such increase in business was lawfully accomplished, and without violating any law or public policy. These defendants are unable to state whether any or how much of such increase of business was acquired "at the expense of competitors"; but they say that in all competitive business, the business properly secured by each of the competitors is, within the sense and meaning of such allegation in said petition, acquired at the expense of other competitors; and that such is the proper and lawful operation of competition, which is authoritatively defined to be the seeking by two or more of trade which only one may secure.

These defendants deny any purpose on their part to secure control of the markets for meat substitute foods; and that their engaging in such trade in competition with hundreds of others who are also engaged in such trade, and the purpose of the defendants to secure, by proper competitive methods, a portion of such trade as might come to them, is lawful and proper. There is no allegation or charge in said petition or bill of complaint nor is there in fact any basis for a charge of the use by these defendants of any unfair methods of competition in such trade.

XVII.

These defendants admit that these individual defendants are respectively either officers, directors, agents, or employees of the parent company, Armour & Co., its subsidiaries, and that some of the defendants are large and other smaller stockholders of said parent company and subsidiaries, or one or the other or both, and others of the defendants are not stockholders in either or in any of said companies, and are only, if at all, connected with the various matters alleged and charged in the said petition or bill of complaint, as and while they are so connected with one or the other of said companies as officers or employees; and that they are and can only be proper defendants herein or properly subject to the jurisdiction, order, or direction of the court herein, with reference to their action as such officers or employees, while connected with such defendant companies, and not otherwise.

These defendants respectively deny each and every allegation of said petition or bill of complaint not herein admitted; and having answered, they pray to be hence dismissed, etc.

Solicitor for Defendants.

ANSWER OF MORRIS DEFENDANTS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co., et al., defendants, in equity, No. 37623.

THE JOINT AND SEVERAL ANSWER OF THE FOLLOWING-NAMED DEFENDANTS TO THE BILL OF COMPLAINT FILED HEREIN.

CORPORATIONS.

Morris & Co. (Maine), Morris Packing Co. (Maine), Morris & Co. (New Jersey), Morris & Co. (Ltd.) (Louisiana), Morris & Co. (Pennsylvania), Joseph Stern & Sons (Inc.) (New York), Brooklyn Beef & Provision Co., Condit Beef & Provision Co., Corwin-Wilde Co., Chamberlain & Co. (Inc.), Donnelly & Co. (Inc.), National Hotel Supply Co., J. M. Wilson & Co., Middletown Beef & Provision Co., Glenn & Anderson Co.

INDIVIDUALS.

Edward Morris, Nelson Morris, L. H. Heymann, C. M. Macfarlane, H. A. Timmins.

DEFENDANTS.

These defendants now and at all times hereafter saving unto themselves, and each of them, all manner of benefit and advantage of exception which can or may be had or taken to the many errors, uncertainties, and other imperfections in the said bill of complaint contained, for answer thereto, or to so much and such parts thereof as these defendants are advised it is material or necessary for them to make answer unto, answering, say:

COURT'S JURISDICTION.

These defendants admit that Morris & Co., of Maine, is engaged in the character of business mentioned and described in the bill of complaint, but say that the bill of complaint does not state facts which show that such business is interstate and foreign commerce.

These defendants deny that they, or any of them, have ever been a party to any contract, combination, or conspiracy in restraint of trade or commerce among the several States or with foreign nations, either in the purchase of their raw material or in the sale of their finished products; and these defendants expressly and distinctly deny any and all allegations, charges, intimations, or inferences in the bill of complaint contained to the effect that the defendants, or any of them, are in any illegal combination, conspiracy, or contract of any kind or description with the other defendants, or any of them, or with any other person, firm, or corporation, either as to the purchase of their raw material, the sale of their finished products, or otherwise.

These defendants deny that they have in any manner whatsoever, either monopolized, combined or conspired to monopolize, or attempted to monopolize, any portion of the food supply of the Nation; and also deny that they control artificially either the supply or the price of the foods of the Nation; but, on the contrary, these defendants allege that the business of Morris & Co. has been, and is being, conducted in accordance with the laws of the land and the rules of good business ethics; that in considering the question of monopoly, the Swift, Armour, Wilson, and Cudahy interests must be considered separately, and not jointly, for each is in actual and active competition with the others and Morris is in actual and active competition with them all.

OBJECT TO BE ATTAINED.

These defendants deny that they have, or ever attempted, any monopoly whatsoever in the interstate trade or commerce of live stock, meat products, or so-called substitute foods; and deny that they have any instrumentalities, facilities or advantages by which they could build up or perfect any monopoly of meats, meat-food products, or substitutes for meats, or any other article or commodity.

Defendants aver that they have a perfect legal and moral right to deal in the so-called substitute foods or unrelated commodities, and that their dealing in such foods and commodities is sound economically and without question has been and is now of great benefit to the public.

THE NATURE OF THE BUSINESS AND METHOD BY WHICH IT IS HANDLED.

These defendants admit that the principal business of Morris & Co., of Maine, is the slaughter of live meat animals, the dressing of the carcasses, and the distribution of the dressed meat, and the sale of such meat and meat-food products to butchers, who in turn sell the same to the consumers.

These defendants admit that the large packers invented what is commonly known as the refrigerator car. By means of the refrigerator car the dressed meats can now be transported for long distances and delivered to the great consuming centers in the eastern part of this country in good condition. This is in the interest both of the producers of live-meat animals and of the consumers of meats and meat-food products. These cars make it possible for the packing houses to be located near the source of production of the live-meat animals, which saves shrink and freight to the producer of such live stock and relieves the necessity of shipping anything to the consuming centers excepting meats, the rest of the carcass being manufactured into by-products. In this respect the refrigerator car has been of great benefit to the country as a whole. It has developed the live-stock industry and has cheapened meats to the consumer.

This very advantageous and economical way of transacting this business requires large units, because only with a large volume could the packer afford to own refrigerator and route cars and the branch houses necessary for the distribution of the meats and meat-food products required in the great consuming centers of this country.

After inventing the refrigerator car the large packers were required to build, own, and operate their own cars, because the railroads refused to furnish such cars. These cars have been operated by the packers at a great loss and without any advantage over their competitors, because they pay the same rate on the product shipped in their own cars as that shipped in the cars of others and because the mileage rate paid to the packers for the use of their cars is fixed by the Interstate Commerce Commission.

STOCKYARDS.

The stockyard is a market place, where the live-meat animals of the country are received, penned, rested, fed, watered, weighed, and sold. The stockyards of this country are absolutely essential not only to the live-stock industry but also in getting meat foods for the people. They are not only in theory but in fact public markets where all who wish to buy or sell have had and may have free access and right to trade. The present high state of efficiency in the stockyards of this country is almost entirely due to the packers. It is infinitely better that the control of these yards should be with people who are interested in the industry rather than with people who are interested only in their dividends.

The stockyards, as alleged in the bill of complaint, have always afforded to the cattle raiser the opportunity to speedily dispose of his live stock for an immediate cash price. This is because of the financial strength of the packers. In the past this has been done, regardless of panics, the financial condition of the country, or the number of animals offered for sale, which demonstrates that there must be large units in the packing business. If the borrowing power of the large packers is impaired through needless agitation, improper regulation, or unwise legislation, it may be that in the future all of the live stock offered for sale will not continue to be purchased each day for cash.

As alleged in the bill of complaint, packing houses are naturally located at stockyards, because each is dependent upon the other. The stockyards furnish the raw material for the packer, and the packer furnishes a spot cash market for the live stock offered for sale in the stockyards. Consequently, the packer is directly and vitally interested in building up the yards and the live-stock market at all points where he may have a packing house. Originally many of the smaller yards near the source of production were not efficiently or successfully conducted. This was the great underlying cause that influenced the packer to become interested in such yards.

The ownership of the capital stock of the stockyards company can not possibly exercise any control or influence over the prices obtained for live stock bought and sold in the yards, for the reason the yards are public and free for everybody to bid upon stock offered for sale therein.

It is natural and proper that there should be located at the stockyards commission men skilled in valuing, handling, buying, and selling of live stock and to look after the live stock intrusted to their care for sale and disposition at the yards.

The stockyards company very properly makes charges for services rendered, as alleged in the bill of complaint, and the stockyards company is entitled to fair and reasonable compensation for such services, and this regardless of the ownership of the capital stock of the company. The charges at the various yards in the past have been fair and reasonable for the services rendered.

These defendants, further answering, state that none of the Morris corporation defendants has any interest whatsoever in any of the stockyards of this country. The Morris individual defendants holding interest in the stockyards have been, and are, willing to dispose of such interests, providing a purchaser can be obtained therefor who will pay what said interests are fairly and reasonably worth and who at the same time will insure the future efficient operation of such yards.

PACKING-HOUSE SITES.

There has been no undue or improper tendency to "centralize" the live-stock markets of this country, and it was not on account of any such alleged "tendency" that packing houses were located at the stockyards, and vice versa, as intimated in the bill of complaint. The stockyards could not exist without packing houses, because the packers are the principal buyers at the yards. Neither could a packing house exist without a stockyard, unless the packer should buy his raw material in the country direct from the owners of the live stock, which policy, we submit, neither the producers nor the Government would favor.

These defendants deny that the stockyard companies generally own or control all of the packing-house sites at such yards; also deny that the owners of the stockyards are in a position to determine or do determine what packing companies, and how many plants, shall be established at the yards.

Further answering, these defendants say that it is to the decided advantage of the stockyards to have as many packing houses as possible located at such yards. Each additional packing plant builds up the live-stock market for the yards company, as the yards company makes its money out of yardage and feedage charges. Therefore the greater number of head passing through the yards will necessarily increase the receipts of the stockyard company. It has always been the fixed policy of the stockyard companies to secure additional packing plants at the respective yards. It is not a fact that there has been any discrimination whatever in that regard. On the contrary, the stockyard companies, regardless of their ownership or control, have always been anxious to get additional packing plants located at their respective stockyards.

SITES FOR STOCKYARDS BANKS AND CATTLE LOAN COMPANIES.

These defendants admit that a very large amount of capital is required to finance the raising and preparing for market of live meat animals, upon which the consumers of this country depend for their meat and meat-food products. It is not practicable for the banks of the country generally to loan this money, taking chattel mortgages on the cattle as security, which is ordinarily the only security offered, because of the character of security and the distant location of the banks therefrom. Accordingly there are a great many cattle-loan companies in this country which maintain offices and representatives in the locality of the cattle given in security for loans, and thus these cattle-loan companies are in a position to keep in touch with the loans and inspect the security from time to time. The majority of these cattle-loan companies have no packer interest in them whatsoever.

The mode of procedure is for the cattle-loan companies to take the notes of the cattlemen, secured by chattel mortgages on the cattle, and then the cattle-loan companies indorse and guarantee this paper to the banks scattered all over the country. Most of this paper goes to eastern banks. The banks take and pass this paper out to their customers, not upon the security of the mortgaged cattle, which are generally at a great distance from the banks, but upon the indorsement of the cattle-loan company. For the inspection of the security and guaranty of the paper the cattle-loan company gets a reasonable commission, generally the difference between the interest which the borrower pays and the interest retained by the bank buying the paper. In this way it has been possible for the live-stock men of this country to borrow the required money to prepare the live stock for market, and the cattle-loan company has in this way been of great benefit both to the producer and the consumer.

These defendants further state that the cattle-loan companies controlled by the big packers have never required the live-stock man to market his live stock except when same is actually prepared and ready for the market. In not a single instance has the packer—controlled cattle-loan companies—required prior marketing of live stock, even in case of droughts or other extremity beyond human control, unless and except it was in the best interest of the owner of such live stock. The packers, in fact, have had no advantage whatever through such cattle-loan companies, except through the encouragement of production. The live-stock men have not to any extent been damaged by the interest of the packers in such cattle-loan companies, but, on the contrary, have been greatly benefited.

It is in the interest of the live-stock men and of everybody else that these cattle-loan companies and live-stock banks be located at or near the principal stockyards of this country.

These defendants deny that the owners of stockyard companies in which they, or any of them, have any interest have at any time or place designated how many and which banks or loan companies may establish themselves at the yards. But, on the contrary, there is in fact actual and active competition between the banks and cattle-loan companies at all of the large stockyards of this country.

Morris & Co. has no stock or other interest in any bank or cattle-loan company.

RENDERING PLANTS.

In the shipment of live meat animals to the market naturally some of them die either en route or after reaching the yards. There are not enough of these dead animals at any one stockyard to justify the investment, overhead, and expense incident to the operation of a rendering company. Accordingly the rendering company that handles the dead animals at any one of the stockyards must and does have additional business, which is generally obtained in the way of dead animals collected from the streets of the city under city contract. When a company has such a city contract it is enabled to handle the dead animals at the stockyards on better terms and to better advantage for the producers than otherwise could be done.

From the standpoint of health and sanitation these dead animals must be handled very expeditiously, and on that account some one must be charged with the responsibility of their very prompt collection and disposition.

These defendants deny that there is any monopoly at any of the public stockyards of this country for the handling of dead animals at said yards, but state the fact to be that said animals are handled to the best possible advantage and in the interest of the owners of such animals.

Morris & Co. has no stock or other interest in any rendering company.

COMMISSION MEN'S OFFICE SPACE.

It is advisable for the commission men and traders at the stockyards to have offices in or near the yards, as alleged in the bill of complaint, otherwise they could not expeditiously transact the business at the yards for the producers of this country. In the orderly and efficient handling of live stock at the yards it is necessary to allot certain pens to the commission men in order to avoid confusion and delay. The renting of offices and the allotting of pens to commission men at the various stockyards have been done in the interest of the producers and of all concerned, and nothing is averred in the bill of complaint to the contrary. Generally the commission men and traders at the yards have a committee of their own to make these allotments of pens, as the interests of the yards and the commission men are absolutely mutual in this regard.

TERMINAL RAILWAYS.

These defendants state that it is in the interest of the live-stock producers that these terminal railways should be owned and operated independent of any one railroad system, because otherwise the railroad company controlling such terminals would use same to its own advantage and in the interest of its shippers and against the interest of shippers on other railroads. These stockyard terminals were originally brought into existence so that all shippers would be treated alike and so that there would be no discrimination in the handling of live stock into and at such yards. It is of the greatest importance that all live stock should reach the unloading chutes and be unloaded as soon as possible, so as to be rested, fed, watered, and prepared for the early market.

While the bill of complaint does not charge the exercise of any discrimination on the part of the terminal railways at the different stockyards, it claims they have such power. These defendants state most positively that these terminal companies have not discriminated in the matter of sidings, spurs, or other accommodations which may be required by a packing house, and there has been no discrimination along this line against any packer or buyer in any manner whatsoever.

MARKET PAPERS AND JOURNALS.

As stated in the bill of complaint, the cattle raiser requires "full, accurate, and unbiased reports of the demand for live stock, the prices prevailing, and the character and kind of stock required," and such information is furnished by the market papers and journals specializing in intelligence of this kind. In years past the daily press printed more extensive, but still inadequate, reports than at the present time, the increased cost of print paper and the reduction in size forcing a curtailment of these reports. The burden of increased cost of production bears more heavily on the small publisher than the large. This situation endangers the future of these publications, and care should be taken that these market papers and journals are not required to abandon the field altogether.

Whatever financial aid or assistance which the packers have given these publications in the past has been done in the interest of the market, and the producers got the benefits thereof. No market paper or journal could successfully falsify either prices or conditions. To do so would be to commit financial suicide, as its integrity and accuracy are the sole measures of its value to its subscribers.

These defendants have no advantage of any kind either over the producer of live stock or the purchaser of their finished products by or through the publication of market papers or journals. The fact is that both the people from whom the packers buy their raw material and the people to whom they sell their product are fully and accurately advised concerning market conditions.

These defendants deny that they, or any of them, own any interest whatever in any of the market papers or journals at any of the stockyards in this country.

ALLEGED RESULTS FROM CONTROL OF STOCKYARDS.

These defendants deny that the control of the stockyards and of the other facilities at the yards would cause the results claimed in the bill of complaint, and with reference thereto would state:

(a) If the profits made by the stockyard company are reasonable (and there is no charge in the bill of complaint that they are unreasonable) then it is wholly and absolutely immaterial, both to the producer of live stock and the consumer of meat, who owns the capital stock in the stockyards so far as profits are concerned. Packers' interest in stockyards does not add 1 cent to the cost of meat to the consuming public. On the contrary, if packer control of the yards means greater efficiency and saving of cost, it is to that extent a saving to the consumer. In other words, the elimination of the packers from interest in the yards would eliminate neither the yards nor the reasonable charges which the yards company is justified in making for its services.

(b) There is no power in a stockyard company to grant a monopoly either to banks, cattle loan institutions, rendering plants, or concerns supplying food for live stock and others, and no such monopoly has been granted or attempted in the past.

(c) The stockyard companies have no power to prevent the establishment of new packing plants at the respective yards or to hamper the growth of those in existence; but, on the contrary, it is to the direct and best interest of the stockyard companies to induce the location of additional packing plants and to give such service as would encourage the growth of those in existence. The fact is that the building of additional packing plants has been encouraged by all of the yards.

(d) The present stockyard companies can not prevent the development and limit the number of new markets or centralize and restrict business to the present stockyards. The Morris interests have in the past established new markets in direct competition with the other large packers. In 1910, Morris built a packing plant and stockyards at Oklahoma City in direct competition with Swift and Armour at Fort Worth and with Cudahy and Dold at Wichita, being less than 200 miles from each point, and even to the present time Morris must buy live meat animals in the leading markets of this country to sustain and keep its Oklahoma City packing plant in operation. To illustrate, Morris & Co. has purchased as high as 40,000 head of cattle in one year at the stockyards in Fort Worth, controlled by Armour and Swift. These cattle were purchased for slaughter at its packing plant in Oklahoma City, operated in active competition with the Swift and Armour plants at Fort Worth.

The South needs packer development and diversified industry, and especially in those sections where cotton can no longer be raised on account of the boll weevil. The climate and the soil both favor the raising of meat animals, and the large packers have been developing this section both with packing plants and stockyards. If the packer should be denied the privilege of being interested in stockyards, then this development, so much needed and desired, may be arrested and defeated.

(e) There has never been any exclusive access to information concerning receipts and sales of live stock and its disposition, either to the producer, the packer, or anyone else. This information has always been and is public and accessible to everybody alike.

The Bureau of Markets, under the Department of Agriculture, is maintained for the purpose of obtaining and disseminating this species of information to all concerned.

BRANCH HOUSES.

A branch house is primarily a market, or sales place, for the disposition of packing-house products at a distance from the packing plant. Branch houses are also frequently used for manufacturing purposes, such as the smoking of hams and bacon, and the making of sausage and other similar products; the consuming public thus gets the most wholesome product.

The branch house must have refrigeration, for meat is a very highly perishable product. Before we had refrigeration, beef was shipped to the eastern markets in box cars, when the weather was cold enough, and sold at auction on arrival. This costly, insanitary, wasteful, and extravagant method was soon discarded when the big packers invented and brought into use the refrigerator car and the branch house.

The branch house is ordinarily located on a switch track near the business center of the city and is managed by experienced men who know the wants of their particular community. At first the branch house was a crude affair, but the modern branch house costs from $75,000 to $300,000.

The branch house is in the interest of both the producer and consumer, because, without the distributing facilities of the big packers, of which the branch house is a part, congestion would take place at the packing plant and the packer could not buy the live meat animals shipped to the yards. Consequently, it is in the interest of the producer that the packers have proper marketing facilities, so that the packing plant will not be congested with the finished product, and so that the packer, by not being a spasmodic buyer, can at all seasons of the year pay a fair price for the live meat animals offered for sale on the market. The branch house not only serves this purpose for the producer, but is also the source through which the butcher at all seasons of the year gets his meat and in turn is able to continually supply the consuming public.

With the large packing plants located near the source of production, as they should be (thus saving the producer shrink and freight), the branch house is an absolutely essential part of the distributing system of the packer. Meat is a highly perishable product and can only be kept in good condition for a limited number of days, even with refrigeration. Not only is the refrigerator car and the branch house an essential in the distributing system of the packers, but these facilities keep down the waste of meat to a minimum, and prevent the increase in price which waste would necessarily entail.

These defendants are not advised as to the number of branch houses maintained by the defendant parent companies, as alleged in the bill of complaint, but these defendants state the fact to be that Morris established its first branch houses in the East in the year 1885, and it now has 186 branch houses, with 2,850 employees.

These defendants further state that the distributing system of the large packers, including refrigerator cars and branch houses, does not give to them any monopoly in the sale of meats in the great consuming centers or anywhere else. To illustrate the situation in that regard it may be stated that in New York City, in addition to the defendants, there are more than 75 wholesale dealers and slaughterers, and in Boston, besides the defendants, there are 13 large wholesale dealers and 15 houses that buy from local slaughterers. This is characteristic of all the large cities in the great consuming section along the Atlantic seaboard.

The meat sold through the branch houses must bear the expense of shipment from the packing plant to the branch house, in many instances being a great distance and a large expense. This meat comes in competition with the meat of numberless local slaughterers in all of the cities of this country, which latter meat has no expense whatever for transportation and is also free of the expense incident to Federal inspection. Consequently, in the matter of competition the meat of the big packer sold through branch houses is at a decided disadvantage. The branch houses are maintained simply as a matter of necessity and because no better distributing system has ever been suggested or adopted for the transportation of meat from the large packing-house centers, which should be near the source of production, to the great consuming centers, which are largely along the Atlantic seaboard.

These defendants further state that a perishable product like meat can not be handled through some common freight house, like farming implements, clothing, boots, and shoes, or other staple articles, which do not have to be sold quickly in order to prevent deterioration or complete loss.

ROUTE CARS.

As stated in the bill of complaint, route cars supplement the branch houses and serve the purpose of reaching the small communities where the trade is not sufficiently large to justify an investment in a branch house.

The route car does more than this, it brings to these smaller communities the Federal inspected, sanitary, and finely prepared products of the modern packing house. Through the efficiency of the large packers and the utilization by them of all by-products, these meats and meat food products can be supplied to these small distant communities at less cost than they are supplied through the local butcher. At the same time the Department of Agriculture has determined and reported "that farmers receive smaller relative returns from cattle marketed locally than from those that are shipped to centralized markets."

These defendants are not advised as to the number of route cars operated by the parent companies or the percentage which that number bears to the total number operated in the packing industry. These defendants state that Morris & Co. operate 265 car routes in this country, reaching 5,074 towns, and the business done from these route cars comes in direct and active competition not only with the products of the large packers but also with the local butchers and slaughterers, many of whom are not Federal inspected and have no expense of shipment whatever. The percentage of route cars operated by the five large packers, as compared with the number of route cars operated by the packing industry as a whole, does not begin to describe the amount of competition which the business done from these route cars comes in contact with. If these route cars were not in existence the strong probability is that the local butchers and slaughterers would increase the price of meat to the consuming public. These defendants maintain that these route cars are now operated, not only within the law and without any undue or improper advantage to the packers, but they are in fact operated to the great benefit and advantage of the consuming public in the towns and communities reached by them.

AUTOTRUCKS.

These defendants do not maintain any autotrucks that serve as route cars, but insist that the consuming public is entitled to the most efficient and best means of distribution of meats and meat food products that can be devised.

COLD-STORAGE WAREHOUSES.

The bill of complaint alleges that the cold-storage warehouse enables the packer to extend the volume of his business. Anything that extends volume in the meat-packing business is in the interest of the public generally, both producer and consumer, because a big volume enables the packer to utilize the by-products to the fullest possible extent. That is why the big packer has so many departments. That is why the big packer has a large force of chemists and highly trained specialists who are constantly endeavoring to produce more and more by-products from the offal, the effect of which is to bring down the price of meats for human consumption. That is one important reason why this country must continue to have big units in the packing industry.

Generally speaking, the cold-storage warehouse enables full production in seasons of plenty to be carried over to seasons of scarcity, thus stabilizing the prices for the producer in seasons of plenty and at the same time making the prices lower to the consumer in seasons of scarcity.

The chief function of the cold-storage warehouse in the meat-packing business is to preserve the surplus meats until they can be advantageously marketed, which is in the interest of both the producer and the consumer. At times there are extraordinary runs of cattle, hogs, or sheep at the various yards. Sometimes this is due to usual and normal causes, such as the end of the grass season for cattle, or in the fall for hogs; and at other times it is due to some-

thing unusual and out of the ordinary, as a drought in the Southwest or a cholera scare among the hog feeders. Under such circumstances if there were no cold-storage warehouses to take care of this temporary oversupply this live stock could not be marketed and would represent a clean waste in the food supply of the Nation, which in turn would enhance the price of meats to the consumer, not to mention the loss to the producer.

If it had not been for the cold-storage warehouses along the Atlantic seaboard, our armies and the armies of our associates could not have been fed with American meat during the war, as these warehouses enabled us to store the meats at places reasonably accessible to seaboard while waiting for the ships.

Morris & Co. owns but one cold-storage warehouse, which is located in Chicago. This warehouse has a capacity of about 50,000,000 pounds, a large part of which is used for meats in process of curing. It is necessary for the company to store almost that amount in outside public warehouses, for which Morris & Co. pays the regular published rates regulated by the various State utility commissions where the different warehouses may be located. Morris & Co. has never had or exercised any control over public warehouses.

These defendants deny that they have any possible advantage over their competitors through the cold-storage warehouse; also deny that the cold-storage warehouse has ever been used by them, or any of them, as a means to control the price of meats and so-called substitute foods.

THE PARENT COMPANIES' ACQUISITION OF ABOVE-DESCRIBED FACILITIES AND THEIR PURPOSE IN DOING SO.

These defendants deny that they, or any of them, purchased or acquired any interest whatsoever in stockyards or the facilities pertaining thereto, the stockyards terminal railways, or market papers in order to repress and discourage the development of other packers and slaughterhouses or to control the shipments of meat to the various markets.

These defendants state that there are more packers in competition with them than ever before in the history of the industry; that there are more than 300 meat packers doing an interstate business under Federal inspection, and there are more than 1,000 local slaughterers doing an intrastate business, all in keen and active competition with these defendants.

These defendants deny that they, or any of them, ever purchased or acquired any interest whatever in stockyards, terminal facilities, or market papers by concert of action and pursuant to a common understanding with the other defendants in this case, or with any other person or persons; and these defendants have never acquiesced in the acquisition of interest in or control over stockyards by any of the other defendants.

These defendants deny that, in pursuance of a common purpose, plan, and desire, outside investors and packers have gradually been forced out as dominating factors, both in the ownership and management of the most of the important stockyards, and have been replaced by the parent companies or their representatives. The fact is that none of the Morris corporations have any capital stock or other interest whatsoever in any stockyard in this country. The largest stockyard in the country—Chicago—is not controlled by the packers, but, on the contrary, only one individual packer has any interest therein, and that but 19 per cent. More than two-thirds of the capital stock of the second largest stockyard in the country—Kansas City—is owned by people wholly unconnected with the packing industry, and the capital stock of this company is dealt in very extensively on the stock exchange, and any person is privileged to buy a substantial interest therein. Large blocks of the capital stock of the Omaha yards, the third largest stockyard in this country, are owned by people wholly unconnected with the packing industry. More than one-third of the capital stock of the East St. Louis yards, the fourth in size, is owned by people who are not connected with the packing industry. But the smaller yards, near the source of production, like the Denver, Fort Worth, Oklahoma City, and Wichita yards, which can scarcely support two packers, and which render the great service to the producers, relieving them of both freight and shrink, are not so attractive to the investing public, and these are the yards which have been built up and are controlled by the packers.

These defendants further state that the interests acquired by the packers in the various stockyards of this country were generally acquired through necessity and in order that such yards might be built up and maintained efficiently, and this packer interest in these yards has resulted generally in the extension and building up of the market.

These defendants deny that they, or any of them, ever acquired any interest in any stockyard, stockyard terminal, or stockyard paper through any of the means or methods set out and described in the bill of complaint.

These defendants deny that the Morris parent company, charged in the bill of complaint, has granted any exclusive privileges, such as the right to purchase dead animals, the right to furnish supplies and facilities, and the location of cattle banks and cattle-loan companies, to concerns and corporations in which these defendants, or any of them, were interested; also deny that they employed the powers and privileges more specifically set forth and discussed in the bill of complaint under the heading "Nature of the business and method by which it is conducted."

These defendants expressly and distinctly deny that they, or any of them, have done any of the things alleged in the bill of complaint for the purpose or with the effect of discouraging and suppressing the establishment of packing establishments or dwarfing the growth of any packing company whatsoever.

These defendants further deny that they, or any of them, have attempted to monopolize the meat industry of the country or to artificially control the ultimate price which the consumer pays for meat or meat products.

CONTRACTS IN RESTRAINT OF TRADE.

Defendants expressly and distinctly deny each and every allegation and averment in the bill of complaint under this heading.

Further answering this charge of an agreement as to percentage of purchase, these defendants deny that they, or any of them, have any agreement or understanding whatsoever with any person, firm, or corporation concerning or affecting its purchases of live stock, and, in that connection, state most positively that the business of Morris & Co. is regulated and controlled entirely and absolutely by the law of supply and demand, and that its purchases of live stock are not regulated or controlled, to any extent whatever, by the purchases of Swift & Co., Armour & Co., Wilson & Co., the Cudahy Packing Co., or any or either of them, or of any other person, firm, or corporation.

These defendants state that there is not the uniformity of purchase between the parent companies that is intimated in the bill of complaint, but an approximate uniformity of purchase between these companies is of no particular significance, as these businesses have been many years in developing, and each company now has its regular organization, its ordinary and usual trade, its plant capacity, and distributing system. Moreover, there has been a very determined fight for several years from certain quarters to hold these companies to their present volume and not to permit them to grow or extend, if not to disintegrate them altogether. All of this would tend to bring about even a greater uniformity of purchase than the law of general average.

The uniformity appears closer than it actually is because of the tremendous volume incident to the packing business. In the figures of percentage the difference of 1 per cent to the average mind would not appear great, and yet that 1 per cent may represent several hundred thousand head of cattle. The difference of 1 per cent in the Morris buy between the years 1915 and 1917, which is conceded by the Government, represents 76,000 cattle, which is approximately 10 weeks' kill in Chicago or 3 weeks' kill at all of the Morris plants.

Further answering, these defendants state that there is much more uniformity of purchase by the leading interests in any stabilized basic industry in this country having competition than there is in the packing industry, and that this alleged uniformity of purchase in the packing industry, whatever uniformity there may be, is due to healthy conditions and sound economic laws, except that brought about by forces and influences outside of the packing industry itself.

This identical charge of uniformity of purchase was made by the Government in a criminal case instituted by the Government in Chicago against certain of the officers of three of the defendant parent companies, and after hearing the testimony for several months, this precise question being gone into very fully, the jury, in March, 1912, returned a verdict in favor of the defendants upon the testimony of the Government alone. The judgment based upon that verdict necessarily means that there was no undue uniformity of purchase by the packers, and is, in fact, an adjudication on that point.

This Government suit of 1912 was on the theory that three of the parent companies in this case maintained a certain percentage as to buy of live stock, while this present suit is against five parent companies and their officers, and yet there is no allegation in the bill of complaint as to how, when, or why the Government changed its position from three to five or when the two additional parent companies became parties to the present alleged agreement, or how or to what extent the two additional companies have affected the alleged percentage.

These defendants further state that during the war the Government ordered and directed the packers of the country generally, including the defendants, to maintain their respective volumes of business. The Government can not consistently order a certain thing done and then afterwards complain of its being done. Consequently the allegations in the bill of complaint do not set up any facts constituting a violation of any law on this point within three years next preceding the filing of the bill of complaint.

CONTROL OF SUBSTITUTE FOODS.

The statement in the bill of complaint that defendants had eliminated competition in meat products is wholly without foundation in fact, as is also the statement that the packers commenced the handling of foods and products ordinarily handled by wholesale grocers and produce dealers in order to keep the price of meats from advancing out of proportion to these other foods.

The fact is that Morris & Co. largely confined its activities to the production and handling of meat food products until the latter part of 1917. At that time the cost of live meat animals, labor, taxes, supplies, and everything entering into meat had advanced tremendously. The irregular receipts of cattle, sheep, and hogs due to shortage of live stock caused irregular markets. There are always slack seasons in the sale of the meats. Morris & Co. had fixed an overhead for the maintenance of its branch houses and the distributing system. During the war the meat that was furnished to our Government and the Governments of our associates did not pass through the branch houses, and as the Government discouraged the eating of meat by the civilian population in order that the armies and navies might be properly fed, the employees in the branch houses were not fully engaged and had plenty of time to handle additional lines. In order to meet these conditions and to keep down the expense of this distributing system, Morris & Co. began the handling of canned fruits and vegetables. The company had the branch houses, the sales organization, and delivery equipment, and expenses were going on whether the meat business was active or quiet. It was, therefore, decided that it was good business to keep all of these men and the equipment busy the year around, and in order to do so canned fruits and vegetables were added to the Morris lines.

In addition to the utilization of the entire organization to its full capacity, these added lines enabled Morris & Co. to make more frequent turnovers, smaller sales to the retailer, who ordered more frequently, reduced his investment in stock and gave the consumer a better product. Morris & Co. was often encouraged by retailers to add to its line, as they appreciated the service and could save time in both purchasing and delivery.

In the handling of groceries Morris & Co. had no advantage whatever in freight rates over its competitors, and the only advantage which the packer had in handling groceries and so-called unrelated lines was the advantage due to his efficiency, and it is perfectly legitimate and proper that the consuming public should receive the benefit of such legitimate advantage.

These defendants deny that Morris & Co. fixed prices so low as to gradually eliminate competition and to exterminate the produce dealer and wholesale grocer. It is an admitted fact that the number of wholesale grocers and the volume of business done by them since Morris & Co. entered this field in the latter part of 1917 has increased more than 10 per cent. This conclusively demonstrates that, instead of eliminating competition, or even injuring the business, the competition of the packers has stimulated and been beneficial to the business.

The entire business done by Morris & Co. in the so-called unrelated lines, which consisted almost entirely of canned fruits and vegetables, amounted to less than 2 per cent of the total annual sales of the company. The total business done by all of the packers in lines unrelated to meats amounts to less than 3 per cent of the entire volume transacted by the wholesale grocers and packers.

In view of the substantial growth of the business of the wholesale grocers during the last few years, the statement in the bill of complaint to the effect that, unless prevented by a decree of this court, the defendants will, within the compass of a few years, control the quality and price of each article of food found on the American table, is nothing short of the ridiculous. On the contrary, these defendants insist that it is in the best interest of the consuming public that it should get the benefit of the distributing system and added competition

of the packers in these so-called unrelated lines. To eliminate the packers from this field would merely mean to cut down competition to that extent to which the consuming public is entitled. The handling of groceries and foods other than meats by the packers has resulted in a better product and a saving of foods through wastage and destruction. While the wholesale grocer has his place in the economic scheme of this country, still it would be to the interest of the people generally if the efficient competition of the packers would force the wholesale grocer to revise his business methods and cut down his costs.

All of the profits made by Morris & Co. in the handling of these so-called unrelated lines finally went into the packing house profits, and to that extent enabled the packer to sell meat at a lower price. Consequently, the elimination of the packers from these so-called unrelated lines would naturally result either in lower prices for the live stock or higher prices for meats.

FINANCIAL GROWTH, PRESENT NET WORTH, AND VOLUME OF BUSINESS.

These defendants are not advised concerning the alleged growth, profits, sales, or net worth of Swift, Armour, Wilson, and Cudahy between the years 1904 and 1919, but these defendants do state that the total annual profits of Morris & Co. from every source whatsoever for this period of 16 years was but 8.41 per cent on the capital and surplus invested. Out of these profits dividends have been paid to the stockholders representing but 1.71 per cent on the capital invested. The balance of profits, to wit, 6.70 per cent on the capital invested, has been added to surplus.

A table showing the capital stock, the surplus, and the profits of, and the dividends paid by, Morris & Co. for each of the years 1904 to 1919, both inclusive, is as follows:

Year.	Capital.	Surplus.	Profits.	Dividend paid.
1904	$3,000,000.00	$12,663,983.17	$1,655,509.39	$240,000.00
1905	3,000,000.00	14,080,582.56	2,023,643.80	240,000.00
1906	3,000,000.00	15,864,226.26	1,796,618.65	240,000.00
1907	3,000,000.00	17,420,844.91	2,251,673.39	1,800,000.00
1908	3,000,000.00	17,872,518.30	2,650,389.35	315,000.00
1909	3,000,000.00	20,207,907.65	2,089,578.36	450,000.00
1910	3,000,000.00	21,827,486.01	746,194.96	435,000.00
1911	3,000,000.00	22,138,680.97	1,034,851.64	189,000.00
1912	3,000,000.00	22,993,532.61	1,812,653.49	180,000.00
1913	3,000,000.00	24,626,186.10	1,916,996.94	360,000.00
1914	3,000,000.00	26,183,183.04	2,205,672.69	450,000.00
1915	3,000,000.00	27,938,855.73	2,321,414.78	750,000.00
1916	3,000,000.00	29,510,270.51	3,632,212.90	1,000,000.00
1917	3,000,000.00	32,142,483.41	5,301,071.47	150,000.00
1918	3,000,000.00	37,293,554.88	4,217,858.84	300,000.00
1919	3,000,000.00	41,211,413.72	703,641.00	300,000.00

The profit on each dollar of sales by Morris & Co. for the years 1910 to 1919, both inclusive, is as follows:

Year.	Profit on each dollar of sales.
1910	$0.0061
1911	.0086
1912	.0136
1913	.0117
1914	.0139
1915	.0129
1916	.0170
1917	.0181
1918	.0106
1919	.0016

These defendants are in no way connected with Swift, Armour, Wilson, or Cudahy and are not in a position to state as to their profits, but these defendants are advised and verily believe that the profits made by the five big packers have been substantially less than the profits made by any other large basic industry in this country.

These defendants deny that the Government has not ascertained all of the profits made by the defendants and state the fact to be that departments and representatives of the Government have been through their books and records very thoroughly and for many years, and are familiar therewith, and, under these circumstances, these defendants state that the petitioner is not justified in alleging that there are profits which have not been ascertained.

NUMBER OF CONTROLLED COMPANIES.

Unfortunately, the allegations in the bill of complaint under this heading are vague, indefinite, and uncertain. These defendants are not advised as to the number of corporations in which the Swift, Armour, Wilson, and Cudahy companies are interested; nor are these defendants advised as to what is included in the word "families" under the averment in this regard. These defendants do say that the Morris organization is interested, comparatively, in very few corporations, and if the petitioner would specifically allege or set out the names of the corporations in which it is claimed that any of the Morris defendants are interested, then these defendants would answer such an allegation with certainty and precision.

These defendants are absolutely certain, however, that the Morris organization has no greater number of corporations than is ordinarily identified with a business having the volume and magnitude of Morris & Co. The corporations which Morris & Co. do own or control were acquired and are held and controlled legally and not in violation of any law.

EXTENT OF INDUSTRIAL CONTROL IN THE SUBSTITUTE FOODS AND UNRELATED COMMODITIES.

It would not be an enormous undertaking to determine the degree of control exercised by the defendants in all of the various activities mentioned in the bill of complaint, and there is positively no truth in the statement that, if the growth is permitted to continue unchecked, it will be complete within a few years. The fact is that it is now within the complete power of the petitioner to ascertain and determine, if that has not already been done, just to what extent Morris & Co. is engaged in any of these unrelated lines.

Of course, these defendants are not familiar with the alleged growth of the business of Armour & Co. in these unrelated lines, as alleged in the bill of complaint.

Morris & Co. disclaims any purpose whatever on its part to secure control of the market for so-called meat substitute foods or any portion thereof.

The parent companies do not control either the output or the price of products marketed through their distributing facilities, because they must pay exactly the same freight rate on goods shipped through these facilities as if they were shipped otherwise.

INDIVIDUAL DEFENDANTS.

The individual defendants are all members of the board of directors of Morris & Co., of Maine; Edward Morris is president, Nelson Morris is chairman of the board, L. H. Heymann is vice president, C. M. Macfarlane is vice president and treasurer, and H. A. Timmins is secretary and assistant treasurer of Morris & Co., of Maine.

The defendant, Nelson Morris, was not on the pay roll of Morris & Co. between March 1, 1918, and June 11, 1919, and took no part whatever in the affairs of the company during that time.

There is no foundation in fact for the statements in the bill of complaint that there is any effort or attempt on the part of these individual defendants, either for themselves or for others, to control the meat products or so-called substitute foods in the United States.

CORPORATION DEFENDANTS.

The history of the growth and development of the Morris organization is merely the recital of thrift, economy, efficiency, strict personal attention to business, and the leaving of the earnings in the business to accumulate; in another form, it is the tale of interest compounded. This organization has been three generations in the making. Nelson Morris, grandfather of the present heads of the business, was the original founder. More than 60 years ago he started in business as a sheep driver in the Chicago yards with a total capital of 50 cents. He became the largest feeder of cattle in the world, feeding as high as 60,000 head at one time, making big money in selling his cattle to the packers, and the money so made went into the packing business. The capital stock of Morris & Co. has always been closely held, and its legitimate growth, with increasing values in this country, can thus be easily understood.

The original corporate organization was the Fairbank Canning Co., but the business was in fact conducted as a partnership by Nelson Morris and his sons under the firm name of Nelson Morris & Co. until the present parent company, Morris & Co., of Maine, was organized.

It can be asserted with complete confidence that even during the period of business development in this new country of unparalleled natural resources and advantages the packing industry was far above the average in business morals, and that the industry continues to be conducted with honesty of purpose and scrupulous regard for the laws of the country and the equities of the producer and consumer.

There is a strong disposition in certain quarters of this country to have the Government interfere with private business by the creation of bureaus to control and run the business, which necessarily means inefficiency, politics, and added cost to the consuming public. This policy in its developed state would lead to paternalism and finally Government operation, which would mean the destruction of private initiative and personal ambition, which has been the genius of American business.

In this country of shifting extremes the preservation of equal opportunity to all American youth, such as that possessed by the founder of the Morris organization, is of vastly more importance than everything else involved in this litigation.

These defendants state that Morris & Co., organized under the laws of the State of Maine on October 16, 1903, with a capital stock of $3,000,000, is the company designated in the bill of complaint as the parent company in the Morris group, and said company has its principal place of business in the city of Chicago, Ill., and owns and operates a packing house in said city and also in the cities of East St. Louis, Ill.; St. Joseph, Mo.; Kansas City, Kans.; Omaha, Nebr.; and Oklahoma City, Okla. Its principal business is the purchase and slaughter of live meat animals and the sale of the finished products thereof; the said company, through its subsidiaries, maintaining selling branches in the principal cities of the United States.

The Morris subsidiary defendants mentioned in said bill of complaint are as follows:

The Morris Packing Co. was organized under the laws of the State of Maine on September 28, 1912, with a capital stock of $25,000, and conducts branch houses at Little Rock and Helena, in the State of Arkansas, selling Morris products, all of the capital stock of said company being owned by Morris & Co., of Maine.

Morris & Co., the New Jersey corporation, was organized under the laws of New Jersey on December 27, 1902, and has a capital stock of $100,000, and operates the selling branches for the Maine corporation in the United States, with the exception of those branches in the States of Texas, Louisiana, Pennsylvania, Maine, and Arkansas, all of the capital stock of said company being owned by Morris & Co., of Maine.

Morris & Co., the Louisiana corporation, was organized under the laws of the State of Louisiana on October 11, 1910, with a capital stock of $50,000, and conducts the Morris selling branches in the States of Louisiana and Texas, all of the capital stock of said company being owned by Morris & Co., of Maine.

Morris & Co., the Pennsylvania corporation, was organized under the laws of the State of Pennsylvania on October 6, 1910, with a capital stock of $50,000, and operates the Morris selling branches in the State of Pennsylvania, all of the stock of said company being owned by Morris & Co., of Maine.

Joseph Stern & Sons (Inc.) was incorporated under the laws of the State of New York in the spring of 1910, and has a present capital stock of $2,000,000, and now operates a meat-packing plant in the city of New York, all of the capital stock being held by Morris & Co., of Maine.

The Brooklyn Beef & Provision Co. was incorporated under the laws of the State of New York on September 30, 1912, with a capital stock of $5,000 and merely operates a branch house in the city of Brooklyn, N. Y., selling the Morris products, all of the capital stock of said company being owned by Morris & Co., of Maine.

The Condit Beef & Provision Co. is a corporation incorporated under the laws of the State of New Jersey in July, 1909, with a capital stock of $5,000 and merely operates a branch house in East Orange, N. J., selling the Morris products, all of the capital stock being held by Morris & Co., of Maine.

The Corwin-Wilde Co. was incorporated under the laws of the State of Massachusetts on March 29, 1893, with a capital stock of $50,000 and merely operates a branch house in the city of Boston, Mass., selling the Morris products, all of the stock being held by Morris & Co., of Maine.

Donnelly & Co. (Inc.) was incorporated under the laws of the State of Massachusetts in December, 1912, with a capital stock of $50,000 and operates a branch house in the city of Boston, Mass., selling the Morris products, all of the capital stock of said company being held by Morris & Co., of Maine.

The National Hotel Supply Co. was incorporated under the laws of the State of Illinois on March 19, 1901, with a capital stock of $5,000 and operates certain branch houses in the cities of New York and Philadelphia, selling the Morris products, all of the stock of said company being held by Morris & Co., of Maine.

Chamberlain & Co. (Inc.) was incorporated under the laws of the State of Massachusetts on February 27, 1907, and has a present capital stock of $200,000 and operates certain manufacturing and selling branches in the city of Boston, Mass., 1,334 shares of the capital stock of said company being owned by Morris & Co., of Maine, the rest of said capital stock being owned by parties wholly unconnected with the Morris organization.

J. M. Wilson & Co. was incorporated under the laws of the State of Massachusetts on December 23, 1915, with a capital stock of $12,000, and this company merely operates a wholesale meat market in Dover, N. H., Morris & Co., of Maine, owning capital stock of the par value of $9,000, and the rest of the capital stock of said company being owned by parties wholly unconnected with the Morris organization.

The Middletown Beef & Provision Co. was incorporated under the laws of the State of Massachusetts on January 7, 1914, with a capital stock of $12,000, and merely operates a wholesale meat market in Middletown, Conn., Morris & Co., of Maine, owning capital stock of the par value of $8,000, the rest of the capital stock being owned by people wholly unconnected with the Morris organization.

Glenn & Anderson was incorporated under the laws of the State of Illinois on December 14, 1905, with an authorized capital stock of $10,000, of which amount stock of the par value of $8,750 has been issued, which company operates a wholesale meat market in the city of Chicago, Ill., Morris & Co., of Maine, owning 44½ shares of said capital stock, the rest owned by persons not connected with the Morris organization.

It is not the fact, as alleged in the bill of complaint, that only those subsidiaries which are substantially 100 per cent parent company owned and which are engaged either in slaughtering, packing, or the selling of meats have been made parties defendant. On the contrary, it will be observed that the interest of Morris & Co. in several of the above corporations does not even approach 100 per cent.

Defendants deny that the Western Meat Co., Oakland Meat & Packing Co., and the Nevada Packing Co. are subsidiaries of Morris & Co.

SOME PERTINENT FACTS AND SUGGESTIONS IN CONNECTION WITH THE PACKING INDUSTRY.

These defendants feel justified in this honorable court of equity in calling attention to some of the pertinent facts involved in this litigation and to some of the problems and difficulties which they encounter in endeavoring to do equity to all with whom they come in contact, and that means the whole population of the United States, for they deal in a necessity of life—food.

Equity demands that the producer of live stock be paid a fair price for his animals. Equity also demands that the consumer be served with the packers' finished product at the lowest possible cost. Equity, however, in the view of the stock raiser means high prices for his cattle, while equity to the public means cheap meat on the table. It is practically impossible to please both, for there can not be cheap meat on the table of the consumer when the producer receives high prices for the live meat animal.

Between this Scylla and Charybdis the packing industry in the past has been tossed in all directions by angry winds, sometimes blowing from the ranges, sometimes from the combined kitchens of housewives, storm tossed themselves by the mounting waves of the cost of living, and sometimes from the cavernous mouths of politicians whose interest in the matter is distinctly less honest than that of the producer and consumer. Thus the packer has suffered from agitation and misrepresentation; he has been a tempting target for time-serving aspirants for public favor, and he has furnished campaign shibboleths. While equity has been demanded of the packer, and to the best of his ability he has rendered it to all, still equity has seldom been conceded to him.

The packing business is so intimately interwoven in the daily existence of every man, woman, and child in the Nation, so identified with their welfare and health, that it is extremely sensitive to criticism, and doubly so because it deals in a highly perishable product. These attacks cause not only moral but material damage.

The packing industry can not justly be blamed for the present high cost of living because it gets less than 2 per cent profit out of its total sales (representing approximately one-fourth of 1 cent per pound of dressed meat), while the producer gets 85 per cent, and the balance goes to labor, freight, and other expenses. In the last few years packing-house labor has advanced more than 150 per cent, and everything that goes into meat has advanced in proportion, and yet meat has not advanced in comparison with other necessities, and within the last six months meat at wholesale has declined 35 per cent.

We submit, in all candor, that we have reached the point where equity must be done to this vital industry, as well as to the producer and the consumer, because its future very closely affects the welfare and the happiness of all the people. It can only stand so much strain. It must not be torn down through prejudice or passion or even a misunderstanding of the great facts which point to the eternal justice of this controversy.

The large packers are perhaps the largest borrowers of money of any industry in the world, because large sums are required to buy for cash the live meat animals offered daily for sale in the stockyards. The large packers are expected to "clean up" the yards every night. It also takes large sums of money to carry the stocks, transport the meats to and distribute them in the great consuming centers at a distance from the packing houses and to make a market for American meats in foreign countries. This export trade is in the interest both of the American live-stock producer and of American labor. If the borrowing power of the packer is destroyed, this complex industry will be in a worse mess than the railroads; production will go down and the price of meats will necessarily go up. It is easier to tear down than to build up, as the world is now learning in this period of reconstruction.

It is but just and proper that this honorable court should know the great and controlling facts underlying this industry and the difficult and delicate problems with which it is constantly confronted. The packer is in the nature of a buffer between the producer and the consumer. He is the manufacturer and distributor of meats and meat-food products for the people. If he does his work efficiently and at a reasonable cost, if the toll he exacts for the manufacture and distribution is fair and reasonable, then he performs a great and vital work for the people generally, and the machinery and efficiency with which this work is done should never be destroyed or impaired. It is just as important that this vital industry should be treated fairly and justly by the public as that the public be treated fairly and justly by this industry.

These defendants have never attempted or desired any monopoly in foods. They have never taken a position of defiance to the Government. On the contrary, they have honestly tried to observe the laws governing their business not only in letter but in spirit as well. They desire to cooperate with the producer and to treat the consumer fairly. They want to deserve the confidence of all the people. The present efficiency and marketing system of the packing industry should be preserved to the people for all future time, but this industry can not survive constant agitation and criticism.

These defendants stand ready and willing to meet the views of the Government along fair lines that would tend to bring about a better and more equitable understanding between this industry and the public, to the end that the present efficiency and lasting benefits of this great industry may be preserved and perpetuated for the American people.

THE PRAYER.

These defendants say that the bill of complaint does not state a good cause of action and does not aver facts which would entitle the petitioner to any relief in a court of equity.

Further answering, these defendants deny that the petitioner is entitled to the relief, or any part thereof, in the said bill of complaint demanded, and pray the same advantage of this answer as if they had pleaded or demurred to the said bill of complaint, and pray to be dismissed with their reasonable costs and charges in this behalf most wrongfully sustained.

By M. W. BORDERS,
Solicitor for said defendants.

—

ANSWER OF THE WILSON DEFENDANTS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and The Cudahy Packing Co., et al., defendants, in equity, No. 37623.

The joint and several answers of the following-named defendants to the bill of complaint filed in this cause, who are designated in said bill of complaint as Wilson defendants:

	Organized under laws of—
Corporation defendant names as parent company:	
Wilson & Co. (Inc.)	New York.
Corporation defendants named as subsidiaries of the parent company:	
Wilson & Co	New Jersey.
Wilson & Co. (Inc.) of California	Nevada.
Wilson & Co. (Inc.) of Louisiana	Louisiana.
Wilson & Co. (Inc.) of Oklahoma	Oklahoma.
South Dakota Provision Company	South Dakota.
Gotham Hotel Supply Company (Inc.)	New York.
Standard Beef Company	New York.
Stiefel O'Mara Company (Inc.)	New York.
Drexel Packing Co	Illinois.
Albert Lea Packing Company (Inc.)	Virginia.
Mississippi Packing Company (Inc.)	Virginia.
Morton-Gregson Company	Delaware.
Paul O. Reymann Company	West Virginia.
Standard Provision Company	New Jersey
Central Products Corporation	Virginia.

Individuals named as defendants because of their connection as directors, officers, and employees of Wilson & Co. (Inc.), defendant parent company, and its subsidiary corporation defendants above named: Thomas E. Wilson, Arthur Lowenstein, Jacob Moog, Vonce DeLeon Skipworth, Arthur L. Smith, James A. Hamilton, George D. Hopkins, Adolph E. Petersen, George H. Cowan, William C. Buethe, Carl F. Burrell, James C. Good.

These defendants, jointly and severally, for answer to the bill of complaint filed in this cause, or to so much thereof as these defendants are advised is material or necessary for them, or any of them, to make answer unto, say:

First. These defendants, for whom answer is herein made, for the limited purposes of this case only, admit that Wilson & Co. (Inc.), the corporation referred to in said bill of complaint as the parent company, is either directly or indirectly, or through subsidiaries, engaged in interstate and foreign commerce, but deny that any of the following acts constitute either interstate or foreign commerce as alleged in said bill of complaint, viz:

(a) The purchase and slaughter of live stock.

(b) The preparation and manufacture of dressed meat and by-products of the slaughtered live stock.

(c) The curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animal.

(d) The production and sale of nonedible by-products and of articles in the manufacture of which those nonedible products are largely used.

(e) The manufacture, canning, or otherwise preparing for the market, sale, and distribution of certain food supplies other than meats.

And these defendants, for whom answer is herein made, severally deny that Wilson & Co. (Inc.), or any of its subsidiaries or any of the individuals named as Wilson defendants in said bill of complaint, are engaged in or are a party to any contract, combination in the form of a trust or otherwise, or conspiracy in restraint of trade or commerce among the several States or with foreign nations, or are attempting to increase and extend any monopoly therein of the products and commodities referred to in said bill of complaint, or to artificially control the supply and price of the food supply of the Nation, or that such defendants acting by and through their principal officers, or otherwise, have come to dominate, control, and monopolize a very great proportion of the food supply of the Nation and have thereby built up an unlawful monopoly and control over divers and sundry products and commodities referred to in said bill of complaint, or that any of said defendants have created or obtained any monopoly in interstate trade or commerce in live stock, meat prod-

ucts, and substitute foods, as charged in the bill of complaint, or that there has been or is in existence, as charged in the bill of complaint, any contract, combination, or conspiracy in restraint of trade or commerce between the several States, wherein said Wilson defendants or any of them are in any way concerned or a party or parties, but these defendants herein named, and each of them, aver that no such state of facts exists as charged in said bill of complaint as related to said Wilson defendants, or any of them.

And these defendants, and each of them, further deny that the said defendant parent company and its subsidiary companies who are defendants herein, either by themselves or in concert or combination with any or all of the other defendants named in the bill of complaint, have created or obtained any monopoly in interstate trade or commerce in live stock, meat products, and substitute foods, as charged in said bill of complaint, and deny that any unlawful monopoly by the defendants named in the said bill of complaint exists, as is charged therein.

STOCKYARDS AND STOCKYARD TERMINAL RAILROADS.

Second. These defendants, for whom answer is herein made, further severally say that neither Wilson & Co. (Inc.), defendant parent company, or any of its subsidiaries, own or control, directly or indirectly, any interest in the form of stock ownership or otherwise in any corporation, firm, or association now owning, controlling, or operating any public stockyard market company, stockyard terminal railroad company, or market newspaper doing business in the United States of the class and character referred to in said bill of complaint.

These defendants further answering, aver that notwithstanding that the said Wilson & Co. (Inc.), or any of its subsidiaries, do not own or control, directly or indirectly, any interest in any such companies, there has never been any discrimination against said defendant companies, or any interference with their right to go upon the premises of any of the said stockyard companies and purchase live stock or transact any other business thereon; that neither they, or any of them, nor any other person, firm, or corporation, so far as they or either of them are informed, have ever been denied the right to secure desirable packing-house sites in or near any such stockyards; that said stockyards are open to any person, firm, or corporation in the United States who desires to sell live stock thereon, and they are open to any person, firm, or corporation in the United States who desires to go thereon and bid for the purchase of any live stock offered for sale in said stockyards; that to the best of their knowledge and belief the ownership of stock in any such stockyard by any of the defendants owning any such stock has not and does not exercise any control over the prices for which live stock are bought or sold at any of said stockyards, and that ownership or control of any stock in any such stockyards does not give the owner thereof any advantage in the purchase or sale of live stock at any of such stockyards not possessed and enjoyed by any other person transacting business thereat.

The defendants, Wilson & Co. (Inc.) and its subsidiaries, are charged with all manner of divers conspiracies in relation to the ownership, operation, and control of public stockyard market companies, stockyard terminal railroads, and market newspapers, when in truth and in fact Wilson & Co. (Inc.) and its subsidiaries did not at the time and do not now own any of the capital stock or other interest in any such public stockyard market companies, stockyard terminal railroads, or market newspapers, nor did they exercise any control or influence whatever in shaping the business policies of any such companies.

Further answering, the defendants, for whom answer is herein made, deny that the defendant Wilson & Co. (Inc.) and its controlling heads set about to acquire the various stockyards, appurtenances, and privileges incidental thereto, as charged in the bill of complaint, and the defendants deny that there was any concert of action or common understanding between the parent companies in regard thereto, and the defendants deny that the ownership and control of stockyards by others than the parent companies, or one of their members or controlling heads, was discouraged and opposed, as charged in said bill of complaint, but, on the contrary, in so far as the defendant parent corporation, Wilson & Co. (Inc.), or any of its subsidiary companies who are defendants in this cause are concerned, they and each of them allege the facts to be that, as heretofore set forth, they have never acquired any stock or other interest in any of the stockyards referred to in said bill of complaint, nor have they refrained from purchasing any such interest because same was owned or controlled, either wholly or partially, by any other parent company defendant in this cause; nor have they, or either of them, entered into any contract, agreement, or understanding with any other defendant in this cause the purpose of which was to effect any of the matters or things alleged in said bill of complaint, but specifically deny each and every allegation therein contained in relation thereto.

And the individual defendants, for whom answer is herein made, and each of them, except Thomas E. Wilson, further specifically deny that they, or either of them, own any interest, directly or indirectly, in any public stockyard market company, stockyard terminal railroad, or stockyard market newspaper, as described in the bill of complaint, and deny each and every allegation in the bill of complaint in relation to stockyards, and further deny that they now have or exercise or heretofore have had or exercised any voice or power, or now have or have had any agreement or understanding, directly or indirectly, express or implied, to do or bring about any of the matters or things alleged in the bill of complaint.

And further answering, the defendant, Thomas E. Wilson, says that he is the owner of a small amount of stock in a few public stockyard market companies, purchased by him as an investment and not for any of the purposes set forth in said bill of complaint.

And the defendant, Thomas E. Wilson, further answering, denies that either he, Wilson & Co. (Inc.), or any of its subsidiaries or any of the other individuals named in said bill of complaint as Wilson defendants, is or has ever been in any combination, agreement, or understanding with any of the other defendants mentioned in said bill of complaint or any other corporation, firm, or association to accomplish or effect any of the things or conditions set forth in said bill of complaint in relation to any stockyards or stockyard terminal railroads or market papers referred to therein.

And these defendants for whom answer is herein made, further answering, severally say that if it be true, as alleged in the bill of complaint, that the public stockyard market companies directly or indirectly own or control the available land surrounding the yards owned by such companies, it was no doubt acquired at the time said yards were established to provide necessary land for the future growth and expansion of its business and the extension of said yards.

The value of stockyards as an investment is dependent upon the number of head of live stock handled through such yards. It is therefore to the interest of such stockyard company to encourage the establishment at such yards of as many packing plants and other enterprises essential to the maintenance of a market as can be induced to locate at such yards. The greater the number of such plants, the larger the requirements of such a market; and if it be true that new packing companies can secure desirable packing sites only from said stockyard companies or from the companies owned or controlled by said stockyard companies, or their principal stockyards, or that said stockyard companies are in a position to determine what packing companies and how many plants should be established at the various stockyards, as charged in the bill of complaint, these defendants aver that said facts do not constitute a violation of any law of the land; and, so far as they are informed and believe, no packing company or other related enterprise has ever been denied the privilege of securing a location for its plant at any of such stockyards.

These defendants, further answering, aver that, according to their observation, information, and belief, the ownership by packing companies of an interest in public stockyard market companies has been to the advantage of such stockyard companies.

The acquisition of such interests has usually been followed by improved management, better facilities, new extensions, and greater efficiency in the handling of live stock at and through the yards. The packer has the greatest possible interest in maintaining a market for his raw material, to popularize it with the producer as far as it is possible to do so, in order that a continuous supply of live stock will be available for his requirements. Much of the trouble suffered by the packing industry has grown out of the impression and suspicion existing in the minds of some of the producers of live stock that the ownership or control of stockyards by packing companies in some mysterious manner gives to the packer a power to influence and manipulate the prices paid for live stock. There was never a grosser misconception or more erroneous assumption wholly unsupported by facts.

These defendants further answering, severally aver that for sanitary reasons, and to comply with the laws of the country and regulations of Government bureaus, it is essential to remove the carcasses of dead animals from the premises promptly; and in order to have some one ready at all times to perform that service and properly equipped to do so, the defendants are informed that it is customary to enter into contract with some responsible concern to perform that service. These defendants are informed and believe that the number of such animals dying either in transit or after arrival is not sufficiently large to support a number of plants for disposing of same, and that the stockyard companies do not determine or fix the price which shall be paid for such dead animals.

These defendants, for whom answer is herein made, further answering severally deny that they or either of them is or has been a party to any arrangement, understanding, or agreement with any of the other defendants herein or with any public stockyard market company, or with any other person, firm, or corporation whatsoever, whereby any such stockyard company was induced or was attempted to be influenced to discriminate against certain commission men or traders in the leasing of office space, or in the allotment of pens or other accommodations as alleged in the bill of complaint. That some offices and some pens are more advantageously located than others is true of any structure, but unfortunately they can only be occupied by one tenant at a time—and these defendants for whom answer is made herein further answering upon information and belief severally deny that there is any discrimination against any packer or independent buyer by any stockyards terminal railway operating at any stockyards described in the bill of complaint; or that the control of stockyards and facilities appertaining to stockyards is used by defendants owning or controlling them as a means of favoritism in dealing with commission men; or that such control of stockyards and facilities appertaining thereto has resulted in any discrimination by the defendants owning or controlling them in favor of banks, cattle loan institutions, rendering plants, and concerns supplying food for live stock which are located at or near to any of the stockyards described in the bill of complaint; or that the control of stockyards and facilities appertaining thereto is or has been used by the defendants, or any of them, as a means to prevent the establishment of new packing plants or to hamper the growth of those in existence; or that the control of stockyards or facilities appertaining thereto is, or has been, used by the Wilson defendants as a means to prevent the development and limit the number of new markets or to centralize or restrict business to the stockyards so controlled; or that the control of stockyards and facilities appertaining thereto affords peculiar and exclusive access by the defendants, or any of them, to information concerning receipts and sales of live stock, its disposition, and the dissemination of information to the producer. But, on the contrary, these defendants severally aver that according to their observations, information, and belief the service afforded by such stockyard companies is furnished without favoritism toward or discrimination against any shipper, dealer, packer, buyer, commission man, or any other person, firm, or corporation transacting business at any or all of such stockyards.

BRANCH HOUSES.

Third. These defendants further answering severally aver that Wilson & Co. (Inc.) and its subsidiaries operate approximately 120 branch houses in the United States; that said branch houses are established for the purpose of facilitating the sale and distribution of the products manufactured, produced, and sold by Wilson & Co. (Inc.) and its subsidiaries, and are not mere storage warehouses. These defendants further aver that the branch houses of Wilson & Co. (Inc.) and its subsidiaries are operated in actual and open competition with the branch houses of any and all the other defendants in this cause and in competition with all other persons, firms, and corporations engaged in a similar business.

ROUTE CARS AND AUTO TRUCKS.

Fourth. These defendants, for whom answer is herein made, further answering severally aver that the establishment by Wilson & Co. (Inc.) and its subsidiaries in their business of the system of distributing fresh meats, dairy and poultry products through refrigerator cars and auto trucks running on a fixed schedule has been an economic advantage to the country. It enables the smallest towns along such routes to receive regular supplies of food necessities and provides the producers with a much enlarged market for the consumption of their products. But these defendants deny the inference that there is anything unlawful in their use as a means of distribution. The use of refrigerator cars for such purposes is recognized, approved, and regulated by the Interstate Commerce Commission. All products so handled pay the same freight rates and are governed by the same rules and regulations as apply to or affect all other shippers handling the same commodities.

COLD-STORAGE WAREHOUSES.

Fifth. These defendants further aver that the cold-storage warehouses described in the bill of complaint are necessary adjuncts and facilities for the preparation, conservation, and distribution of the food products stored therein, one of the objects of such storage being to conserve the surplus supplies of seasons of heavy or excess production for use during seasons of light or under production, thereby furnishing a more uniform market for producers and supplying such products at lower prices to consumers during times of natural scarcity.

PARENT COMPANIES' ACQUISITION OF STOCKYARDS TERMINAL RAILROADS AND MARKET PAPERS AND THE POWER GIVEN BY SUCH CONTROL.

Sixth. These defendants for whom answer is herein made, further answering, severally deny, as they have heretofore done, that the defendant Wilson & Co. (Inc.), or its subsidiaries, have acquired any interest in or control over any public stockyard market companies, stockyard terminal railroads, or stockyard market newspapers, and, consequently, each and all of the allegations contained in said bill of complaint, dealing with the power of such ownership or control and the manner in which it is alleged to be exercised, can have no application to the defendant Wilson & Co. (Inc.), or any of its subsidiaries, and, therefore, these defendants, and each of them, further answering, severally deny that Wilson & Co. (Inc.) and its subsidiaries, acting in concert or otherwise with any or all of the defendants named in said bill of complaint, have employed any power or privilege possessed by them through any such agencies to effect or discourage or suppress the establishment of independent packing companies or of dwarfing the growth of such independent packing companies as might then be in existence, as charged in said bill of complaint, and the said defendants further deny that the defendant Wilson & Co. (Inc.), parent company, or its subsidiaries, either alone or in concert with any or all of the other defendants named in said bill of complaint, have in any manner attempted to monopolize the meat industry of the country or artificially or otherwise control the ultimate price which the consumer pays for meat or meat products, as charged in the bill of complaint.

CONTRACTS IN RESTRAINT OF TRADE.

Seventh. And these defendants, for whom answer is herein made, and each of them, further answering, severally deny that Wilson & Co. (Inc.), the parent company, has entered into any unlawful contract or combination with any other defendant named in said bill of complaint to restrain trade and commerce and to artificially or otherwise prevent between themselves competition in prices for which meat and meat products are sold.

These defendants further severally deny the existence of any contract, agreement, arrangement, understanding, or practice by which purchases of live stock by Wilson & Co. (Inc.), the parent company, has been gauged, divided, or distributed between Wilson & Co. (Inc.), the parent company, and any other defendant or defendants named in said bill of complaint. These defendants further deny that any purchases of live stock by Wilson & Co. (Inc.), the parent company, have been made in accordance with or pursuant to any agreement, understanding, or arrangement with any other defendant in regard thereto; or that the divers percentages of the purchases by the respective defendant parent companies of live stock at the various stockyards were agreed upon, and further deny that any understanding, agreement, or arrangement was had or made that certain of the parent companies should buy in certain stockyards or should refrain from buying at certain stockyards, as charged in the bill of complaint.

These defendants severally deny that any arrangement, agreement, or understanding was entered into with any other person, firm, or corporation designated in said bill of complaint as "independents" engaged in the meat-packing business, whereby purchasing between Wilson & Co. (Inc.) and its subsidiaries and such so-called "independents" was effected upon a percentage basis, as charged in the bill of complaint. And these defendants severally say that they, or either of them, to the knowledge or belief of the others, or other of them, do not know whether the percentage of purchase of live stock by the parent companies, other than the defendant herein, for whom answer is made, were uniform and approximately constant, as alleged in said bill of complaint, but, on the contrary, from the best of their knowledge and belief, the defendants for whom answer is herein made aver that the purchases of live stock of the several defendant parent companies have not been uniform or constant in respect of any ratio of percentage to the other defendants in this cause or uniform as to the purchases made by the so-called "independents," and the defendants for whom answer is herein made expressly deny that the percentages of purchases of live stock by Wilson & Co. (Inc.) have been uniform in any week, month, or year, as compared to the purchases of others, and the defendants severally aver that any and all of the purchases of live stock made by the said Wilson & Co. (Inc.) and its subsidiaries were not the result of and were not controlled or governed by any agreement, understanding, combination, or conspiracy by and between the parent companies, or any of their officers or employees, or with any other person, firm, or corporation whatsoever, but that they were the result of the trade demand of said Wilson & Co. (Inc.) and its subsidiaries and the active competition existing between Wilson & Co. (Inc.) and its subsidiaries and each and all of the other defendants named in the said bill of complaint.

And said defendants, further answering, severally aver that each and every allegation in said bill of complaint relating to the purchase of live stock on a percentage basis are founded upon misconceptions and are in fact untrue; that the defendants, Wilson & Co. (Inc.) and its subsidiaries, are ever alert to maintain the volume of their business and to increase it wherever and whenever possible, without regard to the policy of any other company engaged in a similar business and in competition with any and every such company. The meat food products of Wilson & Co. (Inc.) and its subsidiaries are distributed to the public through the medium of retail dealers; Wilson & Co. (Inc.) and its subsidiaries have their regular line of customers among such dealers, and it is the business policy of Wilson & Co. (Inc.) and its subsidiaries to supply as far as possible all the trade demands of its customers and to secure new customers wherever and whenever possible. Wilson & Co. (Inc.) and its subsidiaries purchase in the open markets of the country a sufficient number of live stock to fill their trade requirements, without regard to how it may figure out in comparison with the purchases of any other person, firm, or corporation. If the demands of their customers increase, the purchases of live stock are increased accordingly, and if there is a decrease in the demand, likewise purchases are decreased. The law of supply and demand govern the aggregate purchases of live stock by Wilson & Co. (Inc.) and its subsidiaries, and from their knowledge of the business and their belief, based upon observations, the ratio of the volume of business transacted by the several defendants in this cause is not more uniform than will be found to exist between competitors in any other basic industry in this country.

And these defendants for whom answer is herein made, further answering, severally aver that Wilson & Co. (Inc.) and its subsidiaries annually purchase and slaughter approximately 3,000,000 head of hogs, 1,000,000 head of cattle, and 1,000,000 head of lambs. In order to increase their annual purchase to the extent of 1 per cent it would mean that retail dealers handling the products of Wilson & Co. (Inc.) and its subsidiaries would be required to secure approximately 10,000 new customers who would exclusively purchase the Wilson brand of commodities for the entire year. It would mean the additional purchase and slaughter by Wilson & Co. (Inc.) and its subsidiaries of approximately 30,000 head of hogs, 10,000 additional cattle, and 10,000 lambs, representing an outlay of approximately $2,500,000 for the raw materials. Therefore, while the variations in the percentage of purchase of live stock from year to year may appear to be very small, yet the smallest fraction of an increase or decrease actually represents a very considerable number of live stock and quite a volume of business in money values. It is and has been the purpose of Wilson & Co. (Inc.) and its subsidiaries to use all lawful and legal means at their disposal to maintain their present volume of business and to increase it as much as possible.

These defendants, further answering, severally deny that means were adopted by any of the defendants named in the bill of complaint whereby and by the parent companies' control over stockyards, sales to outsiders or so-called independents were controlled in any manner by Wilson & Co. (Inc.) or any of its subsidiaries, as charged in the bill of complaint; and these defendants deny that such control as the parent companies, other than Wilson & Co. (Inc.), have exercised over stockyards, stockyards loan institutions, stockyards terminal railways, and other facilities incidental to the operation of such stockyards has discouraged opposition or competition by commission men or by so-called independent packers, as charged in the bill of complaint. As heretofore alleged, the defendant parent company, Wilson & Co. (Inc.), nor any of its subsidiaries, own or control any interest in said stockyards, terminal railroads, or the instrumentalities by means of which any of such results were accomplished, if indeed any such conditions were created as alleged, all of which these defendants deny.

CONTROL OF SUBSTITUTE FOODS.

Eighth. These defendants, further answering, severally deny that they have eliminated competition in meat products, as charged in the bill of complaint.

Wilson & Co. (Inc.) and its subsidiaries are in active, open, free, and unrestricted competition with over 1,000 persons, firms, and corporations engaged in the business of slaughtering live stock in this country, more than 300 of which are engaged in interstate commerce. Moreover, the meat products of said Wilson & Co. (Inc.) and its subsidiaries are sold in active competition with the products of local butchers in all sections of the country. It is absurd to charge that the defendants in this cause have eliminated competition in meat products when all of said defendants together do not slaughter in excess of 35 per cent of the cattle slaughtered for food in this country.

These defendants further deny that Wilson & Co. (Inc.) and its subsidiaries set about to control the Nation's sale of fish, vegetables, either fresh or canned, fruits, cereals, milk, butter, cheese, eggs, and other foods ordinarily handled by wholesale grocers or produce dealers, as charged in the bill of complaint, and these defendants deny that their method of handling any such commodities has or had the effect of eliminating competition in the sale or of fixing the price of said products, but, on the contrary, they, and each of them, aver that according to their knowledge, information, and belief the total volume of business transacted by each, any, and all of the defendants in any of the commodities mentioned in this paragraph was only a small fraction of the total volume of business transacted in the United States in the said commodities; that the total volume of the business handled by the defendants in this cause in all of the so-called grocery lines approximates in the aggregate about $100,000,000, whereas the defendants are informed and believe and so represent that the total volume of such business transacted by competitors other than the defendants herein, including the wholesale grocers, aggregates more than $4,000,000,000 annually.

These defendants further aver that the business in such lines transacted by each of the parent companies and their subsidiaries is separate, distinct, and independent from the business transacted by any other parent company or its subsidiaries, and said defendants deny that there is any contract, agreement, understanding, or concert of action by and between Wilson & Co. (Inc.) and its subsidiaries and any of the defendant parent companies in this cause whereby they, or any of them, have attempted to monopolize commerce in any of the products above mentioned, and further deny that any acts of Wilson & Co. (Inc.) and its subsidiaries have resulted in the defendants, or any of them, obtaining complete control of any food products, as charged in the bill of complaint, or any such control as would in the remotest degree approximate a monopoly in commerce in any of such food products; and these defendants further deny that great numbers of competitors have finally abandoned and quit their business or sold out to the defendant parent companies or their subsidiaries, as charged in the bill of complaint, but, on the contrary, the defendants aver that according to their information and belief a few such competitors for sufficient reasons of their own may have retired from business, but the number of competitors in such lines of business has increased, and the volume of such business transacted by them has constantly grown and is now greater than at any previous time in the history of this country.

These defendants emphatically deny that unless prevented by a decree of this court the defendants will within the compass of a few years control the quantity and price of each article of food found on the American table, as charged in the bill of complaint.

And as a further evidence of the lack of facts to support the theories of said bill of complaint these defendants aver that long prior to the filing of the bill of complaint in this cause and long prior to the time that the Department of Justice took up for consideration the issues involved in its complaint Wilson & Co. (Inc.) and its subsidiaries determined of their own volition to retire from the business of manufacturing, transporting, and distributing through their distributive system many of the products theretofore handled by them, such as canned goods and groceries. To this end they have long since disposed of all their manufacturing plants whereby fish and vegetable foods

were manufactured, and steps are being taken for a final discontinuance of their distribution. This decision was not taken because of any existing contracts, agreements, or understandings in violation of law or of sound business ethics.

Wilson & Co. (Inc.) and its subsidiaries deny any and all allegations in said bill of complaint that its entry into or the handling of any of the so-called unrelated lines of food or so-called substitute food products was in any manner a violation of any law of the land or of sound economics or was against the interest of the producing or consuming elements of the population of this country.

FINANCIAL GROWTH, PRESENT NET WORTH, AND VOLUME OF BUSINESS.

Ninth. The defendants for whom answer is herein made further severally say that they, or any or either of them, to the knowledge or belief of the others, or other of them, do not know and have never been informed, save by the bill of complaint and through the public press, of the facts in relation to the financial growth of the parent companies other than Wilson & Co. (Inc.), the parent company, for whom answer is herein made, or in regard to the payment of cash dividends by any of said parent companies, other than Wilson & Co. (Inc.), and therefore neither admit nor deny the averments contained in the bill of complaint in regard to the financial growth of said parent companies; but answering specifically for Wilson & Co. (Inc.), they aver that its financial growth has been the result of sound business management, in conformity with the laws of the land, and not a result of any combination, agreement, or understanding with any other person, firm, or corporation that gave it the slightest advantage over any of its competitors or influenced it to act in concert with any other person, firm, or corporation.

NUMBER OF CONTROLLED COMPANIES.

Tenth. These defendants further severally say that they, or any or either of them, to the knowledge or belief of the others, or other of them, do not know the number of corporations and concerns, including trade names, which the parent companies, or the individual defendants and their families maintain and control, as set forth in the bill of complaint, further and beyond those relating to said Wilson & Co. (Inc.) (parent corporation defendant) herein, and therefore neither admit nor deny the averments contained in the bill of complaint in regard to the number of corporations and concerns, including trade names, which such other parent companies, or individual defendants and their families maintain and control, but answering specifically for Wilson & Co. (Inc.), and the other defendants for whom answer is herein made, these defendants deny that any corporation or concern or trade name controlled by it or them in any manner violates any law of the land.

CONTROL OF VARIOUS INDUSTRIES.

Eleventh. These defendants deny that if the growth of the parent companies and their subsidiaries is permitted to continue unchecked they will within a few years completely control the various industries in which said defendants are engaged.

EXTENT OF CONTROL IN THE SUBSTITUTE FOODS AND UNRELATED COMMODITIES.

Twelfth. These defendants for whom answer is herein made further severally say that they, or any or either of them, to the knowledge or belief of the others, or other of them, do not know and have never been informed, save by the bill of complaint and through the public press, as to the volume of business transacted by Armour & Co. in 1916, and therefore neither admit nor deny the averments contained in the bill of complaint in respect thereof.

Thirteenth. These defendants for whom answer is herein made further severally deny that Wilson & Co. (Inc.) and its subsidiaries have any purpose or intention of securing control of the market for the so-called substitute meat foods, as alleged in the bill of complaint; but on the contrary the defendants herein aver that it is impossible that any or all of the defendants, even if they should act together (which they do not), in pursuance of a common purpose and design to attempt or secure control of the market for meat or meat substitute foods, as alleged in the bill of complaint, that, so long as the raw material entering into the manufacture of meat and meat food products is in the hands of millions of producers and is sold in the open markets of the country in free competition such as actually exists in the sale of said raw material, no man or group of men may secure a monopoly thereof.

These defendants further aver that there are over 1,000 persons, firms, and corporations in the United States engaged in business in active competition with Wilson & Co. (Inc.) and its subsidiaries, and with the other parent corporations and their subsidiaries named as defendants in said bill of complaint, of which more than 300 are engaged in interstate and foreign commerce. All of said other concerns purchase their raw materials in the open market in competition with the defendants herein and sell their products in the markets of the world in competition with each and all of the said defendants, each of whom is in open active competition with the other.

INDIVIDUAL DEFENDANTS.

Fourteenth. The individual defendants named in said bill of complaint as Wilson defendants, answering further for themselves and each for himself, deny all and singular the allegations in said bill of complaint, wherein it is charged, directly or indirectly, inferentially or otherwise, that they, or either of them, jointly or severally, have entered into any contract, agreement, or understanding with any other person, firm, or corporation named as a defendant in said bill of complaint, to establish or create a monopoly or any restriction or restrictions in trade or commerce between the States or foreign nations, or to do any of the acts or things alleged in said bill of complaint as violating the laws of the land.

Fifteenth. Said individual defendants aver that they are the managing officers of Wilson & Co. (Inc.) and its subsidiaries, named as defendants herein; that it is and has been the constant aim and purpose of each of said individual defendants to conduct the business of said corporation, defendants for whom answer is herein made, in strict conformity with the laws of the land and in consonance with the highest commercial ethics and ideals; that the bill of complaint in this cause follows closely the report of a Government bureau, made after an ex parte investigation, in which the defendants herein were not given an opportunity to testify or explain any of the matters or things set forth in said report.

The individual defendants, further answering severally, aver that the packing-house industry is but the manufacturing and distributing agency between the producer on the one hand and the consuming public on the other; that when the prices of live stock are high and profitable to the producer the consumers complain of the high cost of the products, and, on the other hand, when they are low the producer is dissatisfied, and out of this unfortunate situation has grown the basis for the allegations in the bill of complaint, which are grounded upon misconceptions, inaccuracies, and unwarranted deductions, having no foundation in fact.

CONCLUSION.

Sixteenth. These defendants for whom answer is herein made, and each of them further answering, severally deny all, and all manner of unlawful combination and conspiracy wherewith they are by the said bill of complaint charged, or that the complainant is entitled to the relief, or any part thereof, in said bill of complaint demanded, and pray to be hence dismissed with their reasonable costs and charges in this behalf most wrongfully sustained.

Respectfully submitted.

Wilson & Co. (Inc.), Wilson & Co., Wilson & Co. (Inc.) of California, Wilson & Co. (Inc.) of Louisiana, Wilson & Co. (Inc.) of Oklahoma, South Dakota Provision Co., Gotham Hotel Supply Co. (Inc.), Standard Beef Co., Stiefel O'Mara Co. (Inc.), Drexel Packing Co., Albert Lea Packing Co. (Inc.), Mississippi Packing Co. (Inc.), Morton-Gregson Co., Paul O. Reymann Co., Standard Provision Co., Central Products Corporation, Thomas E. Wilson, Arthur Lowenstein, Jacob Moog, Vonce DeLeon Skipworth, Arthur L. Smith, James A. Hamilton, George D. Hopkins, Adolph E. Petersen, George H. Cowan, William C. Buethe, Carl F. Burrell, James C. Good.

By JEWEL P. LIGHTFOOT, *Solicitor.*

ANSWER OF CUDAHY DEFENDANTS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co., et al., defendants, in equity, No. 37623.

Now come the defendants in the above-entitled cause (herein called "Cudahy defendants"), viz:

1. The Cudahy Packing Co. in said bill of complaint designated as a "parent company."

2. The Cudahy Packing Co. of Nebraska, the Cudahy Packing Co. of Louisiana (Ltd.), the Cudahy Packing Co. of Alabama, Nagle Packing Co., in said bill of complaint designated as "defendant subsidiaries."

3. Edward A. Cudahy, sr., Edward A. Cudahy, jr., Guy C. Shepard, John E. Wagner, Andrew W. Anderson, Emil A. Strauss, Frank E. Wilhelm, George Marples, designated in said bill of complaint as "individual defendants"; all by George T. Buckingham and Thomas Creigh, their solicitors, and for answer to the bill of complaint in the above-entitled cause, or to so much thereof as these defendants are by counsel advised is necessary or material to be by him or any of them answered, say:

Cudahy defendants admit that said the Cudahy Packing Co. is a corporation organized under the laws of the State of Maine. They aver, however, that said corporation was organized in October, 1915, and began business on the first day of November, 1915, and that said corporation prior to that date was never engaged in any business or activity.

They aver that individual defendants—Edward A. Cudahy, sr., since the organization of said the Cudahy Packing Co. has been its president, and Edward A. Cudahy, jr., its vice president, and that the other individual defendants since the organization of said parent company have been connected with it as officers or employees.

Cudahy defendants deny that they or any of them have now or have ever had any stock ownership or other interest in Western Meat Co., Oakland Meat & Packing Co., Nevada Packing Co., or that either of said companies is or has ever been a subsidiary of any of the Cudahy defendants.

COURT'S JURISDICTION.

Cudahy defendants admit, for the purposes of this action, that said parent company since its organization November 1, 1915, has been and now is engaged in interstate and foreign commerce, and that it transacts the kinds of business as alleged under (a), (b), (c), and (d) of paragraph 1 under the above head, and also to a limited extent as alleged under (e) and (f) of said paragraph 1, and as to said latter limited number of items none of them are unrelated to the general business of parent company but are all a natural outgrowth of same and economically related thereto.

Cudahy defendants deny that they or any of them by means of any unlawful means or method, or otherwise, attempted to dominate, control, or monopolize a very great portion or any portion of the food supply of the Nation, or that they have, in conjunction with any person or corporation whatever, built up by any means, or attempted so to do, any unlawful monopoly in or any control over divers and sundry products mentioned in said bill, as alleged in said bill.

Cudahy defendants deny that by any methods whatever any of them have attempted or are attempting to increase or extend any monopoly, or that they are or any of them have been enabled in any manner, artificial or otherwise, to control the supply or price of the food supplies of the Nation, as alleged in said bill.

OBJECT TO BE ATTAINED.

Cudahy defendants deny that any monopoly exists or has been attempted by any of them, as alleged under this head.

THE NATURE OF THE BUSINESS AND METHOD BY WHICH IT IS CONDUCTED.

Cudahy defendants admit that the allegations of the bill of complaint under this head are substantially true and correct, except that they aver that the "invention of refrigerator cars" was only one of the elements which caused said parent company to widely extend its market, and to make the same nation-wide, and they allege that many other elements of natural growth and legitimate business development entered into and caused such expansion of business.

Defendants further aver that the business established by its predecessor corporation was begun in 1887, and that while in its inception this predecessor devoted itself exclusively to the slaughter of live stock, it from the very beginning, in addition to dressing the carcass and selling the dressed meat to retail butchers, also engaged in the business of preparing various by-products, such as hides, fertilizer,

bones, hair, etc., and that more than 30 years ago said predecessor began its operations and developed its business in other kindred lines in the manufacture and dealings in other articles both edible and inedible which were not derived from live stock.

THE STOCKYARDS.

Cudahy defendants admit that the allegations in the bill of complaint under this head are substantially true and correct in so far as they relate to the stockyards being a public market place, but they deny that the stockyards afford the cattle raiser the opportunity to dispose of his live stock for an immediate cash price. They aver that the stockyards provide facilities for attending to the handling of the live stock itself, and is a place where commission men, packers, feeders, and all other dealers have common access to the live stock for the purpose of independently buying, trading, selling, and inspecting it, but that all of these activities are entirely independent of any relation to the stockyards as such, and that in fact it is largely the facilities and financial resources of the packers and other dealers which provide to the cattle raiser the opportunity to dispose of live stock as alleged.

Defendants further deny that the stockyards by reason of its dominating position controls the conveniences and facilities associated with it, as alleged in said bill of complaint.

CONVENIENCES AND FACILITIES CONTROLLED BY STOCKYARDS.

Cudahy defendants aver that said parent company owns packing houses in or near, and does business at, the stockyards following, and at none other, to wit:

Sioux City, Iowa; Omaha, Nebr.; Kansas City, Kans.-Mo.; Wichita, Kans.; and North Salt Lake City, Utah.

With reference to these stockyards (and only as to these), Cudahy defendants, as to the subject matter of the respective subheads, under the above general head, say:

Packing-house sites: That they deny the allegations of the bill of complaint.

Sites for stockyards banks and cattle loan companies: That they deny the allegations of the bill of complaint.

Rendering plants: That they deny the allegations of the bill of complaint.

Commission men's office space: That they admit the allegations of the bill of complaint.

Terminal railways: That they deny the allegations of the bill of complaint.

Market papers and journals: That they admit the allegations of the bill of complaint.

That they deny that control of said stockyards or of any facilities appertaining to said stockyards carried with it any of the profits, means of favoritism, means to prevent the establishment of new packing plants, means to prevent the development or to limit the number of new markets, or peculiar and exclusive access to information, and that they deny all allegations as alleged in paragraphs (a), (b), (c), (d), and (e) under the above general head.

That they further expressly deny that any said stockyards ever has—

(a) Derived any profit from the meat industry "levied upon it" as alleged in paragraph (a); or

(b) Exercised any favoritism in dealing with commission men or granted any monopolies, as alleged in paragraph (b); or

(c) By any means or method prevented the establishment of new packing plants or hampered the growth of those in existence, as alleged in paragraph (c); or

(d) Prevented the development or limited the number of new markets or centralized or restricted stockyards business, as alleged in said paragraph (d); or

(e) Possessed or used any peculiar or exclusive access to information, as alleged in paragraph (e).

BRANCH HOUSES, ROUTE CARS, AUTO TRUCKS, AND COLD-STORAGE WAREHOUSES.

Branch houses: Cudahy defendants admit the allegations of the bill of complaint under this subhead to be substantially true and correct, except that they have no direct knowledge as to the number of branch houses maintained in the United States by all interstate slaughterers and therefore neither admit nor deny the allegations concerning numbers.

Route cars: Cudahy defendants admit that the allegations of the bill of complaint under this subhead are substantially accurate and correct, except that they have no direct knowledge as to the total number of route cars operated by all parent companies, or the percentage which those bear to the total operated in the entire packing industry, or the number of towns reached thereby, or the number of States in which the same operate, and they therefore neither admit nor deny the allegations concerning numbers and percentage.

Autotrucks: Cudahy defendants neither admit nor deny the allegations under this subhead, but aver that none of them have ever operated any autotrucks over any route under the system or otherwise, as alleged under said subhead.

Cold-storage warehouses: Cudahy defendants deny the allegations under this subhead.

THE PARENT COMPANIES' ACQUISITION OF ABOVE-DESCRIBED FACILITIES AND THEIR PURPOSE IN DOING SO.

Cudahy defendants deny that they, or any of them, ever set about the acquisition of stockyards and appurtenances and privileges incidental thereto in the manner or with the purposes as alleged under said head.

They deny that such was done in any instance, or that it was done by concert of action or pursuant to a common understanding between any of the Cudahy defendants and any of the defendants in this bill of complaint other than Cudahy defendants.

They deny that the acquisition of control of any stockyards by any defendant to the bill of complaint other than Cudahy defendants was acquiesced in by any of Cudahy defendants, or that any defendant other than Cudahy defendants ever acquiesced in the acquisition of any interest in any stockyards ever acquired by any of Cudahy defendants, or that any of Cudahy defendants ever discouraged or opposed the acquisition by any other defendant of any interest in any stockyards or that any defendants other than Cudahy defendants ever opposed or discouraged the acquisition by Cudahy defendants, or any of them, of any stockyards property or any interest therein; but, on the contrary, Cudahy defendants aver that none of them have any interest whatever in any stockyards company or property, except only as follows, to wit:

Holdings in stockyards companies, Jan. 20, 1920.

	Par value.	Number of shares.			Total.
		C. P. Co.	E. A. C.	E. A. C., jr.	
Sioux City Stockyards Co. (preferred)	$100.00	1,117	.....	.....	1,117
Wichita Union Stockyards Co. (common)	100.00	6,140	119	.....	6,259
Salt Lake Union Stockyards Co. (common)	10.00	5,625	.....	.....	5,625
Union Stock Yards Co. of Omaha (Ltd.) (common)	100.00	.....	31	.....	31
Kansas City Stockyards Co. (common)	100.00	.....	500	.....	500

That in said Wichita property, and in said Salt Lake property, no defendant, other than Cudahy defendants, have any stock ownership or interest whatever; that all of said interests so acquired by any of the Cudahy defendants were acquired for purely legitimate business purposes, as investments and for value received.

They deny as to said stockyards companies in which any of them are interested, that, in pursuance of a common purpose, plan, and design, or otherwise, outside investors and independent packers have been forced out as dominating factors in the ownership and management of said stockyards or that such have been replaced by any defendant or representatives thereof, as alleged under the above head.

Cudahy defendants deny that by the various means set forth in said bill of complaint, or otherwise, the Cudahy Packing Co. has, directly or indirectly, obtained control of any stockyard whatever, or that it has any interest in any except only as above set forth.

Cudahy defendants deny that by reason of their control of any stockyard, or otherwise, they have granted exclusive privileges such as the right to purchase dead animals, furnish supplies and facilities, locate cattle banks and cattle-loan companies, or otherwise, to concerns and corporations in which they, or some of them, are stockholders, as alleged under this head. On the contrary, they aver that all of their acts as owners of any interest in said two stockyards, in which they have any substantial interest, have been in complete harmony with the holders of the majority of the stock in such stockyards company, and that Cudahy defendants, separately or collectively, do not own a majority of the stock in any said stockyards company, and that any or all of Cudahy defendants, in connection with any other defendants, do not in any case own a majority interest in any said stockyards company, and that none of Cudahy defendants have at any time every exercised the aforesaid exclusive rights and privileges alleged under this head.

Cudahy defendants deny that any of the acts alleged under this head have been done with the intent and purpose alleged in said bill of complaint, or have had the effect therein alleged, or that the Cudahy Packing Co. has been enabled thereby to obtain vast profits, or any profit, from the management of any said stockyard or from the granting of any said exclusive privileges relating thereto, or that said the Cudahy Packing Co. has realized vast profits or any profits which were not disclosed in its profits on its books.

Cudahy defendants deny the Cudahy Packing Co. has attempted to monopolize the meat industry of the country, or to artificially control the ultimate price which the consumer pays for meat and meat products, either by its own acts or in conjunction with any other defendant, as alleged under this head, or otherwise.

CONTRACTS IN RESTRAINT OF TRADE.

Cudahy defendants deny that the Cudahy Packing Co. has ever entered into any unlawful contract or combination to restrain trade and commerce, or to artificially prevent between it and other defendant parent companies competition in the prices for which meat and meat products are sold as alleged under this head.

Cudahy defendants further deny that any contract or agreement described in said bill of complaint as "the percentage purchase agreement," or anything similar thereto, exists or was ever entered into or participated in by the Cudahy Packing Co. parent corporation, or that it ever entered into or participated in any contract or agreement with anyone which had as its ultimate object the elimination of competition in the purchase of live stock or in the sale of dressed meats, as alleged under this head or otherwise.

They deny that it is a "well-established commercial principle" that limitation on the source of supply, and consequent limitation on volume of business, removes all incentive to reduce prices, or necessarily tend to do so, as alleged under this head.

With reference to the purchase of live stock, they deny that the Cudahy Packing Co. agreed with said parent companies, or with anyone, or thereafter recognized between it and them certain percentages or proportions of purchase to which they deemed that each was entitled, and they deny that the said Cudahy Packing Co. thereafter gauged its purchases in such manner that its annual purchases approximated actually or substantially percentages agreed upon, as alleged under this head.

They deny that as a means of perfecting this arrangement, or otherwise, divers percentages varying at different stockyards were ever agreed upon by or for the Cudahy Packing Co., or that understandings were had by or for it that certain parent companies should buy in certain yards, or should refrain from buying in certain yards, or that in order to prevent such plans from being disarranged by outsiders, or otherwise, agreements were made by the Cudahy Packing Co. with "outsiders" by which its purchases were conducted on any agreed percentage basis, as alleged under this head.

They deny that by virtue of its control over any stockyards, or by any other method, purchases by outsiders or independents were ever controlled by the Cudahy Packing Co. or by any agreement whatever made by or for it, or that it, by any control or by any agreement, ever discouraged any opposition by commission men or independent packers, as alleged under this head.

Cudahy defendants aver the fact to be that the Cudahy Packing Co. and its subsidiaries, operates at various points in the United States a total of 105 branch houses and, in addition thereto, a large export and other business; that these branch houses are equipped with refrigeration and other facilities; that it employs therein a large number of salesmen; that it sells and distributes its products therefrom, within

the territory naturally and commercially adjacent and tributary to each; that it makes every effort within its power, and by the best business activity and efficiency of which it is capable, to sell as much as it can; that the great bulk of said products originate at the said packing houses of the Cudahy Packing Co., parent company; that at its packing houses, and at its branch houses and other said distribution facilities, it has refrigeration and storage space in which it keeps products in the brief period between manufacture and sale; that naturally and logically the parent company purchases and slaughters at its packing plants such number of animals and such number only as it can reasonably expect and anticipate will yield the quantity of products which can be marketed through its said branch houses and other facilities; that the amount of product which it can sell necessarily determines and limits the number of animals which it buys and slaughters; that it has never entered into any agreement and could not in the nature of the economic situation enter into any agreement which would either limit or expand the extent of its purchases, the latter being determined by the amount of products which it is able (a) to manufacture at its plants, (b) to keep and to refrigerate pending sale, and (c) to handle and sell through its branch houses, car routes, foreign trade outlets and other sale facilities.

That all other packers, handling the same products and including the other so-called parent companies, are similarly situated with respect to marketing their said products through their branch houses and otherwise; that all branch houses and sales outlets are in keen and active competition with each other at various market and consuming points and the distributing centers; that the necessary result of this trade situation and the competition existing at said centers, is that each of the said packers is able to sell and distribute from one month to another, and annually, a similar proportion of products; and the natural result of this is that the purchase of live stock by the several parent companies maintain throughout monthly and yearly periods substantially a similar percentage relation to each other; that this condition has always obtained in the packing business and, in the opinion of the Cudahy defendants, always will obtain; that it is brought about by competition, and by the economic situation, and by the natural laws of trade and commerce, and not by any agreement or combination; that the aggregate purchases of live stock by the parent companies and by the packing industry as a whole is very great, amounting annually to millions of animals. In 1916 this latter total, according to the Federal Trade Commission, was approximately 70,000,000 animals; that there are daily, weekly, and monthly fluctuations in the relative number of its purchases by the various defendant parent companies; that these variations are considerable and substantial, amounting to hundreds of thousands of dollars; there are also great variations in the kind, character, quality, weight, and value of the respective animals purchased. When, however, these very great numbers are compared to each other, and the comparison expressed in percentages, it is inevitable that substantially similar percentages will appear from year to year, although the actual variations, as among the several packers, are in themselves enormous.

CONTROL OF SUBSTITUTE FOODS.

These defendants deny that competition ever has been eliminated in meat products, as alleged under this head.

They deny that for the purpose of preventing the public from turning to meat substitutes or for any other purpose they or any of them, individually or collectively, or with any or all defendants, set about controlling the Nation's supplies of fish, vegetables, fresh or canned fruits, cereals, milk, poultry, butter, eggs, cheese, and other substitutes ordinarily handled by wholesale grocers or produce dealers, or any of them, as alleged under this head.

They deny that to accomplish said purpose or to accomplish any purpose they, or any of them, ever availed themselves of advantages available in route cars, autotrucks, branch houses, storage warehouses owned or controlled by the Cudahy defendants, or any of them; they deny that said advantage or any advantages were ever employed by Cudahy defendants in fixing prices so low as to gradually or otherwise eliminate competition, as alleged under this head.

They deny that they have participated in any attempts to monopolize which have resulted in complete control or any control in any substitute food lines or that they are invading any fields, as alleged under this head.

EXTENT TO WHICH THE MONOPOLISTIC ATTEMPTS HAVE BEEN SUCCESSFUL.

FINANCIAL GROWTH, PRESENT NET WORTH, AND VOLUME OF BUSINESS.

Cudahy defendants, as to the allegations under this subhead, say that they have no direct or authoritative information concerning the subject matter of the first paragraph, but that they are informed and believe that said allegations are untrue. Therefore upon information and belief they deny said allegations and each of them under the first paragraph of this subhead.

Cudahy defendants deny that there has been realized by the Cudahy individual defendants, or any of them, vast profits or any profits in addition to those shown upon the books of the parent company arising from any advantages or privileges growing out of interlocking control of stockyards and stockyard appurtenances, as alleged in the second paragraph under this subhead.

NUMBER OF CONTROLLED COMPANIES.

Cudahy defendants deny the allegations under this subhead, and particularly they deny that they, or any or all of them, control or have any interest in 762 corporations or 574 corporations or 131 trade names, or in any number of corporations or trade names remotely approximating either of said alleged numbers.

Cudahy defendants deny that they have acquired or have organized any corporations whatever in furtherance of any general scheme and plan of action with defendants other than Cudahy defendants, as alleged under this subhead.

EXTENT OF INDUSTRIAL CONTROL IN THE SUBSTITUTE FOODS AND UNRELATED COMMODITIES.

Cudahy defendants deny that they, or any of them, exercise any degree of control in the various mentioned industries, as alleged under this subhead.

Cudahy defendants, as to the allegations concerning the business of Armour & Co., have no direct or authoritative information, and therefore neither admit nor deny the same.

Cudahy defendants deny that they, or any of them, are engaged in the business of canned fish, vegetables, and sundry canned and dried fruit, and soda-fountain supplies.

Cudahy defendants deny that they, or any of them, are engaged in the business of fruit preserves and grape juice, except only that Edward A. Cudahy, sr., and Edward A. Cudahy, jr., own and control a corporation called The Red Wing Co. (Inc.), which manufactures fruit preserves and grape juice in a small and relatively negligible amount, and which has always been entirely independent of the Cudahy Packing Co.

INDIVIDUAL DEFENDANTS.

Cudahy defendants admit that the Cudahy individual defendants are either officers, directors, agents, or employees of the Cudahy parent company. They deny that Cudahy individual defendants are financially interested to a great extent in stockyards, but aver that none of them is financially interested therein except only as above set forth. They deny that any of said Cudahy individual defendants are financially interested in terminal railways, cattle loan banks, rendering companies, and other institutions interrelated with stockyards, except only that E. A. Cudahy, sr., owns, and for more than 20 years has owned, 80 shares of stock in one rendering company and 25 shares of stock in another. They deny that any acts of theirs, or of any of them, enable the Cudahy parent company to carry out the purpose of the supposed combinations described in said bill of complaint, and they deny that any such combination exists.

They deny that the Cudahy parent company, or its subsidiaries, either by itself or in conjunction with any other person or corporation, has complete control, or is likely ever to have complete control, or any control, over meat products or substitute foods, as alleged under this subhead.

PRAYER.

Wherefore these defendants, having answered this bill of complaint, deny that the plaintiff therein is entitled to the relief sought by the prayer of said bill of complaint, or to any relief whatever, against Cudahy defendants, or any of them, and hence pray that they may be, and that each of them may be, hence dismissed.

ANSWER OF WESTERN MEAT CO. AND OTHERS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co. et al., defendants, in equity No. 37623.

The joint and several answers of the following-named defendants to the bill of complaint filed herein:

Corporations organized under the laws of—
Western Meat Co., California; Oakland Meat & Packing Co., California; Nevada Packing Co., Nevada.
Individual, Fred L. Washburn.

These defendants now and at all times hereafter saving unto themselves all manner of benefits and advantages of exception which can or may be had or taken to the many errors, uncertainties, imperfections, and insufficiencies in the complainant's said bill of complaint contained, for answer thereto, or to so much and such parts thereof as these defendants are advised it is material or necessary for them to make answer unto, answering say:

These defendants aver that none of the corporations described as parent companies in the bill of complaint in this cause has any ownership, interest, or title in and to any of the capital stock or property of any of these corporation defendants, and none of these corporation defendants is a subsidiary of any of said parent companies.

"COURT'S JURISDICTION."

These defendants neither admit nor deny that the parent companies referred to in the bill of complaint, either directly or through subsidiaries, are engaged in—

(a) The purchase and slaughter of live stock.
(b) The preparation and manufacture of dressed meat and by-products of the slaughtered live stock.
(c) The curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animal.
(d) The production and sale of nonedible by-products and of articles in the manufacture of which these nonedible products are largely used.
(e) The manufacture, canning, or otherwise preparing for the market, sale, and distribution of certain food supplies other than meats.
(f) The manufacture and sale of various other articles commonly purchased and used either by the producer of live stock, the companies transporting the live stock or dressed meats, or the competitors of the parent companies (these are hereinafter referred to as unrelated commodities).

But leave the complainant to make due proof thereof.

These defendants deny that they or any of them in collusion, agreement, or combination with the so-called parent companies or their subsidiaries or any of them, or otherwise, have made any contract or in any manner or by any act, method, or means have engaged in or are or have been a party to any combination in the form of a trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign nations.

These defendants deny that they or any of them in collusion, agreement, or combination with the so-called parent companies or their subsidiaries or any of them, or otherwise, in any manner or by any act, method, or means have monopolized or attempted to monopolize or have combined or conspired with any other person, persons, firm, or corporation to monopolize any part of the trade or commerce among the several States or with foreign nations.

These defendants deny that they or any of them in collusion, agreement, or combination with the so-called parent companies or their subsidiaries or any of them, or otherwise, acting by and through their principal officers or otherwise, have attempted to dominate, control, and monopolize a very great proportion of the food supply of the Nation and have thereby built up an unlawful monopoly and control over divers and sundry products and commodities, referred to in the bill of complaint.

These defendants deny that they or any of them, in collusion, agreement, or combination with the so-called parent companies or their subsidiaries or any of them are attempting to increase and extend said alleged monopoly of the products and commodities referred to in the bill of complaint. These defendants neither admit nor deny that the said parent companies and their subsidiaries artificially control the supply and price of the food supplies of the Nation, but leave the complainant to make due proof thereof.

"OBJECT TO BE ATTAINED."

These defendants deny that they have created or obtained any monopoly in the interstate trade or commerce of live stock, meat products, and substitute foods, as charged in the bill of complaint; and these defendants deny that any monopoly by the defendants named in the bill of complaint, as charged therein, exists. These defendants deny that there has been or is in existence, as charged in the bill of complaint, any contract, combination, or conspiracy in restraint of trade or commerce among the several States.

On the contrary, these defendants allege that they, and each of them is in actual and keen competition with each and every so-called parent company and its subsidiaries.

As to the allegations and charges relating to the so-called parent companies contained in the sections or subdivisions of the bill of complaint entitled "The nature of the business and method by which it is conducted," "The stockyards," "Conveniences and facilities controlled by stockyards," "Branch houses, route cars, autotrucks, and cold-storage warehouses," "The parent companies' acquisition of above-described facilities and their purpose in doing so," and "Contracts in restraint of trade," these defendants neither admit nor deny the truth thereof, but leave the complainant to make due proof thereof.

"CONTROL OF SUBSTITUTE FOODS."

These defendants deny that they, or any of them, have eliminated competition in meat products, as charged in the bill of complaint. These defendants further deny that they, or any of them, set about to control of the Nation's supplies of fish, vegetables, either fresh or canned, fruits, cereals, milk, poultry, butter, eggs, cheese, and other foods ordinarily handled by wholesale grocers or produce dealers, as charged in the bill of complaint.

These defendants deny that they, or any of them, ever employed their distributive facilities, or otherwise, to fix prices so low as to eliminate competition.

These defendants deny that they, or any of them, have attempted to monopolize commerce in any of the food products mentioned in the bill of complaint, and they deny that any act or acts of these defendants have resulted in the defendants obtaining complete control of any food product, as charged in the bill of complaint.

These defendants deny that unless prevented by a decree of this court the defendants will, within the compass of a few years, control the quantity and price of each article of food found on the American table, as charged in the bill of complaint.

"EXTENT TO WHICH THE MONOPOLISTIC ATTEMPTS HAVE BEEN SUCCESSFUL."

These defendants neither admit nor deny the allegations and charges relating to the so-called parent companies contained in the section or subdivision of the bill of complaint, entitled as above, but leave the complainant to make due proof thereof, except that these defendants deny that, if the growth of the parent companies and their subsidiaries is permitted to continue unchecked they will within a few years completely control the various industries in which the defendants are engaged.

"INDIVIDUAL DEFENDANTS."

Defendant Fred L. Washburn denies that he is either an officer, director, agent, or employee of any of the so-called parent companies or their so-called subsidiaries, or a large stockholder of any of the said parent companies or their subsidiaries, and he further denies that, in his individual capacity, he is financially interested to a great extent in the stockyards, terminal railways, cattle loan banks, rendering companies, and other companies intimately related with the stockyards, as charged in the bill of complaint. He further denies that in addition to his individual holdings he holds stock in any corporation dealing in the so-called substitute foods and so-called unrelated commodities for the benefit of the said parent companies.

Defendant Fred L. Washburn denies that he has or exercises any control over the facilities or instrumentalities of the meat business as charged in the bill of complaint, and he denies that by reason of any interest which he may have in such corporations dealing in so-called substitute foods and so-called unrelated commodities, the so-called parent companies are enabled to carry out the alleged purpose of the combinations charged in the said bill of complaint.

Defendant Fred L. Washburn denies that any interest which he may have in any corporation hereinbefore described is now or will continue to be a sinister or ever-present means of furthering any attempt to monopolize or to perfect a monopoly so that the so-called parent companies or their subsidiaries will have or will ever have complete control either of meat products or of all so-called substitute foods consumed in the United States as charged in the bill of complaint.

"SUBSIDIARIES DEFENDANTS."

These defendants deny that they, or any of them, are subsidiaries owned or controlled by the so-called parent companies, and they further deny that the parent companies, or any of them, has any ownership, interest, or title in and to any of the capital stock or property of any of these defendants.

CONCLUSION.

As to all other averments of said bill of complaint which are not hereinbefore denied or admitted, these defendants make no answer, but pray strict proof.

These defendants allege that the allegations and charges in each of the paragraphs of the bill of complaint are not sufficiently definite and specific to constitute a violation of law, but are too general and vague.

These defendants allege that the bill of complaint does not allege acts or facts to constitute a violation of law, but that the charges contained in the bill of complaint and in each paragraph thereof are mere statements of legal conclusions.

These defendants deny that complainant is entitled to the relief, or any part thereof, as prayed for in its bill of complaint, and allege that complainant under the allegations of its complaint is without standing or right in this court or in any court of equity.

These defendants deny all and all manner of unlawful acts whatsoever whereof they are in anywise by the said bill of complaint charged; all of which matters and things these defendants are ready and willing to prove as this honorable court shall direct.

These defendants pray in all things the same benefit and advantage of this, their answer, as if they had pleaded or demurred to said bill of complaint.

Wherefore, these defendants pray that the bill of complaint herein be dismissed with costs.

WESTERN MEAT CO.,
OAKLAND MEAT & PACKING CO.,
NEVADA PACKING CO.,
FRED L. WASHBURN,
By HENRY VEEDER, *Their Solicitor.*

ANSWER OF NEW ENGLAND DRESSED MEAT & WOOL CO. AND OTHERS.

In the Supreme Court of the District of Columbia.

United States of America, petitioner, *v.* Swift & Co., Armour & Co., Morris & Co., Wilson & Co. (Inc.), and the Cudahy Packing Co. et al., defendants, in equity, No. 37623.

The joint and several answer of the following corporations, defendants, to the bill of complaint filed herein:

Organized under laws of the several States mentioned:

New England Dressed Meat & Wool Co., Maine; North Packing & Provision Co., Maine; The Sperry & Barnes Co., Connecticut; John P. Squire & Co., Maine; John P. Squire & Co. (Inc.), Massachusetts; John P. Squire & Co. (Inc.), Rhode Island; Springfield Provision Co., New Hampshire; White, Pevey & Dexter Co., Maine.

These defendants now and at all times hereafter saving unto themselves all manner of benefits and advantages of exception which can or may be had or taken to the many errors, uncertainties, imperfections, and insufficiencies in the complainant's said bill of complaint contained, for answer thereto or to so much and such parts thereof as these defendants are advised it is material or necessary for them to make answer unto, answering, say:

These defendants aver that none of the corporations described as parent companies in the bill of complaint has any ownership, interest, or title in and to any of the capital stock or property of any of these defendants, and none of these defendants is a subsidiary of any of said parent companies.

COURT'S JURISDICTION.

These defendants neither admit nor deny that the parent companies referred to in the bill of complaint, either directly or through subsidiaries, are engaged in—

(a) The purchase and slaughter of live stock;

(b) The preparation and manufacture of dressed meat and by-products of the slaughtered live stock;

(c) The curing, canning, or otherwise preparing for the market of the edible products and by-products of the slaughtered animal;

(d) The production and sale of nonedible by-products and of articles in the manufacture of which these nonedible products are largely used;

(e) The manufacture, canning, or otherwise preparing for the market, sale, and distribution of certain food supplies other than meats;

(f) The manufacture and sale of various other articles commonly purchased and used either by the producer of live stock, the companies transporting the live stock or dressed meats, or the competitors of the parent companies (these are hereinafter referred to as unrelated commodities);

but leave the complainant to make due proof thereof.

These defendants deny that they or any of them in collusion, agreement, or combination with the so-called parent companies or their subsidiaries, or any of them, or otherwise, have made any contract, or in any manner or by any act, method, or means have engaged in, or are or have been a party to any combination in the form of a trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign nations.

These defendants deny that they, or any of them, in collusion, agreement, or combination with the so-called parent companies or their subsidiaries, or any of them, or otherwise, in any manner or by any act, method, or means have monopolized or attempted to monopolize, or have combined or conspired with any other person, persons, firm, or corporation to monopolize any part of the trade or commerce among the several States or with foreign nations.

These defendants deny that they, or any of them, in collusion, agreement, or combination with the so-called parent companies or their subsidiaries, or any of them, or otherwise, acting by and through their principal officers, or otherwise, have attempted to dominate, control, and monopolize a very great proportion of the food supply of the Nation and have thereby built up an unlawful monopoly and control over divers and sundry products and commodities referred to in the bill of complaint.

These defendants deny that they, or any of them, in collusion, agreement, or combination with the so-called parent companies or their subsidiaries, or any of them, are attempting to increase and extend said alleged monopoly of the products and commodities referred to and as charged in the bill of complaint. These defendants neither admit nor deny that the said parent companies and their subsidiaries artificially control the supply and price of the food supplies of the Nation, but leave the complainant to make due proof thereof.

"OBJECT TO BE ATTAINED."

These defendants deny that they, or any of them, have created or obtained any monopoly in the interstate trade or commerce of live stock, meat products, and substitute foods, as charged in the bill of complaint; and these defendants deny that any monopoly by the defendants named in the bill of complaint exists, as is charged in the bill of complaint. These defendants deny that there has been or is in existence, as charged in the bill of complaint, any contract, combination, or conspiracy in restraint of trade or commerce among the several States.

On the contrary, these defendants allege that they and each of them is in actual and keen competition with each and every so-called parent company and its subsidiaries.

As to the allegations and charges relating to the so-called parent companies contained in the sections or subdivisions of the bill of complaint, entitled "The nature of the business and method by which it is conducted"; "The stockyards"; "Conveniences and facilities controlled by stockyards"; "Branch houses, route cars, autotrucks, and cold-storage warehouses"; "The parent companies' acquisition of above-described facilities and their purpose in doing so"; and "Contracts in restraint of trade," these defendants neither admit nor deny the truth thereof, but leave the complainant to make due proof thereof.

"CONTROL OF SUBSTITUTE FOODS."

These defendants deny that they, or any of them, have eliminated competition in meat products, as charged in the bill of complaint. These defendants further deny that they, or any of them, set about to control the Nation's supplies of fish, vegetables, either fresh or canned, fruits, cereals, milk, poultry, butter, eggs, cheese, and other foods ordinarily handled by wholesale grocers or produce dealers, as charged in the bill of complaint.

These defendants deny that they, or any of them, ever employed their distributive facilities or otherwise to fix prices so low as to eliminate competition.

These defendants deny that they, or any of them, have attempted to monopolize commerce in any of the food products mentioned in the bill of complaint, and they deny that any act or acts of these defendants have resulted in the defendants obtaining complete control of any food product, as charged in the bill of complaint.

These defendants deny that unless prevented by a decree of this court the defendants will, within the compass of a few years, control the quantity and price of each article of food found on the American table, as charged in the bill of complaint.

"EXTENT TO WHICH THE MONOPOLISTIC ATTEMPTS HAVE BEEN SUCCESSFUL."

These defendants neither admit nor deny the allegations and charges relating to the so-called parent companies, contained in the section or subdivision of the bill of complaint, entitled as above, but leave the complainant to make due proof thereof, except that these defendants deny that if the growth of the parent companies and their subsidiaries is permitted to continue unchecked they will within a few years completely control the various industries in which the defendants are engaged.

"INDIVIDUAL DEFENDANTS."

These defendants neither admit nor deny the allegations and charges relating to the individual defendants and the so-called parent companies contained in the section or subdivision of the bill of complaint entitled as above, but leave the complainant to make due proof thereof.

"SUBSIDIARIES DEFENDANTS."

These defendants deny that they, or any of them, are subsidiaries owned or controlled by the so-called parent companies, and they further deny that the parent companies, or any of them, has any ownership, interest, or title in and to any of the capital stock or property of any of these defendants.

CONCLUSION.

As to all other averments of said bill of complaint which are not hereinbefore denied or admitted, these defendants make no answer, but pray strict proof.

These defendants allege that the allegations and charges in each of the paragraphs of the bill of complaint are not sufficiently definite and specific to constitute a violation of law, but are too general and vague.

These defendants allege that the bill of complaint does not allege acts or facts to constitute a violation of law, but that the charges contained in the bill of complaint and in each paragraph thereof are mere statements of legal conclusions.

These defendants deny that complainant is entitled to the relief, or any part thereof, as prayed for in its bill of complaint, and allege that complainant under the allegations of its complaint is without standing or right in this court or in any court of equity.

These defendants deny all and all manner of unlawful acts whatsoever whereof it is in any wise by the said bill of complaint charged, all of which matters and things these defendants are ready and willing to prove as this honorable court shall direct.

These defendants pray in all things the same benefit and advantage of this, their answer, as if they had pleaded or demurred to the bill of complaint.

Wherefore these defendants pray that the bill of complaint herein be dismissed with costs.

STIPULATION AND PROPOSED DECREE.

In the Supreme Court of the District of Columbia.

The United States of America, petitioner, *v.* Swift & Co. et al. defendants, In equity, No. 37623,

It is hereby stipulated by and between the parties hereto that the decree hereinafter contained may, upon consent of the parties and without any findings of fact, be entered in this cause.

The corporation and individual defendants, while maintaining the truth of their answers and asserting their innocence of any violation of law in fact or intent, nevertheless, desiring to avoid every appearance of placing themselves in a position of antagonism to the Government, consent to the making and entry of said decree; but this stipulation shall not constitute or be considered as an admission, and the rendition or entry of the decree, or the decree itself, shall not constitute or be considered as an adjudication that the defendants, or any of them, have in fact violated any law of the United States.

The decree above referred to is as follows:

(In the original "Stipulation and proposed decree" filed in the Supreme Court of the District of Columbia there was inserted here the proposed decree which was the decree entered in this cause by said court and is set out in full in the book on pages 1 to 12, both inclusive, but is omitted here to avoid unnecessary repetition.

Dated Washington, D. C., February 27, 1920.

IN THE MATTER OF THE APPLICATION FOR PARDON OF WILLARD N. JONES.

WASHINGTON, D. C., *May 10, 1912.*

The PRESIDENT.

SIR: On March 1, 1911, you commuted the sentence of Willard N. Jones in effect to four months' imprisonment in the county jail and to pay a fine of $12,000. On March 16 you received a telegram from H. H. Schwartz, former chief of field service of the General Land Office, charging irregularities in the filling of the jury box from which grand jurors and petty jurors were drawn in the Jones cases, and also in the trial of the cases, and pursuant thereto you directed a further investigation to be made and that the execution of the penalty be deferred until the investigation be completed.

Shortly thereafter additional papers were filed to sustain the charge, and a report was received from United States Attorney McCourt with which he transmitted additional papers formerly belonging to William J. Burns, detective, which were found in the United States attorney's office. All of these were sent to you April 24, 1911, with a statement that I thought enough facts were submitted to throw a very decided doubt upon the fairness and impartiality in the method of selecting the jury. And that in my opinion it would not be just to allow a man to be sent to prison as the result of a trial before a jury procured in the manner in which it was shown by the papers the jury by which Jones was tried was selected.

I stated further that the papers also tended strongly to show an atmosphere surrounding the whole prosecution which was hardly consonant with the impartial administration of justice. I referred, however, to the fact that the papers had not been submitted to Mr. Francis J. Heney, the attorney who conducted the prosecution and who was at that time in California, and recommended, in view of the delay which would result from securing a statement from Mr. Heney, that the sentence be commuted so as to relieve the defendant from actual imprisonment, or if you desired Mr. Heney's statement before acting that the papers be transmitted to him for an expression of his opinion concerning the points of criticism. On April 28, 1911, you replied saying that you believed the execution of the sentence should be withheld until the papers had been submitted to Mr. Heney for comment and answer.

Mr. Heney's report, a lengthy document covering 77 pages, dated May 23, 1911, was received by the department June 28, 1911. Mr. Heney disclaims any knowledge of the matters charged, offers explanations and conjectures regarding the alleged irregularities, and expresses the firm conviction that the charges are baseless. I read the statement and referred it to the pardon attorney, directing him to look over the report carefully, and also the papers and documents which had been received since your prior action on the case, and requested him to inform me whether or not in his opinion there was anything in the papers which should modify the conclusions shown in Mr. Heney's report. This the pardon attorney attempted to do.

On August 26, 1911, he informed me that he had practically completed the preparation of his report, and although he had reached a fairly satisfactory conclusion, there were matters which he could not settle with absolute certainty from the papers before him, and said that he thought it desirable the department should have at least some statement from Mr. Burns; that he had in my absence caused a telegram to be sent to Mr. Burns inquiring how he obtained possession of the list of names which were in the possession of Capt. Sladen and Jury Commissioner Bush prior to the filling of the jury box, to which Mr. Burns replied that there was no truth whatever in the statements that Capt. Sladen or the jury commissioner had furnished him with advance lists of prospective jurors, and stating that he would look up data and furnish the department with a complete report of his connection with the matter, which was entirely straight and honorable; that he expected to be in Washington within a short time and would then make a report and answer interrogatories by anyone interested. Thereupon, I directed the pardon attorney to delay the completion of the report until he had seen Mr. Burns. Mr. Burns, however, did not make his report or come to the department for months afterwards, although repeatedly communicated with about the matter.

The papers received up to this time and reviewed by the pardon attorney in connection with Mr. Heney's lengthy report was so voluminous that the pardon attorney's brief had reached nearly 80 pages. He delayed the completion of his report styled "Supplemental report" until October 10, and then closed it with a statement that he did not think any fair or proper conclusion could be arrived at until the department had received a complete statement from Mr. Burns, and that it might be necessary to receive statements from others connected with the prosecution, and in view of the size to which his report had grown he thought it would be well to make the result of his further investigations the subject of another communication.

This he has done, styling it "Second supplemental report." It is well that he has done so and that he has delayed his report until this time, as the department is now in receipt of such further information in documentary form that there is little left to conjecture as to what actually transpired regarding the filling of the jury box and the correctness of the charges made by petitioner and his friends.

Fortunately, this evidence is of such a character that it will not be necessary for you to follow very carefully the line of reasoning, conjecture, and comparisons of documents and reports received, which otherwise would have been required in order to reach, I think, a thoroughly satisfactory and convincing idea of what actually transpired.

Nor is it necessary to review the offenses of which Jones was convicted, for the reason that if the charges made by him are true, it matters little what the offense was; he should not be required to serve a day of imprisonment or be otherwise punished. The facts relating to the conviction are, however, fully set forth in my former report, which is sent herewith.

It is charged by the defendant and his friends that William J. Burns, who was investigating jurors for Mr. Francis J. Heney, as stated by the latter in a communication to me dated August 23, 1911, sent his agents throughout the several counties from which names of jurors had been taken for the purpose of filling the jury box, and had these proposed jurors investigated prior to the time the box was filled. It is claimed that these agents reported to Burns and that he was able in some way to control, and did control, the selection of names that went into the jury box; that in this way the jury box was filled with names of persons predisposed to convict, to wit, Democrats, Populists, Socialists, and Republicans belonging to what is known as the Simon faction who were antagonistic to the so-called Mitchell faction of the Republican Party, to which Jones and the persons prosecuted belonged, and that none of the persons objectionable to Burns were selected.

It is also claimed that offenses against the public-land laws were of such common occurrence by reason of the lax methods employed by the Government officials or even by their acquiescence, that very many people in that section of the country had made themselves liable to conviction and punishment under a strict interpretation of the law; and that the prosecution, through intimidation by threats of indictment and conviction, compelled witnesses both before the grand jury and petit juries to testify falsely, and that witnesses did testify falsely in the Jones and other cases. These charges have been substantially proven, particularly those relating to the irregularities in the filling of the jury box.

The department has in its possession the original reports of Burns's agents to him and those assisting him regarding the names of proposed jurors, which reports were made prior to the filling of the box. Some of the comments upon these names were as follows: "Convictor from the word go." "Socialist. Anti-Mitchell." "Convictor from the word go; just read the indictment. Populist." "Think he is a Populist. If so, convictor. Good, reliable man." "Convictor. Democrat. Hates Hermann." "Hidebound Democrat. Not apt to see any good in a Republican." "Would be apt to be for conviction." "He is apt to wish Mitchell hung. Think he would be a fair juror." "Would be very likely to convict any Republican politician." "Just convictor." "Would convict Christ." "Convict Christ. Populist." "Convict anyone. Democrat." Burns's favorite way of describing an unsatisfactory juror was to designate him as a "s—n of a b—h," and lists are checked as "s—b," etc. Attached to the Polk County list found among Burns's papers is a slip bearing the following indorsement: "Pat McArthur checked all on Polk County list who were good; checked on said list for s—s of b—s."

The department also has Burns's original statements of adversely reported names, some in his own handwriting, others typewritten. Evidently Burns, or some one for him, had gone over the reports received and picked out the bad reports and had them typewritten. This was done county by county, with the exception of Multnomah County, concerning which reports are meager, and in practically every instance all of the names on these lists were left out, and occasionally were the only names left out, from a particular county unless the name bore a circular check, which indicated, although the name appeared upon the list, yet for some reason the proposed juror would be satisfactory.

The conclusion is obvious it would have been a remarkable coincidence for the jury commissioners to have selected for rejection even from one county only the names which were reported upon adversely, and which had been collected and typewritten as above stated, but when the situation obtains with substantial uniformity throughout all of the counties save one it is impossible to reach any other conclusion than that Burns in some way, either with or without the actual knowledge of the jury commissioner, caused the selections to be made in conformity with his wishes.

In view of the high regard in which Capt. Sladen and the jury commissioner were held, and the positive statements made regarding the probity of these men, I am disposed to regard it as improbable that they really understood the nature or the extent of what was being done, but there is abundance of evidence, in my judgment, to show that the work was probably done by Burns acting in collusion with Marsh, who was deputy clerk at the time.

It is noticeable that the positive statements of denial are chiefly in the nature of an assertion that neither Capt. Sladen nor the jury commissioner could have been implicated in the affair. Even Burns, in his first telegram, does not reply directly, but says there is no truth in the statements that Capt. Sladen or Bush furnished him with the information, and Mr. Marsh's emphatic statements have been largely of a similar nature. Indeed, some of the information, which Mr. Burns secured and secured so promptly, it would seem could not have been obtained in any other way.

It is impracticable to go into all the details of the corroborating evidence on this point, but if there were any doubt regarding Burns's connections with the affair and what he actually accomplished, it would seem to be set at rest by his own telegram in cipher to Mr. W. Scott Smith, then secretary to Hon. E. A. Hitchcock, the then Secretary of the Interior, on August 19, 1909, the very date the jury box was filled and on which the grand jury was drawn. The department has this original telegram. It reads as follows:

"Jury commissioners cleaned out old box, from which trial jurors were selected, and put in 600 names, every one of which was investigated before they were placed in the box. This confidential."

In addition to this an affidavit was received on the 12th instant from C. N. McArthur, who was one of Burns's agents in the field, and afterwards speaker of the House of Representatives of Oregon. Mr. McArthur makes a complete disclosure of the whole situation, which leaves no possible ground for doubt. Among other things he states that on or about July 25, 1905 (the jury box was filled Aug. 17, 1905), Burns telephoned to him that he wished to see him in the district attorney's office and while there and in the presence of Francis J. Heney, Burns handed him a typewritten list and said, as nearly as Mr. McArthur can remember: "Here, Mac, is a list of prospective jurors from several counties. Take it, weed out the s—s of b—s, who will not vote for conviction, and return it to me as soon as possible for we are going to make up a new jury box and we want to be sure that no man's name goes into the box unless we know that he will convict; for, by G—, we are going to 'get' Williamson this time, you can bet your sweet life, and we will send this whole d—d outfit to jail, where they belong. We are going to 'stack the cards' on them this time."

Mr. McArthur states that he became indignant, and told Burns that such methods as he proposed were altogether improper and that no self-respecting man could be a party to them; and Burns replied: "Any methods are justifiable in dealing with these s—s of b—s." He states further, that on or about September 1, 1905, he met Burns, and the latter said to him: "Well, Mac, we weeded out the s—s of b—s, at least I think we did, and we will 'get' Williamson this time and, by G—, we will get the whole d—d crowd. Old Sladen kicked like h—l, because my men worked the lists over before they went to the jury commissioners, but it didn't do the old s—n of a b—h any good, and the corrected lists went in anyhow."

Mr. McArthur, it is to be remembered, was one of Burns's agents and furnished many of the reports which are on file in the department. He claims, however, that he did so with great reluctance and under duress, and after much persuasion. He does not state the nature of the duress, but I am informed is willing to do so if you insist.

There are also on file affidavits of persons who claim that they were induced through intimidation and threats to testify falsely in the Jones case. Such representations in the absence of other corroborating evidence would not be entitled to very great weight, but when it is considered how emphatic have been Mr. Burns's denials and his statements that the whole thing is a tissue of falsehoods from beginning to end it is apparent, notwithstanding these denials, that the prosecution very probably resorted to intimidation of witnesses also.

In line with these practices, it is further shown that one of the defendants, with Jones, a man named Sorensen, while he was presumptively being tried by the Government, was in the active employment of Burns and received compensation from the Government under the name of George Edwards. In this way Burns kept tab on Jones, and the latter, relying on Sorensen because he was a fellow defendant, accepted as jurors persons to whom he would otherwise have objected.

I need not go further in a recital of the high-handed outrageous conduct on the part of the officers of the prosecution in these cases. The Government can not properly countenance, nor is it expedient in these times of attacks upon courts and the judicial system of the United States for it to lend its approval to any such procedure.

In the light of the facts as they appear from the documents and reports before the department, it does not seem to me that any person convicted of land frauds by the jury drawn from the box referred to had a fair and impartial trial. For this reason I feel it my duty to advise you that, in my judgment, Willard N. Jones should receive a full and unconditional pardon. In this connection, I should say that Mr. Burns has been given the fullest opportunity to make a statement. The pardon attorney went to New York and interviewed him by appointment, but could not obtain a statement from him, though he informed Mr. Burns that he had with him all of the documents that had been filed, and would be glad to show him every one and receive what com-

ment he had to make. Thomas B. Neuhausen, Burns's right-hand man in the investigation and also closely connected with Mr. Heney in the prosecution of the cases, has been given an opportunity to make a statement, the pardon attorney informing him of the nature of the representations made, and the documents filed, and indicating the conclusions to which the documents unanswered and unexplained must lead. No reply has been received. Such statements as have been secured are of an evasive character or are directly contrary to the documentary evidence before the department. Even Judge Gilbert has submitted an explanation of his former emphatic statement denying that the charges made could be true.

The course of the Executive, however, seems to me to be clear, and that is, he can not countenance the methods employed in the prosecution of these cases by requiring an enforcement of the sentence imposed in the Jones case, and I think also, and for the same reason, a pardon should be granted to Franklin P. Mays, although my impression is that the man is really very guilty and deserving of punishment.

Respectfully,

GEORGE W. WICKERSHAM,
Attorney General of the United States.

—

THE WHITE HOUSE,
Washington, June 2, 1912.

MY DEAR MR. ATTORNEY GENERAL: I am sorry that I am so occupied as not to have time to make an extended examination of the application for pardon on behalf of W. N. Jones. From the case made it is perfectly clear that his conviction was effected by the most barefaced and unfair use of all the machinery for drawing a jury that has been disclosed to me in all my experience in the Federal court. It gives sufficient to justify the pardon of Mr. Jones, as well as the condemnation of the methods of Mr. Heney and Mr. Burns. You may send me a pardon for signature.

Sincerely, yours, WILLIAM H. TAFT.

Hon. GEORGE W. WICKERSHAM,
Attorney General.

CALL OF THE ROLL.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Gronna	Moses	Spencer
Beckham	Harris	Nelson	Sterling
Borah	Heflin	New	Sutherland
Brandegee	Johnson, Calif.	Overman	Swanson
Calder	Jones, N. Mex.	Page	Townsend
Capper	Jones, Wash.	Phipps	Trammell
Culberson	Kendrick	Pomerene	Underwood
Curtis	Keyes	Reed	Wadsworth
Dial	Kirby	Sheppard	Walsh, Mass.
Dillingham	Knox	Sherman	Warren
Elkins	Lenroot	Shields	Willis
Fernald	McCormick	Simmons	Wolcott
Fletcher	McCumber	Smith, Ariz.	
France	McKellar	Smith, Md.	
Gooding	McLean	Smoot	

The PRESIDING OFFICER. Fifty-seven Senators have answered to the roll call. A quorum is present.

Mr. FERNALD. Mr. President, the bill which I propose to discuss briefly to-day is another attempt to extend Government interference over private business and place one of the greatest industries of the country under the control of a Federal bureau. The provisions of the bill are so revolutionary in character that I ask the indulgence of the Senate that I may call its attention to what is likely to result if this bill becomes a law.

I want to recite briefly the reason given for this bill and why such a measure is now pending before this body. In February, 1917, President Wilson, in a letter to the Federal Trade Commission, directed that it make an investigation of the food supply of this country. Among other things, the President in his letter said:

> I direct the commission, within the scope of its powers, to investigate and report the facts relating to production, ownership, manufacture, storage, and distribution of foodstuffs, and the product or by-products arising from or in connection with their preparation and manufacture.

This order from the President naturally meant that the entire industry from the producer to the consumer, or, putting it in another way, from the farm to the table, should be investigated, but this was not done. The only part of the instructions that was followed by the Federal Trade Commission was to investigate the manufacturing end—the packing industry. No attempt was made to look into the producing, the distributing, or the retailing end of the business.

The Federal Trade Commission employed an attorney, who was a candidate for office—and I refer to Francis J. Heney, of California, who was then seeking the nomination for governor of his State, as this counsel. Hearings were held in different parts of the country, but these were ex parte in character and the packers have insisted that they were not permitted, through legal counsel, to cross-examine witnesses who were prejudiced and were sought out to testify against them. I think the records of these hearings will show that the Federal Trade Commission, and its attorney, were prejudiced against the packers when they started this investigation. The investigation was confined to the so-called big five packers, and apparently the Federal Trade Commission before they ever started made up their minds that the packers were guilty of wrongdoing and every means that could possibly be employed was brought about to convict them. The inquiry was continued for more than a year and the reports of the Federal Trade Commission which were published, among other things, recommended that the Government take over the stockyards, the refrigerator cars, and the branch houses. As a result of this investigation, bills were introduced in this body by the Senator from Wyoming [Mr. KENDRICK] and the Senator from Iowa [Mr. KENYON]. These bills required the packer to take out a license. Hearings were held on these two bills before the Senate Committee on Agriculture and Forestry from August 18 to September 13, 1919. After the hearings closed and the committee considered the evidence submitted the present bill was reported from the committee, and was known as the Gronna bill. This bill provides for a Federal live-stock commission, and provision is made for the packer to register, and I think in the outcome you will find that the effect between a license and registration is more imaginary than real.

But, Mr. President, I want to discuss briefly the facts leading up to the preparation of this bill. I want to discuss the report of the Federal Trade Commission as well as the statements of W. B. Colver, who was then a member of that body, and who was particularly interested in the findings that were submitted by the Federal Trade Commission. When the hearings before the Senate committee opened Mr. Colver appeared and reviewed the Federal Trade Commission's findings at some length. These included a number of very serious charges against the packing industry. Mr. Colver reiterated these charges when he appeared before the Senate committee. The more important of these were:

First. That the small packers "are existing at sufferance" of the big packers.

Second. That the stock producers of the country "are at the mercy of the five great packing concerns."

Other charges made by Mr. Colver were that the packers have a monopoly in the packing industry; that they are guilty of unfair practices in trade; that the markets are not free and open at the stockyards; and that there is unfair competition in the selling end of the business.

There were about 200 witnesses who testified during the hearings and they came from all parts of the United States—33 States were represented.

I regard the charges made by Mr. Colver as very serious, and coming from a Government official naturally would carry considerable weight. But I want to call your attention, first, to the specific charge made that the small or independent packers "are existing at sufferance" of the big packers. There were more than 20 of these small packers who went before the committee and asserted the statement made by Mr. Colver was untrue. They denied absolutely that there was any basis for such a charge and discredited the Federal Trade Commission's report, as well as Mr. Colver's statement.

Many of these witnesses are known to Members of this Senate as citizens of the highest honor and integrity, and their word is never questioned. One of these was Mr. Michael Ryan, president of the Cincinnati Abattoir Co. He is one of the best-known and one of the most prosperous of the small packers, and has been engaged in the packing business for 40 years. This is what he says:

> I have been a competitor of the so-called big packers for the last 30 or 40 years, and I have never found a disposition on their part to crush competition. * * * I have never heard of any desire on the part of the big packers to eliminate any packing house in this country.

Mr. Ryan said that his company's turnover that year was about $30,000,000; that they owned about 200 refrigerator cars, and were prosperous and had no complaint to make.

Mr. T. Davis Hill, vice president of the Corkran Hill & Co., Baltimore, testified as follows:

> Our business has never been subjected to any undue interference by any other corporation. The big packers can not control the market for the reason there are too many outside packers. Outside packers at Chicago some days purchase more than all the large packers put together. In other words, the small packers make the market for the big packers day after day. We have no fear of the big packers' competition. As to profits, I believe that during the past 25 years we have done a little better than the large packers.

Mr. W. R. Sinclair, manager of Kingan & Co., of Indianapolis, also denied the statements by Colver. Kingan & Co. is among the larger of the so-called small packers, and do a large business. They operate about 550 refrigerator cars and do business running into the millions annually. Their turnover in 1918 was $63,000,000. Mr. Sinclair declared that there was no monopoly in the packing business, and he saw no tendency in that direction.

I could go on and read to you similar testimony from these small packers, gentlemen like J. C. Dold, president of the Dold Packing Co., Buffalo; Patrick Brennan, president of the Independent Packing Co., of Chicago; W. N. W. Blaney, president of the Coffin Packing Co., Denver; John J. Felin, president of the Felin Co., of Philadelphia—all of whose testimony corroborates that I have just read, but I shall not detain the Senate further in reading from their testimony. It will all be found in the report of the committee.

I simply cite the testimony of these gentlemen, Mr. President, men of truth and veracity, and ask whom are we to believe, these men, whose word is unquestioned, or a Government bureau, many of whose members have the reputation of preferring that the business of this country be operated and controlled by Government agencies rather than by a private industry.

PRODUCERS.

The second and equally as serious a charge was made by Mr. Colver when he said the live-stock producers of the country "are at the mercy of the five great packing concerns."

There were more than 80 cattle growers who appeared as witnesses, and with but few exceptions they declared the charges made by Mr. Colver were false. These men came from the cattle-producing States of Texas, Wyoming, Oklahoma, Kansas, Illinois, Iowa, and Nebraska. They declared emphatically, as did the small packers, that there was no monopoly in the packing industry, and they further asserted stockyards were free and open, and that they had always received fair treatment from the packers in disposing of their live stock. This testimony was submitted by farmers and small dealers.

I shall not undertake, Mr. President, to burden the Senate with much of this testimony, because all of it may be found in the printed reports of the Senate hearings. But I can not refrain from calling the attention of the Senate to the testimony of Mr. J. S. Blackwell, of Muscatine, Iowa. He comes from that great agricultural State from which one of the sponsors of this bill hails. Among other things Mr. Blackwell said was this:

> I am sorry that a Senator from a prosperous State like Iowa has to be the father of this bill, in view of the great prosperity that we are now enjoying. I do not think such legislation should originate from a State like ours. * * * Iowa's land values have increased by leaps and bounds within the last few years—from $50 to $500 an acre, and in some places more than that. This is due to the packers more than any single thing, and I want to tell you why. Iowa is the greatest hog-producing State in the Union. Besides, it is one of the foremost cattle-producing States, as well as one of the leading States in the production of poultry, eggs, and butter. Now, all of these products of our farms, practically, are sold to the packers at a ready cash market every day in the year.

But Mr. Blackwell was not the only producer from Iowa to appear before the committee. There were eight or nine other prominent farmers who testified practically the same as did Mr. Blackwell. Similar testimony was given from producers in other States, and all but a very few refuted and declared to be untrue the statements that they were at the mercy of the Big Five packing concerns.

So I ask again, Mr. President, whom are we to believe—these reputable citizens whose business compels them to be in contact almost every day with the big packers, men who have been engaged in the business for years, or are we to discount their testimony and accept a statement from an employee of a Government bureau? I do not think there is anyone in this Chamber who for one moment believes these packers and cattle raisers would go before a congressional committee, or anywhere else for that matter, and make a false statement. And I submit, Mr. President, that the charges made by Mr. Colver and the Federal Trade Commission were wholly and absolutely discredited by these citizens.

At the opening day of the hearings the Senator from Iowa [Mr. KENYON], who has been one of the sponsors of this legislation, among other things, said:

> The justification for any such measures as these at all is in the report of the Federal Trade Commission, showing what has been done in the way of combination among the packers.

The Senator made this statement on August 8, 1919, and in this Chamber more than a year afterwards—December 8, 1920—the Senator, in spite of the testimony given by the leading citizens of the country, among other things, made this statement in his speech supporting this measure:

> There are some independent packers, and they are permitted to live at the sufferance of the large packers.

This statement was made in view of the preponderance of testimony declaring there was no foundation in fact for the Federal Trade Commission's charge. The Senator from Iowa continues:

> These packers have it in their power to fix the price at which they buy and the price at which they will sell. * * * What I have to say is based on the hearings before our committee and also on the reports of the Federal Trade Commission. If the report of the Federal Trade Commission is unworthy of belief, as has been charged on this floor, then what I have to say falls to the ground.

If we believe, Mr. President, that the witnesses who testified before the Senator's committee were telling the truth, then I say the Federal Trade Commission's report is unworthy of belief. I, for one, would rather believe honest and sincere business men and farmers who are recognized as the leading citizens in their communities than I would a Government commission of impractical men, who know nothing about business, who are socialistically inclined, and who believe the Government ought to regulate private business.

As I said in the beginning, the Gronna bill is so drastic in its nature and so far-reaching in its effects that it should command the serious consideration of this body. While I have little confidence in the Federal Trade Commission as it is at present constituted, yet I think a study of the Federal Trade Commission law and the provisions of this bill will disclose that the Federal Trade Commission has ample power to take care of any violations of the law, and that another commission is unnecessary.

If I understand this bill, it will give the members of the commission the power to make its own rules and regulations; in fact, it will be a law-making body so far as controlling the packing industry is concerned. It will not be an administrative body, but a legislative and executive one. It will determine whether there is a monopoly, which, it seems to me, should be the province of a court and not of a commission.

The bill provides for three commissioners at an annual salary of $10,000 each, and section 3 of the measure prohibits anyone directly or indirectly interested in the packing business from being eligible to membership on the commission. The packing-house business is one of the most efficiently managed, yet one of the most complex in the country, and the men who have charge of it have had years of experience in handling this technical industry. Yet men who have this experience and the knowledge are prohibited from serving on the commission. The great trouble in the past with like bureaus, commissions, and boards has been that practically no one has ever been appointed to serve on them who has had any knowledge, experience, or training in the business which the commission controls.

That has been one great trouble with the Interstate Commerce Commission. There has never been an active, operative railroad man on the Interstate Commerce Commission until the appointment of Mr. Mark W. Potter, whose nomination has not yet been confirmed by the Senate. I believe Mr. Clark, who was a railroad conductor, has been serving also as a member of the commission. This is equally true with the Federal Trade Commission. There is not a man of recognized business standing a member of that body to-day. Yet the purpose of the Federal Trade Commission was to help and encourage business, and naturally one would suppose it would be a sane policy to have one business man at least a member of that bureau. That commission has had in its membership too many reformers, too many dreamers, too many theorists, and no one of practical business sense. And they have harassed, annoyed, and meddled with American business until the country has lost faith in the Federal Trade Commission. The operations of that organization alone should be a warning and provide ample evidence that no more commissions are wanted.

So this very important question is put squarely up to Congress, whether it is ready to turn over such a complex and vital industry to a bureau with almost unlimited power, but whose members would be without any practical or technical knowledge of the industry, and specifically provide that no man who has any connection with the business shall serve on the commission. These men who have no knowledge of the business will be empowered to make rules and regulations—or their own laws, if you please—controlling this great industry, of which they know nothing. Think of a $10,000 a year man sitting here in Washington regulating and controlling an industry which runs into billions of dollars a year! It is absurd and ridiculous.

I believe this bill is merely the entering wedge for similar legislation for control of all private business engaging in interstate commerce and will be a long step in the direction of the nationalization or socialization of all private industry. It strikes at individual initiative and personal ambition. It is not a governmental function to meddle in private business as long as that business is conducted honestly and fairly, and Government meddling is contrary to the history of this country and everything that has contributed to its greatness.

This measure means bureaucratic government for the packing business, and I am going to predict that it also means the same kind of government for all large business. If the bill becomes a law a group of men will be put in control of an industry which is the most sensitive to the law of supply and demand of any in the country, and the commission will have greater power

than was ever before conferred by Congress on any man or group of men. It will have power to legislate, to prosecute, and judge, and it may soon hamper the industry so as to affect the meat supply of the Nation and even of the world.

Another objection to such a commission is that it will be like every similar commission that has been created; it will be anxious to extend its own power and jurisdiction. The number of its employees and the size of the pay roll will be augmented, and it will not be many months until the cost to the Government will run into the millions. This has been the case with every bureau and commission which has ever been created.

For example, take the Federal Trade Commission. Starting in 1916 with an appropriation of more than $300,000, the amount has been increased from year to year so that if the appropriation recommended for 1922 by the House passes the Senate, the Federal Trade Commission will have cost the Government approximately $7,500,000 since it was organized. In 1919 it asked for the enormous sum of $1,677,000. It has increased its employees now to several hundred, and asks that Congress appropriate almost a million dollars for 1922.

I want to call the attention of the Senate to the manner in which the people's money has been expended by the Federal Trade Commission. It has flagrantly disregarded the appropriations made by Congress, and from year to year has gone ahead and spent large amounts exceeding the annual appropriation. In 1916, in addition to the $355,000 allowed by Congress, $15,000 was spent for printing. In 1917 Congress gave the commission $444,000, but it proceeded to spend $75,000 more, and $25,000 of that amount was for printing. In 1918 Congress appropriated $773,000 in round numbers, and the President gave $700,000 to the commission from his fund, yet it went ahead and spent $30,000 more for printing. One million and fifty-five thousand dollars was allowed by Congress in 1920, yet the Federal Trade Commission, regardless of that large amount, spent an additional $150,000. Nine hundred and fifty-five thousand dollars was expended in 1921, and the same amount has been recommended by the House for 1922. You will notice that since 1916, $70,000 has been expended for printing, and I have wondered whether this may have been used for propaganda. I have also wondered sometimes whether some member of the commission was not a printer.

I believe the theory of the Federal Trade Commission, that of being of assistance to business—and I understand that was the purpose of it when it was created—was a practical and feasible one; but it has enlarged its field of operations, and now has its special attorneys, special experts, special agents, special clerks, and other employees, who travel over the country, meddling here and investigating there, where they have no business. So far as I know, there is not a single business in the United States that has uttered a word of commendation of the Federal Trade Commission because of any assistance it may have rendered. There may have been some such instance, but I have never heard of it. Many of its so-called experts, from the best information I have, are against the American idea of business. Some of these experts are of foreign birth and education and brought up in an environment of socialism. Yet these individuals have been investigating American business and recommending that certain things be done. Is there any wonder that the Federal Trade Commission is discredited in the minds of the business men of this country?

While I am on the subject of commissions I want to discuss in some detail the operations of the Interstate Commerce Commission. I desire to be fair, and in the beginning I want to say that in many instances this commission has rendered valuable service, but there are numerous occasions when I think it has been a menace to the railway transportation system of the country over which it has control.

When the so-called Mann-Elkins amendment to the interstate commerce act was approved on June 18, 1910, the Interstate Commerce Commission, for the first time, was given complete jurisdiction over interstate freight and passenger rates, with the powers of suspension and investigation, the initiation of rates, or other investigations, and the like. This amendment greatly strengthened the hands of the commission and placed its authority over railway rates beyond question.

The financial status of the railways of the United States from 1910 to 1917—and I refer to this period for the reason the roads went under Government control January 1, 1918—depended very largely therefore upon the attitude of the Interstate Commerce Commission for the several petitions that were presented to it by the railways for increased rates, to maintain and improve their credits. It is a matter of general knowledge that this period was one of rising prices and wages, during which an industry like the railway industry, the price of whose product, namely, transportation, was closely regulated by law, would suffer a loss of net revenues and a consequent diminution of credit unless rates were permitted to advance to relatively the same degree as the cost of operation.

Beginning with the increased powers of the Interstate Commerce Commission over rates in 1910, the railways made several general applications to the commission for increased rates. In no instance did the commission grant the applications in full, and in some cases the applications were denied and some were granted in part and subsequently reopened for further consideration. In spite of the fact that the railroads knocked at the door of the commission and pleaded and pleaded with it for relief, every case occupied many months in hearings and deliberations before final decision was granted.

Two well-known rate cases were inaugurated in 1910, known as the eastern and western cases. These cases were filed in the summer of 1910 and not until February, 1911, was there any decision, when the applications were denied by the commission. In the spring of 1913 the eastern railways made their first petition in the so-called 5 per cent case. The commission delayed its decision until July, 1914, and then granted the increases only in part. On petition of the railways, and because of the serious situation caused by the war, the commission reopened the case in August, 1914, and in December of that year granted the remaining portion of the desired increase. In 1915 the so-called western advanced-rate case was decided by the commission, only a part of the increase being granted. The 15 per cent case was inaugurated by the railways in March, 1917, and the increase was granted in part by the commission in July of that year. The case was later reopened upon petition of the carriers, but the final decision was not made until 1918, after the Government had assumed control.

There were several less extensive rate cases during this period, but the record of the commission during the seven years from 1910 to 1917 can not be regarded as exhibiting a desire to do more than grant only such increases in the freight rates as were made absolutely necessary by the straitened financial situation of the railways. In other words, the commission demanded almost a proof of impending bankruptcy before any substantial relief was granted. The idea seems to be that of relief rather than of assistance.

Between 1910 and 1920 the population of the United States increased 14.9 per cent. Railway facilities developed at a much lower rate, owing, at least in part, to the failure of railway credit to keep on a par with that of industry in general.

The mileage of new railway lines constructed between 1910 and 1913 was 13,256 miles; during the four years between 1914 and 1917 it declined 4,542 miles. Locomotives were built and purchased to a number of 18,548 during the first four years and 8,505 during the second four years. New passenger cars numbered 13,225 and 8,771, respectively; new freight cars, 591,758 and 394,542. In every instance it will be noted the railroads found themselves unable to maintain the same amount of construction of new trackage or new equipment during the second four years as during the first. Their credit was clearly on the downward grade.

Mr. President, I think an impartial investigation and study of the operations of the Interstate Commerce Commission since the railroads were placed at its mercy in 1910 will show that the members of that commission lacked the perspective and bigness of intellect and the knowledge of conditions, or a practical sense of the real situation and the needs of the railway industry. In place of being of some assistance and helpfulness to these great arteries of trade and commerce, the decisions of the commission in almost every instance resulted in preventing the railroads to keep abreast of the times and in retarding their operations.

But when you analyze the personnel of the Interstate Commerce Commission from the time it was organized down to the present day, one need not be surprised that this governmental agency has failed in many instances to render a satisfactory service to the country. It has strangled and starved and annoyed railway operations until practically no new lines were contemplated on account of its niggardly policy toward the roads for improved equipment and betterment.

I referred awhile ago to the fact that Mr. Potter, who has just recently been appointed a member of the commission, is the first active operative railway official ever appointed to membership on the commission. I understand he was president of the Carolina, Clinchfield & Ohio Railway Co. The membership of the Interstate Commerce Commission for the most part has been composed of lawyers, politicians, professors, so-called economists, and experts who never had a day's experience in the management of a railroad. The Interstate Commerce Commission is composed of nine members, but there are at the present time two vacancies. Of these seven who are now serving,

I think all of them, with the exception of Mr. Potter and Mr. Clark, are either politicians or professors. I understand some members of the commission have had railroad affiliations, like being counsel for a railroad. For example, Commissioner Walker, from 1887 to 1889, had been general counsel to a railroad prior to his appointment. Commissioner Calhoun, in 1898, was connected in a legal capacity with the Chicago & Eastern Railroad, while Commissioner Hall, in 1914, was at one time general attorney of the Arkansas, Louisiana & Gulf Railway. But these connections were all legal and the men involved were primarily lawyers rather than men versed in the operation of railroads.

As a result of this policy pursued by the Interstate Commerce Commission, thousands of people throughout the country have suffered. Railway securities are widely scattered at the present time. In 1917 there were 647,689 railway stockholders, whose average holdings were $13,966 par value. Including railway stock owned by the railways themselves, the average holdings per stockholder were $10,024. The number of railway bondholders has been estimated at not less than a million. A large proportion of the stock, and a much larger proportion of the outstanding bonds, is held by banks, trust companies, insurance companies, corporations, benevolent institutions, and so forth, the beneficiaries of which number many million persons. In fact, it has been stated that the ownership of equities of American railways are in the hands, directly or indirectly, of perhaps the total population of the country. Every insurance policyholder, every bank depositor, every student in a college or other endowed institution has a vital interest in having railway credit conserved and maintained. Railway credit is a matter of vital interest to the general public, both because they are the real owners of railways and because transportation is the artery that feeds the economic lifeblood of the Nation.

So, I believe, Mr. President, that if the Interstate Commerce Commission had had during these years a few practical railroad men who understood the operation of a railroad, who knew something about traffic conditions, who knew something about rates and railroad economics, it would have been a means of helpfulness, and the stockholders, who are in reality the owners, and are numbered by the hundreds of thousands, would have been better off; but I am sorry to say that the commission has in the main been dominated and controlled by men without any practical business training, let alone any training or knowledge of how this great system of transportation is operated. They have theorized and imposed their idealistic notions upon the public.

The records show, Mr. President, that when the railroads in 1910 were placed at the mercy of the Interstate Commerce Commission it required months and months of hearings and rehearings before the commission would decide whether to grant the increase in rates, and in almost every case the request was denied.

The attitude of the Interstate Commerce Commission resulted in an agitation by politically aspiring demagogues throughout the States, and one legislature after another in the several States passed a 2-cent rate law which prohibited railroads from charging more than 2 cents a mile for passenger travel. It was popular then for the politicians to jump on the railroads, but since they collapsed, due to the folly of the Interstate Commerce Commission, many demagogues and politicians who always appeal to the prejudices of the people have turned from the railroads to the packers, and it is now popular in the minds of some people to attack the packing industry.

If the railroads of this country had been permitted to receive a just compensation for the services rendered along with the increase in cost of operation as well as the increase in population, there never would have been any excuse for the Government taking them over in January, 1918. Their failure to function properly was not the fault so much of the railway management as it was of the narrowmindedness and the impracticability of the men who decided what their income should be.

I realize, Mr. President, that I have gone into this question in considerable detail, but I have done this with the hope to be able to show that whenever a Government bureau or a commission has attempted to regulate or govern an industry it has been a total failure.

Like the Federal Trade Commission, the Interstate Commerce Commission costs the country millions of dollars a year. For the fiscal year 1920 the appropriations made by Congress for the Interstate Commerce Commission totaled $5,596,600. The amount expended in that year was $5,542,373. From 1888 through to 1920 the total appropriations for the commission were $47,671,704. The exact appropriations for the fiscal year 1921 is not yet known.

The total number of employees of the commission in 1919 was about 2,200, including the Bureau of Valuation; excluding that bureau, the employees number about 1,000.

Senators, let me state to you that there have been 900 employees of the Interstate Commerce Commission traveling over the country for the past eight years, or since 1913, undertaking to determine the physical value of the railroads, and they might travel for the next 800 years and they would not be any nearer able to determine the exact value than they were the day they started out.

Mr. SHERMAN. Did the Senator state the number of employees?

Mr. FERNALD. There are 900 employees traveling. There are 2,200 employees.

Mr. SHERMAN. The total number of employees?

Mr. FERNALD. Two thousand two hundred; but 900 of those employees are traveling to-day over the country, and have been since 1913.

Mr. SHERMAN. It will be a great deal like the story in Gil Blas, that before they got to a conclusion they had forgotten the beginning.

Mr. FERNALD. Precisely. I thank the Senator for the observation. Senators, for the past few weeks we have been undertaking to assist the farmers in the marketing of their crops. I have letters here from nearly every State in the Union, and in almost every one of them they state that if they could have had transportation to get their goods to the market they would have disposed of more than half of them. I have a letter here stating that the farmers in the Dakotas to-day would have disposed of 47 per cent of their wheat if they could have had transportation facilities.

A few years ago we used to hear about the Harrimans, the Hills, and the Flaglers, who developed the great Central West and the Valley of the Mississippi, who brought the fruits from California and Florida to the breakfast tables of the people in Washington, Maryland, New York, Philadelphia, and the eastern markets. It was done by the development of the railroads of the country. But we hear nothing to-day of great railroad magnates. The ambition for building railroads has ceased. There are no men to-day undertaking to get any capital to build new railroads. We have been drying up for the past 10 years, and I suppose that in the next 10 to 20 years, if we pursue this policy of creating new commissions, there will be no producers to need railroads. They will all be down here in Washington working for the Government at a salary of $10,000 a year.

Since the roads were taken over by the Government during the war and subsequently there has been an 80 per cent increase in freight rates; that is, paid by the farmer. Yet, just a while before the roads were taken over the Interstate Commerce Commission denied the small increase of 15 per cent asked for by the railroads. And immediately after they came under Government control an additional rate was made of 35 per cent, and you know that it costs about twice as much to-day to travel as it did five years ago.

Mr. President, I have no interest in the meat-packing industry. I own none of their stock. I do not know a single one of the so-called meat packers, and the only interest I have is for fair play. No business has experienced a greater evolution than that of this industry. It has not been so very long since the old days of meat slaughtering when every butcher did his own work. There was no division of labor, only a few animals were handled at a time, and the conditions under which meat was dressed were not of the best. The meat was inferior in quality and the by-products were thrown away. The packing business is really a delicate mechanism. Expert skill and judgment are necessary at every step, from the purchase of live animals in the stockyards to the delivery of meat in prime condition to retailers hundreds of miles away. Even with the most expert skill available, and with constant attention to details, the whole complex process is accomplished at only a fraction of a cent a pound of the products sold. The least derangement of this machinery on the part of inexperienced Government officials whose appointment probably would be the result of political consideration, would without question have a serious effect not only on the packers themselves but on producers of live stock and consumers of meat.

Those who are prejudiced against the packers merely because of their size overlook several very important considerations. In the first place, instead of having one corporation which dominates the industry there are five large ones who are not only in competition with each other but who have to face the competition of hundreds of small and medium-sized packers, and thousands of local butchers who are handling meat raised in their immediate neighborhoods. Why, there are over 230 pack-

ing plants in the United States outside of the five largest ones which ship meat in interstate commerce and which have Government inspection. Some of these companies are so large that they each do a business of over $50,000,000 a year. There are also a number that have sales amounting to $15,000,000, $20,000,000, and $25,000,000 a year.

It is simply necessary that there be a packing industry organized on a large scale. If my own State raised enough cattle and hogs to feed Portland and Lewiston and Bangor and the other cities, perhaps no large packing organization would be necessary. But the people of my State have to rely on cattle and hogs raised and fattened in the Mississippi Valley and in the West. It takes a large organization to be able to maintain a selling organization which can market stuff from Chicago to Bangor in an economic fashion. No small packer would have a sufficient volume of business to make it possible to maintain a selling organization which could take care of the needs of the cities in my State.

Our experience during the war also demonstrated the value of such an organization as the American packers have developed. The story of their war-time achievement has never half been told. If they had been harassed by Government regulation and starved as the railroads have been starved they might have had the same difficulty in carrying out their war-time obligations as the railroads had. As it was, the job was done so smoothly and so perfectly and with so little noise that nobody realized the importance of the task they performed.

Consider, for example, that they not only took care of the needs of the United States during the war but that England and France purchased greater quantities of meat than they had been buying before the war. In fact, we had been exporting no beef for several years until the European war broke out. Especially during the last two years of the war shipload after shipload of beef was sent to the Allies. Not only this, but our own soldiers had to be fed on the other side.

The packers with their splendid organizations merely had to accelerate their activities, work overtime, and give their first attention to overseas shipments. Orders for millions of pounds would be placed by the Food Administration for shipment to Europe. Within a few days after the order was given, trainloads of meat were started eastward by the Chicago packers as soon as these orders were received. Never once did they fall down on any of these shipments. They always had the goods at port of shipment on time.

One packer shipped as many as 800 carloads of foodstuffs in a single week during the war, and this food was pure and sweet and clean and of the highest quality available. Imagine what would have happened if the country had had nothing but thousands of small individual packers. How could they have handled these tremendous orders and kept meat moving in sufficient quantity and with so little friction and waste motion?

When I addressed the Senate before on this subject I referred to the astonishingly small profit obtained by the large packers, and I submitted a table which showed this profit for each year from 1909 to 1918.

During the past two years the profits in the packing industry have been lower than ever, due to declining markets in live stock and meats. Although fresh meat is sold by the packers within two or three weeks after the animals are killed, these concerns have to carry huge stocks of goods continuously. When the market is falling this means losses to the packing industry, and during an industrial depression such as we are going through at present the packers necessarily suffer along with all other industries.

One of the large packers had to pass its regular quarterly dividend two or three months ago. Another large packer within the past few days has announced that it will pay its regular dividend in the form of stock instead of in cash. The annual statement of Swift & Co. was issued only a couple of weeks ago, and this showed that that company earned during the fiscal year ending November 1, 1920, only $5,000,000, whereas interest requirements alone amounted to $12,000,000. Because of a conservative policy of financing and the accumulating of a surplus in profits during previous years, this company was able to continue cash dividends by drawing on surplus. This is a policy, however, which could not be kept up indefinitely. I am stating these facts merely to show on what a slender margin of profit these companies do business and how dangerous a time it is to agitate Government regulation of this industry.

This profit of $5,000,000 earned by Swift & Co. last year was made on sales of over $1,100,000,000, so that it amounted to less than half a cent on each dollar of sales and to less than 4 per cent on total investment in the business.

Of course, it might be argued that this small profit of 1920 is abnormal and has no bearing on the case, but I find even during the most prosperous war year this same company made less than 4 cents on each dollar of sales, and that its average profit for a long series of years has been only about 2½ cents on each dollar of sales. In the long run this has averaged only about 11 per cent on investment, out of which dividends have had to be paid. It should also be remembered that dividends represent interest on capital invested in the business by stockholders.

I also find that this company carries a very great responsibility to its stockholders, inasmuch as the president of Swift & Co., in his recent annual address, announced that there are over 40,000 shareholders of record. He also pointed out that over 13,000 of these 40,000 are employees, and that there are only four or five other corporations in the United States whose shares are more widely held.

As indicating the desire of this company to deal fairly with its employees, I find that it has developed an employee's stock savings plan, under which employees may purchase stock at par, even when the stock has been worth over 130 on the market, and pay on the installment plan. In addition to the 13,000 who already own shares there are 7,000 other employees who have subscribed for shares on the installment plan. This makes about one-third of the 60,000 employees of Swift & Co. who are or will soon become shareholders of record.

The smallness of the profit in the packing industry also suggests the unfairness of singling out this industry for special legislative action. There is probably no industry in the country whose profit has so little effect on the prices of commodities sold. It seems absurd to think that an industry which is perhaps less responsible for high prices than any other industry in the country should be harassed and criticized. If we are going to break away from American traditions and subject private industry to Government restriction and regulation, why should we begin with this industry? If we are ready to take the step and extend Government regulation definitely over private industry, let us make a clean sweep of it and provide commissions to regulate and control all interstate corporations.

During the World War the Government became involved too much in the affairs of private business. No doubt this was essential in many instances, and no one will criticize any act which was necessary for bringing the war to a successful issue. The War Industries Board controlled industry in a great measure through the agency of trade organizations. Nearly everything a man did during the war was regulated by some one besides himself. If an individual or organization wanted to know what he could do, he had to come to Washington and seek some official or some war board organization if he got anywhere. Men got in the habit of having or of permitting some one else to do their own thinking for them.

The Government idea of conducting private business was further expanded during the war when it got into the price-fixing field. The Government fixed the price first of one product, then another. It guaranteed a certain price on articles of production. It regulated credits; it regulated prices up and down—labor, capital, hours of work, wages, and all that sort of thing. This war period of Government regulation has got the idea into the minds of many people that the Government can do anything and everything; that it possesses magic and that by waving the wand impossible things become possible.

Our country is still suffering from the effects of the World War, and it will require several months before conditions are normal. It should be the duty of Congress to lend every possible aid toward a complete restoration of prewar conditions. We should encourage and not discourage business. We should lend a helping hand and not throw any obstruction in the way of progress.

I indorse with all my heart the sentiment expressed by President-elect Harding when he declared, and he has made the statement repeatedly:

> More business in government and less government in business.

It is the most cheering and encouraging message that has come to the business men of the country from a man in high position in a quarter of a century. It has met with universal approval from one end of the country to the other. I am sure that business men, little and big, indorse the sentiment expressed by Senator Harding and believe that we are soon to enter upon an era of confidence and good feeling. There has been a lot of hysteria in this country during the past few years, and men of high Government position have been responsible for much of this un-American propaganda that has been disseminated all over our land.

We have had too much meddling by the Government in private business. Let us cut the chains and unshackle this governmental octopus which retards the development and progress of business. We have now too many bureaus and too many commissions. If this bill becomes a law it is the opening of the door for further Government regulation of business. It is the sure road to paternalistic Government. Such measures as this will encourage others of a socialistic mind to attempt the regulation of other business by commissions. If we put the packing industry under the control of a commission, I can see no reason why other business and corporations should not also be governed by bureaus. If a commission is good for the packing industry, why not for the shoe industry, the clothing industry, the cotton, the coal, the iron, and the steel industry? There is no reason why one should be singled out. For if you do that, you have class legislation pure and simple.

I made a plea in this Chamber more than a year ago in discussing this proposed legislation for American business. I said then let business alone, and I repeat it now. I am unalterably opposed to this bill. I am a business man myself and I know how the business men of the country feel about this sort of legislation. We should encourage initiative in American business. Of course, I do not approve or sanction any business guilty of any unfair practices, but so long as business is conducted honorably and honestly I say the Government should keep out of it and not meddle.

Mr. President, the kind of legislation this bill proposes is filled with danger to our institutions and our system of government. It is socialistic, it is un-American, and I can not think that such a body as the United States Senate, noted for its conservatism, will go on record favoring such a bill. I believe if we decide in this Senate that we are going to give the country a rest from agitation and useless legislation and say to the people that the days of bureaus and commissions and governmental meddlings are over there will be a confidence established that is so much needed at this time.

Irrespective of party, I plead that we uphold the hands of President-elect Harding and assure him we are with him in his desire that there should be "more business in Government and less Government in business." Nothing will encourage our people or restore confidence in Government more than the assurance that henceforth that is to be our policy.

So, Mr. President, in behalf of the business men of this country, in behalf of those who have had as much to do with making our country great as any other class of citizens, I want to protest here and now against this proposed legislation. Remove the shackles that some men are attempting to place upon the business interests of this country. Give them a fair field. Open the avenues of commerce and stimulate trade. Let each in his own way work out the problems before him, and I believe if the country understands that to be our policy we shall enter an era of peace and prosperity never before experienced in the history of our Republic.

CALL OF THE ROLL.

Mr. HEFLIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. McCUMBER in the chair). The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Harris	Moses	Smith, Ariz.
Beckham	Harrison	Myers	Smith, Ga.
Brandegee	Heflin	New	Smoot
Calder	Johnson, Calif.	Overman	Spencer
Capper	Jones, N. Mex.	Page	Sterling
Curtis	Jones, Wash.	Phelan	Sutherland
Dial	Kendrick	Phipps	Swanson
Dillingham	King	Pomerene	Trammell
Elkins	Kirby	Reed	Underwood
Fernald	Knox	Sheppard	Wadsworth
Fletcher	Lenroot	Sherman	Warren
Gooding	McCumber	Shields	Willis
Gronna	McKellar	Simmons	Wolcott

Mr. CURTIS. I was requested to announce that the Senator from Iowa [Mr. KENYON], the Senator from Wisconsin [Mr. LA FOLLETTE], and the Senator from Massachusetts [Mr. WALSH] are detained from the Senate on official business.

Mr. BALL. I wish to announce that the Senator from New Hampshire [Mr. KEYES], the Senator from Washington [Mr. POINDEXTER], and the Senator from Nevada [Mr. PITTMAN] are engaged in committee work.

Mr. MOSES. I desire to state that the Senator from Michigan [Mr. TOWNSEND] is engaged in the Committee on Post Offices and Post Roads.

The PRESIDING OFFICER. Fifty-two Senators have answered to their names. A quorum is present.

ESTRADA CABRERA (S. DOC. NO. 357).

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was read and referred to the Committee on Foreign Relations and ordered to be printed:

To the Senate:

I transmit herewith a report from the Acting Secretary of State in response to the resolution adopted by the Senate on January 10 (calendar day, January 12), 1921, requesting the Secretary of State to furnish to the Senate such information as he may possess concerning the signing and observance of articles of capitulation under the terms of which President Estrada Cabrera surrendered the executive office of Guatemala and was guaranteed certain safeguards.

WOODROW WILSON.

THE WHITE HOUSE,
21 January, 1921.

ARMY STORES AND SURPLUS MILITARY SUPPLIES.

Mr. KNOX. Out of order, from the Committee on Military Affairs, I report back favorably without amendment Senate resolution 426, and I ask unanimous consent for its present consideration. I will say that I believe it will lead to no debate.

The PRESIDING OFFICER. The resolution reported by the Senator from Pennsylvania will be read.

The resolution (S. Res. 426) submitted by Mr. KING January 18, 1921, was read, as follows:

Resolved by the Senate, That the Secretary of War be, and he is hereby, directed to report to the Senate the description and quantity of quartermaster stores and all property and materials of a nonmilitary character under the control of the War Department, and the value thereof, at the armistice of November 11, 1918; the description and quantity of the surplus of such quartermaster stores, property, and materials not required for the uses of the Army and available for disposition at the armistice of November 11, 1918; the description and quantity of such surplus quartermaster stores, property, and materials which have been sold and disposed of since the armistice of November 11, 1918, together with a statement of the moneys obtained on account of such sales and dispositions; and the description and quantity of such surplus quartermaster stores, property, and materials, and the value thereof, on hand at this date.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. UNDERWOOD. I wish to ask the Senator from Pennsylvania if the resolution has been referred to a committee?

Mr. KNOX. The resolution was introduced by the junior Senator from Utah [Mr. KING]. It was referred to the Committee on Military Affairs and unanimously recommended to be reported favorably by that committee. I have, in obedience to that command, reported the resolution.

Mr. UNDERWOOD. I do not know that I shall object to the resolution, but I should like to inquire if the Military Affairs Committee has made any investigation as to what it will cost the Government to ascertain the facts called for by the resolution.

Mr. KNOX. The Committee on Military Affairs took this position: One very prominent member of the committee assured the committee that, in his opinion, it would take but a short time for the War Department to give us the information, or, if the War Department can not give us the information, it will give us the reason why it is not available. So, in either event, the resolution would be harmless.

Mr. UNDERWOOD. Mr. President, I shall not object to the resolution as it has been considered by a committee of the Senate, but I wish to say that there are a great many resolutions passed by the Senate calling for information, and I think we should all of us be exceedingly generous with each other in our desire to obtain information for the Senate to act upon, because that is a channel which should not be closed; but when a Senator sits down and writes a resolution the adoption of which requires an investigation, and sometimes requires a vast number of clerks in order to procure the information, I think the committees which have such resolution under consideration should ascertain whether or not their passage will involve the expenditure of a great deal of money and require the services of a number of clerks in order to comply with their terms, and should also ascertain whether or not clerks employed in the ordinary fields of Government endeavor are going to be withdrawn from their work in order to obey the mandate of the Senate.

If we do not do that we shall constantly be met with the proposition that we must appropriate for a deficiency; and that is one of the grounds on which such requests are made. We are told by officials who come before the committee with requests for deficiency apppropriations that the Senate has diverted the work of the clerks. As the Committee on Military Affairs,

however, has investigated the pending matter and has reported the resolution favorably, it is their responsibility; but I believe if we are going to enter upon the attempt to cut down expenditures we ought to reform our own household by not making demands on the executive departments of the Government which are going to require great expenditure and the consumption of much time, unless the matter is carefully investigated.

Mr. KNOX. I think, Mr. President, that this resolution does not come within the category of those to which the Senator from Alabama refers. The first consideration that the committee gave to the resolution was to determine the value of the information which it seeks and of the propriety of the Senate having the information for guidance in further legislation. Of course, if it should involve very great expense or a very long period of time or if for some reason or other the information should not be thought by the War Department to be of importance to the Senate, it would be up to the War Department to say so; but really the people of the country, as well as the Senate itself, have some right to know what quantity of the quartermaster's stores and other nonmilitary articles were on hand at the time of the armistice; they are entitled to know what disposition has been made of them to the extent that they have been disposed of; they are entitled to know what the proceeds of the sales have been to the extent that they have been sold; and they are entitled to know what is on hand at the present time. It was the important character of the information requested that addressed itself to the committee and moved the committee to its action.

The PRESIDING OFFICER. Is there objection to the request for the present consideration of the resolution?

The resolution was considered by unanimous consent, and agreed to.

COMPENSATION OF UNITED STATES EMPLOYEES.

The Senate resumed the consideration of the bill (H. R. 5726) to fix the compensation of certain employees of the United States.

The PRESIDING OFFICER. The pending amendment is the amendment offered by the Senator from Georgia [Mr. SMITH], which will be stated.

The READING CLERK. On page 2, line 9, after the word "clerks," it is proposed to insert "or employees in the District of Columbia."

Mr. SMITH of Georgia obtained the floor.

Mr. WARREN. Mr. President, will the Senator yield for a moment?

Mr. SMITH of Georgia. I yield.

Mr. WARREN. I should like to know the condition of the record as to the measure which is now under consideration, for, as I recall, at the time the bill went over there were certain amendments which had been offered to it. I think, however, that in the confusion which then prevailed, they were not adopted, although there did not seem to be any objection to them. I therefore should like to have the bill read, with all the amendments which have been adopted, and then I should like to ascertain what amendments are pending.

The PRESIDING OFFICER. Without objection, the Secretary will read the bill as it has been amended.

The bill as amended was read, as follows:

Be it enacted, etc., That after the passage of this act the minimum compensation of any person employed by the United States or by the government of the District of Columbia shall be not less than $3 per day, including any Government bonus; or if employed by the hour not less than 37½ cents per hour; or if employed by the month not less than $90 per month; or if employed by the year not less than $1,080 per annum, including any Government bonus: *Provided*, That persons employed on a monthly or annual salary basis and who regularly perform less than a full day's service shall receive compensation at the rate of not less than 37½ cents per hour: *Provided further*, That the provisions of this act shall not apply to persons enlisted in the military or naval branches of the Government nor to the employees in the Philippine Islands, Porto Rico, Guam, the Virgin Islands, the Territory of Hawaii, the Territory of Alaska, and the Panama Canal Zone, nor to members of the National Home for Disabled Volunteer Soldiers employed at or in connection with said homes, nor to persons holding appointments as postmasters, assistant postmasters, rural carriers, postal clerks, carriers in the City Delivery Service, or railway mail clerks: *Provided further*, That the provisions of this act shall apply only to those persons who shall have attained the age of 20 years: *And provided further*, That in the case of an employee receiving quarters and subsistence in addition to his compensation, the value of such quarters and subsistence shall be determined by the head of the department, and the compensation of such employees, plus the value of quarters and subsistence, shall in no event be less than the rate fixed by this act.

The PRESIDING OFFICER. The Secretary will now state the pending amendment.

The ASSISTANT SECRETARY. The pending amendment is the amendment offered by the Senator from Georgia [Mr. SMITH], to insert after the words "railway mail clerks," in line 9, page 2, the words "or employees in the District of Columbia."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Georgia.

Mr. SMITH of Georgia. Mr. President, I hope the Senate will continue for 12 months longer the bonus of $240 to Government employees as it has been paid during the past 12 months. The cost of living has been unusually high, and the bonus was allowed for that reason; but in 12 months we may expect the cost of living again to be normal, and, if we continue the bonus for 12 months longer, we may then view the compensation of Government employees from that time forward upon the same basis as that prior to the war.

This proposition to establish a minimum wage disregards entirely the service to be rendered. I am in favor of paying all Government employees liberally and as much as is paid for similar work in private employment. We give them in addition the benefits which are provided to Government employees, the stability of the office and the old-age pension; but we can not, in justice to the people at home and to those engaged in occupations throughout the entire Nation, establish rules for Government employees and for their pay in disregard of compensation paid elsewhere and in disregard of service rendered. This bill proposes to increase the pay, it is estimated, of 50,000 Government employees, without regard to the service which they render, but to say arbitrarily that each one of them shall receive not less than $1,080 a year.

I offered the amendment excepting the District of Columbia. I shall vote against the entire bill.

I think it is unsound to fix compensation without regard to service. Service should be paid for, should be well paid for; but if there is service rendered of less value than $1,080 a year, then this bill pays for service not rendered.

Take the District of Columbia: It was said before the committee that the minimum wage should be $1,080, because no man could support a family on less. Why, Mr. President, compensation can not be fixed upon the theory that but one in a family works. In the District there are frequently three in a family in the Government service. I know a family in which two are messengers and one runs an elevator and one stays at home, there being four in the family; and yet that family's compensation would be $3,240 a year by this minimum wage. There are dusters in the Patent Office. Twenty-five years ago they received $40 a month. They were girls between 20 and 25, perhaps, without education, the extent of the service received from them being to take a duster and dust off and clean around the exhibits in the Patent Office. There were messengers receiving from $60 to $80 a month. There were innumerable applicants for the places. The compensation for the service was more than the same parties could earn outside.

The hours of occupation were less. The very brightest of boys were glad to come here and take messengers' places at $70 a month, or from $60 to $80 a month. They attended school at night and in that way prepared themselves better for the struggles and the opportunities of life. The difficulty was not in obtaining them; it was in refusing those who could not get the places; and yet we are to say that the untrained messenger, with but little education, performing a very ordinary class of work, must have $1,080 for about as cheap service, about as little skilled service, as could be rendered anywhere.

We have in the Government employ as unskilled service in many instances, as is found in any private occupation, less skilled than the most unskilled on the farm, less skilled than domestic service, much less skilled than the girl in the store; and yet we are arbitrarily to say that no one of these shall receive less than $1,080 a year. We have ladies of education in the Government service who are drawing for clerical work now $900 a year. I grant that they should receive more. We have those that are receiving $1,000 a year. I grant that that is low pay for them. But we are to bring the duster in the Patent Office and the entirely unskilled and usually uneducated messenger boy of the lowest order of service up to a parity with educated women, when their service does not compare with that of the educated woman.

We have a commission, I think, now studying the entire question of compensation that is being given to Government employees. As I said, I favor paying them liberally, taking into consideration what can be earned and what is paid in private employment for similar work; but to say arbitrarily that each one of these performing service of the least value, with the least accomplishment, shall come up to the grade of pay of educated women performing much higher service is utterly unsound and I think indefensible.

Let us wait until we hear from the commission. If these messenger boys and lowest order of employees are to receive $1,080, are we to leave the clerical force of educated women at $1,080? Is that fair? I grant that I should be pleased to see

every person in the United States so prepared for occupation and so skilled and trained that each one's work would be worth more than $1,080 a year. I would broaden the field of opportunity for preparation, but, finally, compensation should follow service rendered, and it should be graded according to the service rendered; and if the duster in the Patent Office gets $1,080, no educated woman doing clerical work should fail to receive substantially more.

Now let us come to the bill and look at whom it excepts from its provisions.

The provisions of this act shall not apply to persons enlisted in the military or naval branches of the Government.

Why? Is the messenger boy around one of these departments worth more than a soldier or sailor? Is there any reason why he should be compensated more than a man in the Navy or in the Army? And yet we expressly except the Army and Navy from the provisions of the act. It is understood that the act will apply to some 50,000 employees and involve an expense of from five to ten million dollars annually. No accurate report was given to the committee on this subject. No accurate testimony was furnished the committee showing how large the bill might be. I was on the committee at the hearings, and if any evidence was presented I can not recall it. I can recall only one proposition expressed before the committee—that a family could not be supported for less; and it was plainly upon the theory, therefore, that but one in a family must work that the minimum scale of pay was to be fixed.

It will be most unfortunate for this country if we instill the doctrine that but one in a family is to be occupied. There may be families where one has so prepared for life that he or she can produce such a result from his or her occupation that the balance of the family may lean upon him or her, and be comfortably supported; but in the usual family, when they are past 20, the boys are at work, and many of the girls are at work. With our changing conditions, with woman suffrage, with women entering into politics, with women holding offices, I have no doubt that the number of women in occupation will be far greater. I, for one, believe that when a woman does a piece of work she should have just as much pay for it as a man gets when he does the same work; but what I wanted to urge was that the idea of predicating compensation upon the theory that but one in a family is to work is radically unsound. It is untrue in practice. It will be less and less true as the days go by.

But why should the soldier and the sailor be excepted? If the ordinary messenger boy, 20 years of age, who sits at the door of an office and runs a few errands, and works 7½ hours a day, is to get $1,080, why not give the same compensation to a sailor in the Navy and to a soldier in the Army?

Again:

Nor to the employees in the Philippine Islands, Porto Rico, the Territory of Hawaii, the Territory of Alaska, and the Panama Canal Zone.

If our boys go off to these countries to work, or if our women go, why should they receive less compensation? Why discriminate against them? Is it an easier task to go to one of these colonies to work than it is to stay here in the District of Columbia? I think not.

Nor to persons holding appointments as postmasters, assistant postmasters, rural carriers, postal clerks, carriers in the City Delivery Service, or railway mail clerks.

Why should they be exempted? Why pick the cheapest of labor, the least productive of labor, here in the District—and I understand that one-half of these places are in the District—and put them upon the basis of $1,080 a year, and discriminate against your assistant postmasters at home?

Mr. DIAL. These messengers are holding down a chair most of the time, anyway.

Mr. SMITH of Georgia. They do that practically all the time without getting up to do anything else, and very few of them have the politeness to show you anything, if you want to find it, about a department.

Why should these 25,000 in the District of Columbia be put up to a minimum of $1,080, and assistant postmasters, rural carriers, postal clerks, carriers in city delivery, and railway mail clerks be prohibited from receiving as much compensation? They are not limited to seven and a half hours a day. But they are not to have the benefit. This provision for $10,000,000, half to the District of Columbia, excludes these people at home, excludes your boys who are in the Army, and excludes your boys in the Navy. If you would add all, you would carry your increase to at least a hundred million dollars—yes; two hundred million.

The discrimination is made on account of the size of the bill, because if its provisions were extended to all the amount would be so large that it would stagger Congress.

Mr. President, let us compare the compensation. We are coming to normal times. We are going to have normal times in 12 months, and I hope we will take care of all these Government employees with the $240 bonus for 12 months longer, until the cost of living comes down. Let us compare their compensation with the compensation in private life.

The average pay of a teacher in the United States is $600 a year, according to the report furnished us by the census. Of course, the amount paid teachers is too small. I wish it were much larger. But that is what the States have found they were able, as an average, to pay their teachers.

Mr. JOHNSON of California. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from California?

Mr. SMITH of Georgia. Yes; I yield.

Mr. JOHNSON of California. However many States the Senator may refer to, do not include the State of California in that category, if you please.

Mr. SMITH of Georgia. I did not; I said the average. I think most of the Western States, where land grants have been given by the Government to aid in education, pay more than the old States, with one or two exceptions. But I am giving you a fact as reported from the census and as reported by the National Educational Association.

Mr. JOHNSON of California. Mr. President, does the Senator believe that sum to be adequate for teachers?

Mr. SMITH of Georgia. I have said I did not.

Mr. JOHNSON of California. Then let us increase it wherever we can. Would the Senator make the inadequate sum paid to some occupation an argument for the payment of an inadequate sum where we have the power to fix the compensation?

Mr. SMITH of Georgia. Yes and no.

Mr. JOHNSON of California. That is a good answer.

Mr. SMITH of Georgia. I will explain why. Yes, in the sense that compensation of Government employees should average with compensation in private occupation, in ordinary occupation, outside of occupation by the National Government. For that reason, yes. I will say no because I think that compensation ought to be substantially advanced.

But if you take the employees of the stores, if you take a similar branch of service in private occupation, it does not receive and it can not receive $1,080 a year for the lowest order of service. It can not earn it. It can not produce results which justify it. If the compensation to the least competent and least productive is to be put at this figure, then the educated and the more productive, to be justly treated, must receive a great deal more.

I am utterly opposed to the theory of paying by the head. Pay should be by the service.

Mr. JOHNSON of California. Mr. President, does the Senator mind interruptions?

Mr. SMITH of Georgia. Not a particle.

Mr. JOHNSON of California. Does not the Senator think that under that system we should alter the scheme of paying United States Senators?

Mr. SMITH of Georgia. In which direction would the Senator alter it—up or down?

Mr. JOHNSON of California. Some are worth many times what they receive. I would not insinuate that any are worth less than they receive, but some of them are worth very many times what they do receive, and so you ought to have a graded class by service for United States Senators.

Mr. SMITH of Georgia. It is impossible to separate compensation when paid to a class.

Mr. JOHNSON of California. Quite so.

Mr. SMITH of Georgia. It would be very difficult to discriminate between Senators. I could scarcely estimate the value of the services of the Senator from California.

Mr. JOHNSON of California. Of course, Mr. President, I had in mind the transcendant value of the services of the Senator from Georgia.

Mr. SMITH of Georgia. I thank the Senator.

Mr. JOHNSON of California. But I did not suggest that; it was so obvious that it did not require suggestion.

Mr. SMITH of Georgia. I thank the Senator. I am glad he realizes that it is obvious. And I agree to the value usually of his service as well as my own, but I feel sure I am rendering a service now and the Senator from California is not.

Mr. JOHNSON of California. The amount fixed is $3 per day.

Mr. SMITH of Georgia. I do not understand. The Senator said it was $3 a day?

Mr. JOHNSON of California. We are rendering a service on a $3 per day bill. The service the Senator renders, of course, is made conditional upon the value that it may be to the Republic

in his service. The value that flows from a bill of this sort is not measured alone by the $3 a day which is given to underpaid employees, but it is measured in many other fashions as well. With that, however, I shall deal in subsequent remarks.

Mr. SMITH of Georgia. I know of some who are to be affected by this bill who are underpaid. There are a great many of them I can name who are fully paid now. I have pointed to those whose services are of but small value, the character of whose services does not justify a flat $1,080 a year. My contention is that there are classes of service of small value. One might be more efficient in that service than another, but if you are undertaking to apply a minimum to the lowest grade of service, without regard to its value or its productiveness, it is economically unsound.

If the Senator will single out a part of these employees and say that they render service worth $1,080 a year, I will vote to increase the pay of that class. But the Senator does not do that. He arbitrarily says that no matter how low the order of service, how cheap the character of service, how small the result, the pay shall be $1,080 a year, except that if they are in the Army they can not have it, if they are in the Navy they can not have it, if they are in the Postal Service they can not have it, if they are in any of the Territorial services they can not have it. One-half of those to be raised are in the District of Columbia, where the hours are the least and the service perhaps the easiest and the number from the same family frequently the largest.

I state again that if this bill is right, then nobody in any occupation should receive less for a 7½-hour day's work than $1,080. You can scarcely measure the discontent the passage of this bill would produce throughout the United States, the discontent among other Government employees, the discontent it would produce in the Army, the discontent it would produce in the Navy, the discontent it would produce in the Postal Service, the discontent in our Territories, the discontent in all private occupations, for if it is understood that these easy-going District employees must, if of the least value, receive $1,080 per year, where can anybody work or do anything for less? Who should anywhere do anything for less. The domestic must have as much. Every farm hand should have as much. They work over 7½ hours a day. You set a precedent and a standard that must necessarily produce dissatisfaction and upheavals all over the land.

Let us come back to the service here. You raise that messenger boy or that duster to $1,080 a year. Alongside of them you raise the cultivated woman who is doing high-class clerical work to $1,080. I grant she ought to have it. I would pay her more. But you put them on the same basis of compensation. You put lack of education, lack of efficiency, low-grade work, not based upon merit, not based upon the value of the service, right alongside of the cultivated woman who has spent her time in getting an education.

Well, if you put that as the standard for the least efficient, the least valuable, then there is but one thing to do, in all fairness; lift all the other pay in the same proportion. Be just, pay for service what the service is worth, pay for service what the time for preparation justifies. You should raise, if you are just, all your employees, and if you apply the rule of justice to those higher up, and the rule of justice to your Army and to your Navy, and to the postmasters, you would have a bill of over five hundred million increase.

What I am seeking to press is that you can not logically sustain the proposition of segregating these producers of minimum value, these least efficient and least serviceable, and put them up to $1,080, and disregard the rights of those of higher qualifications who are rendering much more valuable service to the country.

You can not pick these 50,000 and disregard the 175,000 in the Army. I believe they get $30 or $40 a month in the Army and not more in the Navy. Can the Senator from California tell me a reason why a messenger boy in one of the departments in Washington should have more than a sailor in the Navy, or more than a postmaster or assistant postmaster, or a clerk in a post office? The bill will produce discontent in the entire Government service if we make this distinction, and it will be just discontent. It would produce the discontent which comes from the consciousness that a class has been segregated for an increase without an increase commensurate for the service of others, that a class is segregated for an increase, and other classes are excluded from it.

It will produce discontent and disorganization in private employment. We can not carry such compensation into private employment for the least productive. We can not give it to the least productive without proportionately or greatly increasing the compensation of the more productive. It will produce discontent in the public service, and it will produce discontent in private occupations. It will invite strikes; it will invite discontent.

As I said, if the Senators who favor the bill will designate those who are entitled to more compensation and recognize others also who should receive increased compensation, I have not a word to say against such a policy. What I can not accept as sound in the bill is the arbitrary fixing of a minimum wage to only a class, excluding many more equally meritorious, excluding 175,000 soldiers worth more than some of these, excluding our sailors worth more than many of these, excluding those in the Postal Service worth more than many of these. The idea can not be carried out except upon a sentimental desire, an ethical purpose, which does not work out practically.

I understand there is a commission now engaged in studying the compensation of Government employees, and that we are going to have a report indicating a more just compensation, based upon the character of work done and the value of the services. To that bill I would give ready support.

As I intend to vote against the pending measure, I wished briefly to express the reasons that lead me to the conclusion that it ought not to be passed.

Mr. DIAL. Mr. President, the Senator from Georgia [Mr. SMITH] has so well presented the opposition to the bill that I do not deem it necessary to say very much. I was opposed to the bill when it came up before and I have not seen any reason since to change my mind. To my way of thinking the bill is unsound and there is nothing in it to cause one to advocate its passage. It is based upon a wrong principle. It is undemocratic. It would tend to bring about great dissatisfaction in the country. It is unjust, as the Senator from Georgia has said, to a great number of employees of the Government who would not be benefited by the bill.

It is wrong in principle for Congress to try in this way to legislate pay to fix compensation for the people. The bill treats all employees in a drove, as it were. That is contrary to the production of efficient service. It does away with the idea of employees excelling in their work, it does away with competition and with the rendering of the best service within one's power. The employees affected by the pending bill perform their duties mostly indoors. Theirs is not hard work. Their work does not require education nor skill. The lowest kind of intelligence can perform it. If we pass the bill we virtually say to everyone in the United States, "Unless your employer is willing to pay you $3 a day, you should not work." Many times we would like to employ the old or the decrepit or parties who are somewhat incapacitated and can not render a full day's service, but under the bill they are practically excluded from such employment. If they can not get work to do, the next thing for them to do is to go on the charity list. It is wrong to put all mankind in the same category in this way. As I said, each one should be induced to perform better service, if that could be done.

If the bill is passed it will not be two days before the news is heralded clear across the continent, and people in private occupation will say that the Congress has invited them to ask for greater pay and if they do not get it they will be dissatisfied with the positions they are occupying.

We know that in some little towns there are only two or three Government employees who might receive the additional or increased pay.

This fact will be heralded about town and all other employees in the town will know it, and if they can not get their pay increased in private employment they will feel that their employers are not treating them justly, and they will become dissatisfied with their labor and perhaps leave their positions.

I believe in paying everyone a just, fair, and reasonable compensation. It is impossible for us to legislate to meet changing conditions at all times. We will remember that about 12 months ago we were appropriating the public money to find employment for people. It was not six months after that until we could not find the people for the positions that were open. Even in my home town, a small place, pay for ordinary labor, such as plasterers and carpenters, went to the unheard of figure of something like $1.35 an hour. A short time ago that same labor was begging for positions at $2 a day. So it is unwise in us to try to legislate to meet the changing conditions from time to time. It is impossible to do it.

The bill is wrong in principle and establishes a wrong precedent. As the Senator from Georgia has said, the cost would be enormous. I have seen no provision in the bill whereby the money is to be raised, and no estimate of the amount needed. This is a democratic country, and we, the representatives of the people, have no right to pick out pets and to pay them salaries away out of proportion to the value of the services rendered,

and away beyond any salaries which the people who support the Government pay their employees for greater work than is done by the employees of the Government. We will bring the Government into ridicule.

The positions will be looked upon as soft snaps. We have no right to set a standard way beyond what the people of the country are able to meet.

I believe in being on the best of terms with labor. I believe in helping them better their condition. The term "living wage" never did appeal to me. People do not work just to live. They should be able to earn something more than a living, to save something; but when we get to paying ordinary labor, people who sit down in their chairs and have nothing to do except to point visitors to the next door—and we could get along with a vastly less number of them, by the way—when we pay them more than we pay people who are educated and who take a great interest in their work, then we are doing wrong, and we are encouraging dissatisfaction all over the country. We should want everyone to receive what is just and fair and reasonable. We should adopt a scale which would be on the same basis as that for similar employment in private life, and even to give them something more would not hurt. This bill, however, proposes at least to double, and perhaps to treble, in the case of Government employees the compensation received by people in similar employment outside the Government service.

I picked up a newspaper to-day which shows what wages farm labor is now receiving. I see that in the State of the Senator from California farm laborers are paid higher than they are anywhere else in the United States. What I shall now read may be interesting to the Senate. I read from the New York Times of yesterday, January 20, as follows:

The wages of hired men—

This article refers to men, not women and children.

The wages of hired men on farms have more than doubled in the last 10 years, tripled in the last 20 years, and were more than four times higher last year than they were in 1879. These changes are shown by statistics of the Department of Agriculture.

Wages paid by the month, without board, averaged $64.95 for the country as a whole last year; 10 years ago they averaged $27.50; and in 1879 they were $10.43.

Day labor at harvest time last year averaged $4.36 without board, and at other than harvest time, $3.59. Ten years ago harvest-time labor was paid $1.82, and at other than harvest time, $1.38. In 1894 harvest-time day labor was paid $1.13 and nonharvest-time labor 81 cents a day.

California and Nevada farmers paid their labor the highest prices for labor without board, the average in those States last year having been $107 a month. The lowest average was in Mississippi, where $41 was paid. The average for the country as on a whole was $64.95.

It is here proposed to pay Government employees who perform very little service, who sit indoors, who are not exposed to the elements, about double what men in the country upon the farms receive. In that employment they are engaged about 7½ hours a day, while on the farm the hours of labor are something like 14 hours a day during many months of the year.

Mr. President, we can all appreciate the feelings of the men who toil, who do work in reality, and who earn on the average only $64.95 as against the proposition to pay the beneficiaries of this bill nearly $100 a month.

Conditions as to labor and wages paid are much worse in the South, perhaps, than in other sections of the country. I do not like very well to expose our poverty there, but I have before me an article from a publication entitled "Commerce and Finance," from which I will ask that certain excerpts, appearing on page 131, be printed in the RECORD as a part of my remarks. The communication is signed by Mr. Coker, one of the best-known men in South Carolina, a member of the Federal Reserve Board at Richmond, who has made a calculation as to what a farmer in the cotton-producing States can earn a day. He figures out that a man, his wife, and three children engaged in farming in the South only earn $1.07 per day, figuring cotton at 15 cents a pound and the production as one bale per acre, which is practically twice the quantity that is raised per acre. Yet a man, his wife, and three children will net only $1.07 a day as wages, in addition to some potatoes or a little cabbage patch or something like that. I have marked the paragraphs which I desire to have inserted in my remarks, and ask that they be printed at this point.

The VICE PRESIDENT. Without objection, permission is granted.

The matter referred to is as follows:

THE COTTON PROBLEM—HOW CAN IT BE SOLVED?

[By D. R. Coker, of Hartsville, S. C. The writer of this article and his father before him are known to the entire fraternity of cotton producers and consumers as men who have been conspicuous as upbuilders in the South.—T. H. P.]

We believe that few outside of the South, and by no means all in the South, realize the distressing features of the present situation or are able to diagnose their effect upon the civilization of the South and the future of the cotton industry. A brief consideration of facts, however, will promptly convince everyone interested in the industry, whether in the North or the South, that there is no future for it at present prices, and that a continuation of present conditions would threaten the civilization of the South.

Government statistics show that the average production of lint cotton in the South is between one-third and four-tenths bales per acre, but in order to show how impossible the present situation is we are going to first discuss production figures under the ideal conditions of a bale per acre production at 15 cents—a price above the present market.

The bulk of the crop of the South is produced on a share-crop system, the most popular share contract in this section being one under which the land owner furnishes the land, buildings, planting seed, and fertilizer and the tenant furnishes the live stock, tools, and labor. Ginning and baling expenses are divided. Landlord and tenant divide the cotton equally, but the landlord receives all of the seed. Under this plan let us see what would be the returns to landlord and tenant on a 20-acre crop of cotton producing one bale per acre.

The farm will contain about 30 acres, including a little woodland and a few acres for corn and other minor crops. If the land is good enough to produce a bale per acre, a fair valuation for the farm including buildings will be between $6,000 and $10,000. A minimum charge for rent on the cotton land, therefore, to cover interest, repairs, and taxes would be not less than $25 per acre. The landlord expecting a bale of cotton per acre would buy not less than $20 worth of fertilizer per acre for the cotton, and, as he must exercise supervision over his croppers, a charge of $5 per acre for supervision should be made. The total of these expenses is $50 per acre. His returns will be one-half bale of cotton at 15 cents, $37.50; seed, $10; total, $47.50, less one-half ginning, $3; net income, $44.50 per acre. These figures show a net loss to the landowner of $5.50 per acre. Some may object to the charging of rent and supervision to crop expenses. To this we answer that these are necessary preliminary expenses for crop production without which capital can not be secured.

To make this crop the tenant furnishes a mule and feed costing per year $125; depreciation on implements, taxes, etc., $25; hire for picking 10 bales of cotton, $150; one-half ginning, $60; total, $360, besides the labor of himself, wife, and three children.

Receipts from 10 bales of cotton at 15 cents per pound	$750
Expenses besides labor of family	360
Balance	390

Divide this amount by 365 and you get the magnificent sum of $1.07 per day with which the tenant must purchase clothing, shoes, and household equipment and must supply a large part of the food for the family, and besides must pay the doctor and the preacher if they are paid. It is true that the tenant raises some corn, a few vegetables, and sometimes has a pig or a few chickens. The pitiful poverty under which most of them live, however, keeps them moving from place to place, the average term of farm tenancy being about two years, and it is the exception rather than the rule for the tenant to have any livestock besides his mule or any poultry.

Please note that with cotton at 15 cents per pound, $1.07 is the maximum amount that a tenant can receive for the labor of himself, his wife, and three children in producing the ideal yield of 1 bale of cotton per acre on 20 acres, and this is a larger acreage than the average one-horse crop in this section and must be further curtailed this year. The item for picking 10 bales is absolutely necessary, for the tenant and his family can not gather more than half the crop in time to prevent serious deterioration of the grade.

Please remember that the average production in the South is less than four-tenths bale per acre. The production in this State, however, for the past year has slightly exceeded one-half bale per acre. Based on one-half bale production, the tenant farmer's expenses would be reduced by the item of picking, $150, and half of the ginning, $30, making his expenses $180 instead of $360. He would receive for his half share of 10 bales, $375, leaving $185, or 51 cents per day for the sustenance of his family. But at least half the tenant farmers make less than one-half bale per acre in South Carolina or less than one-third bale per acre in the rest of the cotton belt except in North Carolina. How can these people keep body and soul together, much less maintain a decent standard of citizenship, if cotton does not advance materially?

Mr. DIAL. I repeat that the writer of the article bases his figures on the basis of a bale of cotton to the acre, whereas the average is only about four-tenths of a bale at the present time. That shows the great injustice which would be placed upon a large population in this country by the enactment of a bill such as that now pending.

Mr. President, I have not the figures before me, but I venture the assertion that many lawyers in the United States do not average $1,000 a year. I am satisfied that the ministers in the United States as a whole do not average $1,000 a year. I have figures before me which show that in 1918 the average salary of teachers for all cities in the United States was $854 a year. That is the average for the cities and not of the country districts, where the average is less. The Senator from Georgia [Mr. SMITH] said, I believe, that the teachers of the country received an average salary of $600 a year. I have not verified that statement, but no doubt he is correct. I have, however, the figures to which I have referred, furnished by the Bureau of Education, which show that the teachers of this country, who are trying to lead our children in the way they should go, who are educated and trained for their work, receive on the average the pitiful sum of $834 each a year, while in this bill it is proposed to pay a low class of labor $1,080 a year minimum. It would be enough to cause an uprising in the country if any such legislation should be adopted.

I saw a statement some time ago to the effect that ministers in Georgia—and I do not think they are any better off in South Carolina—only receive, according to my recollection, $700 a year.

So, Mr. President, I feel that this is far-reaching legislation; it is wrong in principle; it would be wrong in practice; and it would cause more disturbance and dissatisfaction in this country than any law we could well pass. I feel this is no time to put it on the statute books, and I hope that it will be rejected. Now is no time to increase the expenses of this country. When we think of the great decline in business and prices which has come upon the country and how rapidly it has come and how far it has gone, it is plain that the people are in no position to have piled upon them taxes beyond their endurance. We read of business failures throughout the country every day; a great many people have become bankrupt; some are even committing suicide because they are not able to meet their obligations. We, as their representatives, should pay heed to their condition. We should act so as to set an example here that may be followed all over the country and should pass no law of which we would be ashamed and which would impose a burden upon the great mass of the taxpayers of the country.

This bill would discount education and place a premium on ignorance. It is against public policy.

DEATH OF REPRESENTATIVE CHARLES F. BOOHER.

Mr. REED. Mr. President, I have the painful duty to perform of announcing to the Senate the death of Representative CHARLES F. BOOHER, of the fourth Missouri district. The official announcement has not come from the House of Representatives, and I would await it but for the fact that the funeral service is to be held in the State of Missouri at so early a date that it is necessary for the Members of Congress who shall be assigned to attend the funeral to leave at 6 o'clock this evening.

Mr. President, CHARLES F. BOOHER has been for many years a distinguished Member of the House of Representatives. He was a man of the highest character, of unimpeachable integrity, and of rare courage. There was no public duty which he ever hesitated to perform, with an eye single to the public interest and with a total disregard of his own personal fortunes. He was beloved by the people of his district and of his State. He was a typical American Representative and of the best type.

Mr. President, I ask for the adoption of the resolutions which I send to the desk.

The VICE PRESIDENT. The resolutions will be read.

The resolutions (S. Res. 431) were read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. CHARLES F. BOOHER, late a Representative from the State of Missouri.

Resolved, That a committee of six Senators be appointed by the Vice President, to join the committee appointed by the House of Representatives, to take order for the superintending of the funeral of Mr. BOOHER at Savannah, Mo.

Resolved, That the Secretary communicate a copy of these resolutions to the House of Representatives.

The VICE PRESIDENT appointed as the committee on the part of the Senate, Mr. REED, Mr. SPENCER, Mr. TRAMMELL, Mr. FERNALD, Mr. DIAL, and Mr. CAPPER.

Mr. REED. As a further mark of respect to the memory of the deceased Representative, I move that the Senate take a recess until to-morrow, January 22, at noon.

The motion was unanimously agreed to; and (at 4 o'clock and 30 minutes p. m.) the Senate took a recess until to-morrow, Saturday, January 22, 1921, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

FRIDAY, *January 21, 1921.*

The House met at 12 o'clock noon.

Rev. James Shera Montgomery, D. D., pastor of Calvary Methodist Church, Washington, D. C., offered the following prayer:

Almighty God, lead us into all constructive truth; deliver us from all destructive ignorance; illumine our minds so that our characters shall be the direct offsprings of our understanding. Grant that the Angel of Peace and the Angel of Mercy abide around about the fireside of the one who is stricken to-day, and may our citizens everywhere deal justly, love mercy, and walk humbly with their God. Through Jesus Christ our Lord. Amen.

The Journal of yesterday's proceedings was read and approved.

COUNTING THE ELECTORAL VOTES.

Mr. ANDREWS of Nebraska. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk Senate concurrent resolution No. 38 for immediate consideration.

The SPEAKER. The gentleman from Nebraska asks unanimous consent for the immediate consideration of a Senate concurrent resolution, which the Clerk will report.

The Clerk read as follows:

Senate concurrent resolution 38.

Resolved by the Senate (the House of Representatives concurring), That the two Houses of Congress shall assemble in the Hall of the House of Representatives on Wednesday, the 9th day of February, 1921, at 1 o'clock in the afternoon, pursuant to the requirements of the Constitution and laws relating to the election of President and Vice President of the United States, and the President of the Senate shall be their presiding officer; that two tellers shall be previously appointed by the Vice President on the part of the Senate and two by the Speaker on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, all the certificates and papers purporting to be certificates of the electoral votes, which certificates and papers shall be opened, presented, and acted upon in the alphabetical order of the States, beginning with the letter A; and said tellers, having then read the same in the presence and hearing of the two Houses, shall make a list of the votes as they shall appear from the said certificates; and the votes having been ascertained and counted in manner and according to the rules by law provided, the result of same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote, which announcement shall be deemed a sufficient declaration of the persons, if any, elected President and Vice President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses.

The SPEAKER. Is there objection to its present consideration?

Mr. GARNER. Mr. Speaker, reserving the right to object, this is the usual resolution passed every four years?

Mr. ANDREWS of Nebraska. Yes.

Mr. GARD. Mr. Speaker, reserving the right to object, has this the approval of the minority members of the committee?

Mr. ANDREWS of Nebraska. I understand it is on the Speaker's desk, and has not been referred to the committee, but this is the usual course pursued in calling it up.

Mr. MONDELL. Mr. Speaker, I will say to the gentleman from Ohio that the only reason why the resolution has not been called up earlier is that the chairman of the committee to which it would be referred if it were referred has been ill and is still ill, and the gentleman from Nebraska calls it up in his stead.

Mr. BLANTON. May I suggest the minority could not lose any right by it anyway?

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the resolution.

The resolution was again reported.

The question was taken, and the concurrent resolution was agreed to.

On motion of Mr. ANDREWS of Nebraska, a motion to reconsider the vote by which the concurrent resolution was agreed to was laid on the table.

AGRICULTURAL APPROPRIATION BILL.

Mr. ANDERSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 15812) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1922.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15812, the Agricultural appropriation bill, with Mr. HICKS in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15812, the Agricultural appropriation bill, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 15812) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1922.

Mr. ANDERSON. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ANDERSON. Mr. Chairman [applause], I ask to be notified when I have consumed 30 minutes.

Mr. Chairman and gentlemen of the committee, the subcommittee which considered the appropriations for the Department of Agriculture worked under rather unusual and extraordinary difficulties. In the first place we could not be unmindful of the general financial condition of the Government and the urgent necessity of economy in every direction where economy was possible. We could not be unmindful of the fact that the country has a very large floating indebtedness which it is necessary to reduce as fast as possible, and that the general necessity of economy must be reflected, to some extent at least, in the Agricultural appropriation bill. There were those who took the position that agriculture might be considered outside of

the general rule of economy, but the committee felt if there was to be a policy of economy in Government expenditures that policy must of necessity also be reflected, to some extent at least, in appropriations for the Department of Agriculture.

The bill under consideration carries a total of $33,517,459. That represents an increase on the face of the bill of $1,804,675 over the appropriation for the current year, but taking into consideration the fact that the committee made the sum of $71,180, carried in the current bill for investigation of road material and road construction, payable out of the fund for the administration of the Federal road act, the actual increase is $1,875,495. Of this total $875,495 represents the increase in the regular items carried in the bill, and that increase is approximately 7.7 per cent of the total requests for increases of the Department of Agriculture in the regular appropriations for that department. The other million dollars of increase represents an appropriation for purchase of land in the Appalachian and White Mountain regions at the head of the navigable streams under the Weeks law, and is therefore not an increase in the regular items as carried in the bill. The total estimates submitted by the department for the operations of the department amounted to $43,029,384, representing an increase over the current year of $11,316,600. That is an increase of approximately 35 per cent in the amount carried in the current law and is three times the largest estimated increase for that department in any preceding fiscal year. The total requests, including $10,000,000 for purchases under the Weeks law, amounted to $53,029,384.

Of this amount the committee denied requests amounting to $19,511,925. In this connection it must be remembered that the Agricultural Department is normally a growing department; that it must grow with agriculture and the population of the country. Normally this increase has been approximately 10 per cent a year during the last 10 or 15 years. The current appropriation bill, however, carried $2,196,977 less than the bill for 1920, which represented a decrease of 6.04 per cent, where normally there would have been an increase of about 10 per cent. So that the committee started on its labors this year considering a situation in which the appropriations were about 16 per cent below the normal and the regular increase which might be expected in the department. The increases allowed by the committee are covered principally in the following items:

Four hundred and ninety-eight thousand three hundred and sixty dollars for the eradication and control of bovine tuberculosis. This represents the increase estimated for originally by the department. The Secretary of Agriculture, however, subsequently made a request for an additional appropriation of $1,000,000 in a letter which he sent to the chairman of the subcommittee, and that request was supported by live-stock men's organizations the country over. The committee, however, did not allow the additional $1,000,000. In disallowing it the committee had in mind that every appropriation carried in the bill bears some relation to every other appropriation, and if another million was to be added to the bill, this million ought to be divided between a number of items in the bill rather than added to this single item. Besides that, it has been the experience, I think, of everyone connected with the appropriations for the Department of Agriculture and familiar with its operations that where extraordinarily large increases are allowed, necessitating the organization of large new forces of scientific or professional men, unqualified men are frequently employed, with the result that the work is retarded rather than accelerated. And the committee felt that the amount which it allowed, coupled with the amounts which we understand will likely be appropriated by the States, represented all that could be well spent in the next fiscal year, considering the number of veterinarians that would be available for that sort of work.

Mr. JONES of Texas. Will the gentleman yield?

Mr. ANDERSON. I yield to the gentleman.

Mr. JONES of Texas. While the gentleman is on the Bureau of Animal Industry I would like to ask him what is the reason the committee eliminated the appropriation for vaccine in the treatment of domestic animals?

Mr. ANDERSON. I do not think it was eliminated.

Mr. JONES of Texas. It was in the other appropriation bill, but not in this.

Mr. ANDERSON. I have no recollection that it was eliminated. If the gentleman will call my attention to it when we reach the item, I will be very glad to discuss it then.

The committee allowed an increase of $50,000 in the appropriation for dairy investigations. I will discuss these items somewhat more in detail and at length when we reach the debate under the five-minute rule. I only mention them now so that the gentleman may have them under consideration when we reach that debate.

Mr. KINKAID. Will the gentleman yield?

Mr. ANDERSON. I will yield.

Mr. KINKAID. If it is not too soon in the discussion, I would like to inquire how much more is allowed in field work in the investigation of hog cholera and for veterinarians than during the past year?

Mr. ANDERSON. I am just coming to that item, I will say to my friend. The appropriation for the eradication of hog cholera was increased by $100,000 over the appropriation for the current year.

Mr. KINKAID. Is that to be devoted to field work?

Mr. ANDERSON. Yes.

Mr. KINKAID. In the employment of veterinarians?

Mr. ANDERSON. Yes.

Mr. KINKAID. And that will increase the number very materially?

Mr. ANDERSON. I would think it would practically double the force that is in the field now.

Mr. SINNOTT. The gentleman has referred to an increase. Does he mean an increase over the estimates?

Mr. ANDERSON. No. I am referring to the increase over the current law. I think in no case did the committee increase appropriations over the estimates.

Mr. SINNOTT. The gentleman means last year's bill?

Mr. ANDERSON. I mean the current bill, the 1921 bill, under which the department is operating now.

The committee allowed an increase in the item for control of the brown-tail and gypsy moths of $150,000. That was to take care of new infestations of this insect in New York and New Jersey. The committee allowed a new item of $100,000 for the control and quarantine of the Mexican bean weevil. This insect has been established in Colorado for many years, and I am told has prevented the production of beans in that State ever since it was originally introduced there. It is now established in one locality in Alabama and has done very great damage there. No one knows whether its habits in Alabama will be the same as its habits in Colorado. Methods for control of the insect have to be worked out and a quarantine will have to be established to prevent the spread of the insect into other sections of the South.

The committee, as I have already stated, made an appropriation of $1,000,000 for the purchase of lands under the Weeks Act. If gentlemen have added up these increases as I have gone along they will discover they amount to a greater sum than I stated represented the total of increases for the department. This is due to the fact that so far as it was possible, where the committee allowed an increase over the amount carried in the current law, they undertook to find the money for those increases in the bill itself. That is to say, in order to increase some of the items we found it necessary to decrease some of the other items, and we undertook to decrease them, of course, in those places where it seemed to the committee the least damage would be done.

Under the statutory roll for the Secretary's office the committee carries two new places. These two places are a director of scientific work and director of regulatory work. The department is now spending approximately $13,000,000 in activities directly connected with the promotion of agriculture and reducing the hazards of insect pests and plant and animal diseases. Practically all of the remainder of the amounts carried in the Agricultural bill, amounting to about $20,000,000, cover regulatory activities, such as the meat inspection law, the pure food law, the administration of the United States grain standards act, and the administration of the United States cotton standards act. This $13,000,000, largely spent upon research work, has been spent heretofore without any direction except such direction as was possible through the heads of the bureaus themselves. The result of this has been that the department has grown through the different bureaus without very much consideration of the relativity between the work carried on in one bureau and another and the relative importance of that work.

The committee felt that the employment of a person to direct this scientific work would enable the department to take a survey of itself and to coordinate and direct its scientific activities in those directions where it was most desirable that the department should grow, and that the employment of such a director would be of great service to the committee in its subsequent consideration of appropriations for this department.

Practically the same situation exists with respect to the regulatory work of the department, and in order that this work might be coordinated under a single hand, which would have

nothing to do except to understand and direct the regulatory work of the department, we provided the director of regulatory work.

Everybody knows that the Secretary of Agriculture can not, and usually does not, have the scientific knowledge and the administrative knowledge necessary to the coordination and direction of the hundreds and thousands of scientific and regulatory activities of the department. He has to make speeches to agricultural colleges and at State fairs and at dozens of other places. He is a member of a great many different boards and commissions, all of which require a proportion of his time. The Assistant Secretary of the department is very largely an administrative man. His duties are very largely routine, and he takes the place of the Secretary of Agriculture during the Secretary's absence. So that it is necessary and desirable to have in the department these two places to coordinate, respectively, the scientific and the regulatory work of the department.

Now, of course, it is much more pleasant to say yes than it is to say no, and I personally—and I think the rest of the committee—would have felt gratified if it had been possible to grant a larger proportion of the requests for appropriations than we felt warranted in granting. But we were consoled by the fact—at least I was—that there would be a new Secretary of Agriculture on the 4th of March, and that it would probably be wiser to let him start in with the department somewhat pinched for money, so that he would have to take a survey of his situation, the direction in which the department ought to expand, and consider the development of a policy in the department which would enable him a year from now to come to us with a program of expansion which we could consider under a less pressure for time than existed when we considered these items. Personally I have had to oppose a number of appropriations which under different circumstances I would have favored, and I hope that it will be possible when the committee again considers the appropriations for this department to adopt a much more liberal policy than it has been possible to adopt in the present instance.

If the committee is interested in the general policy which the committee followed in considering these estimates, I might say that we found it impossible to lay down any general rule which could be applied to every item under which the items would fall, either into the basket of those which should be allowed or into the basket of those which should not be allowed. We would have to make a great many exceptions to such a rule if we applied it. But so far as I had in my own mind any rule, I thought it was the duty of the committee, first, to make such appropriations as were necessary for the preservation and maintenance of the department's property; second, that it was necessary that we should take care of emergencies that had arisen or which had become more acute during the current fiscal year, emergencies represented by new or increased infestations of injurious insects or new injurious plant diseases and animal diseases; and, in the third place, we allowed some increases and some new items where it seemed that the allowance of these items would promote new industries or new uses for existing farm products.

In general, that represents the policy of the committee, but I may add to that that in general we did not allow increases in those cases where we felt that the work was of a character that might wait, where the situation would not be injured, where the difficulties would not be increased by postponing the appropriation for another year.

I want to make just a few general observations with respect to the agricultural situation in the future. During the last few generations the activities of the department in increasing production have been very largely in the direction of increasing the per man production. That is to say, we have tried to make it possible for one man, through the use of machinery, through better methods, through the better utilization of labor, to produce a larger quantity of the foodstuffs of the Nation. I think we have nearly reached the maximum of per man production, and perhaps it is a good thing if it is so, because there has been, I think, a tendency for farmers to farm too large a quantity of land and to farm it too poorly. The activities of the department, I think, in the future will be directed rather toward increasing the production per acre, and it is a significant fact in this connection that in the last 50 years or more the per acre production has increased but 2 bushels. The production of wheat in the United States, if my recollection serves me correctly, is approximately 13 bushels, or perhaps a little more than that in the United States. In Germany, immediately preceding the war, the production was approximately 29 bushels per acre. It is entirely possible to very materially increase the per acre production of wheat, and practically of all the other farm products, by the adoption of intensified methods of farming. But in addition to that we must find means of reducing, so far as that is possible, the hazards with which agriculture in this country is constantly confronted. We can not, of course, reduce the hazards of the weather, but we can, by the expansion and the better organization of the Weather Bureau Service, make it possible for the farmer to some extent protect himself against prospective weather conditions.

Mr. HUSTED. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. HUSTED. Did I correctly understand the gentleman to say that we had reached in this country, in his opinion, the maximum production per man in agriculture?

Mr. ANDERSON. I think so.

Mr. HUSTED. Will the gentleman be good enough to explain that—amplify that a little bit?

Mr. ANDERSON. Well, what I had in mind was simply this: Perhaps that statement is a generalization which is subject to a good many exceptions, and one which I perhaps ought not to make. I made it only with the idea of emphasizing the fact that the direction of the agriculture of the country has been toward increasing per man production, and that in the future it would have to be in the direction of increasing the per acre production; that the agriculture of the country in the future, in my judgment, instead of being an agriculture based upon a 320-acre farm, will be an agriculture based upon a 160-acre farm or upon an 80-acre farm.

Men will find that it is possible to raise as much grain or produce on 160 acres as they formerly raised on 320, and I think that is the direction in which the activities of the department ought to be exercised, because we have come very near reaching the limit of the new lands which can be brought into production. Not only is that true, but you can by less effort increase the production in Illinois, Iowa, Ohio, and the Central West and the State of New York than you can increase the production in the State of Idaho.

Mr. HUSTED. I should feel very sorry to be constrained to believe that we have reached the maximum per man production in agriculture in this country, because, as I understand it, it is much less here per man than it is in many of the European countries.

Mr. ANDERSON. The gentleman is not correct about that. The per man production here is greater than anywhere else in the world.

I was referring to the possibility of increasing the production through the reduction of the hazards to which agriculture is subject. The department can, through the necessary appropriations, reduce the hazards incident to insect pests, to plant diseases, and to animal diseases.

As an illustration of what might be possible through the reduction of the hazards incident to plant diseases, I might refer to the situation in the great spring wheat area of the country. I am told that the yield in the spring wheat area in 1918 was reduced by 180,000,000 bushels by black stem rust. It is entirely feasible to prevent that reduction in yield, to make that reduction very nearly negligible by the destruction of the barberry bushes through which the spores of the wheat rust go in the cycle of their life from year to year. That is but one illustration of the possibilities of reducing the hazards incident to agriculture through control of plant and animal diseases and insects.

I had thought to take up some of the items in the bill individually, but I have occupied very nearly all the time which I expected to take, and with the permission of the House I will go somewhat more into detail with respect to those items when we reach them under the five-minute rule.

Mr. SUMNERS of Texas. I should like to ask the gentleman to give us his judgment as to whether or not the Department of Agriculture can be of assistance in helping to bring about a better system of marketing agricultural products and therefore better prices to the farmers? If the gentleman would prefer to discuss that under the five-minute rule, I will withdraw the question and submit it later.

Mr. ANDERSON. I can discuss it now in a very general way. My own judgment is that we do not have at the present moment accurate fundamental information relative to the marketing situation which would enable anyone to say dogmatically or positively how that marketing system can be improved, or whether it ought to be abandoned altogether and an entirely new system developed.

The CHAIRMAN. The gentleman has occupied the time that he requested the Chair to notify him.

Mr. ANDERSON. Industry generally has more or less fundamental information relative to the cost and the methods of marketing manufactured products, but that information is to a very large extent lacking with respect to the cost and methods of marketing farm products, and I think that we are going to

UMI

be compelled to redirect to some extent the work which is being done in the Bureau of Markets, with a view to obtaining through an independent source the information relative to the cost and methods of marketing farm products, which will enable us to determine whether these methods are sound or unsound, and if they are unsound, the places in which they ought to be corrected. Does that answer the gentleman's question?

Mr. SUMNERS of Texas. I should like to ask another question when we get to the five-minute rule, but I realize the limitation of the gentleman's time now.

Mr. BLANTON. Will the gentleman permit me to interrupt him for a question?

Mr. ANDERSON. Yes.

Mr. BLANTON. I want to commend the committee for making substantial reductions in this bill, but it still carries $33,517,000.

Mr. ANDERSON. Yes.

Mr. BLANTON. Can the distinguished chairman tell us about what proportion of that large sum is overhead and what proportion do the farmers of the country really get the benefit of?

Mr. ANDERSON. I do not think I can answer that question with respect to the entire department, although I have some information on it. It is very difficult, however, to separate the entire appropriations for the department into administration or overhead and into appropriations which go directly to the aid of the farmer. As a matter of fact, in the aggregate all of the appropriations help the farmer in some way. The gentleman must keep in mind that fundamentally the Department of Agriculture is a scientific institution; that the one thing which the Department of Agriculture was organized for, and for which the organic act provides, is the acquiring and diffusing of information on subjects connected with agriculture; that the fundamental purpose of the Department of Agriculture is scientific, the working out of these fundamental problems upon the solution of which all practical agriculture must ultimately be based. That work ought to be done here, where it need be done only once, instead of being done in 48 States; but when it comes to disseminating this information, when it comes to controlling insects and plant diseases and animal diseases, then the department ought to put itself in accord with the departments of agriculture in the 48 States. But primarily the Department of Agriculture in the proper sense is a scientific institution, especially devoting itself to the fundamental research upon which all the agriculture of the country depends.

Mr. BLACK. Will the gentleman yield for a question?

Mr. ANDERSON. Yes.

Mr. BLACK. I notice that in the bill is carried an appropriation amounting to $150,000 to continue the plant of the Government at Summerlands, Calif., for making potash out of kelp. Now, I recall that last year I undertook to strike that item out and the committee said that they had the assurance that it is now on a self-sustaining basis and would in all probability pay its own way for the year 1920. I notice that the hearings say that they have expended about $192,000 and have sold about $60,000 worth of potash. Does not the gentleman think that this project has been used as an experiment long enough and that now would be a good time to discontinue it?

Mr. ANDERSON. I remember the statement which was made on the floor of the House and which I myself made with respect to this plant. It was represented to us that the plant would substantially or practically sustain itself during the current fiscal year. I apologize to my distinguished friend from Texas for the failure to make good on that promise. The committee considered the question whether or not the plant ought to be abandoned immediately or whether we ought to allow it to run for some additional time, at the same time putting in a provision authorizing the Secretary to sell it. It was a very close question, in my judgment, whether it was better to cut the plant off now and permit the property to be sold at its junk value or give it some additional time to run with the idea that we might be able to dispose of it as a going concern. The outcome, after a thorough consideration of the whole matter by the committee, was that we agreed to give the Secretary for the maintenance of this plant a sufficient amount to run it for six or seven months of the next fiscal year, putting into the item a provision authorizing and directing its sale, with the idea that if it could be put on a paying basis and sold as a commercial plant within that time we were willing to have it done, but if it could not be sold as a commercial propostiion then the experiment should stop and the plant be sold anyway.

Mr. MOORE of Virginia. Will the gentleman yield for a question about a matter that was referred to a little while ago?

Mr. ANDERSON. Certainly.

Mr. MOORE of Virginia. The gentleman has no doubt at all as to the value of the work of the Bureau of Markets and Crop Estimates, has he?

Mr. ANDERSON. In general, no. I think the work ought to be redirected in some respects, but that is a matter the committee could not bring about.

Mr. MOORE of Virginia. My idea is that it is a most useful work that is being done by that bureau, and instead of commending such reductions as the bill may contain I want to say that I am very glad to see that the appropriation for that particular bureau has been substantially increased.

Mr. ANDERSON. What I said was not said in a spirit of criticism. There is some work that I think ought to be redirected, and I think some of the money being spent there ought to be directed into other channels which would yield in future more practical results.

Mr. BRIGGS. Will the gentleman yield?

Mr. ANDERSON. I will.

Mr. BRIGGS. I want to ask if the gentleman thinks this work will be as well done by the combined Bureau of Markets and Crops as it is now?

Mr. ANDERSON. The work done by the two bureaus is substantially the same, and it is likely that we will save some overhead by correlating the work—by putting the two bureaus into one.

Mr. BRIGGS. Without any reduction in the efficiency?

Mr. ANDERSON. Yes; I think with an increase of efficiency.

Mr. RUBEY. Mr. Chairman [applause], I would like to be notified when I have consumed 20 minutes. Gentlemen of the House, it would seem unnecessary to consume time in the discussion of agriculture. Its importance is conceded by all. It is well known to you and to everyone else that every industry in the land is dependent entirely upon agriculture for its own success.

Neither should it be necessary to take up at any very great length the critical conditions that agriculture faces at the present time, and which it has faced, as you all well know, for many, many months. The newspapers of the country are filled with articles as to the critical condition of agriculture and the enormous losses that have come to American farmers within the last few months.

Getting back to "normalcy," to use a recently coined word, has been very expensive to the farmers of America. Wheat and corn and cotton and other products were planted when seed and labor were higher than ever known before. When the wheat was harvested and the corn and cotton were being cultivated labor was still high. During all this time the people of the cities and in the congested centers were clamoring for a reduction in the high cost of living. The reduction came and it hit the farmers long before it did any other industry. The bottom dropped out of the prices of agricultural products. What was true of grain and cotton was also equally true of cattle. Feeders were bought when they were high. They were fed on high-priced corn and when taken to market were sold at enormous losses. Many cattlemen were bankrupt. The drop in the prices of farm products came long before there was any reduction in the prices of machinery and other necessaries that the farmers had to buy.

Mr. Chairman, coming right along with these critical and almost unbearable conditions, which are putting the farmers out of business and threatening the very life of this, the basic industry of our country, came the increases in freight rates. These increases are the direct result of the railroad legislation enacted during the last session of Congress, and which I am glad to say I voted against.

These enormous increases in freight rates, effective throughout the country, are doubly injurious to the farmer because he has to pay the freight on everything he sells and he has to pay the freight on everything he buys. I could cite many instances where commodities shipped in carload lots from the great Southwest to the central markets were sold for little more than enough to pay the freight. In some instances the freight charges were more than the commodity brought. You can not go into a gathering of any kind where public questions are discussed without finding agriculture and agricultural conditions forming a large part of the program. Just a few evenings ago I went down to the New Willard Hotel to attend a meeting of the Mississippi Valley Association. That is an association of gentlemen from the 27 Mississippi Valley States, representing, I may say, the greatest valley in all the world. They came here to urge certain important legislation for the benefit of the valley and the country at large. As I looked over the little pamphlet which I received enumerating the activities in which they were interested, the thing that caught my eye were the words in big

black letters, "Adequate appropriations for the United States Department of Agriculture." These representatives of the Mississippi Valley were calling the attention of Congress to this as one particular thing in which they were greatly interested.

There is another thing which I desire to discuss briefly that my friend from Minnesota [Mr. ANDERSON] has touched upon. He has called your attention to the necessity of increased production in this country. He has cited the per acre production in the United States of wheat, a little more than 13 bushels, and the per acre production in Germany prior to the war, 29 bushels per acre. This large per acre production in Germany is due to their method of intensive farming. In America, where extensive farming prevails, we have the largest per man yield of any country in the world. Certainly there is room for greatly increased production in our own country by improved methods, the use of machinery, fertilization, rotation of crops, and the utilization of millions of acres of uncultivated lands. While the amount per acre can be greatly increased, I am sure no one will advocate that the intensive methods of Germany shall ever be applied in America. Large estates and extensive ranches may well be divided into smaller farms and every encouragement given to the tiller of the soil to become the owner of the land he cultivates. The broad-minded typical American farmer will never consent to be cooped up on a few acres and compelled to follow the intensive farming methods of Germany and other nations in both Europe and Asia.

We are told by those who have investigated and gone into the matter that the increase in production has not kept pace with the increase in population and that unless production is materially increased within the period of 20 years this great country of ours will be importing its foodstuffs. When we take into consideration the fact that there are now a number of articles that we must import, such as sugar, coffee, tea, spices, and the tropical fruits, we are really now importing more foodstuffs than we export. God forbid that the time should ever come when America will be compelled to import her corn, wheat, and other staple agricultural products. [Applause.]

In view of all of these things, it is the duty of the Government, acting through its Congress, to do everything it possibly can for the advancement of agriculture.

In passing this appropriation bill you have an opportunity to enact legislation which will encourage and help the farmers of America. Items in this bill are sometimes opposed by those who represent city districts on the ground that we are enacting special legislation in the interest of the farmer. We are not legislating here for the farmers of America, we are going further than that, we are legislating for all the people. I remember once reading in Owen Meredith's poem, entitled "Lucile":

> We may live without poetry, music, and art;
> We may live without conscience, and live without heart;
> We may live without friends; we may live without books;
> But civilized men can not live without cooks.

There may be something in the poet's philosophy, but of one thing I am quite certain, and that is cooks can not cook without food. Food is the all important thing. When we enact measures that will enable the farmers to give us a greater supply of food we are helping all the people of America from one end of it to the other. Incidentally the farmers receive assistance of course, but the main thing is to enable them to increase food production and make this a country which can sustain itself and have a surplus to send abroad.

Not only is there an increase in population and the lack of a corresponding increase in production, there is also a drift of population from the agricultural communities to the cities. The Census Bureau has a very peculiar way of figuring. They figure that everybody who lives in a city of 2,500 people or less lives in an agricultural community. Consequently when they give the ratio of those who reside in agricultural districts compared with those who live in the cities, they make about a 50-50 division. But we should take into consideration the fact that the people who live in these smaller cities, towns, and villages are not engaged in agriculture, and when we do that we will find that only about one-third of the American people live on the farms. One-third of the people must raise the foodstuffs necessary to supply themselves and the two-thirds who live in the cities, the towns, and the villages.

Mr. SUMNERS of Texas. Mr. Chairman, will the gentleman yield?

Mr. RUBEY. Yes; I will gladly yield to my friend from Texas.

Mr. SUMNERS of Texas. The gentleman speaks of the drift of the population and the decrease of production. Does he not think that if we are going to keep the people on the farms it is not so much a question of how much they raise but what they get for it.

Mr. RUBEY. That is absolutely true, and they are leaving the farm and going to cities, because they can make more money there than they can on the farm. We are living in a time when money counts, and if you are to keep the boys on the farm, farming must be made profitable. You can talk about better schools and better roads and churches and all that sort of thing, they are not going to stay for those things alone. They are not going to stay unless they can make as much money on the farm as they can when they go to the cities.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

Mr. RUBEY. Yes; I yield.

Mr. McKENZIE. I appreciate there is a great deal of force in what the gentleman is saying, but is it not a fact that the greater the number of people who live in the city, the greater the market is for the farmer, for the produce that he raises, and to that extent is it not a benefit to the farmer?

Mr. RUBEY. It is a benefit to the farmer to have as extensive a market as he can possibly have, but the difficulty lies in the facilities which he lacks for getting the stuff to market, the high freight rates, and so forth.

Mr. SUMNERS of Texas. Is it not a fact that the cities are increasing faster than the country, and is not that conclusive evidence that the city is the best center for financial opportunity? Is not that increase of the city a bad thing from the standpoint of sound national policy?

Mr. RUBEY. The gentleman is correct.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. RUBEY. I yield to the gentleman from Texas.

Mr. BLANTON. In reply to our good friend from Illinois [Mr. McKENZIE] I want to say that it is the continual clamor of these two-thirds of the population who live in the cities for the farmers' products at the very least possible price that is running the farmer off the farm. It is this clamor of the city consumer that has held up the tariff bill in the other end of the Capitol, by which we sought to give some relief to the farmer.

Mr. RUBEY. Mr. Chairman, the gentleman is correct. I agree with him; but I can not yield any further; I want to discuss a few things connected with this bill.

Mr. LAZARO. Mr. Chairman, before the gentleman proceeds, will he not yield to me for a question?

Mr. RUBEY. I yield to the gentleman.

Mr. LAZARO. Will the gentleman give us his views on the transportation relative to this matter of production and prices to the city people?

Mr. RUBEY. Mr. Chairman, I will say to my friend from Louisiana that I can not go into the details of the question of transportation. I have already touched upon some features of it. The question of transportation is one of the biggest problems we have in the United States to-day. There are many other gentlemen on this side to whom I have promised time, and I must not consume too much myself.

Mr. LAZARO. Does the gentleman think that the farmers will ever get the prices to which they are entitled until we have better transportation facilities?

Mr. RUBEY. Certainly not. Only a few days ago, before the Committee on Agriculture, a gentleman testifying there called attention to the fact that wheat shipped from Colorado to Galveston, Tex., was carrying a freight rate of 60 cents per bushel.

Mr. McLAUGHLIN of Michigan. It was 60 cents a hundred pounds.

Mr. CANDLER. The witness corrected that. It was 60 cents a hundred pounds.

Mr. RUBEY. I thought if that were true it was certainly bad for the wheat raisers of Colorado.

Mr. McLAUGHLIN of Michigan. The statement was made by the witness just as the gentleman from Missouri quoted it, but it has been corrected by the gentleman since that time.

Mr. RUBEY. I am very glad that it has been corrected, but 60 cents a hundred is 36 cents a bushel, and that is too much. I want now to take up the appropriation bill itself. The gentleman from Minnesota [Mr. ANDERSON] has explained it to you and has gone somewhat into detail, but he comes to you with explanations as to how the committee has been able to keep the appropriations down to the present figures. I want to say to you that I am proud that the appropriations have been increased to their present figures, and I only wish that the increases could have been made even greater. [Applause.]

I want to take this opportunity to compliment the gentleman from Minnesota [Mr. ANDERSON] for the excellent work he has done in the preparation of this bill. As chairman of the subcommittee that had this appropriation bill in charge he has held as extensive hearings and has made as thorough investigations as it has been possible to make in the limited time of a

short session of Congress. I also commend the good work and hearty cooperation given him by the gentleman from New York [Mr. MAGEE], the gentleman from New Hampshire [Mr. WASON], and the gentleman from South Carolina [Mr. BYRNES]. It has been a great pleasure to me to serve with these gentlemen upon a subcommittee having in hand matters of such vital importance to the American people.

The bill which we present to you to-day carries the largest appropriation—$33,517,459—of any bill ever reported to this House for the work of the Department of Agriculture. I wish that it could have been larger. You know that I have stood for liberal appropriations for the department ever since I first became a Member of this body. I have always taken the position that when Congress took money from the Treasury and put it into an Agricultural bill to be spent for the advancement of that great industry that it was making an investment that would bring returns to the people increased a hundred, yes, sometimes a thousand fold.

This bill is an increase over the present appropriation under which the Agricultural Department is now working, as stated by the gentleman from Minnesota [Mr. ANDERSON], of $1,875,495. It is an increase in round numbers over the bill reported by the Agricultural Committee at the last session of Congress of $3,000,000. The work of the department is provided for in 153 lump-sum appropriations. Of these 153 items in this bill, 44 have been increased, 22 have been decreased, and 87 remain the same as in the last appropriation act. It has been my pleasure to serve upon the Committee on Agriculture for the past 10 years. I have seen the department grow, I have seen the appropriations increased from year to year. For the year 1912 there was appropriated by the Congress $16,900,016. The next year we appropriated $16,651,496. In 1914 we had an appropriation of $17,986,945. In 1915, $19,865,832. In 1916 we increased the amount to $22,971,852, in 1918 to $25,929,173, in 1919 to $27,875,352, and in 1920 to $33,899,761. For 1921 it was $31,712,784, a decrease of $2,186,977 over the preceding year, and in this bill we have reported $33,517,459. If the Senate does as it has done in the past and adds two or three million dollars, the bill, when it finally becomes a law, will provide the largest appropriation for the Department of Agriculture in the history of the country.

The CHAIRMAN. Complying with the request of the gentleman, the Chair desires to notify him that he has consumed 20 minutes.

Mr. RUBEY. I will take 10 additional minutes.

Mr. JOHNSON of Mississippi. Will the gentleman yield?

Mr. RUBEY. I will.

Mr. JOHNSON of Mississippi. What is the purpose of the bill in leaving out the garden-seed appropriation?

Mr. RUBEY. I prefer that the gentleman take that up under the five-minute rule. We will have plenty of time then to discuss that proposition, if it will suit the gentleman just as well.

Mr. JOHNSON of Mississippi. Very well.

Mr. MOORE of Virginia. Will the gentleman yield for one question?

Mr. RUBEY. I yield to the gentleman from Virginia.

Mr. MOORE of Virginia. In the opinion of the gentleman, is there any present important or urgent need in the Agricultural Department that this bill fails to take care of reasonably?

Mr. RUBEY. There are several items in the bill that I think, by all means, ought to have been increased. I consider the work of eradicating tuberculosis in cattle the most important activity now being prosecuted by the department. It is important because it will result in the saving of millions to the live-stock industry of the country. More important, however, than the mere saving of dollars is the fact that the eradication of tuberculosis in cattle will eliminate one of the principal sources of that dread disease in the human family. Gentlemen came before our committee from various sections of the country urging the importance of this work and asking an appropriation of $3,000,000. I would like to have seen that amount reported. The committee, however, decided that the sum first estimated for by the department, $2,000,000, was all that we ought to recommend under the present condition of our finances. There are some other items I should like to have seen increased, but you know and everyone else knows that these things must be adjusted largely as the result of compromise. We are reporting a good bill. As I said before, it is the best bill that has ever been reported, and we are unanimously urging this House to pass it.

Mr. HARDY of Texas. Will the gentleman yield for a suggestion?

Mr. RUBEY. I will.

Mr. HARDY of Texas. When I first came here we spent about $10,000,000 on the Agricultural Department, but the values of money were higher in comparison to products than now.

Mr. RUBEY. That is true.

Mr. HARDY of Texas. It is about 1 per cent of the total expenditures, and I think that the gentleman will find that the bill to-day is not as large a per cent, although larger in dollars and cents, not as large a per cent of the total expenditure as it was then, and especially it is not nearly so large a per cent of the expenditure as in 1914.

Mr. RUBEY. What the gentleman from Texas [Mr. HARDY] says is absolutely true. The Department of Agriculture is not receiving as large a per cent of the total amount expended for the Government as it did some years ago when he first came to Congress. The total expenditures of the Government then were something less than $1,000,000,000, and there was appropriated for the Agricultural Department a little more than 1 per cent of that sum. In 1912 there was appropriated for agriculture a little over 1½ per cent of the total amount appropriated for the Government. This year the total expenditures will exceed four billion and agriculture will get only about one-third of 1 per cent of that amount; especially is that true when we take into consideration that less than $20,000,000 of the appropriation in this bill is for the direct benefit of agriculture. A very large part of it is for the enforcement of regulatory acts—the food and drugs act, grain grade act, meat inspection, and so forth.

Mr. Chairman, we are never going to get an equitable proportion of governmental expenditures set aside for the promotion of agriculture until we decrease the enormous expenditures for armaments. For the fiscal year 1921, which began more than 19 months after the signing of the armistice, Congress appropriated $392,558,365 for the Army and $433,279,574 for the Navy, a total of $825,837,939. This was more than the entire governmental expenditures 15 years ago. I repeat, the expenses of armaments must be reduced.

But, Mr. Chairman, to return to the consideration of matters pertaining to the pending bill, I want to discuss briefly the causes which have led to a gradual increase from year to year in the appropriations for the Department of Agriculture since 1912. These increases have come about, to some extent at least, by reason of the enactment by the Congress of great constructive measures for the benefit of agriculture. We passed the Lever Cooperative Agricultural Extension Act, the grain grades act, the cotton futures act, the warehouse act, and many other measures. All these have conferred upon the department new duties and increased work. The Congress has created new bureaus and greatly enlarged the work of others.

In 1912 not a dollar was appropriated for the marketing of farm products. Up to 1913 the work of the department had been devoted to the great work of production and practically nothing had been done to aid in the equally important work of distribution. In 1913 the Senate passed a bill providing for the establishment of a Bureau of Markets. That bill was referred to the House Committee on Agriculture, was considered by that committee, and was ordered reported favorably. It fell to my lot to make the report, and I had the honor of reporting to the House of Representatives the first measure ever reported to it providing for a Bureau of Markets. That being a short session of Congress, and fearing that the Senate bill would not be reached, Mr. Lever, of South Carolina, who afterwards served with such distinction as chairman, and myself prepared and submitted to the committee the following provision and asked that it be put into the annual appropriation bill:

> To enable the Secretary of Agriculture to acquire and to diffuse among the people of the United States useful information on subjects connected with the marketing and distributing of farm products, and for the employment of persons and means necessary in the city of Washington and elsewhere, there is hereby appropriated the sum of $50,000, of which sum $10,000 shall be immediately available.

This provision was agreed to by the committee, reported to the House, accepted by it, and became a part of the appropriation bill approved March 4, 1913. In 1914 the Office of Markets was created and the appropriation increased to $200,000. In 1915 it was made Office of Markets and Rural Organization, with an appropriation of $484,050. In 1917 it became the Bureau of Markets and carried an appropriation of $1,718,575. In this bill it is proposed to combine this bureau with that of Crop Estimates and the total appropriation asked for is $2,939,444. This is, in brief, a history of the beginning and the development of the Bureau of Markets, which is conceded by all to be one of the largest and most important in the Department of Agriculture.

Mr. Chairman, in 1912 not a dollar was appropriated out of the Treasury of the United States for the eradication of tuberculosis in cattle. Now we are asking in this bill for $2,000,000, and the amount, in my opinion, should be $3,000,000. Let me say, however, in this connection, that it was not until December, 1917, that the present method, now in use and approved by the United States Department of Agriculture, had been discovered by which this dread disease in live stock could be controlled and eradicated. For a number of years the department had been making investigations and tests of methods of control. In 1917 the method now being used was worked out by the department and submitted for investigation to the National Live Stock Breeders' Association at its annual meeting in Chicago. A committee of five was appointed by this association to act with a like number from the live-stock sanitary board. This plan of eradication was thoroughly investigated and approved by this joint committee of 10. In 1918, when the Secretary of Agriculture submitted his estimates to Congress, this plan of eradication was included and Congress appropriated $500,000, which was carried in the act approved October 1, 1918.

In 1912 not a dollar was appropriated for the eradication of hog cholera. As early as 1906 a serum had been discovered by scientists in the department which, it was thought, would prevent and control this disease, but no appropriation had ever been made to try it out on an extensive scale. In 1913 Mr. Sloan, of Nebraska, myself, and other members of the Committee on Agriculture secured the insertion in the appropriation bill of a provision setting aside $75,000 "for demonstrating the best method of preventing and eradicating hog cholera." This sum was appropriated by Congress, the serum was given a thorough test on an extensive scale, and its efficiency proved beyond doubt. From this small beginning this work has grown until the Government to-day, in cooperation with the States, is saving to the hog raisers of the country more than $40,000,000 annually. The work now being done in the eradication of tuberculosis and hog cholera is saving to the live-stock industry of America nearly $100,000,000 every year, or about three times as much as we are appropriating in this bill for the whole agricultural industry.

In 1912 we appropriated less than $500,000 for agricultural cooperative extension work. In 1916 the Lever agricultural extension act was passed, and since that time the work has been greatly increased. In this bill we are giving to the Department of Agriculture for this purpose $2,950,000. If we add to this amount the permanent appropriation which comes from the Lever extension law it brings the sum up to $6,530,000 that will be spent by the Government for agricultural extension work. This is a great work, considered by many to be the most important and bringing the best results of any work now being done for the advancement of agriculture.

But, gentlemen of the committee, I must not take more time. There are many others who want to be heard, and under the division of time I have only two hours. There are some gentlemen on this side of the House, members of the Committee on Agriculture, who will retire from Congress on March 4—some of them voluntary and some involuntary. [Laughter.] The gentleman from Minnesota [Mr. ANDERSON], in charge of the time on his side, realizing the peculiar, and I may say unusual, conditions that confront us, and realizing, too, that those on his side of the House will be here for two more years, has very kindly offered to yield me 30 minutes of his time, and I thank him for it.

In conclusion, permit me to say that after the 4th of March we are to have a new administration and a new Secretary of Agriculture. During my service of 10 years in this House there have been three Secretaries of Agriculture—Hon. James Wilson, from the State of Iowa; Hon. David F. Houston, now Secretary of the Treasury, who comes from my own State, Missouri; and Hon. Edwin T. Meredith, of Iowa, the present able and efficient Secretary. As a member of the Committee on Agriculture I have been somewhat intimately associated with these gentlemen and have had opportunity to observe their work and their activities in behalf of agriculture. Each one of them has served his country faithfully and well. I trust that the new Secretary, whoever he may be, will measure up to the high standard set by his predecessors. I bid him Godspeed. [Applause.]

The work of the great Department of Agriculture was never more efficiently conducted than it is to-day. When the new Secretary arrives upon the scene of action to begin the performance of his important duties he will find the department equipped with able bureau chiefs, thorough scientists, and competent men and women in every department, all devoted to their work and ready to cooperate with him.

Mr. Chairman, as I have already intimated and as you all know, I shall leave you on March 4. It has been my endeavor in assisting in the preparation of this bill to present to the House one that liberally provides for every activity of the department. I hope that the House will approve the bill and give to the new administration every opportunity to continue unabated the most excellent work now being done in behalf of the agricultural interests of America.

Mr. Chairman, I reserve the balance of my time. [Applause.]

Mr. ANDERSON. Mr. Chairman, I could wish that the gentleman himself was going to use the time for a different purpose, but I am very glad to yield to him an additional 30 minutes of my time.

Mr. RUBEY. Mr. Chairman, I yield 20 minutes to the gentleman from South Carolina [Mr. BYRNES].

Mr. BYRNES of South Carolina. Mr. Chairman, I know the membership of the House regrets exceedingly to hear the gentleman from Missouri [Mr. RUBEY] refer to the fact that after the 4th of March he will not be with us. That statement causes me to make a personal reference to the membership of the subcommittee that framed this bill.

I have never served on the Committee on Agriculture. And I rejoice that, as a result of the new rule, the House saw fit through its proper committees to assign to the Appropriations Committee the gentleman from Minnesota [Mr. ANDERSON] and the gentleman from Missouri [Mr. RUBEY]. Sometimes I have flattered myself that I was fond of work, and I am free to confess that the gentleman from Minnesota [Mr. ANDERSON] has given me ample opportunity to indulge in that pleasure, for from the 20th of December until two or three days ago I sat with him every day from 10 a. m. until 6 p. m., with the exception of Christmas Day and New Year's Day and the intervening Sundays. I know that he has given a courteous and patient hearing to every official of the department and to every person outside of the department who desired to appear as to any item in this bill. And I may say the same of the gentleman from Missouri [Mr. RUBEY]. He came here in the Sixty-second Congress, when I first came. During his service he has been one of my most intimate personal friends, and I know that this is true, that while he has consumed little time on the floor of the House in debating measures other than those relating to agricultural interests, that whenever we have had pending any measure affecting the agricultural interests of the country the gentleman from Missouri has been active in advocating it. Instead of consuming time on the floor in debate that gave greater opportunity for display, he has used his time in the tedious, grinding work of the committee, which is in most cases a thankless job, but which gives greater opportunity for real service, in my humble opinion. And I know that the House joins with me in regretting that on March 4 he will leave us.

Mr. CARAWAY. Temporarily.

Mr. BYRNES of South Carolina. I think the gentleman from Arkansas is correct in that the gentleman from Missouri will leave us but temporarily, and I hope that he will return, not only because we are fond of him personally but because in his temporary departure the House will lose one of its most efficient Members. [Applause.]

Mr. Chairman, as to this bill, the report states that the estimates have been reduced $19,000,000. Upon its face that would create the impression that the department has been asking for appropriations that were useless. But without attempting to analyze it in detail, I desire to call the attention of the House to this fact, that in this apparent reduction in the estimates of $19,000,000, $9,000,000 is due to the fact that the department submitted a supplemental estimate to carry out the provisions of what is known as the Weeks law, authorizing the purchase of forest lands in this country. The department submitted that estimate because the Congress had not determined—and the Congress ought to determine—what policy it will pursue in the expenditure of money under the Weeks law, whether we shall spend $2,000,000, $5,000,000, or $8,000,000 per year.

Another reduction of $1,000,000 is due again to the Forest Service, where an estimate was made, for the purpose of cooperating with the States for the protection of our forests, and the bill carries but $125,000, the same amount carried in the current law. Still another reduction of $875,000 is made in the Forest Service estimates for the improvement of the forest reserves of the country.

So if we get down to the activities of the Department of Agriculture other than the Forest Service, the reduction in the estimates does not amount to more than about $800,000, and that reduction occurs in such ways as follows: A considerable amount is reduced from the estimate for the Office of Public Roads, but it is provided for by an authority to use a certain

per cent of the Federal aid fund, so that the money will be spent, even though there is a reduction in the estimate. There is a reduction of $1,000,000 in the guaranty fund, which the department has always had until the current law to protect the animal industry of the country against such epidemics as the foot-and-mouth disease. The department asked for $1,000,000, not with any idea that it would be spent, because they hope that it would not be spent, but that it would serve as an insurance fund. Once such an epidemic starts, experience has demonstrated it is too late to stop it, if Congress is not in session. The committee has not granted that appropriation, because the committee thought that the department had available for this purpose about $450,000, and that Congress would be in session for the greater part of the next fiscal year, and if they had to retrench they might safely reduce this estimate by a million dollars.

But these few items that I have called attention to only serve to show that the department has not been engaging in the practice of submitting useless and needless estimates. The truth is as to the other estimates not granted, with the exception of a very few, this subcommittee is of the opinion that they were asked for meritorious purposes, and they have denied them only because they knew that the majority party in the House had determined upon a policy of economy which demanded that this bill should not be brought in with any great increase in the appropriations.

The increased appropriation to the extent of $850,000 for the ordinary purposes of the Agricultural Department has been apportioned among those objects deemed most essential by us; and may I say I have been interested—unusually interested—in the statements made by the chiefs of the various bureaus of this department showing the practical value of the work being done by them. I have come to the conclusion that notwithstanding that some men scoff at the work of the scientists of this department, that the money appropriated in this bill is really the best investment that is made by the Congress of the United States. [Applause.]

Men may at times question the practical value of the research work of that department. I have questioned it myself in the past, and because of that fact, as I became interested, I made notations of the activities of the department which showed a practical result, tangible things to which a man could point. I noted that in the Southwest section of this country, by reason of the activities of the Department of Agriculture, they had introduced a long-staple cotton, especially in Arizona, and as a result of that activity they have developed a long-staple cotton industry amounting, in 1919, to $20,000,000. In the same section of the country they have imported the date tree from Algeria, and as a result of this activity of the department a new industry has been started in America. Those trees are producing dates. I have tasted them, and can testify to their excellence. The officials of the department say that these dates produced in America are unquestionably superior to any of the imported dates.

In the Northwest, on semiarid lands for years unproductive, by reason of the activities of these scientists who have at times been scoffed at, durum wheat has become a crop producing millions of bushels a year.

On the South Atlantic coast they are endeavoring to induce the Sea Island cotton planters to plant a variety of cotton known as the Meade as a substitute for the old sea-island cotton. It is able to withstand the attacks of the boll weevil to a greater extent than any other variety of seed of that kind, and it promises a revival of an important industry in this country.

They have introduced into this country the Smyrna fig industry. They have shown that in California from cull oranges and lemons they could produce marmalades in the case of oranges, and in the case of lemons, citric acid in amounts valued at millions of dollars. From the old corncob they have produced an adhesive which has developed an industry worth thousands of dollars. And then in the way of protecting existing crops——

Mr. BLACK. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. BLACK. Right there, before the gentleman leaves that subject, I want to bear testimony to the excellent work done in the cotton industry, a work which I have actually observed in my section of Texas. In Mr. RAYBURN'S district, for instance, the department has a seed-breeding station in which has been developed the Lone Star cotton, that is considered the best short-staple cotton in the country, being about an inch and one-eighth, and it is now in demand by European spinners and spinners all over this country; and I may say it has added a good many millions of dollars to the value of the cotton crop, and I know that was developed under the direction of the experts from the Department of Agriculture.

Mr. BYRNES of South Carolina. The representatives of the bureau referred to the Lone Star cotton seed, which was introduced into the State of Texas as a result of the activities of these scientists. On the other hand, in the control of insects menacing plant life, can anyone doubt the effective work of the department with respect to the wheat rust, and in the South, in the States of Florida and Louisiana, the citrus canker? I remember a few years ago Members on the floor of the House were frightened by the destruction of the citrus canker, and the representatives of the department informed the committee this year that they were glad to be able to report that they knew of only one case of citrus canker in all Florida this year, and that great industry which was threatened with destruction is once more thriving. I might also refer to the cattle tick of the South, the corn-borer of New England, the gypsy moth, the pink bollworm in Texas. Hundreds of thousands of dollars are being appropriated by this bill for boll-weevil work as well as for work for the extermination of other pests, and in connection with the boll-weevil work the development of calcium arsenic as a means of destroying the boll weevil accomplishes greater results than ever before, and this bill carries an increased appropriation for that work.

Mr. WHITE of Kansas. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. I regret I can not yield now.

The CHAIRMAN. The gentleman declines to yield.

Mr. BYRNES of South Carolina. The loss from hog cholera has been reduced 60 per cent since 1913 by the use of serum recommended by the department, and by its use $40,000,000 a year is saved. These things are tangible things that we can see where practical results have been obtained through the activities of this department.

My friend from Missouri has referred to the excellent work being done to stamp out tuberculosis in cattle. A man might talk endlessly of the work of other bureaus; for instance, the Bureau of Chemistry. I divert for a moment to say that in the Bureau of Chemistry they have discovered that by a certain process they can manufacture from sweet potatoes a sirup as palatable as cane sirup, which they are satisfied can be sold commercially for less money, and as the result of a very small appropriation which is carried in this bill they hope to induce private enterprise during the next year to embark upon that work. This bureau is engaged in research work covering many subjects and promising practical results.

Then, take the Bureau of Markets. For a long time we devoted all of our attention to the encouragement of plant industry and little time or money to the development of improved marketing methods. Now we are devoting more attention to this latter subject, and the work of this new bureau has already resulted in improving our marketing methods. To-day the producer of fruits and vegetables in this country can call upon a representative of the Bureau of Markets when he ships his produce to New York, Boston, or any other of the great markets to secure a certificate as to the condition of that produce when it arrives at the market, and that certificate is made prima facie evidence in the courts as to the condition of the produce when it does arrive. While he pays a nominal sum for the inspection service, it certainly is a service of inestimable value to him. The bureau also maintains a telegraphic service giving him information as to the condition of the various markets on the preceding day, the prices quoted, and, in addition, information as to the produce in transit for the several markets. This service is furnished to consumer or producer.

Mr. GARNER. Will the gentleman yield?

Mr. BYRNES of South Carolina. I am sorry I can not, because I have declined to yield to other gentlemen.

Now, I want to say this to the House: It is undoubtedly true that many of the men who are spending their lives in this work in the Department of Agriculture, especially in scientific work, could leave the department and in private industry receive greater compensation for their services than they are now receiving. During the war, while other departments of the Government were paying larger salaries to their employees, the Department of Agriculture did not benefit by these increases. Yet these men have remained at their posts, devoting their lives to their work because they believed they could render greater service while in the employment of the Government of the United States. I regret now that they can not receive an increase in their compensation; but I think I understand the position of these gentlemen, and if they can not receive additional compensation they at least entertain the hope that the people of the United States appreciate the work they are doing

for the country, and they hope that the Congress, representing the people, will show some appreciation of their service by furnishing ample funds to enable them to continue the activities in which they are engaged. [Applause.]

I yield back the remainder of my time.

The CHAIRMAN. The gentleman yields back two minutes.

Mr. ANDERSON. I yield to the gentleman from North Dakota [Mr. YOUNG] such time as he requires.

Mr. YOUNG of North Dakota. Mr. Chairman, I wish to thank you for the $25,000 additional which you have included in this bill for investigations of insects affecting cereal and forage crops, which, I assume, is for a special investigation of the grasshopper. If that is not clear, the bill should be amended to make it clear, and I think the amount should be increased.

The grasshopper, as an enemy of the farmer, does not seem to be appreciated. Other insect enemies less destructive draw larger appropriations. When this item is reached I shall move to increase the appropriation, and it is to be hoped the committee will not resist or oppose it. Many farmers have been ruined by grasshoppers. The Government should move in this matter.

Mr. Chairman, another item in this bill—for the eradication of the barberry—is very important and should be increased. The first thing to understand about the eradication of the barberry is that it can not be done in one season. It will require several years. Some have fallen into the mistaken notion that it could be done quickly. It is a very difficult task. One organized search for the bushes will not locate all of them, although it is very desirable that a search should be made general throughout all the wheat States and the work of eradication pushed as vigorously as possible. For instance, I have here a map of North Dakota showing the number of barberry bushes pulled by men sent out by the State government. Then there is shown the number of bushes pulled in a later search made by men employed by the Department of Agriculture. The latter found 256 bushes in Pembina County, 328 in Walsh County, 141 in Grand Forks County, 224 in Traill County, and so forth.

Mr. Chairman, many of the grain growers of the Northwest are of the opinion that it would be much more desirable to appropriate a considerable amount of money for the support of the barberry eradication campaign for two or three years than to grant a smaller appropriation for a longer period of years. The appropriation for the last fiscal year was $147,500. It would be desirable to double this amount.

The losses due to black-stem rust were:

In 1916, 180,000,000 bushels of wheat in the United States.
In 1919, 75,000,000 bushels.
In 1920, at least 75,000,000 bushels. Final figures are not yet available.

To these losses must be added the destruction of oats, barley, and rye. It is rather difficult to get accurate estimates on the total destruction of these grains.

The number of barberry bushes located to date are as follows:

Total number of bushes located in 13 States in barberry eradication area	4,732,000
Approximate number of wild bushes (escaped from cultivation)	3,239,000
Approximate number of bushes destroyed	4,000,000

A bush is not necessarily destroyed when it is considered to have been destroyed. It is necessary, therefore, to revisit places where barberry bushes were found in order to make sure that the bushes have not again sprouted.

The number of bushes in rural districts is extremely significant. I have here photographs which give some idea of the problems confronting barberry eradication in rural districts. I have also maps of North Dakota, South Dakota, Nebraska, and Minnesota, showing the number of barberry bushes located in the country and the number located in towns. In a great many cases the total number located in the country districts far exceeds the number in towns. This makes the survey work doubly difficult, and it also increases the danger of the barberry bush to growing crops. The maps were prepared by Prof. E. C. Stakman, of the School of Agriculture of Minnesota.

Map 1 shows the counties in which barberry bushes are known to have escaped from cultivation. In some counties there are thousands of escaped barberry bushes. For instance, in Goodhue County, Minn., there are over 10,000 wild barberry bushes. Wheat growing has been practically discontinued in this county.

Barberry eradication has become increasingly difficult on account of the fact that it was not anticipated originally that there were so many bushes in rural districts. Furthermore, it was not suspected that wild bushes were so numerous. The two maps of Minnesota, one for 1918 and the other for 1919, show very clearly that the problem of barberry eradication is much more serious than was at first supposed.

In 1918 barberry bushes were found almost entirely in towns. In 1919, however, when it was possible to get into the country districts it was found that there were more bushes on farms than in cities and villages, so it was claimed by Prof. Stakman. This makes it imperative to conduct a farm-to-farm survey. A farm-to-farm survey is expensive and requires time. It is highly desirable, therefore, that increased funds become available.

The outstanding advantage of an increased appropriation would be that it would be possible to do the work much more quickly. Under present circumstances, while one section is being surveyed intensively barberry bushes are escaping from cultivation in other sections. If the work could be intensified, the total cost would be less, since the barberry bushes which are now escaping would not have the opportunity to spread. It is very desirable that a determined effort be made to clean up a large area and free it entirely from barberry bushes. In order that this may be done a farm-to-farm survey is absolutely essential. In order that a farm-to-farm survey can be made, more money is necessary. The appropriation of $147,500 should be increased to $300,000, in the opinion of Prof. Stakman.

Dean H. L. Bolley, of the North Dakota Agricultural College, thinks the appropriation should be increased to $500,000. He says in a letter to me:

> You remember that in the past I have been deeply interested in the work of barberry eradication, looking toward control of black stem rust of wheat. I know your deep interest in this matter, and also that many of your colleagues from the wheat regions are much interested in this particular work.
>
> * * * * * * *
>
> The work of eradication to date is but nicely started, yet one already sees news notes and reports that it has failed. The work must be pushed or it will fail. Kicks may grow chronic, etc. It has, however, gone far enough so that no worker who is closely associated with the results can question at all but that the barberry bush is an extremely destructive agent in any neighborhood where wheat or other cereals are grown. * * *
>
> We of the wheat areas believe that not all has been done for wheat to aid in the control of its destructive diseases that might be done. You will pardon me, therefore, in reminding you at this time that it is my belief that the people of this State and of all the wheat-producing States will appreciate if the Congress sees fit to increase that appropriation so that the work may be pushed with sufficient speed to allow the people to see some results before another great epidemic year comes along. Why not $500,000?
>
> At the rate the survey work is now being pushed in the 13 States with which the Department of Agriculture is cooperating they will not have covered the territory in this State inside of four years. To date I am informed that Minnesota has surveyed for the bushes in only the towns of large population and that this is largely true in most of the other States concerned. In North Dakota we are fortunate in having visited every farm in most of the counties of the first congressional district, namely, the Red River Valley, and the observers see clearly in this territory that the attack of the rust this year and last year was always directly to be located as centered around certain local bushes that had escaped the first surveys or clearly came in over the boundary from Minnesota, South Dakota, or Manitoba. Heavy plantings are often found in the farmyards and gardens, showing that until all the farmsteads have been surveyed and the bushes destroyed the work as yet done will prove a loss. Every bush destroyed has lessened the chance of starting the rust epidemics. The attack in this State last year clearly shows the local influence of the absence or presence of local bushes. Let the work go to a finish.
>
> * * * * * * *
>
> When so many millions of dollars are placed to the fight of insects, such as the cotton boll weevil, do you not think that this small appropriation of $150,000 for the control of wheat rust, a pest which not only destroys wheat, but oats, barley, and other cereals, ought to be raised to basis where you and other citizens would have a right to demand speedy action on the part of those conducting surveys and eradication of the bushes?

Mr. RUBEY. I yield 30 minutes to the gentleman from Texas [Mr. YOUNG].

Mr. YOUNG of Texas. Mr. Chairman and gentlemen of the committee, to my mind there is no subject that should be of more interest to the Congress of the United States at this particular time than the subject of agriculture and the problems that confront it. Probably in the entire history of our Nation there never has been a more chaotic condition, from one end of the country to the other, than that prevailing in the various sections of the United States at this very moment. Agriculture is the stabilizing hope in time of peace, and the first line of defense in time of war. It is now on trial as to what its future may be.

To my mind our country has lost its sense of proportion, as have also the other countries of the world. We do not hesitate here on the floor of this House to appropriate $600,000,000 and more in order to increase and enlarge our Navy. We do not hesitate as a Congress to appropriate $300,000,000 and more for our Army. These two enormous appropriations are made for the purpose of destroying human beings. The whole world in recent years has proceeded on the same theory, and the na-

tions have loosed their purse strings to develop methods of destruction, overlooking the fact that the building-up capacity and the power of the Nation rests fundamentally on the farms of the Nation.

We have also lost our sense of proportion as to the industries of the Nation, and in the legislative capacity that we have exercised here for a period of years past have given special recognition and privileges to the industrial centers of the Nation.

We have seen that by these privileges they have increased their wealth, but they have done it at the expense and by the sacrifice of the man who represents the basic industry of this Nation; and the tale of the census as I read it and as you read it reflects the natural flow that will follow from the system that we have pursued in our own country. The present census indicates that we have less than 50 per cent of our citizenship in the small villages and towns and on the farms. More than 51 per cent of the population of this Nation has drifted to the congested centers. I dare say that if a true census were taken, less than one-third of our citizenship would be found actually engaged in cultivating the soil.

My friends, there must be some substantial reason for this trend. As I look at it, it is an unhealthy condition of our Nation, a condition that must be speedily rectified. And if there is anything that this Congress or succeeding Congresses can do to rectify this condition and turn the trend of our population back from the congested centers to agriculture, it will be a healthier condition for our Nation.

What are some of the troubles? Ah, my friends, if the farmer to-day were to keep accurately a set of books and charge the labor of himself and his children at the daily wage that we recognize by legislation in this body, that should be allowed in certain industrial centers and occupations—if he would charge up to the expense account of his farm the extra hours of labor that he puts in before daybreak and after the sun sets—if he should charge up the various items of overhead expense as charged up by the different enterprises of the country, and then credit himself with every dollar the farm has produced with the present market facilities, at the end of 12 months the balance would drive the farmer from the farm to hunt new employment. It is a reflection on our condition, and the conditions under which we exist, that a great enterprise like the farming enterprise of our Nation finds itself in this awful and awkward condition.

What are some of the things needed? We have not had the banking facilities to accommodate the farmers of our Nation. For a period of 50 years or more the farmer's credit has been at too great an expense to him and has been too much limited. Some years ago, recognizing this condition, Congress changed the old banking laws of our Nation and undertook to write into the Federal reserve bank act a recognition of agriculture and give financial privileges that should have been the farmer's always, giving him recognition in that we wrote into that law that prime agricultural paper should be subject to rediscount privileges. It enables him to get credit for production, and during the marketing period, under this system, the farmer may obtain credit so as to withhold his products against the period of price depression in the products of the farm. Every other business has heretofore been able to hold on its shelves and in the warehouses the product of their plants because they could be financed. The farmer has not been properly financed under the old credit structure of the Nation, the result being that when the harvesting and marketing season come the farmers of the Nation have been forced to dump the annual production from the farm on declining and chaotic markets. The old system of banking laws gave the speculator a wonderful field to manipulate markets and to gather where he had not sown.

Under this new law, supplemented by the warehouse system of our Nation, which we have recognized by an act of Congress, the farmer who grows products should be able to warehouse his material and market it as the consuming world demands his product.

In the great section from which I come we have produced a crop this year that the civilized world must have. The industries of New England would fail but for the wonderful staple called cotton produced in our section of this country. England would go out of business were the cotton farmers of the South to fail for one season. The whole world would go naked, and industries everywhere would fail if it were not for cotton. We have grown this year something near 13,000,000 bales of cotton. My State has produced more than 4,000,000 bales of that amount. At this very moment the farmers of Texas, by reason of the collapse in the markets of the world, are engaged in the nondelightful experience of turning back to the soil more than 1,000,000 bales of ungathered cotton that cost them 30 cents a pound to produce.

I want to say now that while we have the Federal Reserve System that has served us in a way this year, I do believe that those who have administered the power under that law—and it is a tremendous power—however good their intentions may have been, have gone into the newspapers of this country in an effort to have deflation, which, in my judgment, must come, but which should come during a period of years, and not have been so drastic as we have seen it; if they had kept out of the newspapers of this country and let the utterances they have made go unpublished, we would not to-day have the sad spectacle that is witnessed throughout the agricultural belt of the Nation in that farmers are unable to market their products at any price.

While I shall return to private life at the close of this Congress, personally it is my desire that the incoming administration may wisely select big-brained, tender-hearted men for the responsible positions of trust—Secretary of Agriculture, Secretary of the Treasury, and president of the Federal Reserve Board.

So far as agriculture is concerned, the power vested in these high officials is tremendous and far-reaching. May I be permitted to say that I indulge the hope that those who shall hereafter administer the powers of these official positions will not so far forget themselves that either by word or act they attempt to become price stabilizers or price fixers of farm commodities. The God-given law of supply and demand should have free play, and, so far as I am concerned, I do not want any governmental power exercised to impede or destroy that law. And I trust that these new officials will remember that they have a function to perform at the head of these great departments of Government, but it is none of their business what the value of my product or your product is. Now, what is true of the great staple of cotton is in a lesser degree true of wheat and other grains. You can not touch a product of the farm that the collapse has not affected.

Oh, the pitiable tale I heard unfolded as to the sheepmen and the cattlemen of the Northwest and of the States running across the entire Nation. They are in a more pitiable plight at this moment than the cotton producer, and, God knows, his condition is bad enough.

What I want is for the people to recognize that our country is not suffering from overproduction, but the disaster through which we are now passing is caused by underconsumption. Instead of those in power seeking to radically disarrange things, they and we should use every ounce of our ability to work out some measure by which these wonderful crops of cotton, wheat, wool, and meat may find their normal flow to reach the people of the consuming world who stand so sadly in need of them. [Applause.]

Mr. Chairman, my good friend, Mr. RUBEY, complimented the committee for producing a bill here carrying with it some thirty-two and a half million dollars for agriculture. I am not proud of the amount. I have been on the Committee on Agriculture for some 10 years, and while this probably is a million or so dollars larger than any bill reported during my incumbency, I want to say again, bring your mind back to agriculture as the basic industry of our country and you will admit that it has not had the proper recognition in all of the years in our past history.

The thirty-two million and odd dollars in this bill is not wholly for agriculture. I made some figures on it some years ago. Placed under the administration of the Secretary of Agriculture is the Forest Service, the administration of the food and drug act, of the meat inspection acts, and other work of that kind not agriculture proper. If you take the sum total of appropriations of these various items that I have mentioned, along with other items, and subtract from the $32,500,000 carried in this bill, you will find that this Congress is appropriating the munificent sum of less than $20,000,000 for agriculture. Do you congratulate yourself on that performance? I do not. It is that lack of interest in the great subject, it is that lack of vision for this great subject, that has dominated the Congresses that I have been in and past Congresses, which has caused agriculture to wane and our people to proceed to the congested centers of the Nation. Instead of complimenting ourselves on the limitation of the expense account, we should determine the tremendous needs of the farm and work out those needs so far as we can, and let every dollar that those needs demand be appropriated, in order that people may be drawn back to the farms and away from the congested centers.

What is the psychology of the situation of the farmers' present condition? I was born and reared in the district that I have the honor to represent. I know the major part of my own people personally. I know their children. I knew their fathers before them. I do not think there is a more conservative citi-

zenship in the United States than in that old settled district which I represent, yet when I was at home preceding the holidays and during the holidays, I found that type of level-headed citizen who had not asked any favors of our Government, who are willing to give it their support, instilled with a spirit of unrest. The reason is plain. Take one farm that I have in mind, which is illustrative of the entire cotton belt, where 2,200 acres were planted to cotton. A wonderful crop was made, but if sold at the present prices that farm would not pay one penny of dividends and there would be a loss, and the tenants who produced those crops at the present prices can not pay their grocery bills for the year.

Yet the world needs that crop, because there is an underproduction of cotton. The resultant effect that follows to these people is to cause them to complain of the condition in which they find themselves after giving a year's labor to producing the crops, and they are beginning to criticize the powers that be. I want to say to you gentlemen who represent the industrial centers, with their great foreign population, that you no longer live in American communities, and in those large cities you are having trouble day by day with the revolutionary spirit, the anarchistic spirit, red-flagism, and if such a condition existed throughout the agricultural sections of our Nation I would fear for the perpetuity of my Government. But I have always looked to the farmer, whether he be from the West or the South, as a staid citizen; he communes with nature and nature's God. He is not involved in all of these agitations that you have in your congested centers. He reasons calmly, he has good judgment, and he is for his Government which protects his titles.

But let this condition which we now have be persisted in, and let that farmer become bankrupt, let him and his children be placed in penury, then agitation will spring up in the great agricultural sections of our Nation and God forbid the conditions that will come to this country when the farmer loses that good judgment and balance that he has exercised all these years. Therefore, I appeal that our banking institutions may be so administered as to give them credits.

We need home owners. Congress also passed the farm loan law, but it is now under attack in the courts. It provides a vehicle through which the farmer and the farmer's son may be enabled to own his own vine and fig tree, by which he may be able to possess the title to the roof that is over his head. Title-owning people never rebel against their Government, and they will protect the Government that protects their titles. That law is in the courts and I but wish that the courts knew how the daily morning papers throughout the entire agricultural belt of this Nation are scanned eagerly for a decision. The citizenship of the country everywhere knows that that decision is expected day by day and week by week.

The farmers need the credit. They have got the property. I would that this decision had been rendered so that the farm loan law might come to the rescue of the farmer at this time. What is the result of that bank not functioning? Everywhere when money is hard there is the usurer, who demands the last drop of blood. In my State to-day men must have money for the year's operations, men whose credit is worth what they ask, men who are good for their contracts. They want to borrow money on their lands. They must have money with which to operate the incoming years. What are the usurers of the country demanding? They have gone back to the old system and they are demanding of my people in Texas a 10-year mortgage on real estate, charging them 10 per cent interest, and they will not give the option of redeeming within less than 10 years, although the farmer needs the money for just one year. That is the hardship that is being perpetrated in my section of the country, and I would to God that the farm loan bank law were now functioning, so that it might furnish credit to these people who need it so badly at this hour.

While some features of the law may be unconstitutional, yet I believe that if that be so when the law gets back here the statesmanship of this House and of the country will amend it so that agriculture may rest assured that so far as farm credits are concerned there is a safe structure that Congress intends to perpetuate. [Applause.] When that is done, you will render a service not only to the man on the farm, but you could go to the congested centers and offer an inducement and thereby relieve the congestion by taking people back to the farms.

Another problem in our equation is the transportation problem. I had a peculiar attitude upon the floor of this House when we had up the railroad legislation, which was called the first great reconstruction measure of the present Congress. I am as bitterly opposed to Government ownership of railroads as any man possibly can be, but somehow I felt that in that law there were powers granted and guaranties made that must of necessity force higher freight rates, which would eventually penalize the agricultural section which produces the raw commodities of wheat, cotton, wool, cattle, and so forth, and that the increased transportation charges would be a heavier burden than the farmer could possibly bear. I felt constrained, therefore, to cast my vote against the so-called Esch-Cummins bill.

The law has worked out as I predicted. In my section, to illustrate, the oil meal and cottonseed cake made a wonderful stride in the market, reaching to the entire northwestern section of our Nation—Washington, Oregon, Idaho, and all that tier of States. But the transportation charges under the present law have been enlarged so much that our customers who need this concentrated food for their stock can not pay the freight charges and transport it to their range properties. What is a transportation facility for except to serve the people? And I prophesy that this or the next Congress will be called upon to repeal or modify that law, because over and over again it is going to be brought to your attention that agriculture can not stand the charges that are being imposed upon it. Wheat raised in Colorado and shipped through my State to the port of Galveston—the testimony was that this particular shipment cost 60 cents a bushel to reach the Gulf ports for foreign export, and the revised testimony was that it was 30 cents a bushel. Can the wheat grower stand that kind of a transportation charge? And yet it is the charge placed upon the farmers of our Nation, who are diminishing year by year and going to our industrial centers. Not only must they stand these transportation charges on their raw products that leave the farm, but when the manufacturer starts the farm implements, his cultivator, his wagon, and such things that the farmer needs, back down to the farm, when they reach the farmer the cost of this transportation is added to the purchase price that the farmer must pay.

He is the burden bearer of the citizenship of our Nation under the present transportation law of our country, and you people who remain here are going to have to deal with it. Now I will yield to the gentleman from Oklahoma.

Mr. McCLINTIC. I want to call the attention of the gentleman to a statement in connection with transportation charges which shows the truth of what the gentleman has stated to the committee at this time:

A car of maize and other grain recently shipped from Goodwell, Okla., to Chicago cost the shipper $550 freight charges and brought the grower a return of $592.

Another car, shipped from the Panhandle to market at an expense of $525, netted the producer $475. Out of this he had to pay 15 to 20 cents a hundred pounds for thrashing in addition to the 51 cents a hundred paid the railway company in freight charges.

A Kansas commission man writes: "Our rate on hay to Kansas City is $3.40; to Chicago, $8.90; to St. Louis, $7.40; to Memphis, $7.40, or about half of what ordinary prairie hay is bringing on these markets."

Certain eastern patriots greatly fear Congress intends to favor the American farmer. It would look as if he needed favoring. But all he asks is a chance to save his life, to live, and help others to live.

It only goes to show that the statement made by the gentleman is true.

Mr. YOUNG of Texas. I am glad to have these figures from my colleague confirming the observations I have made. The present disjointed condition has compelled our people to alter their operations. Texas by all the laws of nature is a cotton-growing and cattle-producing country; the western end of it is a cattle country. Heretofore under the law of nature we have followed the production of cotton with a larger crop where needed. Do you know what is happening in Texas now? I am now talking to you gentlemen from Kansas, Nebraska, Missouri, Indiana, the Dakotas, the grain-producing and horse-producing section of our country. We have been your customers; we have taken our cotton money to buy your foodstuffs. Our farms at this moment are being sowed to wheat and oats and planted in corn. Our natural crop is cotton. We are becoming your competitors. We are forced by present conditions to do it. Personally I have gone all over the north end of my State and I have seen the conditions they are facing. I have said to the people of that section of the State, whom I love, that on account of the conditions at home and abroad any man who proceeds to grow a normal crop of cotton is a bankrupt before the year is out. I think the farmer should prove his good, sound judgment in our country by recognizing the world conditions as to cotton, and the present year's farming operation in the South is to plan first to grow the crops that produce the articles on which we live.

It is necessary for us to be competitors of other States which produce these products I have been discussing. Now, my friends in the industrial section of the country, my friends from Fall River, New York, Philadelphia, you need not think that this awful calamity that has befallen the cotton grower will not be

reflected upon your manufacturing industries. We have a custom in our country of a merchant running his business until Christmas, and then he closes his doors and takes stock. After taking stock and finding out what he has and what he will need for the spring and summer operations, he makes his trip to the manufacturing centers of the East and purchases a year's supply. They are not coming this year; the farmer can not buy.

The CHAIRMAN. The time of the gentleman has expired.

Mr. RUBEY. I will yield the gentleman five additional minutes.

Mr. YOUNG of Texas. We are not purchasing farm utensils as we did. We are abandoning our public-road work that we had under way. We are not purchasing steel for our skyscrapers in Texas as we did. We are not purchasing citrous fruits from California as we did. The automobile establishments of the United States are being closed, and we do not buy Ford cars any more. Our purchasing power has been destroyed. Gentlemen, it is a law as immutable as the law of gravitation that when any one great industry in our country has a collapse it inevitably follows that all other industries will feel the shock. A precipitate collapse of the farmer's market is more marked in its effects than in any other industry. The farmers have a turnover one time in the year, and when you have destroyed that turnover you have destroyed the man's power and his work for 12 months. The manufacturer can guard against that to a greater or less degree, but he has trouble at this time. I trust that agriculture along comprehensive lines may have that place in this and future Congresses that the wisdom of the best minds of the earth have designated it should have. [Applause.]

Mr. SUMNERS of Texas. The European situation created a difficulty, and these conditions to which my colleague is alluding broke the status of agriculture. That is the condition to which you are alluding?

Mr. YOUNG of Texas. Yes. Europe needs our products, but can not buy by reason of bankruptcy, the effect of the recent war. Exchange rates between our country and European countries are prohibitive. Commerce can not move. Here is a fruitful source for constructive statesmanship at this time. We know the disease. Who may be able to provide the remedy? We have the products for which Europe is starving. Our farmers are faced with bankruptcy, for they have their year's products and can not sell. Europe needs and is starving for these products, but unable to buy.

In my own view our Nation must evolve some credit machinery somehow, somewhere, that will enable us to bridge the chasm before we can expect the conditions under which we now operate may have a change for the better.

Mr. Chairman, I had intended to discuss the present marketing system and the vices in it as same relates to agriculture, but I find my time is exhausted. I hope at some future day to make some observations on this most important subject.

I repeat the thought I uttered in beginning this address: Agriculture is the stabilizing hope in time of peace, the first line of defense in stress of war. Wise statesmanship must help solve the problems. [Applause.]

Mr. ANDERSON. Mr. Chairman, I yield 20 minutes to the gentleman from Wisconsin [Mr. CLASSON]. [Applause.]

Mr. CLASSON. Mr. Chairman, there has been reported from the Judiciary Committee a bill (H. R. 14097) "to assure to persons within the jurisdiction of every State the equal protection of the laws; and to punish the crime of lynching."

I wish to discuss briefly certain main features of this measure, and especially the question of their constitutionality.

I do not attempt at this time to go into the details of the bill, but I wish to call attention to sections 8 and 9, no question being made, as I understand it, about the constitutionality of section 15, which is based upon our treaty obligations, nor of the other sections which provide means of enforcing the main provisions:

SEC. 8. That the putting to death within any State of any person within the jurisdiction of the State by a mob or riotous assemblage of three or more persons openly acting in concert, in violation of the law, and in default of protection of such person by such State or the officers thereof, shall be deemed a denial to such person by such State of the equal protection of the laws and a violation of the peace of the United States, and an offense against the same.

SEC. 9. That every person participating in such mob or riotous assemblage by which such person is put to death, as described in the section immediately preceding, shall be guilty of murder and shall be liable to prosecution, and, upon conviction, to punishment therefor according to law in any district court of the United States having jurisdiction in the place where such putting to death occurs.

These sections present squarely the question of the power of Congress under the Constitution to pass an antilynching law.

It is perhaps needless to say that this question has never been passed upon directly by the courts, because Congress has never enacted such legislation, and we can only reason by analogy from decisions which touch such power.

The court refers for authority for such statutes as have been passed on similar subjects to the fourteenth amendment to the Constitution, and that amendment, with possibly one other section of the Constitution, to be mentioned hereafter, must furnish the authority for this proposed law.

So far as material to the question under examination, the fourteenth amendment reads:

SEC. 1. All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

SEC. 5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

The sections of the amendment quoted have been considered by the Supreme Court a number of times, but the case which perhaps comes the nearest to the question now under consideration is that of United States *v.* Harris (106 U. S., p. 629), decided October, 1882.

In that case Harris and others were indicted under section 5519, Revised Statutes, (1) for conspiring to deprive certain persons of the equal protection of the laws of the United States and of the State of Tennessee by beating, bruising, and so forth, those persons while under arrest and in the custody of a deputy sheriff of Crockett County.

(2) For conspiring to prevent such deputy sheriff from keeping prisoners in his custody and giving and securing to them the equal protection of the laws of said State.

In this case one of the prisoners was killed and one count of the indictment charged such conspiracy separately as to him.

The defendants by demurrer put squarely in issue the constitutionality of section 5519, Revised Statutes, which reads as follows:

SEC. 5519. If two or more persons in any State or Territory conspire, or go in disguise on the highway or on the premises of another, for the purpose of depriving, either directly or indirectly, any person or class of persons of the equal protection of the laws, or of equal privileges and immunities under the laws; or for the purpose of preventing or hindering the constituted authorities of any State or Territory from giving or securing to all persons within such State or Territory the equal protection of the laws; each of such persons shall be punished by a fine of not less than five hundred nor more than five thousand dollars, or by imprisonment, with or without hard labor, not less than six months nor more than six years, or by both such fine and imprisonment.

Mr. BLANTON. Will the gentleman yield?

Mr. CLASSON. I trust the gentleman will pardon me for declining to yield.

Mr. BLANTON. I would just like to get some information.

The CHAIRMAN. The gentleman refuses to yield at present.

Mr. CLASSON. I am trying to make a connected statement as to what the court has indicated, and I do not think any answer I might make will add to it.

The judges of the circuit court were divided in opinion, and the question of constitutionality was certified to the Supreme Court.

The Supreme Court held the section unconstitutional, deciding—

1. That the statute could be passed, if at all, only under the fourteenth amendment.

2. That the fourteenth amendment contains a guaranty of protection against the acts of the State government itself and adopting and quoting the language of the court in United States *v.* Cruikshank (92 U. S., 542), as follows:

The fourteenth amendment prohibits a State from denying to any person within its jurisdiction the equal protection of the laws; but this provision does not, any more than the one which precedes it, and which we have just considered, add anything to the rights which one citizen has under the Constitution against another. The equality of the rights of citizens is a principle of republicanism. Every republican government is in duty bound to protect all its citizens in the enjoyment of this principle, if within its power. That duty was originally assumed by the States, and it still remains there. The only obligation resting upon the United States is to see that the States do not deny the right. This the amendment guarantees, but no more. The power of the National Government is limited to the enforcement of this guaranty.

After quoting this language, the court further says:

The language of the amendment does not leave this subject in doubt. When the State has been guilty of no violation of its provisions; when it has not made or enforced any law abridging the privileges or immunities of citizens of the United States; when no one of its departments has deprived any person of life, liberty, or property without due process of law or denied to any person within its jurisdiction the equal protection of the laws; when, on the contrary, the laws of the State as enacted by the legislative and construed by its judicial and administered by its executive departments recognize and protect the rights of all persons, the amendment imposes no duty and confers no power upon Congress.

Section 5519 of the Revised Statutes is not limited to take effect only in case the State shall abridge the privileges or immunities of citizens of the United States or deprive any person of life, liberty, or

property without due process of law, or deny to any person the equal protection of the laws. It applies, no matter how well the State may have performed its duty.

Under it private persons are liable to punishment for conspiring to deprive anyone of the equal protection of the laws enacted by the State.

As therefore the section of the law under consideration is directed exclusively against the action of private persons, without reference to the laws of the State or their administration by her officers, we are clear in the opinion that it is not warranted by any clause in the fourteenth amendment to the Constitution.

There was no dissent in this case, except that Justice Harlan dissented on the question of jurisdiction without opinion. But in Baldwin *v.* Franks (120 U. S., 678) decided in 1886, Judge Harlan did express a vigorous dissent against declaring section 5519, Revised Statutes, unconstitutional, and I wish to call attention to his language in connection with another proposition later on.

In United States *v.* Powell (212 U. S., 564), decided January, 1909, the court affirmed, without opinion, and on the authority of Hodges *v.* United States (203 U. S., 1), a decision of the lower court in Alabama, holding that private citizens who take a prisoner from the custody of State officers and murder him, to prevent his trial, do not thereby deprive him of any right secured by the Constitution or laws of the United States in violation of the fourteenth amendment, and they are not indictable under sections of the Criminal Code for conspiracy to injure the prisoner.

Thus we have so far the construction by the court of certain sections of the statute, and particularly sections 5508, 5510, and 5519, and the holding of section 5519 unconstitutional because it is directed exclusively against the action of private persons without reference to the laws of the State or their administration by her officers.

Justice Harlan, in his dissenting opinion, Baldwin *v.* Franks (120 U. S., 698), says:

> I feel obliged also to express my nonconcurrence in so much of the opinion of the court as holds that Congress is without power under the Constitution to make it—as by section 5519 of the Revised Statutes it is made—an offense against the United States for two or more persons in any State "to conspire or go in disguise on the highway or on the premises of another for the purpose of depriving, directly or indirectly, any person or class of persons of the equal protection of the laws, or of equal privileges or immunities under the laws, or for the purpose of preventing or hindering the constituted authorities of any State * * * from giving or securing to all persons within such State * * * the equal protection of the laws."
>
> It is not necessary in this case to inquire what is the full scope of that clause of the fourteenth article of amendment which provides that "no State shall * * * deny to any person within its jurisdiction the equal protection of the laws." It is sufficient to say that that provision does something more than prescribe the duty and limit the power of the States.
>
> Taken in connection with the fifth section, conferring upon Congress power to enforce the amendment by appropriate legislation, that provision is equivalent to a declaration, in affirmative language, that every person within the jurisdiction of a State has a right to the equal protection of the laws, just as the prohibition in the thirteenth amendment against the existence of slavery operated not only to annul State laws upholding that institution, but to establish "universal civil and political freedom throughout the United States," and to invest every individual person within their jurisdiction with the right of freedom (civil rights cases, 109 U. S., 3, 20); and just as the prohibition in the fifteenth amendment against the denial or abridgment of the right of citizens of the United States to vote, on account of their race, color, or previous condition of servitude, operated to invest such citizens with "a new constitutional right," which "comes from the United States," namely, "exemption from discrimination in the exercise of the elective franchise, on account of race, color, or previous condition of servitude." (United States *v.* Cruikshank, 92 U. S., 542; United States *v.* Reese, 92 U. S., 214.)
>
> In the civil rights cases (p. 28) above cited, it was held that Congress, under its express power to enforce, by appropriate legislation, the provisions of the thirteenth amendment, could, so far as necessary or proper, enact legislation, "direct and primary, operating upon the acts of individuals, whether sanctioned by State legislation or not," for the purpose of eradicating "all forms and incidents of slavery and involuntary servitude."
>
> And since, in the matter of voting, the exemption of citizens from discrimination on account of race, color, or previous condition of servitude is a right which "comes from the United States," and is "granted or secured by the United States." United States *v.* Cruikshank, above cited, can it be doubted that Congress, under its express power to enforce the fifteenth amendment, by appropriate legislation, could make it an offense against the United States for two or more persons to conspire to deny or abridge the citizen's right to vote on account of his race or color? Is there any recognized exception to the general rule that Congress may by appropriate legislation secure and protect rights derived from or guaranteed by the Constitution or laws of the United States? Believing that these questions must be answered in the negative, I am unable to perceive any constitutional objection to section 5519; certainly none of such a serious character as to justify this court in holding that Congress by enacting it has transcended its powers. If the United States is powerless to secure the equal protection of the laws to persons within the jurisdiction of a State, until the State by hostile legislation or by the action of her judicial authorities, shall have denied such protection and can even then interfere only through the courts of the Union in suits involving either the validity of such State legislation or the action of the State authorities, it is difficult to understand why Congress was invested with power, by appropriate legislation, to enforce the provisions of the fourteenth amendment; for, without such power of legislation, the courts of the Union are competent to annul any State laws or reverse any action of State judicial officers which deny the equal protection of the laws to any particular person or class of persons.
>
> Indeed, since the organization of the Government there has existed a remedy in the courts of the Union for any denial, in a State court, of rights, privileges, or immunities derived from the United States. It seems to me that the main purpose of giving Congress power to enforce, by legislation, the provisions of the amendment was that the rights therein granted or guaranteed might be guarded or protected against lawless combinations of individuals, acting without the direct sanction of the State. The denial by the State of the equal protection of the laws to persons within its jurisdiction may arise as well from the failure or inability of the State authorities to give that protection, as from unfriendly enactments. If Congress, upon looking over the whole ground, determined that an effectual and appropriate mode to secure such protection was to proceed directly against combinations of individuals who sought, by conspiracy or by violent means, to defeat the enjoyment of the right given by the Constitution, I do not see upon what grounds the courts can question the validity of legislation to that end.

The proposed legislation starts out with the declaration in section 8 that the putting to death within a State of any person within the jurisdiction of the State by a mob, and so forth, in violation of law and in default of protection by the State or the officers thereof shall be deemed a denial to such person by such State of the equal protection of the laws and a violation of the peace of the United States and an offense against the same.

That is where the legislation proposed differs from that declared unconstitutional by the court. It acts on the individual only in default of action by the State and declares the effect of such default on the part of the State, which gives rise to the right of direct action against the individual.

Mr. CARAWAY. Will the gentleman yield?

Mr. CLASSON. I have not the time, and I trust the gentleman will pardon me.

Does it not meet the criticism of the court of section 5519, in United States against Harris, that—

> Section 5519 is not limited to take effect only in case the State shall * * * deny to any persons the equal protection of the laws.

The proposed law is so limited and so does not come within the condemnation of the court.

The court further condemns section 5519 because it is directed exclusively against the action of private persons, without reference to the laws of the State or their administration by her officers. Here we make the act apply only in default of protection by the State or the officers thereof, and, again, it seems to me, escape the court's condemnation.

Summing up the situation we find that the court has held that a certain criminal statute was unconstitutional because it attempted to act directly on individuals, and hence was not authorized by the fourteenth amendment, which operates only on State action or lack of action.

We find the judges of the Supreme Court not unanimous in this conclusion and a direct and vigorous opinion by one of them—Justice Harlan—holding that such direct control of individuals is constitutional, and then we find an act drawn to meet the very objections advanced by the court.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON. Mr. Chairman, I yield five minutes more to the gentleman.

Mr. CLASSON. Mr. Chairman, the other provision of the Constitution which I mentioned I believe should have weight as authority for this act; that is section 4 of Article IV:

> The United States shall guarantee to every State in this Union a republican form of Government, and shall protect each of them against invasion; and on application of the legislature, or of the Executive (when the legislature can not be convened) against domestic violence.

It might well happen that a State by failure to protect against mobs would be faced by a condition which would call upon the power of the United States to protect it, under this clause, against domestic violence.

If the United States has a duty to protect against such violence it should have a right to prevent a condition which will give rise to such violence.

I believe Congress has the authority under the Constitution to enact this measure.

There is a citizenship of the United States which Congress is bound to protect. As said in United States *v.* Reese (92 U. S., 217):

> The form and the manner of the protection may be such as Congress in the legitimate exercise of its legislative discretion shall provide. These may be varied to meet the necessities of the particular right to be protected.

Time will not permit a review of all the authorities nor a recital of all the expressions used by the courts favorable to the idea of such power in Congress.

I refer to the hearings before the committee and to the report of the gentleman from Missouri [Mr. DYER] for a more complete discussion and citation of authorities, but my deliberate judgment is, after a very careful study of the authorities, that Congress should enact such a law.

UMI

Its constitutionality, in my judgment, is clearly indicated. Certainly its unconstitutionality is not so plain that Members of Congress can not conscientiously vote to cure an evil concededly so great as this.

I am not attempting to discuss the merits of the measure.

No one denies the necessity for such a law.

The matter has been agitated for many years. It has been made the subject of Presidents' messages, and party platform planks, and has been taken up carefully and prayerfully by public men and by ministers and church membership and society generally.

A bill similar in its main provisions to 14097 was introduced in both Senate and House in the Fifty-seventh Congress, but never passed either House.

Lynching is peculiarly an American institution of which America and Americans are much ashamed.

The Republican platform of 1920 contains this language: "We urge Congress to consider the most effective means to end lynching in this country, which continues to be a terrible blot on our American civilization."

It is not, however, a party question nor a sectional question, but an American question.

I firmly believe that doubt as to its constitutionality has been the only thing that has prevented the passage of an effective law and I also believe just as firmly that it is the duty of Members of Congress to so vote on this measure that it may be submitted to the judicial test, should anyone see fit, after its passage, to raise the question of its constitutionality. [Applause.]

Mr. ANDERSON. Mr. Chairman, I yield six minutes to the gentleman from New York [Mr. REED].

Mr. REED of New York. Mr. Chairman, I have been very much interested in the speeches that have been delivered on this floor picturing the hardships of the farmers, the cotton growers, and the dairymen of the country. I come from a dairy country, a fruit area, and an agricultural country, and I am interested in the subject. Before I get through I am going to bring out one point that I think is important in connection with legislation, and particularly in connection with this appropriation and taxation in general.

There is no man here who has any more sympathy with our allies than I have. I know that you are all sympathetic with the difficulties they have experienced during the period of rehabilitation. But, gentlemen, I believe that charity begins at home when a certain point is reached. I maintain that we have our problems of rehabilitation in the United States. The fact is that at the present time there are, if reports are correct, 3,000,000 men in this country out of employment. I have listened with a great deal of interest to the description of the conditions of the cotton men of the South, of the dairymen, and of the farmers in general. Congress is now seeking new sources of revenue to meet the expenditures of the Government, to meet the extraordinary situation produced by the war. At the present time we have a national indebtedness of $24,000,000,000. Ten billions of that $24,000,000,000 is represented in loans made to foreign Governments. We have advanced money to foreign Governments to the extent of $10,000,000,000. Of this sum we have advanced $4,196,878,358.44 to Great Britain. Now, when this war was on there was very little sentiment about the transaction, so far as the Allies were concerned.

We sent our soldiers over as a matter of defense. We also sent them over because of a certain sentiment we had in the matter, but the Governments over there insisted that sentiment should not enter into the transaction. They charged us a good round figure for every soldier transported in a British ship. They charged us at war rates for every ton of material that we shipped across to help their men defend the western front. We paid for the land in England on which the camps stood. In some instances, I am told, we paid for the trenches that we occupied in France. And we shipped over thousands and thousands of tons of material that we sold to them very cheaply after the war. Now, there was no sentiment in that transaction. At the present time Great Britain owes us $200,000,000 in accrued interest, now due and payable. No interest has been paid by Great Britain since April 15, 1919 and May 15, 1919. We are paying 5½ per cent on that $200,000,000. The failure to pay this interest places a heavy burden on our taxpayers. I maintain now is the time when they should pay the interest. [Applause.] I will tell you why. In the appropriation made by Great Britain for the fiscal year ending March 31, 1920, she was able to appropriate $765,586,080 for her navy. She was able to appropriate $1,968,300,000 for her army, and she was able to loan to Argentina $50,000,000 to stimulate British trade in South America. I claim that when she can do this the time has come for her to pay the interest on her loan. I maintain that $200,000,000 would go far in lifting the burden of taxation from our business men. If the entire $500,000,000 of accrued interest were paid, it would not be necessary to cut to the bone these appropriations to increase production on the farms.

I feel that this is a matter that relates to legislation, bears upon taxation, affects labor and industry and agriculture. I think that this Congress ought to take some action to see that those nations abroad, which are sufficiently rehabilitated to appropriate large sums of money for their navy and for their army, when we are reducing our Army and our Navy, are made to pay their interest. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. REED of New York. I ask unanimous consent, Mr. Chairman, to extend my remarks.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. ANDERSON. Mr. Chairman, I yield five minutes to the gentleman from Nebraska [Mr. KINKAID].

The CHAIRMAN. The gentleman from Nebraska is recognized for five minutes.

Mr. KINKAID. Mr. Chairman, so far as my present information qualifies me to judge, the heavy and responsible task of formulating a bill specifying the reasonable amounts to be expended for the various activities carried on by the Department of Agriculture have been well performed. While hewing to the line of the policy being pursued by the present Congress for economy and retrenchment in public expenditures, the committee has not failed to discriminate wisely in cases where the use of money is imperative. My main purpose in the short time allowed me is to express my approval of the action of the committee in the consideration it has shown and the amount of the item reported in the bill for the expense of field work performed by veterinarians for the suppression and eradication of hog cholera.

The estimate made by the department for the eradication and investigations of hog cholera is $678,925. The appropriation allowed for the present year was $410,000, which has proven very inadequate for the purpose. For this reason the committee has increased the amount appropriated for field work over that allowed for the present year in the amount of $100,000, which it is expected will about double the present number of veterinarians for field service.

Mr. Chairman, I expressed my misgivings one year ago when the item contained in the Agricultural appropriation bill for this same purpose was reduced by amendment made on the floor of this House, but I was then assured by members of the committee who had given very careful attention to the hearings that the amendment offered for the reduction, and which was carried, would result only in dispensing with a surplus which then actually existed of veterinarians employed by the Government. It was very firmly maintained at that time that there was a surplus of veterinarians in the employ of the Government whose services should be dispensed with. We all know now that the reduction made of the appropriation by the amendment proved to be very effective in the way of reduction in the number of veterinarians employed and devoted to the eradication of hog cholera, for while there were at that time 140 employed in the work, the number was reduced to 54 at the commencement of the first of the present fiscal year. What was the result? The effect was to demonstrate the efficiency and great value of the service the bureau had been rendering hog growers in the preservation of their holdings against the outbreaks and spread of cholera.

According to the testimony of the able and efficient Dr. Mohler, Chief of the Bureau of Animal Industry, the breaking out and spread of hog cholera was increased over that of the previous fiscal year very noticeably in the States of Iowa, Kansas, Nebraska, Kentucky, Wisconsin, Illinois, North Carolina, and Michigan. The testimony of Dr. Mohler shows that 400 outbreaks occurred in October, an increase of over 1,000 per cent over the same month in 1919; that in Michigan 488 outbreaks occurred between July and November 30, 1920, with a loss of over 6,000 hogs. In North Dakota 216 outbreaks have occurred since the commencement of this fiscal year, the most of it in October. Dr. Mohler stated that in Iowa the reports he has received show that hog cholera is prevalent generally throughout the State, and that it has been found where formerly it had been unknown; further, the witness stated that in Wisconsin the disease has been more prevalent during the last three months than for any like period since the cooperative work of his bureau, meaning with the States, commenced. Dr. Mohler attributes the greater prevalence of hog cholera during this fiscal year directly to the failure of veterinarians to meet the emergencies.

But, Mr. Chairman, the statistics of fiscal years preceding the present one, showing the rate of mortality resulting from hog cholera, proves very convincingly the virtue and value of services performed under the auspices of the Bureau of Animal Industry in preventing and repressing the malady. I shall not take the time of the House or consume the space in the RECORD to give a table of the statistics of the hog cholera mortality in the different States for the years of cooperative work of the Government with the States, commencing in 1913, but I shall let it suffice to say that these statistics clearly prove that the greater the amount of service rendered by the bureau in field work through its veterinarians the greater proportionate decrease of hog cholera in the localities where the services were rendered with a resulting smaller total of hog cholera existing in all of the States.

Mr. Chairman, I do not contend that veterinarians should be employed at the expense of the Federal Government to do more than a small percentage of the very great amount of work required to properly meet the emergencies caused by hog cholera outbreaks, but it is my candid judgment that 140 would not be too many to supervise and lead work in meeting outbreaks in the hog-growing States. With the limited number of 54, now in the employ of the bureau, it is very clear to me that the amount of supervision helpful both to hog growers in preserving their holdings and the bureau in gathering further valuable information is very inadequate.

Therefore I trust the item reported by the committee may meet with the approval of the House, for I am sure the increased service of veterinarians, which it will insure, will result in saving thousands of dollars to hog growers, likewise to the consumers of pork, for every dollar expended by the Government. [Applause.]

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Nebraska asks unanimous consent to extend his remarks. Is there objection?

There was no objection.

The CHAIRMAN. Does the gentleman yield back the remainder of his time?

Mr. KINKAID. Yes; I yield back the remainder of my time.

The CHAIRMAN. The gentleman from Nebraska yields back four minutes.

Mr. RUBEY. Mr. Chairman, I yield 30 minutes to the distinguished gentleman from Mississippi [Mr. CANDLER].

The CHAIRMAN. The gentleman from Mississippi is recognized for 30 minutes.

Mr. CANDLER. Mr. Chairman and gentlemen of the House of Representatives, I shall not detain you a great while, but I felt that it would not be right and proper that an Agricultural appropriation bill should pass the House of Representatives unless I had something to say about its provisions. I came to Congress, insisting that greater consideration and larger appropriations be given to agriculture, and I shall go out insisting on the same policy.

For many years, as you know, I have been a member of the Committee on Agriculture, which reported to the House the appropriations for the Agricultural Department. When I first came to Congress Hon. James Wilson, from Iowa, was the Secretary of Agriculture, and he was a most excellent Secretary. He was succeeded by Hon. David F. Houston, who measured up to the very highest standard, and Secretary Houston was succeeded by the present very efficient Secretary, Hon. Edwin T. Meredith. I am very proud of the fact that I have enjoyed the entire confidence of each of these able and distinguished men. [Applause.] When I came to Congress the appropriations for the Agricultural Department was, in round numbers, $3,000,000. Each year from then until the present I have sought to impress upon the membership of this House the importance of all the appropriations made for this great agricultural business and industry. I have also tried to impress upon the membership of each Congress in which I served the importance of making reasonable increases from time to time to keep pace with the development of our great country. [Applause.] Year after year these appropriations have been increased. The gentleman from Missouri [Mr. RUBEY] to-day called attention to the increases each year for the past 10 years.

This present bill provides an increase over the appropriation for last year. The amount recommended for appropriation in the pending bill is $33,517,459. While this is some increase over the appropriation for last year, I contend that it is not a sufficient increase and not commensurate with the growing resources of the country. I protested last year that the bill passed then was not as liberal in appropriations as it should be, and Secretary Meredith sustained my view in a statement issued later, in which he showed how valuable and necessary work would have to be curtailed and some suspended because the appropriations made were not sufficient to continue it. I protest again now, and prophesy that this bill will not meet in its appropriations the necessary and important work which ought to be done to keep fully up with present conditions. Last year the production in this country from agriculture was, in round numbers, $25,000,000,000. This year it is, in round numbers, $22,000,000,000, even with the decreased market value in agricultural products existing at the present time. Therefore I contend that an appropriation of $33,000,000 to carry on a business which produces $22,000,000,000 is not sufficient for the proper development of the resources of our wonderful and marvelous country. This may be my last speech and word to you, my colleagues, on this important subject, and in it let me say to you, never neglect agriculture, never overlook the farmers. They are always faithful in times of peace and patriotic in times of war. They are the bedrock of our national security, wealth, and prosperity. [Applause.]

I am gratified, however, that the efforts put forth by myself and others in the House have resulted in more serious consideration of these questions from time to time, evidenced by the House responding in increased appropriations each year, although the increases have not been as large, in my judgment, as the importance of the work justified.

I can not congratulate the committee to-day for holding down appropriations on this bill. The members of the committee are my friends, and I would like to do so, but with my views I can not. I would still impress upon them the great importance in the years to come to further seriously consider increasing the appropriations for agriculture in order to develop the various resources throughout the length and breadth of the United States of America. [Applause.]

The gentleman from South Carolina [Mr. BYRNES] to-day called attention to the marvelous results that have come from the successful introduction of various varieties of new products from foreign countries into the United States. These new products, thus introduced, were seemingly of small value at the beginning, but they have grown year by year to larger developments until to-day they amount to great national resources in this country, and, besides, bring great wealth—up in the millions of dollars—to the farmers of America.

Now, just as these developments have taken place from time to time others can and should be secured in the future by proper appropriations to carry forward developments along lines which are inviting and promising of similar splendid results. This bill is a good bill in the provisions it contains, as far as it goes. There are additions and increases which, in my judgment, ought to have been made which are not included in the bill. As it appears to be the best we can get at the present time, I hope you will give it your support.

There is one serious defect in the bill. Of course, you have found that out from an investigation of it—the very serious defect of leaving out one provision which ought by all means to be here, the importance of which could not have escaped the eye of an efficient and faithful representative of the people—that is the elimination from this bill of the garden and flower seeds appropriation. If it is not inserted by amendment—and I favor such an amendment at the proper time—the people will be deprived of these seeds, and they want them and will be disappointed if they do not receive them. Therefore, you better amend the bill in that respect. I have by strenuous efforts kept this appropriation in the bill for many years. I am going out and some of you friends of the people will have to take up the fight. I hope you will do so and be as successful as I have been. [Applause.]

I heard a Member of Congress say a few moments ago that he had hundreds of requests for garden seeds on his desk. I have hundreds of such requests on my desk, and I dare say many other Members have hundreds upon their desks. I believe it is the duty of a Congressman to faithfully and promptly serve his people and respond to their requests for anything provided by the Government which is useful to them, and especially when their requests are for things not only useful to them but useful for the development of the country. The voice of the people should always be heard and heeded by their representatives in Washington. Do not forget them in large matters or small matters. Remember them in all things at all times. [Applause.]

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Mississippi yield to the gentleman from Texas?

Mr. CANDLER. Yes, sir.

Mr. BLANTON. The gentleman will have the consolation of knowing that his successor in the next Congress next year

UMI

will not have the privilege of sending to his erstwhile constituents any garden seed. [Laughter.]

Mr. CANDLER. Oh, I hope that calamity will not befall him in the beginning of his service here.

I want him to be useful to the people, and therefore I hope he will not be deprived of the opportunity to send the people garden seed or to perform any other service they request of him. My constituents are as good people as live in the world, and I want them at all times to have every consideration. [Applause.]

Now, then, my friends, during the years that I have served on the Agricultural Committee I have seen a marvelous development in the agricultural production of our land as well as in the other activities of our country. As an evidence of our ever-growing possibilities I call attention to this statement issued by the Department of Commerce:

1920 FOREIGN TRADE BIGGEST IN HISTORY—$13,507,000,000 TOTAL FOR UNITED STATES—IMPORTS DROP IN DECEMBER.

America's foreign trade in 1920 was the largest in the country's history, totaling $13,507,000,000. Exports were valued at $8,228,000,000, against $7,920,000,000 in 1919, and imports were valued at $5,279,000,000, or $1,375,000,000 greater than the imports in 1919. This left a trade balance for 1920 of approximately $3,000,000,000 in favor of the United States, as against a balance the year before of approximately $4,000,000,000.

In announcing the figures the Department of Commerce said exports were one-third greater than they were in 1913, the first full year previous to the war, and imports were nearly three times those in 1913.

In December exports exceeded those both in November and in December, 1919, but imports were smaller than in either of those two months. The export figures for the month were $720,000,000, as against $677,000,000 in November and $621,000,000 in December of 1919.

Imports amounted to $266,000,000 in December, while November figures were $321,000,000 and December, 1919, figures $381,000,000.

The balance of trade in favor of the United States for December was $454,000,000, as compared with $301,000,000 in December, 1919.

Gold imports in 1920 amounted to $429,000,000, as compared with $77,000,000 in 1919, and gold exports were $322,000,000, as against $368,000,000 in 1919.

Silver imports last year totaled $88,000,000, as against $80,000,000 in 1919, and silver exports were $114,000,000, compared with $239,000,000 the year before.

This is a wonderful showing of the onward strides of our marvelous Republic. Agriculture is the bedrock of it all. [Applause.] From year to year I have helped to put into the Agricultural bills provisions to stimulate our agricultural development in order to help sustain all our business activities. I had the pleasure and the honor of helping to prepare the provision in the Agricultural appropriation bill establishing the Bureau of Markets. Mr. Lever, then chairman of the Committee on Agriculture, and I prepared the provision, and upon my motion in committee it was inserted in the bill. When it was first placed in the bill there was an appropriation of $50,000 to inaugurate it and start it upon its useful career. In the present bill there is an appropriation of $2,939,444 to sustain its very splendid and valuable work. It has grown to be one of the largest and most useful and beneficial bureaus of our National Government. There is no more important question to-day presented to the American people than the marketing of their products so as to secure the closest contact between the producer and the consumer and to eliminate as far as possible the middleman, who takes up the greater part of the selling value of the product that goes into the market and of the price that the consumer is compelled to pay, while the producer does not get the benefit of it, but only gets the primary price which he receives as the product leaves his hands.

Therefore this bureau has been of the most marvelous benefit, and is yet capable of even greater possibilities in the future than it has accomplished in the past. For that reason I feel some pride in having participated in the establishment of it, and in thus supplying to the people a long-felt want; aid it by every necessary appropriation in future, to the end that its work be not hampered but be made more effective year by year. [Applause.]

In addition to that, while I have been a member of the committee I helped to frame and pass the warehouse act and the grain grades act and the Lever extension law. Under the Lever extension law the work of the department and the knowledge acquired therein by research and from every available source goes directly to the farmer upon the farm; so that to-day, under the provisions of that law, practically all the farmers in the agricultural counties in the United States of America are receiving the aid and benefit of the Government in their operations upon their farms. The result upon increased production has been marvelous. Since I have been in Congress I have helped to pass the Federal reserve act, the good roads law, the parcel-post law, the farm loan act, all of which have helped the farmer and the country at large.

These laws to which I refer were separate acts—laws beneficial to the whole country—but in addition to these there have been legislative provisions included in the appropriation bills almost if not every year enlarging the activities of the Agricultural Department and thus making the efforts of the department more effective in assisting the farmers especially in their labors.

There is no better work in which you can engage during the years you shall serve here as Representatives of the people than to aid the great opportunities which this bill annually brings to the farmers of the country, and I want you to always remember, and never forget, that they furnish the real foundation wealth of this country, and therefore in aiding them you help every other vocation, trade, calling, and business of every kind and description. Take away from our country the prosperity that comes from the production of the farm and you will take away the consequent prosperity that exists in every calling, vocation, and trade of every kind in which other people are engaged. Stop adequate farm production and your factories will cease to manufacture and the great transportation companies will stand still and grass will grow in the streets of your cities. Hence it should be the primary purpose and object of us all to aid agriculture and assist it in every way possible. [Applause.]

My friends, as has been suggested, there are several of us who will leave you on the 4th of March, and I happen to be among that number. In all my associations upon the floor of this House with all the Members here on both sides of the aisle I have had nothing but the kindliest feelings for all. If each and every one of the Members with whom I have served during the 20 years in which I have been a Member of this House has not been my personal friend, I have not known it, and there never has been a man upon the floor of the House during my service for whom I have not felt personal friendship and in whom I did not have a personal interest in his success and welfare.

When I shall leave here I shall leave with the best of feeling for each and every Member who composes this Congress, as well as those who composed the preceding Congresses in which I have served. I entertain the very kindest feeling for all the presiding officers who have sat in the Speaker's chair while I have been a Member of the House. When I first came here the Speaker was Hon. David B. Henderson, of Iowa. I remember one day after leaving the Speaker's chair he came to about the second row of seats and sat down beside me. I had been here only a few weeks. He put his arm around me and said, "My boy, how do you like it?" I said, "Well, I confess I am enjoying it very much." He said, "Let me suggest to you that you stay on the floor, that you investigate the various bills that are reported, that you read the reports, that you keep up with the calendars. In that way you can be useful to your people and to the country, and render a service satisfactory to yourself." I appreciated the interest that he took in me and the advice he gave me, and have tried in my service to follow it. Following him I served under Speaker CANNON and then under Speaker CLARK, and I am now serving under Speaker GILLETT.

I have for them all the greatest respect. I enjoyed the confidence of Speaker Henderson and I know I have the confidence, good will, and esteem of ex-Speaker CANNON, ex-Speaker CLARK, and Speaker GILLETTE, with all of whom I serve now. [Applause.]

I shall always look back with pleasant recollections to the associations I have had with each and every Member of the several Congresses in which I have served. I shall retire from Congress wishing for every one who remains in Congress the greatest success, happiness, and prosperity. All are a high type of men—noble, honest, patriotic, and faithful to duty and the best interest of the country as they in their hearts and consciences see it. [Applause.] I shall always have great pleasure in reflecting upon the service I have had the opportunity to render the people of the first congressional district of Mississippi. I delighted to serve them because they deserved my best efforts. No Member on this floor ever had a better constituency. May God ever bless them with His richest blessings. I served them faithfully, efficiently, honestly, and promptly. As an indisputable evidence of that fact I challenged my four opponents in my last race to point to a vote I had cast, a speech I had made, or an act of mine either in my private or official life during my service of 20 years that they would say was not in the interest of the people or was subject to criticism, and none of them, able and alert as they were, dared to or was able to point to a vote, a speech, or a private or official act of mine which they condemned or would say was wrong. [Applause.]

All they said was that ZEKE CANDLER had served long enough, had received enough from the Government, and therefore ought to be turned out in order that one of them might have his place. The people, upon that issue, and that issue alone—the issue of long service—decided that way and gave my place to another

who will come here at the beginning of the next Congress. Time alone can tell whether their decision was best or not. I do not murmur or complain, but bow submissively to their sovereign will, and shall always be grateful and thankful for every courtesy, kindness, and favor shown me by them during the years of my service. I have no bitterness toward a human being in the world, and I shall retire to private life with malice toward none, with the kindliest of feeling for all, with pure sunshine of friendliness in my heart and no lurking shadows of hate or ill will in my soul. [Loud applause.]

To my record behind me of 20 years, unassailed by anyone at any time, I shall point with pride and be ever grateful to my splendid constituency who gave me the opportunity to make it. With the utmost good will to one and all, I shall leave you on the 4th of March. I shall always remember you, the Members of the House and also the employees of the House and the officials in the various departments, and especially in the Agricultural and Post Office Departments, where most of my work has been, with affection, gratitude, and appreciation for the kindness extended to me at all times during my 20 years in the Congress of the United States. May God ever bless each and every one of you, my friends in the House and my friends elsewhere in the Government service, and guide each to give to the country and to Him the very best service at all times. [Loud and continued applause.]

Mr. RUBEY. Mr. Chairman, I yield 20 minutes to the gentleman from South Carolina [Mr. STEVENSON].

Mr. STEVENSON. Mr. Chairman and gentlemen of the committee, I want to discuss one feature of agriculture for the few minutes that I shall take this afternoon, and that is the cotton plant—how it is made, what it costs, and what the outcome is. We hear a great deal said in this Hall about cotton. In the first place, a great many people do not know that you plant it every year.

Since I have brought samples in to-day a good many Members have asked me how many years it takes for a stalk to grow? You begin in the Atlantic seaboard States in February to prepare your land. Your rows are about 4 feet apart, better 5 than 4. You plant the seed after you put in the fertilizer in the territory where you put fertilizer in. The ground is broken, furrows are run, and the fertilizer is put in and the bed is thrown on the fertilizer, and then the seed is planted along the bed in drills. Ultimately stalks are left to grow about 3 feet apart in the territory where I live, but it is planted much more thickly than that in order to insure a stand, and then it is chopped out to a stand, which is known as cotton chopping.

Having prepared the land the fertilizer that is put in amounts in my country to anywhere from 500 to 1,500 pounds to the acre. The average for South Carolina last year, from the best figures I can get, was $20 an acre for fertilizer for cotton plants. You say that is a good lot of money to get a crop, and it is.

The first application is ammonia, which is largely gotten from the cottonseed meal, a can of which I have here. Then acid phosphate, which is put there for the purpose of making the cotton fruit, and potash to prevent decay of the bolls. This is put in before you plant. Then the cotton is planted about the 1st of April and in two weeks it comes up in the ordinary germination of the seed. In two weeks more they begin to chop it out to a stand and begin to cultivate it.

By the 10th of June the plant gets up about 12 to 15 inches high and begins to bloom. You see these stalks here. This is cotton grown in the county where I live by Frederick W. Rivers, and is ordinarily known as Cleveland Big Boll cotton—not named after Grover Cleveland, but a man by the name of Cleveland in Georgia. It is a short staple.

As to the yield, 22 acres made about 25 bales, which is a very good yield. The average in South Carolina for the last few years is about a half a bale to the acre. A great many people make a bale to the acre, but that is due to unusual good husbandry. Now, the stalk gets up this high, begins to put out limbs and bloom, but it does not stop growing. It grows until frost comes and continues to bloom. So you have the fruit at the bottom maturing long before it stops putting on fruit at the top.

When it begins to bloom it is necessary to feed the plant. You have to feed the cow or the calf will die. It used to be that it was always laid to the climate—it was either too dry or too wet or too cold or too hot—something of that kind that caused the fruit to shed off. But agricultural science progressed, and they found that it was not any of those things; it was starvation that caused it to shed off. The result is that the farmer in my country about the time it begins to bloom in June buys nitrogen.

You have heard a good deal lately about nitrogen and the fixation of nitrogen, and Mr. Mann in a letter gave us more information on that subject than I have seen in any discussion of the subject—as I say, the farmer buys nitrate of soda, about 100 pounds to the acre and sometimes 200 pounds, and last year it cost $80 a ton, and he feeds the plant and gives it nourishment to develop the fruit and make a crop.

Then you have to cultivate the land and keep the grass out, keep the plant alive until about the middle of July, when they do what they call "lay by" in South Carolina. By that time the bolls have begun to mature, and by the 1st of August they begin to pick. Six weeks elapse from the date of the blooming until it is mature, and then you begin to pick the cotton. Of course you begin at the bottom because there is where it opens first, because there is where the oldest bolls are.

Mr. BLANTON. Will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. BLANTON. The gentleman stated that it would take two weeks for the seed to come up. I think the gentleman should have gone further for the benefit of the Members and stated that sometimes the seed does not come up and it has to be planted a second and perhaps a third time, and sometimes stalks may be that high and not have a boll upon it.

Mr. STEVENSON. Yes; all of those accidents happen. For instance, if the season is dry or too cold, when you have planted your cotton seed it does not germinate and does not come up, and the seed will die and you will have to plant again. Another thing, you plant about a bushel of seed to the acre, and for the last two years seed has been worth a dollar a bushel. This year it is worth 25 cents. It will not cost us so much to plant, but we will not get so much for it.

It was at the point when interrupted when you begin to pick. You begin to gather when it begins to open, and if you want your cotton of a good grade it must be picked before the rains come and stain the cotton. You follow it up. There is a series of crops. You pick it three or four times before you get through picking. I forget how many bolls, but I think it takes about 100 bolls of cotton to make a pound. You will notice that every lock of that cotton has to be handled by human hands. There are 12,800,000 bales of cotton made this year. This cotton has the seed in it, of course, because it has not been put through a gin. It takes 1,400 pounds of cotton, on an average, to make a 500-pound bale. In other words, you send your hands to the field and they gather you 1,400 pounds of that cotton in the seed. It is taken then to the gin and run through the cotton gin, which takes the seed out at one end and the cotton at the other.

You get 900 pounds of seed and 500 pounds of lint from the 1,400 pounds. That is an average. You get more lint from some kinds and less from others. Nine hundred pounds of seed makes 30 bushels. There are 30 pounds to the bushel of seed, so that you can see that out of a bale of cotton you have gotten two products—the lint, which goes to the cotton mills in my country and in New England, in Japan, in China, in England, and the seed, which is manufactured into oil and feed.

Mr. WHITE of Kansas. Mr. Chairman, will the gentleman yield?

Mr. STEVENSON. Yes.

Mr. WHITE of Kansas. Will the gentleman please tell how many pounds of cottonseed cake or meal in its finished form can be produced from an average acre of cotton?

Mr. STEVENSON. Yes; I can give the gentleman the figures, from which he can calculate it himself. The average acre of cotton in South Carolina makes half a bale. That means 15 bushels of seed. A ton of seed makes 900 pounds of meal, 900 pounds of cake.

Mr. WHITE of Kansas. How many pounds in the bushel?

Mr. STEVENSON. There are 30 pounds in a bushel. On a half bale of cotton you have 450 pounds of seed, and it turns out 45 per cent meal that will make about 200 pounds of meal from the cotton on an acre of land. I shall discuss the seed now for a moment. The seed is put through the mill, which takes the hull off, and gentlemen are perfectly welcome to take this cotton which I have here and do what they please with it when I am through with it. The hull is taken off the seed, and that makes very good grade of cow feed, not as rich in protein, I believe they call it, as the meal itself, but this cow feed takes the place of forage with us. After they have taken the hull off, then they grind the germ, which you will find inside of the seed, the yellow germ, and they put that into a press under tremendous pressure and press the oil out of it, and there are refined from that oil two grades of oil.

That which I hold in my hand is the prime white, out of which they make the lard. It makes a very much better lard than that which comes from the hog. It is clean from the day the seed is put into the ground until it is brought to this condition. This other is prime summer yellow. Then there is another product, the waste, that comes off and is used for

soap. A great deal of the soap of this country is made out of the waste that comes from the refining of these oils. There is a lot of this oil that you get as olive oil. It goes in tremendous quantities to Spain, France, and Italy, and there is converted by their process of handling into olive oil from Palestine and Arabia and comes back here with a high import tax and a stamp on it showing that it came directly from the Orient as olive oil, and you pay for it an oriental price.

In passing, I might say that we had some discussion about the cottonseed oil a few weeks ago and about the competition that the oriental oils were giving, which was destroying the price of cottonseed oil. When that was being done the oriental oils, so I am informed by one of the best oil men in South Carolina, could not be sold in this country for anything in excess of the cost of transportation across the ocean. In other words, the oriental oils were absolutely out of competition with the cottonseed oil in this country, because they could not sell it for enough to pay the freight on it at that time, but oriental oils were competing with us in France and Spain and Italy, because the Egyptian oil and the oils from India were being shipped by water into that southern territory of Europe, and we are getting our olive oil now from the oriental oils and it is crowding the cotton seed out of the market over there, and in that way it is affecting us, but our little tariff proposition did not help us a particle, for it can not help us in our competition with oriental oils in France and Italy and these other countries. But I did not start out to make a political speech.

Let us look for a minute at the cost of this thing. I told you that the average price in South Carolina was $20 an acre for fertilizer. I put down last year about $25 to the acre, and I shall thank my stars if I ever get it back. I hope to, by holding my cotton. The best way to make cotton there is by the share-crop proposition. That is, you get half the crop and the man who makes it gets half. For instance, I furnish the land and the fertilizer and he furnishes the stock and the labor. He does all of the work and I furnish the land and the fertilizer. He gets half the crop and I get half. Let us see how that works out. The cotton crop for 1920 amounts to 12,843,000 bales. Picking this last year cost $1.50 a hundred pounds. We used to get it picked for 50 cents a hundred, but we got so rich that we could not get it picked for less than $1.50 the hundred pounds. Fourteen hundred pounds to the bale means $21 a bale that it costs to pick the cotton out of the field. Then the price of the ginning went up. It costs now $6 a bale to gin in my country, in some places more, but I think that $6 a bale is a good, fair average. It costs half of the yield for labor. Take the States where they fertilize the land, put in your fertilizer bill, and figure your cotton crop, and you have the following:

For labor—and that is half the value of the cotton at the time you sell it—was $699,943,500, figuring cotton at an average of 20 cents. Fertilizers—and that is only in a limited territory—$248,939,000. Ginning, $77,058,000; picking, $269,733,000, making the cotton crop cost $1,295,643,650.

Mr. HUDSPETH. Will the gentleman yield?

Mr. STEVENSON. I will.

Mr. HUDSPETH. Has the gentleman the actual cost per bale of producing cotton in his State?

Mr. STEVENSON. I have not got it here, but I can give it to the gentleman very readily by a little calculation. Now, the proceeds, if sold at 20 cents a pound, and seed at 30 cents a bushel, would amount to $1,399,000,000. That means you have got $104,243,480 for the use of the land. Now, let us see how many acres of land we had in. We had 33,960,000 acres of land under cultivation, at $5 an acre—and you can not rent any good cotton land in that country for less; you have got to pay $10 per acre generally—but putting it at $5 per acre, you have got $169,850,000 on the value of your land, and you have $104,000,000 for the use of it. That is all. That makes a deficit, if we sold our cotton at 20 cents—I am figuring at 20—that would make a deficit of $65,556,000 that goes to hit the landowner and the man who furnished the toil and made the cotton. If we figure the price of spot cotton to-day at an average of 15 cents you will have a deficit of $486,631,520 actual loss.

Now that is the outcome of making a crop of cotton in a year like the past year. It is due to two or three things. In the first place, when the crop was being made it was at an enormously high price of everything. Fertilizer that used to cost $10 per acre went up to $25. Labor, of course, had gone up, everything else had gone up, and when the time came to sell the cotton, of course, a whole lot of men put skates under it and it went down, and people were slow to sell, hoping for a reaction; but it has not reacted much yet. Now, let us see how many people are engaged in the making of a crop. There are in the cotton States a rural population amounting to 16,899,000 people, and an entire population which depends on the cotton crop of 22,475,000 people. Now that shows you the enormous interest that depends upon the crop which starts in the spring, goes through one season, is liable to be destroyed by storm, attacked by boll weevil, and everything else, and after it is made, if the weather is bad in the fall, as it has been this past fall, you will find great difficulty in getting a good harvest. If it stays in the field and many rains have fallen on it the fiber becomes rotten, and it does not make a good sample, and will sell for not more than half price; and, in fact, it does not sell for half price now. The average produced per acre in the fertilizer-using States in 1918 was 175 pounds per acre, and the whole belt averaged 160 pounds of lint per acre. North Carolina made the highest average that year, 268 pounds, and South Carolina next at 250 pounds per acre.

The world production in the year 1918 was as follows:

	Bales.
United States	11,520,000
India	2,577,000
Russia	550,000
Egypt	990,000
China	900,000
Brazil	563,000
Mexico	130,000
Peru	114,000
All other countries	425,000

I have not the figures for 1919 or 1920 yet. India in 1918 planted 20,497,000 acres of land and gathered 2,577,000 bales. The yield is small per acre and the fiber so coarse and short that it does not compete with our spinable grades of cotton. Egypt produces a very high grade of long-staple cotton, and in 1918 on 1,361,000 acres produced 990,000 bales, being a better average than any State in the United States made.

The CHAIRMAN. The time of the gentleman has expired.

Mr. STEVENSON. I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from South Carolina asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. ANDERSON. Mr. Chairman, I yield 10 minutes to the gentleman from Kansas [Mr. WHITE].

Mr. WHITE of Kansas. I may not use all my time, and if I do not I shall yield back any remaining. Lest I forget it I want to say, suggested by the remark of the gentleman from South Carolina, that they are paying oriental prices for oil; that the Kansas cattle feeder has been paying monumental prices for cottonseed cake and meal, and during the progress of the war, when the price got so high they could not use it, it was selling at $80 per ton. Well, you are caught in the readjustment as we are caught in the readjustment, and now our cattle are so low we can not use it at $36 to $40 per ton. I am for this bill. I shall vote for it in the form in which it leaves the committee. I am a farmer, probably the only real practical farmer in this Congress. [Laughter.]

SEVERAL MEMBERS. Oh, no!

Mr. WHITE of Kansas. I think so. I believe I look it. [Laughter.]

I told men here that I was a farmer when I came here, and they said they knew that when they looked me over. [Laughter.] I believe there is in this bill—and I speak from the viewpoint of a farmer—much duplication that might have been eliminated. I shall not speak to the items of this bill. I prefer to call the attention of the House briefly to the serious industrial and financial situation in the Nation, but before doing so I see my good friend from Texas [Mr. YOUNG] here, and I will say to you that he pointed out a wonderful picture of the depressed conditions of agriculture in the United States to-day, and it is not overdrawn in the least. But only yesterday there was printed in the RECORD of this House a wonderful exhibition of economy in legislation. Following the lines laid down by the Republican leaders in this House, the gentleman from California, defending the minority report of the committee on apportionment—I am sorry the gentleman is not in the room, but I shall be glad for him to read my remarks, for they will be spoken in every delicacy of compliment—in the interest of economy, and predicating his remarks on the necessity for economy, said that the Siegel bill proposed, and I quote the gentleman's exact language as it lies before me in the printed RECORD—

> That the bill proposed to add 48 useless Representatives to this body.

And then repeated the language in the course of his remarks.

I do not believe, gentlemen, that there are any useless Representatives in this body. I do not believe that the legislation of this the greatest legislative body in the world is dictated by any steering committee that exists to-day or ever existed on either side of this House. I believe the men who come here represent their constituencies conscientiously. It is logical and

reasonable to expect that the leaders, who have legislative experience, will frame and direct and lead the deliberations of this House. Gentlemen, I do not impugn the sincerity or honesty of any man's conduct in this House, but when I saw so few voting to reduce the number to 307, of those who insisted that we had just the right number, I wondered if it was not the voice of Jacob, but the hand of Esau. Gentlemen, the man that comes here to represent a constituency has more to do than to serve in this Committee of the Whole. Men communicate with their Representatives for many reasons. I, myself, speaking modestly, have adjusted more than 600 cases for soldiers in my district who were hopelessly discouraged because they could not get action from the departments of this Government.

Mr. BLANTON. Will the gentleman yield?

Mr. WHITE of Kansas. I have not the time.

Mr. BLANTON. Will the distinguished farmer from Kansas yield?

Mr. WHITE of Kansas. Just for a question.

Mr. BLANTON. The question is this: I hate to defend an absent Republican Member, but the gentleman from California, in speaking of 48 useless Congressmen, referred to the 48 the House held to be useless by its vote.

Mr. WHITE of Kansas. Mr. Chairman, the gentleman from California, anomalous as it may seem, exhibited as much exuberance of joy over the vote that added an additional Congressman to California as he did over the result that prevented 48 additional "useless" Members of Congress, as he characterized them, from holding seats in this body as provided in the Siegel report.

We saved a million dollars, and taking into account the expense of representative government, $1,000,000 is a goodly sum, but a mere paltry sum compared with that we are proposing to vote to-day, namely, $33,000,000. There is one good feature about this bill. It is in conformity with the spirit of the times. Like the goods hanging in the windows down here, it has been reduced from $53,000,000, but it has not been cut in two. It is not keeping pace with the readjustment. We have started a great movement here to reorganize the executive departments of this Government. The Members of this House who have held their seats here for many years approved that measure. [Applause.]

Many of them gave it strong support and presented convincing reasons why the course should be followed. The most vital issue confronting the Congress to-day is that of retrenchment. The Nation insistently requests it. The strained industrial and financial situation demands it. The one subject uppermost in the minds of almost every citizen of this great Republic is the subject of taxes and how to get the money to pay the taxes. And taxes are payable in dollars, and dollars are getting scarcer every day. It now takes more wheat, more corn, more pork, more beef, more cotton, more steel, more of almost every product of industry in this country in exchange for a dollar than it did a year ago, and in many of the items I have mentioned it requires double the quantity. Gentlemen, I doubt if in all the history of mankind there has ever been a period when the world has been so burdened with debt as at this particular time, and while the condition of our people is vastly more tolerable than that of the people of any other country in the world, yet it is still true that the revenue situation presents a most serious and perplexing problem. Gentlemen should not deceive themselves; it is inevitable that there will be a marked falling off in the revenues of the Government. I ask you in all seriousness to-day, if gentlemen can suggest a wiser, saner, safer policy to relieve the impending deficit than through a reduction of public expenditures. I can not look with complacency upon a program which proposes for the purpose of raising additional revenues the placing of additional burdens of taxation upon the American people.

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. RUBEY. Mr. Chairman, I yield five minutes to the gentleman from Louisiana [Mr. LAZARO].

Mr. LAZARO. Mr. Chairman and gentlemen of the committee, during and following the war I called the attention of the Congress to the importance of providing sufficient hospital facilities for the care of our sick soldiers. I laid stress on the fact that the earlier a disease was diagnosed and treated, the better the chances of effecting a cure were, especially in the treatment of mental diseases and tuberculosis. I now want to call the attention of the House to a recent report by the Government, which I believe should receive immediate consideration, so that the proper treatment of these soldiers can come quickly. This report is made by Mr. LaPorte, who, in commenting upon the situation, says that hospital facilities for the treatment of these men are the scantiest. "Proper treatment for these patients must come quickly," Mr. LaPorte said, "or they will in many cases become confirmed in their disorders." He says that every effort is being made to improve the situation, but that it is handicapped by lack of facilities and scarcity of doctors trained in these diseases.

He says there are 22,292 veterans in the United States hospitals, and that patients of all classes in the Public Health Service hospitals are increasing at the rate of 1,000 a month. "It is expected," he said, "that before the peak is reached the number of patients requiring hospital care will approximate from 30,000 to 35,000." He added that it would be about 10 years before the peak would be reached. Of the patients in hospitals on January 1, he said that 19,019 were war-risk insurance patients, of whom 7,588 were suffering from tuberculosis, 5,745 were general medical and surgical patients, and 5,890 were suffering from mental diseases.

For tuberculous patients the present facilities consist of 1,000 beds in the Soldiers' Home at Johnson City, Tenn., and 7,431 beds in Public Health Service hospitals, but of the latter 5,231 are not satisfactory.

For medical and surgical patients, 9,948 beds, but 4,621 are not satisfactory.

For mental patients he said there are 1,000 beds at the Soldiers' Home of Marion, Ind., and 2,500 beds in institutions under the service; but of this number 475 are not satisfactory.

Mr. Chairman, I want to again appeal to the Congress to give this matter immediate consideration, because these boys are entitled to the very best treatment we can possibly give them in order that we may effect as many cures as possible. I am sure it does not take a physician to understand the importance of early treatment of those cases, especially those suffering from mental diseases and from lung diseases. Then, too, I think something ought to be done to bring about better understanding and coordination between the three bureaus—War Risk Insurance Bureau, Vocational Education Board, and Public Health Service—with the view of avoiding duplication and superfluous work. Of course, this work was new in the beginning and allowance had to be made for inexperience, but we should always keep these activities which have to deal with our disabled and sick soldiers under careful observation, with the idea in mind of improving upon them constantly as we go ahead with the work.

Let me say in conclusion, Mr. Chairman, that unless these soldiers who are suffering from mental diseases and tuberculosis are given particular care and treatment there will hardly be any chance of recovery.

Mr. WILSON of Louisiana. The suggestion has been made that there ought to be separate hospitals provided for those who are suffering from mental disorders, where they might have the care of specialists along that line. What does the gentleman think about that?

Mr. LAZARO. There is no doubt about that. They are a class of patients who require to be in separate hospitals and under the care of highly trained men who are specialists in that line of work. [Applause.]

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. RUBEY. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. SUMNERS].

Mr. SUMNERS of Texas. Mr. Chairman and gentlemen of the committee, I appreciate very much the work being done by the Department of Agriculture and by the great Agricultural Committee, but I want to say to you gentlemen of the Agricultural Committee, and to my colleagues in the House, that we have passed the time when we can meet our responsibilities with regard to this situation by coming on the floor of the House and telling what a deplorable condition the farmers of the country are in. This situation we now have comes to challenge the genius of the men who represent the American people in this Congress, and we must meet these responsibilities with constructive effort and upon the responsibility of our own judgment. Now, let us see. Everybody knows a few things and everybody agrees upon a few things. First, the population is leaving the country, and the spread between the price the farmer receives and the price which the consumer pays is too great. There is no use talking about that any more. There is no lack of production. That is not where the trouble is. So that is not where the remedy is needed. This is just a commonsense proposition. We can not turn back this tide of population to the cities, moving toward them under the influence of irresistible economic law, which carries the current of mass movement to the centers of best opportunity, until we pay the farmers more than they now receive. That is a proposition which I think no one will question.

That brings us to this point: In order to pay him more, the people in the cities must pay more for what they buy or the farmer must receive something from that which represents the

spread between what he now receives and what consumers pay. In other words, the waste and expense between the farmer and the consumer must be reduced, and the farmer must get some of the benefits from the reduction. Is not that a sound proposition? It is self-evident. How are we going to bring about that possibility? That is the definite proposition which confronts us. We must get down to cases. We have passed the "hot air" period in regard to this proposition. Is it fair to our farmers or safe for the people to drift along as we are going? We know that agriculture is economically the weakest spot in our entire industrial organization. What is the difficulty? The fundamental difficulty is that agriculture, for reasons which we know, has never been able to organize the selling end of its business. There is the weak spot. As a rule, it sells seasonally and annually in a restricted market to the highest bidder. I hope, gentlemen, you will ponder over that a little. That method of selling makes the market so unstable, so susceptible to manipulation, that it attracts the manipulator, who plays with the market, moving it up or down, in order to win the bets made on the future boards. In such a market the farmers of the country can not apply ordinary business methods to the sale and distribution of their products. That is the farmers' market as it is now, and we know it. It is absurd to try to build for agriculture a structure of economic strength on a foundation like that. Agriculture is a business. No business can be more stable than the market upon which it rests.

I submit to the judgment of this House that the first thing to do, the natural thing to do, the common-sense thing to do, is to give agriculture a better market for the sale and distribution of its commodities. When we shall have done that, then we will have laid the foundation upon which we can build for agriculture—farmers can build—a structure of real economic strength.

This brings us right down to where the nerve center of agriculture is located. I challenge any man on either side of this House to deny that proposition or to suggest another method under heaven or among men by which it can be done.

Now, then, if I am correct in that statement—and I stand prepared to defend it—if that is the case, then we have gotten down to the place where we must get to work. There is no use talking in generalities. There is no use crying over the farmers' situation. It is deeds, not tears, which are needed now. How is the farmer of this country to be put into a broader and more stable market? How are we going to make it possible to eliminate this food waste and this economic waste, and give more to the farmer and charge less to the consumer? Is not that a pertinent question? Does it not stand here challenging us to-day?

Mr. Chairman, I have a short bill which I have been introducing at each session since I have been a Member of this House, which I will incorporate in my remarks at this time. The bill is as follows:

Be it enacted, etc., That the Secretary of Agriculture is hereby authorized and directed to establish, at as early date as practicable, a farm-produce exchange, with such branches thereof as may be necessary, in order to afford a medium through which the economic and systematic sale and distribution of such products may be effected.

In the operation of such exchange the Secretary of Agriculture, as far as practicable, shall cooperate with the several States and the various agencies therein which may be utilized, and may formulate plans and regulations for exchange of service between them and such exchange.

It shall be the duty of each of the departments of the Government to furnish the Secretary of Agriculture with such statistics and data as they may acquire which would be useful in the operation of such exchange, and to render such other service in the sale and distribution of farm products through such exchange as it would be practicable to render.

The Secretary of Agriculture shall keep advised as nearly as practicable with the details of the quantity, quality, location, and price at which held, of agricultural products and the volume and location of demand in the United States and abroad, and the price at which such products may be sold, and shall make such information available to the producer and purchaser of such products, and shall endeavor to bring about such system in the sale and distribution of such products as shall eliminate the waste and extremes in prices resulting from the present lack of system therein.

Those desiring to offer products for sale through such exchange may do so by grade or by sample delivered to such exchange, under such rules and regulations as the Secretary of Agriculture may prescribe, but all tenders of such products shall be for a definite quantity and quality.

The Secretary of Agriculture is authorized to require such deposits in money, bond, or other guaranty of compliance with the obligation to deliver according to tender or receive and pay according to offer as in his judgment may be necessary to insure compliance with the contracts made through such exchange.

When not otherwise provided for by the law, the Secretary of Agriculture is authorized to establish and promulgate standards and grades for commodities to be dealt in through said exchange and to establish such rules and regulations governing transactions through said exchange and the service rendered by said exchange as in his discretion may be deemed necessary.

Gentlemen of the House, I respectfully challenge anybody to suggest any method other than this bill proposes. I do not say that in a spirit of egotism. I would rejoice if anybody will suggest a better method. Now, let us consider this practically.

First, do generally, as far as possible, what we are already doing—standardize these commodities, condense their description into trade terms. That can be done more generally than we have done it. We have passed the experimental stage, however. That done, these commodities will be ready for a general trade contact in every market where they may be offered. But there is no place of common resort, no open, public market place where the public may trade; no place where these commodities may be sold by grade. There is nothing more absurd than the present method of sending forward blindly shipments of products to market, seeking an unknown purchaser. That applies to every sort of commodity. The cattlemen send their stocks into the stockyards, where they are at the mercy of limited competition and under the high expense of shrinkage and the high expense of maintenance. Even cattle may be standardized; not all, but enough to establish standards and a market. Farm commodities ought to move from the place of first concentration, under prior sale, by the most direct route, to the place of need in quantity and quality as needed.

Mr. HUDSPETH. Mr. Chairman, will my colleague yield?

Mr. SUMNERS of Texas. Certainly.

Mr. HUDSPETH. The difference between the live-stock man and the general farmer is that we live-stock men have to ship our products to market and take whatever price is offered there, whereas the general farmer can hold his commodities on his farm until he cares to sell them.

Mr. SUMNERS of Texas. Yes; I recognize your disadvantage, but it applies to everything farmers sell—truck, cotton, corn, everything else. The difference is only in degree.

Mr. WILSON of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS of Texas. No; I regret I can not yield further. I have only a few minutes, and I am trying to reach a definite objective. I have made a definite suggestion, and I want to follow in some degree of order through to the conclusion of a hurried explanation. I will apologize to my friend when I get time. Now, listen to me, gentlemen; I want you to follow me, if you will be good enough to do it. When we shall have prepared these commodities by standardization for trading contact with the world, then it is necessary for the Government, and I say that without apology, to make it possible for them actually to come into trading contact with the general market. Gentlemen may say we propose to do a socialistic thing. One of my colleagues said that to me just a moment ago. Let me ask you, gentlemen, what is the test as to whether or not the doing of a given thing falls within the province of government? Governments have been ordained among men for no other purpose than to enable them, through government, their common agent, to do for their common good that which their common necessity requires to be done and which they can not do individually. But this is not a new question. From time immemorial the establishment and proper regulation of public market places has been regarded as the proper function of government and one of its chief duties with regard to commerce, and the greatest protection against monopoly which the ingenuity of man has ever devised. We have forgotten the function, the facility, and the protection of the "markets overt" and have turned sale and distribution over to the trusts and complain at their abuses. When opportunity for universal trade contact is established you do not need to have so many antitrust and antiprofiteering laws. The practical, open-to-all route around the privately controlled avenues of distribution automatically forces the total of intervening profits toward the basis of the economic value of the service rendered. We shall either have to restore the possibilities of general trade and commerce, or we must establish a bureaucratic method of administration and control of the internal affairs of these great distributors. I do not want to do that, but public opinion is rapidly pressing governmental policy in that direction. Everybody who has any sense knows that we have come to that choice.

We must establish a system of real produce exchanges in this country where these standardized commodities, physically and morally protected, can be put in trading contact with every market in the world; exercise the necessary supervision to insure integrity of transaction, connect up our warehouse operations, and cooperative associations, and so forth. Then we will have a complete marketing machinery. We have practically all the parts now, but they are turning around like little fluttering wheels. Then we will have brought these difficulties within the power of the people to deal with them. Then we will have laid the foundation upon which agriculture can build for itself a proper rural credit system and a structure of economic strength, a structure which will not come down with a crash under the weight of any unusual strain, crushing the prosperity of other businesses beneath its débris.

There is another viewpoint from which governmental duty may be considered. This very appropriation bill appropriates millions of dollars to support a Department of Agriculture. Why a Department of Agriculture? Is that department and this appropriation socialistic? For what purpose does that department exist? Its justification rests upon a public necessity. What is that necessity? What is its business? Its business can be none other than to help agriculture deal with its big problems. I submit to your common sense, if the problem of sale and distribution is not agriculture's biggest problem, and if it is not there where the nerve center of agriculture is located. It does not so much need help to produce. It has produced more than it can sell at a profit. How in the name of common sense can we go on and attempt to make two blades of grass grow where one grew before when, after making two blades grow where one grew before, the two blades are worth less than the one? We are doing that, and then we come here and brag about what we have done. If we want people to raise more products, we must pay the farmer boys for doing it.

We have been playing with this thing long enough. I have had a bill pending here since I came to Congress. Nobody has ever criticized it. I challenge anybody to successfully do it. I do not like to say this. I do not want to appear egotistical. I would not say this if my personal interest was involved. I have no pride of authorship. I would gladly withdraw my proposition if some of you gentlemen will offer a better one. But you neither accept mine nor propose one yourselves. Many of us were raised on farms. Our people, our own people, are in the depth of despair. Our people in the towns and cities are being charged unconscionable prices while our people in the country are being ruined by low prices. I absolutely know that my constituents in the cities are paying too much, and I know they can not pay the farmer any less, because the farmer is quitting at the present time. But that is not all, gentlemen. There is another angle to this matter, another point from which the public interest may be seen, the highest public interest which ever challenged the constructive genius of a country's statesmen. I listened with great interest to my distinguished friend [Mr. YOUNG of Texas], and he told you the truth when he said to you in substance that the farmer is not disposed to be radical, but that these conditions are making him radical. It is a fact that in the open fields of agriculture class prejudice and class consciousness find a less fertile soil than anywhere else. But under the pressure of imperative economic necessity and economic injustice the farmers of this country are being driven back upon themselves into class solidarity; and I make another declaration, in the light of human history, that no Government can be strong, regardless of its form, through the body of whose citizenship there runs the lines of class cleavage.

One of two things must happen. We must afford the protection and the possibility of the agricultural classes getting economic justice short of the formation of a comprehensive class group, cemented together by class consciousness, fighting in class solidarity in their economic defense—we must meet this situation at the border line of community efficiency, or the farmers of this country will be driven to form themselves into a class, solid and compact. Government will fail miserably in its duty to this class, which holds so much of its strength, and will fail miserably in its duty to itself, if it does not arrest this development which is rapidly taking place. I am asked, Can not the farmers take care of themselves? Yes; they have the potential power to do it. But will we learn nothing from the lessons of the past? They ought not to be forced to the power to do it. You know what their difficulties and disadvantages are. Farmers are not disposed to draw themselves away from the great body of the public. Why should we compel them to do it? I am not speaking of cooperative marketing associations. They would be compelled to organize such associations under the plan I suggest. Why not Government do this thing, which is the duty and function of Government to do, and bring this difficulty within the reach of these marketing organizations?

Let me say to my friends in the city that the farmers of this country have the potential power to do this thing. The farmer is no better than anybody else. I do not blame the people in the city for buying their stuff for the cheapest price at which they can get it, and the quicker we cut out that rot and get down to business the better it is going to be for our people. I never saw a farmer who paid a single cent more than the cheapest he could buy for, and I never saw one who failed to take the highest dollar he could get for what he sold. That does not get us anywhere. It may get some votes for us, but it does not get any help for our people.

Yes; these farmers can do it; and I want to say to you gentlemen that whether it is a king on his throne or an organized nobility or a church dignitary or organized capital or a mass of the common people standing together in a class solidarity, the consciousness of power ever tends to the abuse of power; and if the Government will not do what it ought to do, and meet this difficulty at the border line of community efficiency, when you drive the great farming classes back upon themselves into vocational solidarity, held together by the cohesiveness of class consciousness and class prejudice, they will put their fingers on the throat of the world. The man who does not know that does not know the lessons of history.

I have introduced a bill here and I want you folks to study it. I am going to get it passed in the next Congress unless somebody will offer a better bill. I am going to the country and get some support for this bill in the next Congress.

If you can get up a better bill, let us have it; but let us come to the Congress with some sort of suggestion that will enable us to lay the legislative support beneath the great business of agriculture, so that not we, not the Government, but the farmers may build upon that foundation a structure of economic strength, so that its people may prosper and agriculture may be able to offer as great a bid to the bright country boy as industry will offer, in order that we may be able to make secure the food and clothing supply for this country; so that we may be able to turn back the great tide of population that is sweeping from the country into the cities, the mightiest vocational and residential movement in the history of all the ages; so that we may turn back that tide before the time comes when hunger-crazed crowds will sweep down the streets of your mighty cities. I am not speaking extravagantly. You can not maintain the equilibrium of population without equality of opportunity, and nobody who will consider the opportunities which industry and agriculture offer can say that agriculture is not operating under the disadvantage of a fundamental economic differential against it.

A lot of people are preaching going back to the farm and writing poetry about going back to the farm and talking about organizing movements to colonize the farm. You might as well go down here to the Potomac River and take up its waters and carry them back to Great Falls and pour the water in again and expect it to stay there as to put a man from the city in the country under present conditions and expect him to stay.

The bill in its present form is to a degree merely tentative. It carries the main features and sets forth the principles of what, in a judgment which has been maturing on this matter through many years of investigation and thought, we must have. I would have preferred to devote myself to an analytical discussion of the bill, and intended to do so, but was led to change my plans by some observations made to me by one of my colleagues, which questioned the fundamental features of the bill. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

The gentleman from Minnesota [Mr. ANDERSON] has 10 minutes remaining, and the gentleman from Missouri [Mr. RUBEY] has 13 minutes remaining.

Mr. ANDERSON. I yield to the gentleman from Oregon [Mr. MCARTHUR].

Mr. MCARTHUR. Mr. Chairman, bovine tuberculosis is not only a private question which is of great concern to the cattle owners of the country but it is likewise a question in which the public has a decided interest. The consideration of immediate financial losses to owners whose animals may react to the test is one that causes many a breeder to hesitate before deciding to have his herd tested, but where Federal, State, and county governments agree to cooperate in sharing the losses, all progressive breeders are willing to have the test applied.

The interest of the public lies in having a clean, wholesome supply of meat and dairy products, and it is sufficiently important to warrant expenditures from the public fund where the breeder shows a willingness to cooperate. There is also justification of the use of public money in stamping out this disease, because competent authorities declare that it costs the people of the United States $50,000,000 annually.

The campaign for tuberculosis eradication is being carried on by the Bureau of Animal Industry of the Department of Agriculture under the direct supervision of Dr. A. E. Wight and his corps of able assistants. Having watched with great interest the progress made in this important work, I wish to take this opportunity of informing the House and the country of the general scope of the campaign and its results.

CAMPAIGN LAUNCHED IN 1917.

Until May, 1917, the bureau had undertaken very little tuberculosis eradication in any section of the United States outside of the District of Columbia; but during that month a special division in the bureau was inaugurated for the purpose of handling the work. Probably no other action in connection with the eradication of a contagious disease among animals was

ever under consideration for such a long period before active steps were taken to perfect a clean-up campaign. The nature of the disease in all its phases and the practical methods of eradication were carefully studied for many years by various State and Government officials and also by many eminent authorities on animal diseases throughout the world. All the facts gained by these many years of study were brought together for use in connection with the launching of this great movement.

The first specific appropriation made by Congress for this work amounted to $75,000, and it was used in establishing and perfecting the organization which now is spread out over nearly every State in the Union. Cooperation with the proper State live-stock sanitary officials was the first step to be taken. Many of the States had no laws granting them power to cooperate with the Federal Government, but those that did have proper laws became interested at once and joined hands with the forces of the Federal Government. The other States arranged for the necessary legislation at the earliest possible date and supported it with appropriations. The cooperation of live-stock owners themselves in connection with a campaign of this nature was absolutely necessary, and it was gratifying to the officials directing the work to observe the earnest desire of the owners to take part in the undertaking. In the course of several months after the State cooperation was arranged it was found that the counties could substantially cooperate and assist in the campaign. The assistance from the counties is becoming greater every year as the work develops. Those in charge of the work find that support from the county unit is very beneficial to the progress of the campaign.

At the beginning of the cooperative campaign in 1917 the work was divided into three projects, viz:

1. Accredited herd work.
2. Eradication of tuberculosis from circumscribed areas.
3. Eradication of tuberculosis among swine.

ACCREDITED HERD WORK.

The first project was given most attention at the start, as it was thus possible to work closer to the live-stock owners themselves, especially the owners of pure-bred cattle, and it was purely voluntary on the part of the cattle owner. The other two projects were worked on more or less all of the time, and today the circumscribed area feature is fast becoming the leading project of the work.

An accredited herd is one that has passed two annual or three semiannual tuberculin tests at the hands of representatives of the Bureau of Animal Industry without a reactor or a suspect. Owners of accredited herds are privileged to exhibit their animals at fairs or to ship them in interstate commerce without additional testing beyond an annual test that is applied after the accredited herd status is established. In case these subsequent tests show reaction of suspicion the herd is transferred from the accredited herd list until the infection is removed beyond all possible doubt. The advantages of a place on the accredited herd list are obvious, particularly to the breeder who sells or exhibits pure-bred live stock or to the dairyman who caters to a select trade or who markets certified milk.

On July 1, 1918, there were 204 accredited herds, containing 6,945 cattle, and 881 herds, containing 2,200 cattle, that had successfully passed one tuberculin test in the process of accreditation. On July 1, 1920, the number of accredited herds had reached 3,488, representing 48,764 pure-bred and 37,254 grade cattle, and there were 16,828 herds, representing 99,179 pure-bred and 183,071 grade cattle, that had passed one successful tuberculin test. This number has increased steadily, and at the close of December 31, 1920, there were 5,013 accredited herds, representing more than 80,000 cattle, and 27,842 herds, representing more than 440,000 cattle, that had passed one successful tuberculin test. As many more herds are under cooperative supervision and are being rapidly cleaned up, with the view of being placed on the accredited herd list.

CIRCUMSCRIBED AREA WORK.

The first example of what could be accomplished toward the entire eradication of tuberculosis from live stock in any given area was demonstrated in the District of Columbia, where there are approximately from 1,200 to 1,400 cattle. When the first tuberculin test was applied to the cattle of the District approximately 19 per cent were found to be tuberculous. This percentage was rapidly reduced as the campaign progressed, so that now the percentage is practically nothing, and the cattle in the District are free from tuberculosis. This object lesson was brought to the attention of the people in many sections of the United States, and as rapidly as possible arrangements are being completed to take up the campaign along this line. A complete test has been made in Island County, Wash.; Clatsop County, Oreg.; Clay and Hines Counties, Miss.; Barron County, Wis.; and Leon County, Fla. The work is in progress in many other counties throughout the United States.

ERADICATION OF TUBERCULOSIS FROM SWINE.

From 1907 to 1917 the percentage of tuberculosis found among swine at the packing centers under Federal supervision increased from 1 per cent to nearly 10 per cent, and has increased a little since 1917. The losses from this source are enormous. A total of 38,981,914 hogs were slaughtered under Federal supervision in the United States during the year ending June 30, 1920, and 4,260,720 of these hogs showed evidence of tuberculosis. It is true that only 65,609 of these hogs were sufficiently affected with the disease to cause their condemnation, but when nearly 11 per cent of the hogs slaughtered showed evidence of tuberculosis, as compared with about 1 per cent 10 years ago, it is clearly evident that this disease is undermining the swine industry of America. Efforts are directed toward tracing back these infected shipments to the farm where they originated, and then steps are taken to eradicate tuberculosis from that farm. It is found that cleaning up of the tuberculous cattle on a farm goes a long way toward eradicating the disease from the hogs on that place. Another agency that causes tuberculosis in swine is the feeding of dairy by-products not properly sterilized. Efforts are being made to educate the swine owners to feed only sterilized skim milk and other by-products of creameries, and not to feed by-products from their own cattle unless they are known to be free from tuberculosis.

COMMUNICABLE TO HUMAN BEINGS.

Another phase of the tuberculosis question that is concerning the people of this country at the present time more than ever before is the effect of bovine tuberculosis upon public health. As a result of extensive investigations made by eminent authorities throughout the world, it is to-day generally admitted that this disease is communicable to children to quite a large extent and to adults to a slight degree. The authorities in control who are studying contagious diseases of the human family are of the opinion that the fight now being made to eradicate bovine tuberculosis will have a very beneficial effect upon the campaign they are making to control and eradicate human tuberculosis. The suppression of tuberculosis among animals is, therefore, essentially a matter for public health consideration, as well as for the preservation of a healthy animal industry. If human beings, either adults or children, become affected with tuberculosis by consuming milk containing the tubercle bacilli, it is surely the duty of society to prevent such occurrences as far as possible. The following is quoted from an article written by N. Novick in the Journal of Medical Research, volume XLI, No. 2, January, 1920:

It was thought worth while to ascertain, having material at hand, whether the percentage of incidence of bovine infection in tuberculous meningitis is appreciable, greater, perhaps, than is commonly accepted; whether the bovine type of virus has a special predilection for the meninges. Park and Krumweide, in their study of bovine and human infection of tuberculosis in man, a study which included 1,000 cases of all forms of tuberculosis, found 15 per cent of bovine infection in tuberculous meningitis. Rosenau, analyzing ten hundred and forty cases, including those studied by Park and Krumweide, by the English and German Commission, and some cases collected from the literature, came to the following figures:

	Cases.	Bovine.	Per cent.
16 years and over	686	9	1.3
Between 5 and 16 years	132	33	25.0
Under 5 years	120	59	49.0

Rosenau states that almost half the number of cases tabulated above were those studied by the research laboratory and were unselected. This is important to note. The striking feature of these figures is the alarming percentage of bovine infection in children under five years (49 per cent.) In adults the percentage is very small, almost insignificant. Undoubtedly it is due to milk entering as the chief element in the diet of children and serving as the probable path of transmission of tubercular diseases, and the fact that the bovine bacilli are very much more virulent in the young.

IMPORTANT THAT WORK BE CONTINUED.

The work that has been accomplished in the three years of this campaign since Congress provided funds for the work, while very satisfactory, is insignificant when compared to the amount of work that it is hoped will be accomplished. The various organizations that may take part in this work are daily showing their interest, and it is surely the duty of the Federal Government to continue its efforts in the direction of this important undertaking.

The indemnity feature is another matter that comes up in connection with the eradication of tuberculosis. Most of the States now have a statutory provision whereby the State itself may assist in reimbursing the cattle owner for tuberculous

cattle slaughtered, and in some States the counties also have a right to do this. Under the provisions of the Federal law certain funds are appropriated for this feature of the work, and the demand for funds to cover indemnity will, of course, increase as the work progresses.

The amount available for indemnity during the fiscal year ending June 30, 1921, is $680,440, which will probably be sufficient for this year; but when it is taken into consideration that the legislatures of about 42 States are in session this winter, and many of them will make liberal appropriations for tuberculosis eradication work, it is apparent that the demand for Federal funds to match up the State indemnity will be far greater than heretofore.

STATISTICS FOR LAST FISCAL YEAR.

During the fiscal year 1920 the bureau tested 695,364 cattle in the accredited-herd campaign. Of these, 28,616, or 4.12 per cent, reacted to the test. In addition to this, authorized practicing veterinarians tested 210,250 for interstate shipment, and official veterinarians tested 54,724 for the same purpose. Of these, 3,360, or 1.60 per cent, and 1,417, or 2.58 per cent, respectively, showed reaction.

The number of cattle slaughtered under the direction of the bureau during the year was 20,704; average appraisal, $178.37; total indemnity paid by Federal Government, $551,331.08; total indemnity by States, $934,237.18; average Federal indemnity, $26.62; average State indemnity, $45.12; average salvage per head, $38.76. In connection with the last item I will say by way of explanation that the law permits the sale of unaffected portions of the carcass under strict rules of inspection.

APPROPRIATION FOR NEXT FISCAL YEAR.

The pending Agricultural appropriation bill carries an item of $1,978,800 for the purpose of continuing the tuberculosis eradication campaign in cooperation with the various States. The campaign now under way has reached such proportions and achieved such results that this is the minimum amount which will be needed for the next fiscal year. A larger amount could be used to very great advantage and would hasten the end of bovine tuberculosis in this country. This appropriation is so vital to the live-stock industry and to the general public that I trust no word of opposition will be spoken when the item is reached. The direct bearing which this tuberculosis eradication campaign has upon the health and general welfare of mankind should commend it to the continued favorable consideration of Congress. [Applause.]

Mr. RUBEY. Mr. Chairman, I yield six minutes to the gentleman from Texas [Mr. BLANTON].

Mr. BLANTON. Mr. Chairman, you will never find me voting against any item of appropriation for agricultural interests where the bulk of that appropriation actually goes to the benefit of agriculture; but you are going to find me fighting against every item of appropriation that appears in an appropriation bill and is charged up to agriculture when the bulk of that money goes somewhere else and from it agriculture receives no benefit at all.

I asked the distinguished chairman of this committee [Mr. ANDERSON], when he was on the floor, if he could tell us what per cent of this $33,517,000 appropriated in this bill was overhead and what per cent of it the farmers actually received some benefit from; and my good friend, although well posted, a splendid, able, hard-working Member of Congress, an unusually good member of a committee, could not tell me anything about it except in generalities.

I want to congratulate this committee, however, on one thing, and that is that they have gotten rid of one item of expense which for years has made Congress look ridiculous before the people of this country. They have made Congressmen and Senators take their names off of thousands of packages of little measly garden seeds sent out every year at an expense of approximately $300,000, which did the people no substantial good.

I want to call attention to another item which remains as overhead in this big appropriation bill. Last year I called attention to the immense amount of money that was spent in messenger service and watchmen service in the Agricultural Department. Many, too many, watchmen, and many, too many, messengers were in that service. I want to say that this distinguished committee has not been able to hold that item down in the bill, because in several paragraphs both items have been increased.

Let me call attention to the first paragraph of the bill, that applies to the office of the Secretary himself. This first paragraph in last year's bill carried 70 messengers under this one head alone, while in this first paragraph in the present bill the committee has cut the messengers down to 50. Thank God, they seem to have gotten rid of 20. But I want to submit that if they could get rid of 20 they could have gotten rid of 20 more, and we would still have messengers enough.

Now, when we come to the watchmen in this same first paragraph, let me call your attention to the increase instead of the decrease. The Secretary of Agriculture has gotten all the men back, practically, only they are called watchmen instead of messengers. Last year the paragraph contained only 77 watchmen, but this particular paragraph in this bill contains 86 watchmen—9 more than last year. So you see they are shifted around with their names changed, but the full number, practically, retained. And so the number runs in the numerous other paragraphs of the bill. There are several hundred too many messengers and watchmen.

Mr. ANDERSON. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. ANDERSON. Does the gentleman know that four of those watchmen were transferred from the Forestry Service and four were transferred from the Weather Bureau?

Mr. BLANTON. Oh, the gentleman is giving me information which he got from some bureau chief, about which he personally knows no more than I do. He accepts the word of a bureau chief about the necessity of keeping this number of watchmen and messengers in the service. I want to say that until this appropriation committee begins to think with its own mind and use its own intelligence, and not accept the word of every little bureau chief that is sent before the committee to uphold the department estimate, you are going to continue to have a deficit of two or three billion dollars every year staring people in the face. You will continue to add not only to the city population but to the farmers as well the burdens of taxation. I want to say in that connection that, after all, the tax burdens of the country are paid by the poor people. It is true the big manufacturers, the big packers, the big business men in the cities of the East, actually pay the money into the Treasury as taxes, but indirectly they take them out of the pockets of the poor people in everything they eat and everything they wear. After all, it is the poor people of this country who really pay the great expense of carrying on this Government. I am glad to know that the new Appropriation Committee, into which has been centralized all the appropriating power of taking money out of the Treasury, has begun to wake up on some propositions of expense. They must open their eyes and keep them open and watch every item in these appropriation bills. And the main item is the clerical force. It must be cut down and put back upon a normal and prewar basis. But the clerical force has not been cut enough in this bill.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BLANTON had leave to extend his remarks in the RECORD.

Mr. RUBEY. Mr. Chairman, I yielded some time to the gentleman from Texas [Mr. LANHAM], who is unavoidably absent. I therefore ask unanimous consent that he may be permitted to extend his remarks in the RECORD.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent that the gentleman from Texas [Mr. LANHAM] may be permitted to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. RUBEY. Mr. Chairman, I make the same request for myself.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. ANDERSON. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. HULINGS].

Mr. HULINGS. Mr. Chairman, my remarks shall not be exactly upon any of the terms of this Agricultural appropriation bill, but I wish to submit some observations respecting our merchant marine. It might not be expected that a Member from the red brush and western hills of Pennsylvania would know much about maritime matters or even be interested in them, but the American merchant marine affects very deeply the citizens not only of those who "go down to the sea in ships" but as well of those of the hills and the prairies, and especially of those who are so deeply interested in the exportation of cotton and other agricultural products.

I have collected my information from various sources, and the result of my study may be of interest to some of my colleagues.

I learn that in the year 1800 the total merchant marine of the United States was in round numbers 1,500,000 dead-weight tons, of which two-thirds were engaged in foreign trade.

In 1860 this had increased to 8,000,000 dead-weight tons, of which a little less than one-half were engaged in foreign trade.

In 1910 our total merchant marine was 11,000,000 dead-weight tons, of which only one-tenth were employed in foreign trade.

During the World War up to July 1, 1920, our tonnage had more than doubled, amounting to 25,000,000 dead-weight tons, of which practically 60 per cent were engaged in foreign trade.

In 1800 the cargoes carried were of the value of $159,000,000, of which 89 per cent were carried by American ships.

In 1860 the cargoes were valued at $762,000,000, and 66 per cent were carried by American ships.

In 1914 the cargoes were valued at $3,785,000,000, but only 9 per cent were carried in American ships.

In 1920, $11,975,000,000 of goods were carried, of which 42 per cent were carried in American ships (p. 60, idem).

What proportion of these cargoes were "war materials" is not shown by the report, but it appears that, excluding all ships of less than 750 dead-weight tons and all the ships on the Great Lakes, we have 3,004 seagoing merchant vessels, of 16,918,000 dead-weight tons.

Now, to this number must be added 392 ships, of 2,000,000 dead-weight tons, which the Government will complete during this year and whatever number of ships have been built and building by private operators since June 30, 1920.

This great fleet has been produced under the exigencies of war at a cost that will not fall short of $4,000,000,000, and if fully employed would carry far more than all our imports and exports, while the fact is that only 42 per cent was carried in American ships.

What shall the Government do with the Government-owned vessels?

She tried to sell them. Just after the war, when freight rates were abnormally high, a few vessels were sold, ranging in price from $160 per dead-weight ton to $300 for the better type of vessels, and all these buyers have been saddled with such losses, and ocean freights have gone down so, that the Shipping Board can find no purchasers, for nobody wants to buy a ship at the prices the board demands.

The board has also put many of this great fleet into the hands of private concerns for operation but retained the right to say at what freight rates cargoes should be accepted.

The result has been that the competition of foreign vessels has reduced freight rates, and while the American operator was held up and delayed in getting authority from the board to close a cargo at offered rates, the foreigner would step in and take the cargo at lower rates, with the result that many of this boasted American fleet of merchant vessels are tied up at the dock.

Yet, unless these ships are used they are a dead loss.

Nobody will buy them and enter into competition with the Government.

We may boast and ululate after the American fashion about our great fleet, but it is as useless as a painted ship upon a painted ocean unless we get into the game and meet competition.

In the stress of war this fleet was built in great haste with unbelievable extravagance.

The Shipping Board in the allocation of ships to private operators has sought to realize about 23½ per cent of the cost of the ship for insurance, interest, and repairs, out of the freight earned.

World competition fixes rates that will not permit such realization.

The board has, I understand, made some concessions, still many ships are tied up while the foreigner takes the cargoes; and interest, insurance, depreciation, and overhead goes on without much diminution while the ship is idle.

I believe that the only way out is to charter our ships to responsible parties who know how to run ships at rates that will enable them to meet competition.

Assuming that a 10,000-ton ship will carry outward 8,000 tons and on the return, partly in ballast, will carry 4,000 tons, and will make six such average trips in the year, and if we assume further that the fuel, crew, port, and other charges for such a voyage will cost the American ship $46,000, it is apparent that if the freight rates average but $7.50 per ton, $90,000, and deducting voyage costs, $46,000, there will remain $44,000; or for the year's operations, six trips, $264,000. Deducting for the operator's profits $90,000, balance remaining $174,000, which would pay 15 per cent on a ship of 10,000 tons valued at $116 per ton or $1,160,000.

Let the Government put its ships into the hands of the right kind of men on terms that will incite their ambition and energy and that will enable them to meet world competition, and the Government will then be getting for the use of its ships all the business will pay.

Under our navigation laws the American operator must pay greater crew costs than the foreigner, but compared with fuel and port charges, in which the foreigner has no advantage, and interest, insurance, and replacement, the crew costs are negligible.

If such a ship as I have mentioned is valued at $116 per ton, and overhead, interest, insurance is figured at 23½ per cent, this charge alone would be $5.22 per ton on such a voyage as I have instanced, and now, when rates are as low as $7 per ton, it explains why so many of our ships are idle even when the Government exactions are much reduced.

We might as well "hang our harps upon the willow" unless we grant Government aid to the merchant marine.

I am told the Englishman when he decides to build a ship organizes a corporation with two classes of stockholders, one composed of those who operate the ship, who get stated salaries, the other class is of merchants and manufacturers who buy the stock with a limit of 2 per cent in annual dividends. A commission, as I understand, indicates to these merchants and manufacturers, who are vitally interested in low freights for their traffic, how many shares they are expected to take, and they take them, not only because they are thus assured cheap tolls to and from all parts of the world, but if they refuse British ships refuse to carry for them.

But whatever other Governments do or may do for their shipping, and however some may shy off from a subsidy, here is an opportunity where our Government may give substantial and sufficient aid without costing it a cent.

The ships are built. If they are not used, the three or four billions of dollars that they cost are a dead loss, but there is a simple method by which they can be put in use and the Government will derive for that use all the business will pay, and it can be done without any delay or the creation of additional boards.

I have been speaking of steam vessels, but the day of steam vessels is passing.

It will not be long until all these great steam fleets will be junked.

The effort will be made to wear them out in service, but before many years steam engines and boilers with their stores of fuel and water will be displaced by the internal combustion engine.

Norway, Sweden, Denmark, Holland now build nothing else when they can get the Diesel engine.

Sixty per cent of all the ships ordered in Great Britain in the last six months are motor ships.

Several hundred of these ships of large size in actual operation show that the savings of 12 per cent in cargo capacity and costs of fuel and reduction of crew have cut the cost of carrying freight nearly one-half, as compared with the coal-burning steam engined ship, and have absolutely proved the superior economy of the motor ship.

All these facts were known—they were pressed upon the Shipping Board, but of the billions of dollars spent by the Government in building ships not a dollar was spent in building a Diesel engined ship of large tonnage.

The situation is a serious one. Admiral Benson is quoted as saying that the internal combustion engine—the Diesel type—is the hope of the American merchant marine.

It may be that many of our present fleet can be made available by taking out the boilers and steam engines and replacing them with the Diesel engine, and all the merchant marine ships that are not completed should be equipped with the Diesel engine.

The Diesel engine ship will surely displace the steam-engine ship. Forward looking maritime nations are making great headway toward this end. We are doing practically nothing.

It is true these other nations have great fleets of steam-engine ships that are carrying freights for less rate than the American ship of similar type can carry it, burdened as it is with the exactions or the disposition to exact interest, insurance, repairs, and replacements upon the extravagant cost of these Government ships, and to meet foreign competition with our present fleet of Government steam-engine ships the Government must forego in part the cost of insurance, repairs, interest, replacement, and so forth, and this matter can be arranged by chartering the ships to responsible operators at rates that will permit them to meet foreign competition and at the same time give the Government for the use of its ships all that the traffic will pay, which, after all, is all that the Government ever can hope to realize.

The Clerk read as follows:

DEPARTMENT OF AGRICULTURE.

OFFICE OF THE SECRETARY.

Salaries, office of the Secretary of Agriculture: Secretary of Agriculture, $12,000; Assistant Secretary, $5,000; director of scientific work, $5,000; director of regulatory work, $5,000; solicitor, $5,000; chief clerk, $3,000, and $500 additional as custodian of buildings; private secretary to the Secretary, $2,500; executive clerks—one $2,250, one $2,100; stenographer and executive clerk to Secretary, $2,250; private secretary to Assistant Secretary, $2,250; appointment clerk, $2,000; officer in charge of supplies, $2,000; inspectors—one $3,000, one $2,250; attorneys—one $3,500, two at $3,250 each; law clerks—four at $3,000 each, two at $2,750 each, four at $2,500 each, eight at $2,250 each, one $2,200, five at $2,000 each, two at $1,800 each; superintendent of telegraph and telephones, $2,000; telegraph and telephone operator, $1,600; assistant chief clerk and captain of the watch, $1,800; clerks—one $2,000, five of class 4, thirteen of class 3, one $1,440; seventeen of class 2, thirty-one of class 1, two at $1,100 each, one $1,020, four at $1,000 each, six at $900 each; accountant and bookkeeper, $2,000; messengers or laborers—sixteen at $840 each, eight at $720 each; lieutenants of the watch—one $1,000, two at $960 each; watchmen—thirty at $840 each, fifty-two at $720 each; foreman of stable, $1,080; skilled laborers—four at $1,000 each, three at $960 each; eight messengers or laborers at $600 each; messenger boys—one $720, seven at $600 each, ten at $480 each; charwomen—one $540, three at $480 each, one $360, sixteen at $240 each; for extra labor and emergency employments, $12,480; in all, $367,560.

Mr. HAUGEN. Mr. Chairman, I reserve a point of order—I make the point of order against lines 5 and 6, page 2 of the bill.

Mr. BLANTON. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Texas makes the point of order that there is no quorum present.

Mr. BLANTON. Mr. Chairman, I will withdraw that for the present, as I understood the committee was going to move to rise.

Mr. ANDERSON. I would like to get through the Secretary's office. It will not take very long, I think.

Mr. BLANTON. We can do that to-morrow. We have a controverted point of order here, and——

Mr. ANDERSON. I do not know whether it is going to be controverted or not.

The CHAIRMAN. Does the gentleman withdraw his point of order?

Mr. BLANTON. I will withhold it for the present.

Mr. HAUGEN. Mr. Chairman, I make a point of order against lines 5 and 6 of the bill, page 2.

Mr. ANDERSON. Will the gentleman reserve the point of order?

Mr. HAUGEN. Certainly.

The CHAIRMAN. Will the gentleman state what his point of order is?

Mr. HAUGEN. There is no authority of law for the appropriation.

Mr. ANDERSON. Mr. Chairman, as I said this morning——

Mr. BLANTON. Mr. Chairman, I renew the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Texas makes the point of order that there is no quorum present.

Mr. ANDERSON. Mr. Chairman, if the circumstances were other than I understand they are, I would not allow the gentleman from Texas to run the House, but under the circumstances I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HICKS, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having had under consideration the bill H. R. 15812 had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. BELL, for five days, on account of sickness.

ENROLLED BILLS SIGNED.

The SPEAKER announced his signature to enrolled bills of the following titles:

S. 3994. An act validating certain applications for and entries of public lands, and for other purposes;

S. 4519. An act to authorize the Louisville & Nashville Railroad, its successors and assigns, to construct and maintain a bridge across the Alabama River at or near a point approximately 4 miles from the city of Montgomery, Ala.;

S. 793. An act authorizing the issuance of patent to the Milk River Valley Gun Club; and

S. 2379. An act to provide for the distribution of certain public lands withdrawn and improved under the provisions of the act of Congress approved June 25, 1910 (36 Stat. L., p. 847), as amended by the act of August 24, 1912 (37 Stat. L., p. 497), and which are no longer needed.

DEATH OF HON. CHARLES F. BOOHER.

Mr. RUCKER. Mr. Speaker, it becomes my painful duty to announce to the House the death of our colleague, Hon. CHARLES F. BOOHER, of the fourth district of Missouri, who died this morning at 6.50. At a suitable time I shall ask the House to set aside a day at which proper exercises can be held commemorative of his life and public services. For the present I offer the following resolution and ask for its adoption:

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 649.

Resolved, That the House has heard with profound sorrow of the death of Hon. CHARLES F. BOOHER, a Representative from the State of Missouri.

Resolved, That a committee of 15 Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions, and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Mr. RUCKER. Mr. Speaker, I move the adoption of the resolution.

The question was taken, and the resolution was unanimously agreed to.

The SPEAKER. The Chair appoints the following committee.

The Clerk read as follows:

Mr. CLARK of Missouri, Mr. ROMJUE, Mr. MILLIGAN, Mr. MAJOR, Mr. IGOE, Mr. RUCKER, Mr. MCPHERSON, Mr. LANHAM, Mr. HULL of Iowa, Mr. STEVENSON, Mr. MUDD, Mr. LITTLE, Mr. MCCLINTIC, Mr. SANDERS of Louisiana, and Mr. NICHOLLS.

Mr. RUCKER. Mr. Speaker, I offer a further resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect this House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 25 minutes p. m.) the House adjourned until to-morrow, Saturday, January 22, 1921, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV,

363. A letter from the Secretary of the Navy requesting the amending of Senate bill 412, regarding rank of Frederick W. Cobb as an officer in the United States Navy, was taken from the Speaker's table and referred to the Committee on Naval Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. JONES of Pennsylvania, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 13649) to amend the Penal Code of the Canal Zone and the navigation rules of the Panama Canal, reported the same with amendments, accompanied by a report (No. 1215), which said bill and report were referred to the House Calendar.

Mr. COOPER, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (H. R. 15448) to consolidate the work of collecting, compiling, and publishing statistics of the foreign commerce of the United States in the Department of Commerce, reported the same with amendments, accompanied by a report (No. 1216), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. SANDERS of Louisiana, from the Committee on Interstate and Foreign Commerce, to which was referred the bill (S. 4603) to revive and reenact the act entitled "An act to authorize the Gulf Ports Terminal Railway Co., a corporation existing under the laws of the State of Florida, to construct a bridge over and across the headwaters of Mobile Bay and such navigable channels as are between the east side of the Bay and Blakely Island, in Baldwin and Mobile Counties, Ala.," approved October 5, 1917, reported the same without amendment, accompanied by a report (No. 1217), which said bill and report were referred to the House Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 15744) granting a pension to Charity A. Freeman; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

UMI

A bill (H. R. 15755) granting a pension to Dorothy H. Volk; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. SINNOTT: A bill (H. R. 15829) fixing the taxable status of lands received in exchange for lands formerly embraced in the grants to the Oregon & California Railroad Co. and the Coos Bay Wagon Road Co.; to the Committee on the Public Lands.

Also, a bill (H. R. 15830) to amend section 3 of an act entitled "An act to provide for the leasing of coal lands in the Territory of Alaska, and for other purposes," approved October 20, 1914; to the Committee on the Public Lands.

By Mr. DENISON: A bill (H. R. 15831) to authorize the Secretary of the Treasury to sell a portion of the Federal building site in the city of Duquoin, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. CLARK of Missouri: A bill (H. R. 15832) to provide additional terminal facilities in square east of 710 and square 712 for freight traffic; to the Committee on the District of Columbia.

By Mr. MADDEN: A bill (H. R. 15833) providing for the investment of the Postal Savings System reserve in United States Government bonds and other securities; to the Committee on the Post Office and Post Roads.

By Mr. ACKERMAN: A bill (H. R. 15834) authorizing the accounting officers of the Treasury to adjust certain accounts of certain diplomatic and consular officers; to the Committee on Foreign Affairs.

By Mr. PORTER: A bill (H. R. 15835) for the acquisition of embassy, legation, and consular buildings and grounds; to the Committee on Foreign Affairs.

By Mr. WINSLOW: A bill (H. R. 15836) to amend the transportation act, 1920; to the Committee on Interstate and Foreign Commerce.

By Mr. CROWTHER: A bill (H. R. 15837) amending section 97 of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911; to the Committee on the Judiciary.

By the SPEAKER (by request): Memorial from the Legislature of the State of Washington, asking for appropriations necessary to continue Federal aid in the construction of rural post roads; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introducced and severally referred as follows:

By Mr. DONOVAN: A bill (H. R. 15838) granting a pension to Susan Fuller; to the Committee on Invalid Pensions.

By Mr. HARDY of Colorado: A bill (H. R. 15839) granting an increase of pension to Maria Manuela Lobato; to the Committee on Invalid Pensions.

By Mr. HASTINGS: A bill (H. R. 15840) granting a pension to James J. Davis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15841) granting a pension to Robert Ross; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15842) granting an increase of pension to Joseph B. Antoine; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15843) granting an increase of pension to Joshua Gage; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15844) granting an increase of pension to Price Cochran; to the Committee on Invalid Pensions.

By Mr. HAUGEN: A bill (H. R. 15845) for the relief of James T. Farrill; to the Committee on Military Affairs.

By Mr. HOEY: A bill (H. R. 15846) granting permission to Mrs. R. S. Abernethy, of Lincolnton, N. C., to accept the decoration of the bust of Bolivar; to the Committee on Foreign Affairs.

Also, a bill (H. R. 15847) granting a pension to Sarah A. Jennings; to the Committee on Pensions.

By Mr. IGOE: A bill (H. R. 15848) granting a pension to Margaret Daley; to the Committee on Pensions.

By Mr. LINTHICUM: A bill (H. R. 15849) granting an increase of pension to Mary Crosson At Lee; to the Committee on Invalid Pensions.

By Mr. SLEMP: A bill (H. R. 15850) for the relief of Francis Graves Bonham; to the Committee on Military Affairs.

By Mr. ASHBROOK: Joint resolution (H. J. Res. 454) to pay A. W. Young for money improperly refunded by him to the Post Office Department; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5150. By Mr. BABKA: Petition of Central States Census Supervisors' Association, requesting the passage of House bill 13630; to the Committee on the Census.

5151. By Mr. BURROUGHS: Petition of Mrs. Margaret S. Noyes, on behalf of the Hampton (N. H.) Monday Club, indorsing the Smith-Towner bill; to the Committee on Education.

5152. Also, petition of Mrs. Arven Blanchard, on behalf of Woman's Christian Temperance Union of Center Sandwich, N. H., indorsing the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

5153. Also, petition of Mrs. Lena T. Beardsley, corresponding secretary, on behalf of Derry Woman's Club, indorsing the Sheppard-Towner bill; to the Committee on Interstate and Foreign Commerce.

5154. Also, petition of Mrs. Lena T. Beardsley, corresponding secretary, on behalf of Derry Woman's Club, indorsing the Smith-Towner bill; to the Committee on Education.

5155. By Mr. GALLIVAN: Petition of East Boston League of Women Voters, favoring House bill 10925; to the Committee on Interstate and Foreign Commerce.

5156. Also, petition of Local No. 1120, of the International Longshoremen's Assocation of Boston, Mass., indorsing Senate bill 4606; to the Committee on the Merchant Marine and Fisheries.

5157. Also, petition of Loose-Wiles Co., of Boston, Mass., favoring a gross sales tax; to the Committee on Ways and Means.

5158. Also, petition of Miss Ellen F. Mason, of Boston, Mass., favoring the passage of House bill 14854 and Senate bill 4593; to the Committee on Agriculture.

5159. Also, petition of James P. Parker, of Boston, Mass., urging an appropriation for the administration of the Naval Reserve Force; to the Committee on Appropriations.

5160. Also, petition of W. B. Kilner, of Dorchester, Mass., and L. R. Devoto, of Roxbury, Mass., favoring increased compensation for inspectors of customs; to the Committee on Appropriations.

5161. By Mr. IGOE: Petition of 290 citizens of St. Louis, Mo., protesting against the passage of the so-called health and medical bills, particularly House bills 7, 2023, 2155, and 5724, and Senate bills 454, 813, 814, and 1017; to the Committee on Interstate and Foreign Commerce.

5162. By Mr. MOONEY: Petition of Central States Census Supervisors' Association, requesting the passage of House bill 13630; to the Committee on the Census.

5163. By Mr. O'CONNELL: Petition of Retail Dry Goods Association of New York City, favoring a daylight-saving law, known as the Edge law (S. 3670); to the Committee on Interstate and Foreign Commerce.

SENATE.

SATURDAY, *January 22, 1921.*

(Legislative day of Tuesday, January 18, 1921.)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gore	Lenroot	Sherman
Ball	Gronna	Lodge	Shields
Borah	Hale	McCormick	Simmons
Brandegee	Harris	McCumber	Smith, Ariz.
Calder	Harrison	McKellar	Smoot
Capper	Heflin	McLean	Sterling
Colt	Henderson	Moses	Sutherland
Culberson	Hitchcock	Nelson	Townsend
Curtis	Johnson, Calif.	New	Trammell
Dial	Jones, N. Mex.	Overman	Underwood
Dillingham	Jones, Wash.	Owen	Wadsworth
Edge	Kendrick	Page	Walsh, Mass.
Elkins	Kenyon	Phipps	Walsh, Mont.
Fernald	Keyes	Pittman	Warren
Fletcher	King	Poindexter	Williams
France	Kirby	Robinson	Willis
Gooding	La Follette	Sheppard	

Mr. HARRISON. I desire to announce that the Senator from Oregon [Mr. CHAMBERLAIN] and the Senator from South Dakota [Mr. JOHNSON] are absent from the Senate because of illness.

I also desire to announce that the Senator from Kentucky [Mr. BECKHAM], the Senator from Virginia [Mr. SWANSON], and the Senator from Rhode Island [Mr. GERRY] are detained on official business.

The VICE PRESIDENT. Sixty-seven Senators have answered to the roll call. There is a quorum present.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, communicated to the Senate the intelligence of the death of Hon. CHARLES F. BOOHER, late a Representative from the State of Missouri, and transmitted the resolutions of the House thereon.

The message also announced that the Speaker of the House had signed the following enrolled bills, and they were thereupon signed by the Vice President:

S. 793. An act authorizing the issuance of patent to the Milk River Valley Gun Club;

S. 2379. An act to provide for the distribution of certain public lands withdrawn and improved under the provisions of the act of Congress approved June 25, 1910 (36 Stat. L., p. 847), as amended by the act of August 24, 1912 (37 Stat. L., p. 497), and which are no longer needed;

S. 3994. An act validating certain applications for and entries of public lands, and for other purposes; and

S. 4519. An act to authorize the Louisville & Nashville Railroad, its successors and assigns, to construct and maintain a bridge across the Alabama River at or near a point approximately 4 miles from the city of Montgomery, Ala.

The message further announced that the House had agreed to the concurrent resolution (S. Con. Res. 38) directing the method of counting the electoral votes for President and Vice President of the United States and declaring the result.

COUNT OF ELECTORAL VOTES.

The VICE PRESIDENT. The House of Representatives have concurred in Senate concurrent resolution 38, providing for a joint session of the two Houses for the purpose of canvassing the electoral votes for President and Vice President of the United States. The Chair appoints as tellers on the part of the Senate the Senator from Massachusetts [Mr. LODGE] and the Senator from Alabama [Mr. UNDERWOOD].

PETITIONS AND MEMORIALS.

Mr. McLEAN presented memorials of the Garden Club of Hartford; the Kalmatheon Club, of West Haven; and the Bunker Hill Literary Club, of Waterbury, all in the State of Connecticut, remonstrating against the enactment of legislation commercializing the national parks, which were referred to the Committee on Commerce.

He also presented a petition of sundry citizens of Waterbury, Warren, Naugatuck, Morris, Bantam, Washington, and Watertown, all in the State of Connecticut, praying for the enactment of legislation establishing a bureau of veteran reestablishment in the Interior Department, which was referred to the Committee on Finance.

He also presented a petition of the Connecticut Daughters of the American Revolution, of Bridgeport, Conn., praying for the enactment of legislation to provide for the promotion of physical education in the United States, which was referred to the Committee on Education and Labor.

He also presented resolutions of American Legion Post, No. 29, of Greenwich; Harry W. Congdon Post, No. 11, American Legion, of Bridgeport; Torrington Post, No. 38, American Legion, of Torrington; Clifford R. French Post, No. 22, American Legion, of Thomaston; the American Legion National Executive Committee, of Stamford; Howard G. Hilliard Post, No. 66, American Legion, of Clinton; and the American Legion Post No. 89, of East Haven, all in the State of Connecticut, favoring Senate bill No. 4357, providing for medical, surgical, and hospital services and supplies for discharged soldiers, sailors, marines, and Army and Navy nurses; House bill No. 13558, to improve facilities and service of the Bureau of War Risk Insurance; House bill No. 10835, fixing compensation of National Army officers who incurred disability while in the service; and House bill No. 14157, providing for adjusted compensation for ex-service men, which were referred to the Committee on Public Health and National Quarantine.

Mr. ELKINS presented a resolution of the Chamber of Commerce of Martinsburg, W. Va., favoring the enactment of legislation to provide relief for ex-service men, which was referred to the Committee on Military Affairs.

He also presented a resolution adopted by the members of the Church of the Brethren of Old Furnace, W. Va., protesting against compulsory military training, which was referred to the Committee on Military Affairs.

He also presented a petition of sundry citizens of the city of Clarksburg, W. Va., praying for the enactment of legislation to create a department of education, which was referred to the Committee on Education and Labor.

Mr. LODGE presented a resolution adopted by the Military Order of the Loyal Legion of the United States, at Boston, Mass., favoring the passage of legislation restricting the immigration of aliens into the United States, which was referred to the Committee on Immigration.

He also presented a resolution adopted by the Board of Aldermen of the City of Chelsea, Mass., remonstrating against the enactment of legislation restricting the immigration of aliens into the United States, which was referred to the Committee on Immigration.

Mr. HARRIS presented a telegram in the nature of a petition from Ivan E. Allen, chairman senate appropriation committee, of Atlanta, Ga., praying that an appropriation be made for cooperative work with the States for the use of their respective boards or departments of health in the prevention, control, and treatment of venereal diseases, etc., which was referred to the Committee on Appropriations.

He also presented a petition of the Carroll County Trade Board, of Carrollton, Ga., praying for the enactment of legislation for the relief of veterans of the World War, which was referred to the Committee on Military Affairs.

He also presented resolutions adopted by the County Commissioners of Taylor County, at Butler, Ga.; the Chamber of Commerce of Dublin, Ga.; and the Commissioners of Roads and Revenues of Lowndes County, Ga., favoring the enactment of legislation to continue distribution of Federal aid to rural post roads in the respective States through the Bureau of Public Roads, which were referred to the Committee on Post Offices and Post roads.

Mr. CAPPER presented a resolution of the Farmers' Educational and Cooperative Union of America, Pontotoc Branch, of Ada, Okla., favoring the enactment of Senate bill No. 4561 providing for the levying, collection, and payment of taxes upon contracts for the future delivery of grain, etc., which was referred to the Committee on Agriculture and Forestry.

REPORTS OF COMMITTEE ON MILITARY AFFAIRS.

Mr. WADSWORTH, from the Committee on Military Affairs, to which was referred the bill (S. 4889) authorizing the Secretary of War to furnish free transportation and subsistence from Europe to the United States for certain destitute discharged soldiers and their wives and children, reported it favorably with an amendment and submitted a report (No. 712) thereon.

Mr. CAPPER, from the Committee on Military Affairs, to which was referred the bill (H. R. 567) for the relief of John Chick, reported it without amendment and submitted a report (No. 714) thereon.

REDUCTION OF THE ARMY.

Mr. WADSWORTH. I am instructed by the Committee on Military Affairs to report back favorably without amendment the joint resolution (H. J. Res. 440) directing the Secretary of War to cease enlisting men in the Regular Army of the United States, except in the case of those men who have already served one or more enlistments therein, and I submit a report (No. 713) thereon. I ask for the immediate consideration of the joint resolution.

The VICE PRESIDENT. Is there any objection?

Mr. ROBINSON. The Senator is asking unanimous consent for the immediate consideration of the joint resolution?

Mr. WADSWORTH. Yes; so that the incident may be closed.

Mr. ROBINSON. What is the joint resolution? I listened attentively and could not hear one word the Senator said.

Mr. WADSWORTH. It is to reduce the Army, by the same method proposed in the Senate joint resolution, to an enlisted strength of 175,000.

Mr. ROBINSON. Has the Senate's action been concurred in by the House?

Mr. WADSWORTH. The House passed their own joint resolution.

Mr. ROBINSON. A different measure?

Mr. WADSWORTH. It crossed the Senate joint resolution.

Mr. ROBINSON. Oh, very well.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, and it was read, as follows:

Resolved, etc., That the Secretary of War be, and he hereby is, directed and instructed to cease enlisting men in the Regular Army of the United States until the number of enlisted men shall not exceed 175,000: *Provided, however*, That nothing contained herein shall be held to prohibit the reenlistment of those enlisted men who have had one or more enlistments and who desire to reenlist in the Regular Army.

Mr. WALSH of Montana. I wish to inquire of the Senator from New York whether, since the joint resolution was acted on by the Senate, the House Committee on Appropriations has had the matter under consideration, or has the Senator been advised as to that matter?

Mr. WADSWORTH. I have no personal knowledge of it. I have seen something to that effect in the newspapers. The House itself passed this joint resolution, I think, on the same day we passed ours.

Mr. WALSH of Montana. I saw in the press something to the effect that the House Committee on Appropriations were disposed to make an appropriation for an Army of only 150,000. Is the Senator advised about that?

Mr. WADSWORTH. I have no advice other than what I saw in the newspapers.

Mr. WALSH of Montana. This is an application to concur in the action of the House?

Mr. WADSWORTH. Yes; in effect.

Mr. McKELLAR. I will say to the Senator from Montana that it is a unanimous report from the committee. We thought the recruiting ought to be stopped at once, and as both Houses have agreed to 175,000, we thought it ought to be done immediately. It is a unanimous report of the committee.

The joint resolution was reported to the Senate without amendment, read the third time, and passed.

FORT BUFORD MILITARY RESERVATION LANDS.

Mr. MYERS, from the Committee on Military Affairs, to which was referred the bill (S. 4686) to extend the provisions of section 2455, Revised Statutes, to the lands within the abandoned Fort Buford Military Reservation, in the States of North Dakota and Montana, asked to be discharged from its further consideration and that the bill be referred to the Committee on Public Lands, which was agreed to.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PHIPPS:

A bill (S. 4899) to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes; to the Committee on Post Offices and Post Roads.

By Mr. ROBINSON:

A bill (S. 4900) to amend section 5 of the act approved March 2, 1919, entitled "An act to provide relief in cases of contracts connected with the prosecution of the war, and for other purposes"; to the Committee on Mines and Mining.

By Mr. ASHURST:

A bill (S. 4901) granting certain public lands to the city of Phoenix, Ariz., for municipal purposes; to the Committee on Public Lands.

By Mr. CALDER:

A bill (S. 4902) for the relief of Antti Merihelmi; to the Committee on Claims.

By Mr. TOWNSEND:

A bill (S. 4903) to authorize the construction and maintenance of a bridge across Detroit River, within or near the city limits of Detroit, Mich.; to the Committee on Commerce.

WAR CONTRACTORS' RELIEF.

Mr. ROBINSON submitted an amendment proposing to add a new proviso to section 5 of the act approved March 2, 1919 (40 Stat. L., p. 1274), entitled "An act to provide relief in cases of contracts connected with the prosecution of the war, and for other purposes," providing for a liberal interpretation of that section, and also that the unexpended portion of the appropriation carried in the act be continued available for the purposes named therein until all claims covered in the act shall be finally settled or disposed of, intended to be proposed by him to the urgent deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

SPEECH BY SENATOR JONES OF WASHINGTON ON THE MERCHANT MARINE.

Mr. McKELLAR. Mr. President, on the occasion of the recent meeting of the National Merchant Marine Association convention, Senator WESLEY L. JONES, of Washington, made a notable speech on the subject of our merchant marine, a speech that ought to be read by every patriotic American citizen. There is no better posted man in this country on the subject of our merchant marine than is Senator JONES. His work as chairman of the Commerce Committee in respect to this great enterprise has been untiring, courageous, and effective. In this speech he gives plain facts that ought to be understood by every business man, especially, in the country. We should look at shipping conditions exactly as they exist. We should not mislead ourselves. We should not be deterred in the building up of a great American merchant marine by intimidation, competition, threats, British propaganda, sentiment, or by any other consideration of any kind, nature, or description, but all stand together for a merchant marine that will be second to none on the seas. The United States is entitled to it. Her export trade demands it, the American people want it, and we are going to have it.

The president of the International Mercantile Co., which Senator JONES charged with having an agreement to conduct its business in the interests of the British Government and British trade, stated that what Senator JONES said was unfair. Senator JONES quoted the agreement, and it was not denied. Those of us who have served with him know that Senator JONES is not an unfair man. The American Senate should stand behind Senator JONES to a man in this matter.

I ask for unanimous consent that this speech be placed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR WESLEY L. JONES, OF WASHINGTON, BEFORE THE NATIONAL MERCHANT MARINE ASSOCIATION CONVENTION, AT THE WASHINGTON HOTEL, WASHINGTON, D. C., JANUARY 20, 1921.

"I shall not discuss the need of an adequate merchant marine. I assume that every red-blooded American wants one.

"What must we do to have it? We must believe in ourselves. One of the greatest factors toward success is confidence. The letter 't' may stand between us and success. The more of us who say 'We can't,' the more likely we are to fail. If we all say 'We can,' and act on that, we will succeed. There is nothing that is attainable through human effort that this people have not the ability, capacity, strength, and power to do. The task that confronts us is a hard one. It will take money, time, and effort. There will be failures and setbacks and financial losses, but the goal is worth all it may cost.

"We have passed an act to aid in securing a permanent merchant marine. It may not be perfect. Some think we should not have passed some of its provisions. Some think it should contain others. Every suggestion that is offered now was fully considered in framing the merchant marine act of 1920, and that act represents the mature will and judgment of the majority of Congress without regard to party. Every American should stand behind it until it has had a real and fair test. If it does what we all want, then the majority is vindicated and the minority should rejoice. If it fails under the test, the minority is vindicated and the majority will join in changing it.

"Our principal competitor for the world's carrying trade is Great Britain. She will do everything possible to keep us off the sea. Her citizens have vast and far-reaching business connections with our people. She has been so long dominant in shipping that her citizens control many of the great financial, industrial, and transportation interests in this country. They will use and are using this power to defeat our efforts to build up an American marine. Their attacks will be most insidious where that is the wisest course to follow—bold and daring where that is best—but they will always keep in view the one great thing, success for British trade and shipping.

"I am not criticizing Great Britain. I admire the way she looks after British interests. What I would like to see is for our people to take a leaf out of her book, and I appeal to every American citizen and the American Government to look after American interests and put them first, just as Great Britain and Englishmen put British interests first.

"We fight their battles in many ways. Every man who discourages American enterprise from going into shipping, every newspaper that uses its columns to discredit our efforts and our laws to build up an American marine, gives aid and encouragement to our competitors. Some act unwittingly; some, I fear, purposely. There are those more versed in theory than in practice who urge that those who are most experienced and have the best facilities can do the carrying trade the cheapest and should therefore be permitted to do it. This is plausible and appealing. If accepted and followed it means no American marine.

"Many of our people are beginning to talk this way now. I see editorials along this line in some of our leading papers. Men who ought to know better are urging it. An American Army officer spoke to a class in our War College not long ago. The whole burden of his address was our inability to compete with Great Britain on the sea. He closed his lecture with a quotation from one of the professors in one of our great colleges to the effect that we should have Britain do our water

carrying because she can do it cheapest. Several of this class went to the Far East filled with this idea. They talked it on the boat. They belittled their own country's efforts to build up a merchant marine. They are doubtless doing this now wherever they are.

"We can not build up a merchant marine that way. We did not do it before the war, and it has cost us hundreds of millions of dollars—if not billions of dollars—and kept the world's civilization trembling in the balance for months. The time for plain speaking is here. There are great interests that ought to be American and that are thought to be American that are doing more to thwart American efforts to establish our merchant marine than any other agencies. Masquerading under American names, they are used to destroy or hinder American interests.

"The Chamber of Commerce of the United States is supposed to represent, stand for, and promote American interests, and yet a short time ago a magazine called the Nation's Business, and bearing on its front the legend 'Published by the Chamber of Commerce of the United States,' printed an article in a most conspicuous way that could have no other effect than to discredit what we have done and to discourage further efforts to build up our merchant marine. When I read it it occurred to me that some influence must be at work in the United States Chamber of Commerce to lead to the repeal of the merchant marine act of 1920. I wrote to the president of the chamber and asked him, 'Has your board of directors or your organization been giving consideration to any proposals or suggestions looking to the repeal of the merchant marine act of 1920? If so, by whom were they submitted and what consideration has been given to them? If any such suggestions were submitted, was public discussion invited with reference to them, or were they to be considered secretly and confidentially?'

"He did not answer these questions, although he stated that the chamber did not publish the magazine and was not responsible for what the editor allowed to go in it. If it has no control over the magazine, it is strange for the chamber to allow it to go out to the world that it publishes the magazine.

"In the next issue of this magazine was another article extolling a proposal of the Chamber of Commerce of the United States which was urged upon the Commerce Committee of the Senate, at the time of the formulation of the merchant marine act of 1920, by a Mr. Myrick, vice chairman and counsel of the ocean transportation committee of the Chamber of Commerce of the United States, an unusual proposition which was not adopted in terms by the committee, but which can be put in operation now under the act if it is at all practicable, and if the United States Chamber of Commerce has any faith in it, it should go to work and put it in force. I submit that the Chamber of Commerce of the United States would do a great thing for the country and be far truer to its great name if it would get behind and uphold the law which Congress has passed. I appeal to the patriotic men and chambers of commerce that make up this great organization to see to it that it is not made the agency to serve British interests and undermine American efforts and laws. British interests can have no more effective agency to promote their welfare than to have a great magazine published by the Chamber of Commerce of the United States, but edited in such a way as to serve their purposes intentionally or ignorantly.

"Great business interests, supposed to be American, are subordinating American interests to British interests. British shipping interests and the British Government are pulling strings behind the scenes and Americans are stifling American shipping and thwarting American efforts to build it up before an unsuspecting public and within the very machinery of the Government itself. A short time ago two great American lawyers, addressing an educational gathering, argued vigorously against a policy of discriminating duties. They had nothing to say against the discriminations practiced against us, but they deemed it a terrible thing for us to defend ourselves or put ourselves in a position where we could defend ourselves against such practices. They appeared before that audience as Americans. The audience probably never thought of the fact that one of them was the attorney for a great French shipping company and the other the attorney for a great American company bound by a solemn agreement to prevent injury to British trade and British shipping.

"A short time ago a reputable gentleman of Newark, N. J., told me of his experience in attempting to establish a shipping line between Newark and England. He applied to the Shipping Board to buy or charter Government ships for this purpose. His application was referred to the Shipping Board's representative in New York, and he said he was opposed to it. On being pressed for his reasons, he said that the establishment of such a line would injure the business of British lines sailing out of New York. This American citizen, acting as an agent of the United States Shipping Board, and thus using his power to protect British shipping interests, was a former employee of the International Mercantile Marine Co., which entered into an agreement in 1903 whereby it bound itself, for a period of 20 years, to follow no policy that would injure British shipping or British trade. Let these three paragraphs of this agreement indicate its nature and its consequent influence on American trade, American shipping, and the conduct of American citizens:

"An agreement made the 1st day of August, 1903, between the commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, and the board of trade (for and on behalf of His Majesty's Government) of the first part; the International Mercantile Marine Co. (formerly known as the International Navigation Co.), being a corporation incorporated and registered under the laws of the State of New Jersey, in the United States of America, which company is hereinafter referred to as 'The American Co.,' of the second part; and the Oceanic Steam Navigation Co. (Ltd.); Frederick Layland & Co. (1900) (Ltd.); the British & North Atlantic Steam Navigation Co. (Ltd.); the Mississippi & Dominion Steamship Co. (Ltd.), of the third part.

"10. This agreement shall have effect for 20 years from the 27th of September, 1902, and shall continue in force thereafter subject to a notice of 5 years on either side (which may be given during the continuance of this agreement, provided that His Majesty's Government shall have the right to terminate this agreement at any time if the association pursue a policy injurious to the interest of the British mercantile marine or of British trade.

"12. In case any difference as to the intent and meaning of this agreement, or in case of any dispute arising out of this agreement, the same shall be referred to the Lord High Chancellor of Great Britain for the time being, whose decision, whether on law or fact, shall be final.

"In brief the International Mercantile Marine Co., organized under American law and claiming to be an American company, obligates itself to pursue no 'policy injurious to the interests of the British mercantile marine or of British trade,' and in case of any dispute arising out of the agreement, whether of law or of fact, the Lord High Chancellor of Great Britain is to decide such dispute, and his decision is final.

"Furthermore, it is significant that while the British Government may cancel the agreement on 5 years' notice the shipping company can not do so, but is absolutely bound for the 20-year period, no matter what conditions may arise.

"The International Mercantile owns the American line, which flies the American flag, and, in addition to its regular fleet, controls approximately 40 vessels leased from the Shipping Board, which also fly the American flag, but are all subject to the terms of this contract, and therefore are actually operated in the interest of the British Government and British trade.

"The agreement of 1903 was supplemented by agreements of 1910 and of 1919.

"In the agreement signed in 1919, after the war was over, it is expressly stated that the first principal agreement—referring to the 1903 agreement—and the second principal agreement—referring to the 1910 agreement—shall, 'save as expressly varied by this agreement, remain in full force.'

"Those excerpts from the agreement of August, 1903, do not leave the question open to doubt as to where the International Mercantile Marine Co. stands as regards British interests. The question that then naturally arises in the popular mind is, 'Where do British shipping interests center in the United States?' The answer is that they center almost entirely in the port of New York, where their large terminal investments are located, and from which port most of their tonnage on this side of the Atlantic sails. Consequently, much of what helps the port of New York benefits British shipowners. A monopoly of export freight sent through the port of New York spells greater profits for these British owners. It follows then that the British shipping men are in accord with the eastern trunk line railway officials who seek to cancel the present equalization of export freight rates from Central Freight Association territory to Gulf and South Atlantic ports.

"The proof of that accord is at hand. On April 9, 1920, there was a meeting of the Chamber of Commerce of the State of New York, at which a committee of five representatives of North Atlantic port commercial organizations was appointed to confer with the Trunk Line Association with a view to conducting the fight before the Interstate Commerce Commission for the elimination of the existing equalization of export rates from Central Freight Association and Illinois classification territory to North Atlantic, South Atlantic, and Gulf ports. The present equalization, for the first time, establishes the principle that American foreign commerce may best be developed and extended by the establishment of new foreign trade routes by the United States Shipping Board, as is specifically provided in the merchant marine act, and in furtherance of this movement that every American export shipper should have the right, without discrimination by the railroads, to choose the port through

which his business can be handled most expeditiously and economically.

"The chairman of the committee named was Delos W. Cooke, designated as representing the Chamber of Commerce of the State of New York. A fact that was not mentioned is that Delos W. Cooke also is the American director of the great Cunard Line, which is British owned and flies the British flag.

"Now, the Chamber of Commerce of the State of New York, as its list of officials reveals, is made up of international bankers and the heads of great railroad and steamship companies. Philip A. S. Franklin, a vice president of this chamber of commerce, is the president of the International Mercantile Marine Co., the same American company which entered into the agreement already referred to by which it agreed to pursue no policy injurious to British trade.

"In reviewing this sequence of happenings, can any sane man doubt that this principle necessarily underlying the establishment of an American merchant marine is being sacrificed to a group devoted to furthering 'the interests of the British mercantile marine or of the British trade'?

"These facts should command the attention of every friend of an American merchant marine. They show us what influences are at work to prevent our building up a marine, in addition to those business and commercial difficulties that of themselves are great in the development and establishment of a great enterprise like this. We need the same unity of action and purpose now that moved us in the conduct of the war. The task to do now is more difficult than the task of winning the war and requires equal, if not higher, patriotism."

Mr. JONES of Washington. Mr. President, in the address I referred to an employee of the Shipping Board and the action he was alleged to have been taking in New York in the way of diverting commerce from American ships to British ships. The gentleman's name is Mr. J. F. Andrews. Upon what I considered very reliable information, I stated that he had been formerly employed by the International Merchant Marine Co. The president of that company, Mr. Franklin, states that he was never in the employ of that company, and I have no reason to doubt that statement. I accept it as true. However, I desire to say that other information, which I think is absolutely reliable, has come to me from a Senator confirming what I stated with reference to the action of this employee of the Shipping Board. I have asked the chairman of the Shipping Board to investigate the employee's conduct, and I hope that action will soon be taken, in accordance with what may be found to be the facts.

I ask unanimous consent that as a part of my remarks I may place in the RECORD the three agreements of the International Mercantile Marine Co. with the British Government to which I referred in the address.

The PRESIDING OFFICER (Mr. SPENCER in the chair). If there is no objection, it is so ordered. The Chair hears no objection.

The agreements referred to are as follows:

[Copy of an agreement, dated 1 Aug., 1903, between the Admiralty and the board of trade and the International Mercantile Marine Co., and the Oceanic Steam Navigating Co. (Ltd.), Frederick Leyland & Co. (1900) (Ltd.), The British & North Atlantic Steam Navigation Co. (Ltd.), the Mississippi & Dominion Steamship Co. (Ltd.), the Atlantic Transport Co. (Ltd.), and the International Navigation Co. (Ltd.)]

An agreement made the 1st day of August, 1903, between the commissioners for executing the office of lord high admiral of the United Kingdom of Great Britain and Ireland and the board of trade (for and on behalf of His Majesty's Government) of the first part, the International Mercantile Marine Co. (formerly known as the International Navigation Co.), being a corporation incorporated and registered under the laws of the State of New Jersey in the United States of America, which company is hereinafter referred to as "The American Co." of the second part, and the Oceanic Steam Navigation Co. (Ltd.), Frederick Leyland & Co. (1900) (Ltd.), the British & North Atlantic Steam Navigation Co. (Ltd.), the Mississippi & Dominion Steamship Co. (Ltd.), the Atlantic Transport Co. (Ltd.), and the International Navigation Co. (Ltd.) of the third part.

Whereas the party of the second part owns a controlling interest in the shares of the International Navigation Co. (Ltd.) which owns a majority of the shares of the other companies parties of the third part;

And whereas the term "The Association" hereinafter used means the parties hereto of the second and third parts and also includes any other company, corporate or unincorporate, partnership, body, or person, whether British, American, or other foreign which by any arrangement is admitted to or brought under the control of the association or any of its constituent parts for the time being;

And whereas the parties hereto of the third part are hereinafter referred to as "The British companies included in the association";

And whereas in the month of September, 1902, an agreement substantially to the effect of the provisions hereinafter contained was negotiated and made by and between His Majesty's Government and the American company acting on behalf of the association;

And whereas it is considered desirable that such agreement as last aforesaid shall be embodied in a formal instrument to be executed not only by the American company, but also by the British companies included in the association.

Now these presents witness that in consideration of the stipulations hereinafter contained on the part of the American company and the British companies included in the association the parties of the first part hereby undertake as follows:

1. The British companies included in the association shall, so long as the stipulations on their part and on the part of the American company hereinafter contained are duly observed, continue to be treated as heretofore on the same footing of general equality with other British companies in respect of any services, naval, military, or postal, which His Majesty's Government may desire to have rendered by the British mercantile marine: *Provided*, That nothing in this agreement contained shall extend to vessels of uncommercial speed which His Majesty's Government may specially require to be constructed and which are primarily designed for service in time of war.

And these presents also witness that in consideration of the undertaking hereinbefore contained on the part of the parties hereto of the first part, the American company and the British companies included in the association hereby agree as follows:

2. The British companies included in the association shall be, and continue to be, British companies qualified to own British ships, and a majority, at least, of their directors shall be British subjects.

3. No British ship in the association, nor any ship which may hereafter be built or otherwise acquired for any British company included in the association, shall be transferred to a foreign registry (without the written consent of the president of the board of trade, which shall not be unreasonably withheld), nor be nor remain upon a foreign registry. Nothing shall be otherwise done whereby any such ship would lose its British registry or its right to fly the British flag.

4. British ships in the association, and ships that may hereafter be built or otherwise acquired for any British company included in the association, shall be officered by British subjects, and as regards their crews shall carry the same proportional number of British sailors of all classes as His Majesty's Government may prescribe or arrange for in the case of any other British line engaged in the same trades.

5. Subject to the existing agreement between the Admiralty and the Oceanic Steam Navigation Co. (Ltd.), and without prejudice to the provisions therein contained, the American company and any British company included in the association shall sell or let on hire at any time during the continuance of this agreement to the Admiralty when required so to do by the Admiralty any British ship in the association and any ship hereafter to be built or otherwise acquired for any British company included in the association which the Admiralty may from time to time select. The terms of purchase or hire, if not otherwise agreed on, shall be similar to those contained in the existing agreement aforesaid.

6. At least a moiety of the tonnage built and at least a moiety of the tonnage otherwise acquired for the association in each successive period of three years (commencing from the date of this agreement), including a reasonable proportion of the faster classes of vessels, shall be built or acquired as the case may be for British companies included in the association and shall be registered as British ships. There shall not be reckoned in ascertaining the moiety of the tonnage so built or otherwise acquired: (a) Vessels of the exceptional class referred to in article 1 which may be constructed by special arrangement with the Government of the United States of America; (b) any vessels not already in the association purchased for the association from owners other than British subjects or American citizens or subjects or companies or bodies subject to a British or American jurisdiction, provided that such last-mentioned vessels are existing ships which have been running for at least two years prior to the contract for purchase and have not been built or acquired, directly or indirectly, for the association.

7. If at any time hereafter any British company (not being a party hereto) or any British partnership, body, or person shall be admitted to or brought under the control of the association or any of its constituent parts for the time being, then and in every such case subject and without prejudice to any agreement then existing between such company, partnership, body, or person and His Majesty's Government and subject and without prejudice to any agreement which may be made in view of such admission or inclusion between the American company or other person or body acting for the association, on the one hand, and His Majesty's Government, on the other hand, all the provisions of these presents shall inure for the benefit of and bind such company, partnership, body, or person, as the case may be, in like manner as if such company, partnership, body, or person had been a party hereto of the third part and had been comprised in the expression "The British companies included in the association" as used in this agreement, and except with the consent of His Majesty's Government no such British company, partnership, body, or person as aforesaid shall be admitted to or brought under the control of the association or any of its constituent parts for the time being otherwise than upon the terms specified in this clause.

8. If at any time hereafter during the continuance of this agreement any other company whether corporate or unincorporate partnership body or person, whether British, American, or other foreign shall be admitted to or brought under the control of the association or any of its constituent parts for the time being, the association shall give notice thereof to His Majesty's Government and shall furnish all such particulars with regard to terms, parties, or otherwise as the Government may reasonably require.

9. The American company and the British companies, included in the association, and any British company, partnership body, or person hereafter admitted to or brought under the control of the association or any of its constituent parts for the time being will forthwith and from time to time do and cause to be done all such further acts and execute or cause to be executed all such further documents and take all such steps as may be necessary to give full legal and binding effect to this agreement.

And these presents lastly witness that it is hereby mutually agreed as follows:

10. This agreement shall have effect for 20 years from the 27th September, 1902, and shall continue in force thereafter, subject to a notice of five years on either side (which may be given during the continuance of this agreement), provided that His Majesty's Government shall have the right to terminate this agreement at any time if the association pursue a policy injurious to the interests of the British mercantile marine or of British trade.

11. This agreement shall be construed and take effect as a contract made in England and in accordance with the law of England. The American company hereby irrevocably appoints the chairman for the time being of the British committee of the association or if there be no such chairman then each and every British company in the association to be the agent or agents in England of the American company for the purpose of accepting service on behalf of the American company of any process notice or other document in respect of any matter arising out

of this agreement and service of any such process notice or document on such chairman or company as aforesaid shall be deemed to be good service on the American company. Any notice or document sent by registered post addressed to the American company at No. 22, Old Broad Street, London, or to the registered office of any British company in the association shall also be deemed to have been duly served on the American company.

12. In case of any difference as to the intent and meaning of this agreement or in case of any dispute arising out of this agreement the same shall be referred to the Lord High Chancellor of Great Britain for the time being, whose decision whether on law or fact shall be final.

As witness the hands and seals of two of the before-mentioned commissioners and the seal of the board of trade, parties hereto of the first part, and the corporate seals of the parties hereto of the second and third parts.

Completed by,

Admiral Lord Walter Kerr and Rear Admiral W. H. Day, on behalf of the admiralty; Mr. C. W. Balfour, on behalf of the board of trade; Sir Clinton Dawkins, on behalf of International Mercantile Marine Co.; Mr. Bruce Ismay, on behalf of the Oceanic Steam Navigation Co.; Mr. Wilding and Mr. Glynn, on behalf of Frederick Leyland & Co.; Mr. Wilding and Mr. Richards, on behalf of the British & North Atlantic Steam Navigation Co. and the Mississippi & Dominion Steamship Co.; Mr. Torrey and Mr. May, on behalf of the Atlantic Transport Co.; and Mr. Wilding and Mr. Willett, on behalf of the International Navigation Co.

An agreement made the 1st day of October, 1910, between the commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland and the board of trade (for and on behalf of His Majesty's Government) of the first part the International Mercantile Marine Co. (formerly known as the International Navigation Co.), being a corporation incorporated and registered under the laws of the State of New Jersey in the United States of America of the second part and the Oceanic Steam Navigation Co. (Ltd.), Frederick Leyland & Co. (Ltd.) (formerly known as Frederick Leyland & Co. (1900) (Ltd.)), the British & North Atlantic Steam Navigation Co. (Ltd.), the Mississippi & Dominion Steamship Co. (Ltd.), the Atlantic Transport Co. (Ltd.), and the International Navigation Co. (Ltd.) of the third part. This agreement is supplemental to an agreement made between the same parties on the 1st day of August, 1903 (hereinafter called "the principal agreement"), and the definitions of terms therein contained apply to this agreement whereby it is agreed between the parties hereto, as follows:

1. The *Oceanic*, *Majestic*, and *Teutonic* being British ships in the association and any ship built subsequent to the date of the principal agreement or otherwise acquired for any British company included in the association which may be considered by the Admiralty suitable for employment as armed cruisers or commissioned auxiliaries shall be sold or let on hire to the Admiralty in the manner and subject in all respects to the conditions referred to in the principal agreement, save and except that the purchase price or rate of hire (as the case may be) of any such vessel shall be fixed at the time of every such sale or letting on hire by mutual agreement between the parties or in default of agreement by arbitration as hereinafter provided.

2. Any vessel covered by the principal agreement which His Majesty's Government may require to hire for purposes other than employment as an armed cruiser or commissioned auxiliary shall be let on hire to the Admiralty when so required during the currency of the principal agreement upon the terms of the usual charter party for a transport under the regulations of His Majesty's transport service at such rate of hire as may be settled at the time of hiring by mutual agreement or in default of agreement by arbitration as aforesaid.

3. If and whenever the parties fail to agree upon the purchase price or rate of hire of any vessel the same shall be referred to the arbitration of two arbitrators in accordance with the provisions of the arbitration act, 1889, or any then existing statutory modification thereof. One of such arbitrators shall be appointed by the Admiralty and the other by the association, and every arbitrator or umpire appointed in any such reference is to be a person of commercial experience with knowledge of mercantile affairs.

4. Save as expressly modified by this agreement the terms of the principal agreement shall remain in full force and effect.

As witness the hands and seals of two of the before-mentioned commissioners and the seal of the board of trade, parties hereto of the first part, and the corporate seals of the parties hereto of the second and third parts, the day and year first before written.

Signed, sealed, and delivered by Vice Admiral Sir F. C. B. Bridgeman, K. C. B., K. C. V. O., and Rear Admiral Sir J. R. Jellicoe, K. C. V. O., C. B., being two of the commissioners for executing the office of lord high admiral of the United Kingdom of Great Britain and Ireland, in the presence of

THE ADMIRALTY COMMISSIONERS AND THE BOARD OF TRADE AND THE INTERNATIONAL MERCANTILE MARINE CO. AND OTHERS—AGREEMENT.

[Dated 2d September, 1919.]

An agreement made the 2d day of September, 1919, between the commissioners for executing the office of lord high admiral of the United Kingdom of Great Britain and Ireland and the board of trade (for and on behalf of His Majesty's Government) of the first part, the International Mercantile Marine Co. (formerly known as the International Navigation Co.), being a corporation incorporated and registered under the laws of the State of New Jersey in the United States of America of the second part, and the Oceanic Steam Navigation Co. (Ltd.), Frederick Leyland & Co. (Ltd.), formerly known as Frederick Leyland & Co. (1900) (Ltd.)), the British & North Atlantic Steam Navigation Co. (Ltd.), the Atlantic Transport Co. (Ltd.), and the International Navigation Co. (Ltd.), all of whom are hereinafter referred to as the British companies, of the third part.

Whereas this agreement is supplemental to two agreements (hereinafter called the first principal agreement and the second principal agreement), dated, respectively, the 1st day of August, 1903, and the 1st day of October, 1910, and both made between the parties hereto of the first and second parts and the parties hereto of the third part and the Mississippi & Dominion Steamship Co. (Ltd.), which last-named company has since the date of the second principal agreement been finally liquidated and the whole of its assets transferred to the British & North Atlantic Steam Navigation Co. (Ltd.); and

Whereas the respective articles of association of the British companies included in the association parties hereto of the third part are to be modified so as to give effect to the provisions of this agreement. Now, it is hereby agreed by and between the parties hereto as follows:

1. No person shall henceforth be a director, managing director, managing agent, manager or person to carry on or manage the business of any such British company and having the usual powers of a director (all of whom are hereafter in this agreement included in the term "director") unless his appointment shall be acceptable to the board of trade.

2. The management and operation of the steamships and the general business of each of the British companies shall be carried on and controlled by the directors so approved, who, in addition to the powers and authorities by the articles or by-laws conferred on them, shall exercise all such powers and do all such acts as may be exercised or done by the company and are not by statute required to be exercised or done by the company in general meeting, provided, however, that the right to dispose of the profits of the company shall be and remain in the shareholders to be exercised by them in general meeting.

3. All provisions of the articles or by-laws of the British companies in conflict with this agreement shall, so long as this agreement shall remain in force, be deemed to be superseded, and this agreement shall be ratified and confirmed in general meeting by each of said companies. The American company undertakes to vote its shares in such meetings in favor of such ratification and confirmation.

4. In consideration of the obligations undertaken by the British companies under this agreement:

First. None of the British companies shall be regarded as "a foreign-controlled company" as to the building, purchasing, chartering, and operating of vessels and the acquisition of shares and securities in and of other British steamship companies, and the disposal of all such vessels, shares, and securities, and as to the basis on which it is at liberty to conduct its business and carry on and develop its undertaking.

Second. There shall be no discrimination as against any of the British companies, and each of such companies shall be treated on a footing of equality with other British steamship companies which are free from "foreign control" as to any facilities, advantages, and opportunities afforded for the carrying on and development of similar businesses and undertakings and otherwise: *Provided*, That if the British companies shall give notice for the termination of the principal agreements the provisions contained under this second head shall cease to be operative as from the date upon which such notice is given.

5. The first principal agreement and the second principal agreement shall, save as expressly varied by this agreement, remain in full force. This agreement shall expire or be terminable in the same manner as the principal agreements.

As witness the hands and seals of two of the before-mentioned commissioners and the seal of the board of trade, parties hereto of the first part, and the corporate seals of the parties hereto of the second and third parts, the day and year first before written.

Signed, sealed, and delivered by Rear Admiral Sir O. de B. Brock and Rear Admiral Sir W. C. M. Nicholson, being two of the commissioners

for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, in the presence of

O. DE B. BROCK,
W. C. M. NICHOLSON,
W. H. SYKES,
Temporary Administration Assistant, Admiralty.
J. C. BOARDMAN,
Secretary to Deputy Chief of Naval Staff, Admiralty.

The seal of the board of trade was hereunto affixed by the direction of the president of the board of trade in the presence of

[SEAL.]
A. C. GEDDES.
F. C. STARLING,
Librarian, Board of Trade.

The seal of the International Mercantile Marine Co. was hereunto affixed in the presence of

[SEAL.]
P. A. S. FRANKLIN,
President.
E. C. GRENFELL,
Director.
C. R. JEEVES,
Assistant Secretary.

H. CONCANON,
A. B. CAUTY, *Directors.*
PERCY A. GRIFFITHS,
Assistant Secretary.

COMPENSATION OF UNITED STATES EMPLOYEES.

The Senate resumed the consideration of the bill (H. R. 5726) to fix the compensation of certain employees of the United States.

The VICE PRESIDENT. The pending question is on the amendment of the Senator from Georgia [Mr. SMITH].

Mr. KING. Let the amendment be reported.

The VICE PRESIDENT. The Secretary will read the amendment.

The READING CLERK. On page 2, line 9, after the word "clerks," insert the words "or employees in the District of Columbia," so the proviso as amended will read:

Provided further, That the provisions of this act shall not apply to persons enlisted in the military or naval branches of the Government nor to the employees in the Philippine Islands, Porto Rico, Guam, the Virgin Islands, the Territory of Hawaii, the Territory of Alaska, and the Panama Canal Zone, nor to members of the National Home for Disabled Volunteer Soldiers employed at or in connection with said homes, nor to persons holding appointments as postmasters, assistant postmasters, rural carriers, postal clerks, carriers in the City Delivery Service, or railway mail clerks, or employees in the District of Columbia.

Mr. JOHNSON of California. Mr. President, the amendment is little understood. The amendment will have the effect of destroying the bill. If that is the design, of course, it should be agreed to, but if the bill is a just bill the amendment ought to be defeated, because it proposes to take out of the bill a class comprising almost one-half of those affected by it. I ask that the amendment be defeated.

The VICE PRESIDENT. The question is on agreeing to the amendment. [Putting the question.] The Chair is unable to decide.

Mr. UNDERWOOD. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. NEW. Mr. President, may the pending amendment be stated?

The VICE PRESIDENT. The pending amendment will be stated.

The READING CLERK. On page 2, line 9, after the words "railway mail clerks," it is proposed to insert the words "or employees in the District of Columbia."

The VICE PRESIDENT. On the question of agreeing to the amendment the yeas and nays have been ordered.

The reading clerk proceeded to call the roll.

Mr. KENDRICK (when his name was called). I have a general pair with the Senator from New Mexico [Mr. FALL], which I transfer to the Senator from California [Mr. PHELAN] and vote "nay."

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Colorado [Mr. THOMAS]. He being absent from the Chamber, I withhold my vote. If permitted to vote, I should vote "nay."

Mr. MOSES (when his name was called). I inquire if the junior Senator from Louisiana [Mr. GAY] voted?

The VICE PRESIDENT. He has not.

Mr. MOSES. I have a general pair with that Senator. In his absence I withhold my vote. If at liberty to vote, I should vote "nay."

Mr. POMERENE (when his name was called). I have temporarily a general pair with the senior Senator from Iowa [Mr. CUMMINS]. I do not know how he would vote if present, therefore I withhold my vote. If at liberty to vote, I should vote "nay."

Mr. SHERMAN (when his name was called). I have a general pair with the junior Senator from Virginia [Mr. GLASS], and therefore withhold my vote.

Mr. STERLING (when his name was called). I have a general pair with the senior Senator from South Carolina [Mr. SMITH]. In his absence I withhold my vote.

Mr. WILLIAMS (when his name was called). I have a general pair with the senior Senator from Pennsylvania [Mr. PENROSE], who is not in the Chamber, but I understand that if he were present the Senator from Pennsylvania would vote as I am about to vote. I vote "nay."

The roll call was concluded.

Mr. HARRISON (after having voted in the negative). I have a general pair with the junior Senator from Oregon [Mr. MCNARY], but I understand if he were present he would vote as I have voted. So I let my vote stand.

Mr. JONES of New Mexico. I have a general pair with the Senator from Missouri [Mr. SPENCER]. In his absence I withhold my vote.

Mr. OWEN. I have a pair with the Senator from New Jersey [Mr. EDGE], whom I do not see in the Chamber. If I were at liberty to vote, I should vote "nay."

Mr. DILLINGHAM. I inquire if the Senator from Maryland [Mr. SMITH] has voted?

The VICE PRESIDENT. He has not.

Mr. DILLINGHAM. Then I am unable to vote, having a general pair with that Senator.

Mr. JONES of Washington. The Senator from Virginia [Mr. SWANSON] is necessarily absent on business of the Senate, and during his absence I promised to pair with him. I understand, however, that I can transfer my pair with the Senator from Virginia to the Senator from Nebraska [Mr. NORRIS]. I therefore do so and will vote. I vote "nay."

Mr. MOSES. In view of the announcement which has been made by the junior Senator from Mississippi [Mr. HARRISON], I transfer my pair with the junior Senator from Louisiana [Mr. GAY] to the junior Senator from Oregon [Mr. MCNARY] and will vote. I vote "nay."

Mr. FERNALD. I have a general pair with the junior Senator from South Dakota [Mr. JOHNSON]. In his absence I withhold my vote. If permitted to vote, I should vote "nay."

Mr. KNOX. I transfer my pair with the senior Senator from Oregon [Mr. CHAMBERLAIN] to my colleague, the senior Senator from Pennsylvania [Mr. PENROSE], and will vote. I vote "nay."

Mr. WALSH of Montana. I have a pair with the Senator from New Jersey [Mr. FRELINGHUYSEN]. In his absence I withhold my vote.

Mr. SUTHERLAND (after having voted in the negative). I have a pair with the senior Senator from Kentucky [Mr. BECKHAM], who is absent from the Senate on official business. I am advised that were he present he would vote as I have voted. I therefore allow my vote to stand.

Mr. HARRISON. I desire to announce that the Senator from Oregon [Mr. CHAMBERLAIN] and the Senator from South Dakota [Mr. JOHNSON] are absent from the Senate because of illness.

I also desire to announce that the Senator from Kentucky [Mr. BECKHAM], the Senator from Virginia [Mr. SWANSON], and the Senator from Rhode Island [Mr. GERRY] are detained on account of official business.

Mr. CURTIS. I desire to announce that the Senator from Missouri [Mr. SPENCER] is necessarily absent from the Senate. If he were present, he would vote "nay."

I also desire to announce that the Senator from Indiana [Mr. WATSON] is paired with the Senator from Delaware [Mr. WOLCOTT].

The result was announced—yeas 12, nays 49, as follows:

YEAS—12.

Brandegee	Gore	Phipps	Trammell
Dial	Heflin	Ransdell	Underwood
Fletcher	King	Sheppard	Warren

NAYS—49.

Ashurst	Hale	Lenroot	Shields
Ball	Harris	Lodge	Simmons
Borah	Harrison	McCormick	Smith, Ariz.
Calder	Henderson	McKellar	Smoot
Capper	Johnson, Calif.	McLean	Sutherland
Colt	Jones, Wash.	Moses	Townsend
Culberson	Kellogg	Nelson	Wadsworth
Curtis	Kendrick	New	Walsh, Mass.
Edge	Kenyon	Overman	Williams
Elkins	Keyes	Page	Willis
France	Kirby	Pittman	
Gooding	Knox	Poindexter	
Gronna	La Follette	Robinson	

NOT VOTING—35.

Beckham	Glass	Owen	Spencer
Chamberlain	Hitchcock	Penrose	Stanley
Cummins	Johnson, S. Dak.	Phelan	Sterling
Dillingham	Jones, N. Mex.	Pomerene	Swanson
Fall	McCumber	Reed	Thomas
Fernald	McNary	Sherman	Walsh, Mont.
Frelinghuysen	Myers	Smith, Ga.	Watson
Gay	Newberry	Smith, Md.	Wolcott
Gerry	Norris	Smith, S. C.	

So the amendment of Mr. SMITH of Georgia was rejected.

The VICE PRESIDENT. The bill is in the Senate and is still open to amendment.

TREATY WITH GERMANY AND RELATIONS WITH RUSSIA.

Mr. KING. Mr. President, an article in yesterday's newspapers, written by that able journalist, Mr. David Lawrence, calls attention to a question intimately related to the treaty of Versailles. Reference is made to the conditions in Europe and the possible union of European nations to promote their own trade, though it would be accomplished by discrimination against the United States. The issues involved in the Versailles treaty are not settled in our country, and each day brings additional evidence of the unwisdom of not ratifying the treaty with Germany. We are clamoring for greater export trade, for increased commercial facilities with Europe and the rest of the world, and yet we opposed a plan which would have hastened Europe's rehabilitation and greatly increased our foreign trade.

During the recent campaign it was contended by many that our country should be isolated, that it had nothing in common with Europe, and that its traditional policy forbade any sort of union between the United States and other nations.

The work of President Wilson in attempting to secure a lasting and a just peace was not understood, and his fine humanitarian sentiments were entirely misinterpreted. He sought the peace of the world, and wished to establish not only cordial relations between all nations, but he endeavored to provide a plan for their future conduct, which would prevent war and the international conflicts which the old order of world government and world relationship produced.

The American people, in my opinion, failed to appreciate the nature of the covenant of the league and the issues which were involved in its adoption or its rejection, and they are now seeking to obtain benefits which its provisions would have brought to this Nation.

There were Republicans and Democrats who opposed the covenant of the league or any union between the United States and Europe; they asserted that this Nation was so powerful that it was not interested in the rest of the world, commercially or otherwise, and that its prosperity was not dependent upon what occurred in other lands; but, Mr. President, since the election our Republican friends and those who opposed the league have discovered that we are related to the world, and that the prosperity of the United States is dependent upon the prosperity of other nations.

Mr. BORAH. Mr. President, did I understand the Senator to say that the Republican Senators have discovered the fact that we were related to the other nations of the world?

Mr. KING. No; we have discovered that fact.

Mr. BORAH. Oh, the Democrats.

Mr. KING. The American people have discovered, as many of my Republican friends upon the other side of the Chamber have now discovered, that we are so related to the world that our prosperity in part depends upon their prosperity.

Mr. BORAH. Mr. President, that is a discovery which was made years and years and years ago, and which no one has ever denied or disputed outside of an insane asylum.

Mr. KING. I am very glad to find that the Senator had been converted from a position which I think the majority of the American people believe he assumed during the pre-election campaign.

Mr. BORAH. The Senator from Utah must not presume, because he has made a discovery, that it is a new discovery to the Senator from Idaho.

Mr. KING. Mr. President, the Senator from Utah discovered many years ago what the Senator from Idaho has now discovered and everybody else ought to have discovered—that our prosperity is connected with the peace and with the prosperity of other nations, and that when we attempt isolation for this country we cut off the fountains not only of domestic productivity, in part at least, but we dry up the streams of commerce and trade which bring prosperity to the American people.

Mr. FRANCE. Mr. President——

Mr. KING. I yield to the Senator from Maryland.

Mr. FRANCE. I should like to ask the Senator if he has also discovered that our prosperity is more or less involved in the prosperity of Russia?

Mr. KING. Mr. President, the Senator from Maryland leads me away from the field into which I was about to enter for a moment or two; but I shall reply to the Senator from Maryland as frankly, but briefly, as I can.

I presume that the question the Senator intended to ask was why we did not resume diplomatic and commercial relations with the Russian soviet government, because, as I have followed the political activities and senatorial activities of my distinguished friend for the past few weeks, the belief has been developed that he is desirous that the United States should recognize the dictatorship of Lenin and Trotski in Russia, recognize the bolshevik government not only as a de facto but as a de jure government, and that we should enter into diplomatic relations with Russia.

Mr. FRANCE rose.

Mr. McCORMICK. Mr. President, will the Senator yield for a question?

Mr. KING. If it is agreeable to the Senator from Maryland, who rose first, I shall be glad to yield.

Mr. FRANCE. Mr. President, I merely rose to ask the Senator from Utah where he had made that most extraordinary discovery? That is something which I myself have not discovered.

Mr. KING. Does the Senator refer to my allusion to the suggestion that he desired that the United States should enter into diplomatic or consular relations with Russia?

Mr. FRANCE. I will say to the Senator that I have never made any such suggestion, either upon the floor of the Senate or in any other place; and if the Senator will do me the honor of reading the resolution which I introduced on the 26th, I think, of last February, he will see that my purpose was not the recognition of the soviets at all, but rather the establishment of friendly trade relations with the Russian people—something which can be done without any recognition whatever of the de facto government of Russia.

Mr. KING. I apologize to the Senator if I have misconceived his attitude; but let me ask the Senator from Maryland if he does not know, in view of the conditions prevailing in Russia, that there can be no trade with Russia except through the soviet dictatorship? It is absolutely meaningless to say that we will trade with Russia unless we trade with the soviet government. The soviet government, in effect, has interdicted trade and traffic between Russian people, as individuals and communities, and other nations. They have said that all trade must be through the soviet government, and that is the reason why the soviet leaders are so anxious to secure trade relations, though in name or theory only, with the United States, because they entertain the view that as a proximate sequence recognition of the de facto government of the soviet or bolshevik government of Russia will take place.

Mr. FRANCE. Mr. President——

Mr. KING. I yield.

Mr. FRANCE. I rise merely to say that I do not wish to trespass upon the time of the Senator.

Mr. KING. I shall be very glad to have the Senator make any statement that he desires apropos of the question just suggested.

Mr. FRANCE. I shall take occasion in the near future, however, to discuss this whole question of the opening up of trade with Russia. As a matter of fact, it would be perfectly feasible for us to sell goods to Russia without any recognition of the soviets as the de facto government of Russia. The soviet government could buy, as the agent for the Russian people, materials which we have for sale for cash without our recognizing the soviet government at all. I will say to the Senator, for his information—and I know that he desires to receive all possible information on this most important subject—that a great many very prominent Russians who are entirely opposed to the bolshevist régime are thoroughly convinced that the opening up of trade with Russia would not tend to strengthen the bolsheviks, but that, on the contrary, the opening up of trade would tend to bring about in Russia a greater conformity on the part of the Russians to the practices

of the other nations with which the Russians would trade. The whole development of affairs in Russia has been in the direction of an abandonment of the theories of communism in order that the actual facts of the situation might be met; and it is on the theory that Russia isolated can indulge in fantastic theories of government, but that Russia dealing with the other nations would tend to conform to the principles and practices of other nations, that many of those who oppose the communistic régime are in favor of the opening up of trade with Russia.

I thank the Senator for yielding to me. I have trespassed this much upon his time only because I did not wish it to appear in the RECORD that I had advocated the recognition of the present de facto government in Russia, which I have not done. My resolution very carefully avoided the suggestion that we should at this time recognize any particular government there.

Mr. KING. Mr. President, if any Americans desire to trade with Russia they ought to have the fullest opportunity, and if any of the Russian people desire to trade with the United States full opportunity should be accorded them to sell their commodities in our markets, subject of course to such tariff laws and regulations as now exist, but I think the Senator from Maryland—and I say this with full appreciation of his great knowledge upon this question—does not fully appreciate the power of the dictatorship of Russia over the lives and the commercial and business relations of the people.

Why, Mr. President, it is impossible to trade with Russia, because Russia has nothing to ship in payment for the commodities which she might obtain from other nations.

Mr. McCORMICK. Mr. President, will the Senator yield on that point?

Mr. KING. I yield.

Mr. McCORMICK. Are there no other States in Europe which have nothing to give in exchange for products shipped to them?

Mr. KING. Mr. President, there are other States of Europe that are bankrupt, and the people within their borders are starving. I hope the Senator from Illinois, by his question, does not seek to imply that we should deal with the peoples of those other countries and their Governments as we should now deal with the soviet government of Russia. So far as I am concerned, I rejoice in the charities of the American people in behalf of the starving people of Europe. I should be glad to see American people make capital investments in Europe, for the purpose of enabling the starving peoples to obtain some of our surplus products, and thus save their lives, as well as to furnish a market for products of which we have a surplus.

Mr. President, as I was about to say, it is impossible to trade with Russia. England has attempted it. Norway and Sweden have attempted it. Finland, lying upon her borders, has attempted it. The Czechoslovakian Republic has attempted it, and many other nations of Europe. They found that the representatives of Russia who were admitted to the confines of their territory immediately plotted for the overthrow of their Governments.

Instead of being interested in trade, they were interested in a propaganda which looked to the overthrow of what they denominated the capitalistic Governments of Europe.

Mr. Krassin and Mr. Kameneff and others have been in England, and Lloyd-George, desiring, as he did, to extend the trade of Great Britain, and if possible to find a market in Russia for the products of Great Britain, engaged in protracted negotiations with those men, and attempted to find some basis by which there could be trade relations established between the people of Great Britain and the people of Russia. But finally he was compelled to order them from Great Britain. They attempted to corrupt labor organizations of Great Britain, as well as the press, and the editor of the Herald, the radical labor organ of Great Britain, confessed that a large sum of gold had been placed with him. Of course, it was for the purpose of influencing his paper in behalf of Russia and to induce it to support in Great Britain policies which would result in the overthrow of law and order.

One would suppose that Sweden, Norway, and Denmark would have entered into trade relations of considerable proportions with the Russian people, if trade were possible. But, Mr. President, in each of those nations the authorities at various times ordered the deportation of the representatives of the soviet government. The soviet representatives ostensibly sought trade, but it was soon discovered that they were sent into those nations to carry on a propaganda for their overthrow and to use those States as the base of operations against other States. They invaded Belgium and Holland and attempted to make Holland a base of operations against nations upon this side of the Atlantic. The records are full of efforts made by the nationals of European countries to enter into trade relations with Russia, and they disclose the failures attending such efforts.

The Senator from Maryland says he wants the American people to trade with Russia and the Russian people to trade with the United States. I agree with him in that statement. What is there to restrain them from trading? Americans are at liberty to ship their products to Russia, so far as the United States is concerned, and if there are individuals there or representatives of the soviet government who desire to purchase them, there are no reasons why the sales should not occur. The only inhibition to exporting from the United States to Russia relates to munitions of war. The Senator's constituents, or any American, may ship to Russia commodities of any character or description, outside of munitions of war, and there are no restrictions imposed by the Government of the United States against that trade.

Mr. FRANCE. Mr. President, there is a restriction of the most binding character, a restriction which prevents payment by Russians for the goods which they purchase, and that restriction consists in the refusal of the United States mints to mint gold which may be of Russian origin, and that restriction has, to my knowledge, held up the sales of enormous quantities of goods to Russia. I have not as yet informed myself as to the practice of the mint with reference to gold which is brought to it, but I had never been informed that it was the practice of the mint to search the title of every piece or gold brought to it. I can conceive that such a practice as that would lead to endless difficulty. For example, suppose a miner comes from Seattle with some gold bullion, bringing that to the mint, say, in Philadelphia, to have it minted. Is it incumbent upon that mint to inquire as to how that miner came into the possession of that gold, to search the title of the mine from which the gold was produced, before that gold is minted? It seems to me that if that is the practice of the mint it would be impossible ever to mint any gold without an exhaustive search of the title, not only of the title to the gold in the hands of the miner but the title of the mine from which that gold was taken.

As a matter of fact, it is true that Russian gold is available for the purchase of southern cotton, which the southern cotton growers are now holding at a great loss to themselves, much of which is deteriorating, I am informed, in the open weather.

The Russians have gold with which to pay for that cotton, provided the mints will accept their gold for minting. That gold is not gold which has been confiscated from the Russian people. That gold, I am informed—and there is no reason for believing otherwise—is the gold which was in the imperial treasury of the Czar at the outbreak of the war. The amount of that gold is variously estimated as being between $750,000,000 and $1,300,000,000 at the outset of the war. We have no knowledge as to what the amount of the gold is at present, but my point is that that gold is not gold which has been taken from the Russian people; it is gold that was in the imperial treasury.

We all know that the Russian people are in desperate need of goods. There are no nails in Russia, there are no woolen goods, there is no wool to speak of, there is practically no cotton, there are no cotton goods, there are no pencils, there are no papers; the commonest articles of life are wanting. They need at once 25,000,000 pairs of shoes. I assume that in such an emergency, even a de facto government would be justified in using the gold in the imperial treasury, that is, in the treasury which was the imperial treasury, for the buying of those things so desperately needed by the people. Even our own Government, during the period of the war, actually went to the Argentine, through an agent, to purchase sugar for our people, because our people needed that sugar so desperately during the war.

It seems to me that even a de facto government would have the right, without committing any crime, to use gold that was in the governmental treasury in such an emergency as that which exists in Russia for the purchase of goods for the people. It seems to me that any government or that any people, having goods to sell, would be perfectly justified, morally and legally, in selling, for that gold which was in the imperial treasury and which belongs to the government, those articles which the people of that government so desperately need in a situation of unusual severity created by the war.

That, in a word, is the situation as I see it. It is a question as to whether our mints will now mint the Russian gold. I am not maintaining, I will say to the Senator, that we can indefinitely ship goods to Russia and receive gold in payment for those goods. I realize that trade must be reciprocal, and that there must be a return of goods ultimately in payment

for a shipment of goods. But I do believe that the first shipment should be made for gold, which is available, and the title to which is clear enough for all practical purposes.

Mr. KING. Mr. President, a great judge in Great Britain recently had before him a lawsuit which involved the question, in part, which has just been discussed by the Senator from Maryland. A number of years ago some timber was purchased from Russia, and it was brought to the ports of Russia for shipment to Great Britain; but the war prevented the transportation of the timber. Recently the soviet government seized that timber and disposed of it to another person, and he shipped it to England, where the person who bought it originally from the owners immediately laid claim to it, and in the course of time it was brought before Judge Roche for determination, and he promptly held, as he should have held, that the soviet government's theft of the property and its disposition of it gave no title to its vendee, and the claimant, the man who had bought it from the Russian people themselves, was awarded the property.

As I apprehend the position of the Senator, it is that the Government of the United States ought not to question the title to any gold which may be brought to the mint for minting, and he inquires whether or not a miner in the West who took the product of his mines to the mint would be interrogated as to its ownership, or whether the Government would scrutinize with any particular care his title, to determine whether he was the owner or not. Mr. President, while I deny that there is any analogy or any comparison between the illustration which the Senator gave and the situation we are discussing, I have no doubt in the world but what if the mint at San Francisco or Philadelphia were advised that John Jones was about to present for minting a certain stock of gold, and that he had stolen it, or that his title was denied, the mints would be closed to the minting of that product, at least until the validity of the claim of the man who tendered it had been established.

Mr. FRANCE. Mr. President——

The PRESIDING OFFICER (Mr. SUTHERLAND in the chair). Does the Senator from Utah yield to the Senator from Maryland?

Mr. KING. I yield.

Mr. FRANCE. I was interested to know the date of that finding of the British court, because, as a matter of fact, while we have been opening our system to the poison of this propaganda, which has prevented our opening up trade with Russia, the British have been losing no time whatever, and while we were deporting from this country Mr. Martens, who was the purchasing agent of the soviet government, the British were sending Mr. Krassin back to Russia with a trade contract all ready to be signed by his government, and undoubtedly to-day, if there is a ship traveling from the Baltic ports to London, it is carrying Russian gold to London. The Londoner is not scrupulous about accepting Russian gold, and he is beginning a very active trade in Russia, and we are being isolated from Russia by this policy, dictated I know not by whom, but certainly by no friend of America, and by no man who wants to see friendly relationships existing between Russia and the American people. I would say that the British have already begun active trade relationships with Russia.

As to the title of materials coming from a foreign country, this desk before me is made of mahogany. Who knows in whom the title to that mahogany rested when it was imported into this country? Probably it came from Africa, the land of which, in all equity, belongs to the African people. It was taken from the African forests probably by an English syndicate, without any payment at all to the aboriginal peoples of Africa, and was imported into this country.

In whom did the title to that mahogany rest? In these gentlemen of the English syndicate, stripping the African forests of their valuable woods without paying the aboriginal peoples one dollar? Or did it inhere in the African peoples themselves? What payment have we made to them, pray, for these desks upon which we transact the business of the United States Senate? To search the title of woods and wools and cottons and hemp and flax coming from other countries in the great commerce which we should be carrying on with the world is perfectly impossible. We must sell where we can sell, and accept gold in payment, if we are to build up the trade of the American people; and as for me, I am old-fashioned enough to be for building that trade. I would not sit here idly and see Great Britain preempting those wonderful Russian markets while we are here meditating upon the crimes and evils of bolshevistic communism, something that practically does not exist in Russia, I will tell the Senator, because most of us have overlooked the fact that the very first thing which the bolshevistic communists did upon coming into power was to confront the stern facts which presented themselves in Russia to their administration. Mr. Lenin, of course, was a communist, but he had to face millions of Russian peasants, and he faced reality when they said, "We demand land for ourselves, in individual ownership"; and the first great act of this so-called communistic government was to establish the principle of individualism in land.

So that communism is very largely a matter of theory, and a careful examination of all that is going on in Russia will show that the theory of communism has been giving way before the actual facts of governmental administration, and that communism really in no great degree exists.

Mr. POINDEXTER. Mr. President——

The PRESIDING OFFICER (Mr. JOHNSON of California in the chair). Does the Senator from Utah yield to the Senator from Washington?

Mr. KING. I yield.

Mr. POINDEXTER. If what the Senator from Maryland says is true, then the communists of the United States and France and Italy, who are supporting the Government of Russia and indorsing it because they believe that it is furthering their principles, are being grossly deceived.

Mr. FRANCE. They are very largely deceived. As a matter of fact, we have all been very greatly deceived on the whole Russian question. I can say to the Senator from Washington, and I believe I can say it with some authority because I have been taking very particular interest in the question and have had an opportunity to talk with men coming from Russia, American business men and Russians who are not in favor of communism and bolshevism, men upon whose statements I feel that I can rely, that I am confident from what they have told me that we have been very greatly misled with reference to the whole Russian question, and, let me repeat, misled, whether by a sinister influence or not I can not say, but we have been misled, I know, and that misleading of us has redounded very greatly to the advancement of the trade and of the interests of the British Empire in Russia.

Mr. POINDEXTER. Well, Mr. President——

Mr. FRANCE. And it has been in the direction, if the Senator will allow me to finish, of isolating us from those great countries with which we would naturally be in friendly relationship. Russia and China are our natural friends and allies in Europe and Asia. I will say right here that I shall later discuss the question of the opening of trade with Russia, with a long look ahead to those difficulties which seem to be forming themselves for us in Europe and Asia, difficulties which would seem to indicate that the time will come in the next few years, if we do not formulate a wise policy now, when we shall find ourselves faced in war by Japan, with which will be allied some other of the European countries, and the way to avert that danger is for us to form a closer and more friendly relationship with Russia and China, who are anti-Japanese in all of their thinking and in all of their interests. This policy which I have alluded to, based upon misinformation, I will say to the Senator, has tended to isolate us from those peoples with whom we should be in friendly association.

Mr. POINDEXTER. The Senator from Maryland does not propose that the Government of the United States should carry on commercial transactions with Russia?

Mr. FRANCE. I am in favor of opening up trade with Russia at once.

Mr. POINDEXTER. That was not my question. Is the Senator in favor of the Government of the United States going into the business of buying and selling commodities in order to carry on trade with Russia?

Mr. FRANCE. Oh, not at all.

Mr. POINDEXTER. Then it would be left to private parties necessarily, if the Government does not do it, and it is now open to any private parties who want to trade with Russia. Why do they not trade with them?

Mr. FRANCE. The Senator from Washington was not in the Chamber when that question was brought up by the Senator from Utah, and I explained that it was owing to the fact that the mints would not accept Russian gold for minting. That is the chief obstacle at present. I would say that one obstacle after another has been presented to our opening up trade with Russia. I am quite confident, so far as my judgment goes, that I know why these obstacles have been so placed, but one obstacle after another has been placed in the way of our opening up trade with Russia. In the meanwhile, Great Britain has been trading quite actively with Russia.

Mr. POINDEXTER. If the Senator from Utah will allow me further——

Mr. KING. Certainly.

Mr. POINDEXTER. London is the great financial center of the world, and certainly if people desire to trade with Russia they could find, through some such great central exchange as that, a means of paying for the goods they buy and receiving payment for the goods they sell. I fail to see how any such question as a refusal to mint Russian gold could stop people from carrying on commercial transactions if they wished to do so.

Mr. MOSES. Mr. President——

Mr. KING. I yield to the Senator from New Hampshire.

Mr. MOSES. I wish to address a question to the Senator from Maryland. I wish to ask if there is any dark secret about the reason why these obstacles have from time to time been thrown in the way of trade with Russia?

Mr. FRANCE. Of course, we all wish the millenium were here, but it is not. Men will compete for trade and nations will compete for trade very much as they did before all of this doctrine of the new freedom was announced. Great Britain wants the Russian markets and Great Britain is leaving no stone unturned to secure those Russian markets, and she is formulating a policy here, there, and everywhere which would tend to exclude other nations from those markets, and we are, by the policy of this Government, being excluded. Does that answer the Senator's question?

Mr. MOSES. Does the Senator from Maryland wish to assert that the British Government is formulating the policy of the United States?

Mr. FRANCE. Yes; I wish to assert that the British Government exerts a very great influence.

Mr. MOSES. Upon the Government of the United States?

Mr. FRANCE. Upon the policy of our Government as it has been carried on during the last few years, particularly since the armistice.

Mr. MOSES. The Senator from Maryland has a notice of hearings to be given on a resolution introduced by him bearing upon the question, pending before a committee of the Senate of which I am a member. I sincerely hope that if the Senator will undertake to substantiate the charge of influence of the British Government upon the Government of the United States he will bring such substantiation before the committee having his resolution pending for consideration, if he is unwilling to give it in the open Senate now when the matter is under discussion.

Mr. FRANCE. I think I have stated enough facts to indicate that the policy of our Government has not been in the interest of the American cotton grower, of the American steel workers, and of the American shoe manufacturers, but that the policy has been in the interest of the advancement of the trade of other nations. I have not been in Europe, but I will say to the Senator that a witness will appear next week before the committee to which he refers, who, if he cares to go into the whole question, can make a statement to the effect that while the British newspapers were carrying this very propaganda, which our newspapers were copying, the British merchants were quietly adopting every means known to their wonderful genius for the promoting of trade with Russia. In other words, the British papers print news upon the horrors of bolshevism for our papers to copy, while the British merchants are sitting down with Mr. Krassin, the financial representative of the Russian Government, working out in detail plans by which English goods shall be shipped to Russia and Russian goods shall be shipped to Great Britain.

Mr. MOSES. But that is an entirely different matter from the charge which the Senator makes, that the British Government is influencing the policy of the Government of the United States. What British merchants are doing, what the British newspapers are doing, does not necessarily affect the policy of the British Government and does not necessarily bring the policy of the British Government in contact or in influence with the policy of the Government of the United States. That is a matter of private enterprise or business ethics as interpreted by British merchants and by British newspapers. It is a far less serious proposal than that which the Senator from Maryland earlier advanced, namely, that the British Government is influencing the policy of the Government of the United States with reference to the Russian question.

If the Senator from Utah will permit me to trespass further upon his time, I wish to say that I am one of those Senators who have opposed the opening of trade relations with soviet Russia. It has not been at all because I wish to thwart the enterprise of American cotton growers or American manufacturers, but chiefly because I can not conceive how it will be possible to enter upon trade relations with the soviet government without permitting free entrance into this country of citizens of the soviet republic, who will come here under the guise of commercial errands and who will make use of their presence here to carry on the propaganda of sovietism, a propaganda which I had the privilege of examining into in the course of the investigation of the so-called soviet ambassador to this country, a propaganda whose ramifications no Member of the Senate can follow to the end, a propaganda more insidious and dangerous to the welfare of the American Republic than any I have ever known, a propaganda which I have no intention, if my vote can prevent it, of bringing into this country under any guise whatsoever.

Mr. FRANCE. I wish to ask the Senator from New Hampshire——

The PRESIDING OFFICER. Does the Senator from Utah yield further to the Senator from Maryland?

Mr. KING. Certainly; but I hope I shall not lose the floor while these excellent speeches are being made.

Mr. FRANCE. Is the Senator from New Hampshire under the impression that our Government is less stable than the Government of the British Empire?

Mr. MOSES. By no means. What I am trying to bring to the Senator and other Senators and to the public, if I may, is the fact that with our widespread territory, with our great variations in racial type of population, it is of extreme danger to the peace and welfare of this country if we are to permit the propaganda to go on in the manner in which various investigations before congressional committees have shown it to be carried on in this country. If we open the door through trade relations for the free admission to this country of citizens of the soviet republic, who, I am confident, will take advantage of every opportunity not only to extend trade relations but to extend the propaganda of their peculiar belief, it will develop a wider trail of evils than those already shown.

Mr. FRANCE. The Senator has answered my question. I perceive very clearly that he has greater fear for the stability of his Government than British statesmen have for the stability of theirs.

Mr. MOSES. Mr. President, I object to that interpretation being put upon my remarks because I answered the Senator's question in the negative.

Mr. FRANCE. If I may be permited to continue——

Mr. KING. Will the Senator also answer this question? As I understand his remarks, he would repeal the act of October, 1918, which prevents the entrance into the United States of those who would seek to overthrow our Government by violence and force, and which also requires the deportation from the United States of those who seek the overthrow of the United States by force and violence. If the Senator desires—and I think that is his position—the bolsheviks to come here—and the Senator knows that Lenin has denounced this Government as the apothesis of capitalism and has declared that this Government must be destroyed—he ought to be advised of the fact that they come, not for the purpose of securing employment or becoming American citizens, but to preach sedition and attempt the overthrow of our Government by force and violence. Does the Senator want that act repealed?

Mr. FRANCE. I think that the whole question of immigration and deportation is an entirely different question from the one we are discussing. I say that the Senator from New Hampshire has already admitted that he has a greater fear for the stability of his Government than British statesmen have for the stability of theirs.

Mr. MOSES. Mr. President, may I once more state for the RECORD the fact that that is not my assertion, and that I make no such assertion. I answered the Senator with an emphatic negative in my first sentence, but I went on to say that I did not want to see the bolshevistic government engaged in tracing out and sending out the propaganda which I am sure will result from the free entrance into this country of soviet Russians.

Mr. FRANCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Maryland?

Mr. KING. I yield to the Senator from Maryland.

Mr. FRANCE. I desire to say that, following out the Senator's policy, we are losing the trade which Great Britain is seeking and which Great Britain is obtaining. Great Britain did not feel that the British Empire was in any danger of being undermined because her statesmen and the leaders of the British trade bodies went into session with representatives of Russia to make arrangements for the opening up of trade between Great Britain and Russia.

So far as the Senator's question is concerned, I will say this: Of course, I have been in a rather unique position, standing with a small minority on this side of the Chamber during the

World War, a minority which has believed that our Government has never been in any danger of being overthrown by a few agitators of communism and anarchy.

We have always had those amongst us, and I conceive that our Government has never been in any danger from them. I believe so thoroughly in the principles of our Government, in the principles of a government based upon the will of all the people freely expressed, that I have never had any anxiety whatever concerning this propaganda. I have never trembled or shivered or felt any trepidation whatever for fear that this great Republic, which has withstood the shock of the controversy and of civil war, and of war with the greatest military empire of all time, would be overthrown by a few theoretical anarchists or communists from Russia.

I do not advocate the repealing of the law to which the Senator from Utah has referred. I think we need a new immigration law which would provide that these people coming here should be instructed in our institutions. Many of them do not understand our form of government; they have been brought up under despotisms, and they think that all government is despotic. If they were informed as to the character and nature of our institutions they would become most desirable and useful citizens. I will say further that the Russians and Jews themselves form the finest kind of raw material for the making of American citizens, if the raw material be properly handled. I advocate immigration laws which will provide certain standards and I think laws should be enacted for the education of immigrants in our institutions before they are permitted to become citizens; but I can not too strongly emphasize the fact that while we have been suffering from a phobia, from a fear of Russia, which has led us to close the gates of our exports to Russia, the British have been receiving the Russians with open arms and have been entering upon negotiations for trading with Russia. I may say further that Russian gold, the gold which is supposed to be of faulty title, has been shipped from Moscow to London, where it is being minted and where it is tending to swell the coffers of the British Empire.

Now, if the Senator from Utah will yield a moment longer, I wish to say just one word further.

Mr. KING. I yield.

Mr. FRANCE. There is nothing anti-British in my system. Far from that, I commend the citizen of Great Britain; I commend his policy; I commend his courage; I commend his enterprise. While I do not believe in the imperial system, while I believe it is a system which is passing away, I feel an admiration and affection for the English people. So far from criticizing them, I am urging our Government to emulate them by the advancing of our interests in the same way and with the same skill, enterprise, and genius as that which has been displayed by the British in the advancement of their national interests.

Mr. KING. Mr. President, the statements which have been made by the Senator from Maryland have been so varied and have related to so many subjects that it would be impossible within the limits of reasonable debate to enter into a full discussion of all of them. Let me say, however, with respect to the attitude of the Senator from Maryland concerning immigration from Russia, that I think the American people share pretty generally the view of the Senator that the great mass of the Russian people are frugal and thrifty and that they do furnish the basis for a splendid commonwealth. I have said repeatedly, Mr. President, that the Russian was a wonderful composite, and that he possessed the elements out of which a mighty nation—progressive and enlightened—would arise. He seems to have the imagination, if I may be permitted that expression, of the French, and he has something of the philosophy of the German mind. Whenever a Russian is afforded opportunity for education, though taken from the humblest walks of life, he assimilates education and culture with a readiness that is amazing. The linguistic attainments of the Russians are marvelous. Men who are taken from the plow, men whose fathers were serfs and slaves, after a few years in the common schools and in the universities of Russia, have developed into world characters. Before the World War we sought and found music, literature, poetry, painting, and sound philosophy in Russia. In science Russia has made remarkable progress, and possesses the potentialities for world leadership. She has great metaphysicians, great philosophers, great thinkers, great writers. So the Russian people constitute the basis of a great government that will respond to progressive impulses and which in the end will be one of the dominant nations of the world.

I shall be glad to see coming to our shores, in reasonable numbers, genuine Russian people, but, Mr. President, it is not of that class that complaint has been made. It is not against that class that the act of 1918 was aimed.

That act was aimed against those who came for the purpose of seeking to overthrow by force and violence the Government of the United States. There is no objection, let me say, to the Senator, urged against Russians coming to the United States if they do not come for the purpose of attacking the institutions of this country, but the Senator knows that Lenin and Trotski and the military dictatorship of which they are the heads have started a world-wide propaganda to overthrow law and order and to establish a world-wide communism.

The Senator knows that Martens, the representative of the soviet government in the United States, has not confined himself while in our midst to efforts to build up trade between Russia and the United States, but he entered into all sorts of machinations against the integrity of this Government. He encouraged organizations that sought by force and violence the overthrow of the United States, and it was for that that he was deported.

The Senator knows that the Labor Department, including the Secretary of Labor and the Assistant Secretary of Labor, Mr. Post, have been sympathetic, indeed, too sympathetic, let me say to the Senator, with sinister alien elements that have operated in the United States. There are persons who should have been deported who have been permitted to remain in the United States by Mr. Post, the Assistant Secretary of Labor. I believe the President should have removed Mr. Post from his position months ago. There developed a controversy between the Attorney General's Department and the Labor Department. It amounted almost to a scandal because of the acute nature of the charges by one department against the officials of another department. In my opinion, the President should have determined which of these departments was right, and the head of the other department should immediately have resigned or made complete satisfaction.

Mr. FRANCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Maryland?

Mr. KING. I yield.

Mr. FRANCE. I merely rise to observe that the statements of the Senator with reference to Mr. Martens are in direct conflict with the statement of the Secretary of Labor in deporting Mr. Martens, because in that statement the Secretary of Labor practically exonerated Mr. Martens from the very charges which the Senator has now made against him. I may say further with reference to Mr. Post and Mr. Wilson, the Secretary of Labor, that personally I feel that as to the whole deportation question they were in the right and the Attorney General was in the wrong. So much did I believe that the Attorney General's office had not been properly conducted, particularly under the administration of Mr. Palmer during the days of the war, that I introduced a resolution for the investigation of the department of the Attorney General because of the scandalous conditions in that department which we were led to believe existed because of the charges of very responsible men against that department. While my resolution did not pass, it is very gratifying to me to know that during recent days the Judiciary Committee of the Senate has itself taken notice of those charges and has itself, I believe, investigated some of the activities of the Department of Justice. If I am mistaken in that, the Senator from Utah, who is a distinguished member of that committee, can correct me.

Mr. KING. The Senator is right. I am a member of the committee and of the subcommittee.

Mr. FRANCE. I only wish the investigation could be carried to a greater extent. I have information which I do not care to disclose here. Out of respect for the executive departments of the Government I would not care to give publicity to certain information which I have received through confidential channels as to the conduct of the business of that department.

I am not holding that the Attorney General is responsible for all of the evils, for all of the crimes, I may say, because crimes were committed by the agents of the Department of Justice—crimes, if not murders, I will say to the Senator. I am not holding up the Attorney General as personally responsible for all those acts, but I hope that the Judiciary Committee, before it is through, will thoroughly investigate that whole department and all of its activities, and I hope that when it has been investigated the findings will be laid before the American people and that the American people will see to it that such conditions shall never again prevail in this country. I hope to God they never shall prevail again, because such conditions as have prevailed in this country have never prevailed in any other country in the history of the world perhaps, except in Russia under the worst days of the Czar.

Mr. ROBINSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Arkansas?

Mr. KING. I yield to the Senator from Arkansas.

Mr. ROBINSON. The Senate has just heard a most extraordinary statement. I have no quarrel with the Senator from Maryland when he makes the general declaration that conditions deserving of criticism have prevailed in this country; but I think the Senator from Maryland, when he makes the statement that he has information materially reflecting upon the administration of one of the executive departments of this Government, and that he will not divulge it to the Senate, transcends proper debate. No Senator ought to make a declaration of that kind and then withhold from the Senate or from the American people the facts upon which he bases it. If the Senator from Maryland knows of misconduct on the part of the Attorney General of the United States, or upon the part of the department of which the Attorney General is the head, he ought not to make a general declaration and withhold from the Senate and from the public full information concerning it.

Mr. FRANCE. Mr. President——

Mr. ROBINSON. I decline to yield for the present. I will yield to the Senator in a moment. Such a declaration is calculated—aye, it is designed—to prejudice the judgment of those who receive knowledge of it.

No officer of this Government has borne graver responsibilities, save the President himself alone, than the Attorney General of the United States since his entry upon the duties of that office. The present Attorney General of the United States was formerly a Member of the body at the other end of the Capitol. He is one of the ablest and most distinguished men of this Nation. Along with other representatives of the executive departments of the Government he has been repeatedly misrepresented, slandered, and libeled by individuals and associations of individuals, by newspapers and periodicals, who would penalize him for his loyalty to this Government, his loyalty to the American people, during the conflict recently closed. He is entitled to have the Senator from Maryland make an open and a frank declaration. It does no credit to a Senator of the United States to cast innuendoes and insinuations against the character and conduct of one charged with responsibility in a coordinate branch of the Government. The Senator from Maryland ought to tell the Senate what he meant when he declared a few moments ago that he had information of serious misconduct upon the part of this officer or his department, but that he would withhold it out of respect for somebody or something.

I do not desire, nor does any Senator desire, to shield any officer or agent of this Government who has knowingly violated his duty to the American people. If the Senator from Maryland has knowledge of facts or circumstances which prove malfeasance or nonfeasance in office on the part of the Attorney General, let him state in the open his charges.

Let him bring his proof, and give the Attorney General the opportunity that under the Constitution and the laws of the United States can not be denied to a common criminal—the right and opportunity of a hearing.

Mr. FRANCE. Mr. President——

Mr. ROBINSON. I yield to the Senator from Maryland.

Mr. FRANCE. I will say to the Senator that I introduced last spring a resolution for the investigation of the Department of Justice. This resolution was introduced on the 1st day of last June. It was introduced because evidence had come to me which I was unable to sift, but which led me to believe that grave misconduct had been going on upon the part of certain officials of the Department of Justice, whether with or without the direct knowledge of the Attorney General I was unable to say. This resolution has been sleeping on the files of the committee since last June. The preamble of this resolution sets forth the facts which I have intimated to-day. I will send a copy of it to the Senator. I acted in perfect good faith in this whole matter, in presenting this resolution—it was not a popular resolution—because I believed it to be my duty to call the attention of the Senate to certain charges which had been made. I could secure no action upon the part of the Senate, and we are now in the closing days of the present administration. Personally, I am too much absorbed with issues which are before us to spend the whole afternoon in discussing issues which are back of us. The Senate did not see fit to act upon my resolution, and so far as I am concerned the whole matter is closed. If the Senate had chosen to investigate the facts, I think sufficient evidence would have been forthcoming to justify all that I have said.

Mr. ROBINSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield further to the Senator from Arkansas?

Mr. KING. I yield to the Senator.

Mr. ROBINSON. We have just heard another remarkable statement from the Senator from Maryland. After having aspersed the Attorney General, and having been challenged to make his charges frank and open and bring proof to support them, he now declares that because the Judiciary Committee of the Senate of the United States and the Senate itself have paid no attention to formal charges heretofore made by him, the whole incident is closed so far as he is concerned. I respectfully suggest to my friend from Maryland that it would be closed more honorably, more fittingly closed, if in abandoning his charges he would do so without making further innuendoes and insinuations against the Attorney General.

I have no fault to find with the conduct of the Senator from Maryland if, after he has failed to impress the Judiciary Committee of the Senate, which is in the control of his own political party, he sees fit to abandon his charges; but in beating the retreat he ought not to repeat his charges in general language while he is running away from them.

Mr. FRANCE. Mr. President——

Mr. ROBINSON. I yield to the Senator.

Mr. FRANCE. I desire to say here and now that I have abandoned no charges, nor do I beat any retreat on this subject. I am willing to stand by every word I have said, and I could say many words more if I chose to occupy the floor.

Mr. ROBINSON. There is no doubt about the Senator's ability to say many words. The difficulty about the Senator's use of words is that he never says very much when he consumes time in uttering words. The Senator has made a charge that brave men would not make unless they were willing to make it good.

Mr. FRANCE. Mr. President——

Mr. ROBINSON. The Senator has said on the floor of the Senate this afternoon that he has knowledge of facts—my attention was called to his statement by half a dozen Senators around me—that he will not divulge to the Senate because of his respect for somebody that gravely reflect upon the conduct of the Attorney General or of his department of the Government. The point I am making is that he ought either to retract that statement or tell the Senate what he means by it and bring his proof to sustain it. Instead of doing that, he interrupts me to declare that so far as he is concerned he is too busy a Senator to take any more time with the charges that he has made. The Republican Committee on the Judiciary would pay no attention to his charges, he says, and now he himself regards it as a closed incident.

Mr. FRANCE. Mr. President——

Mr. ROBINSON. I yield to the Senator from Maryland.

Mr. FRANCE. I know my very good friend from Arkansas does not desire to misquote me.

Mr. ROBINSON. Why, certainly not.

Mr. FRANCE. But he has misquoted me, and has quite materially misrepresented my position, due, of course, to the fact that I have not made myself clear.

Mr. ROBINSON. In what particular has the Senator been misquoted?

Mr. FRANCE. I did not, for example, say that the Judiciary Committee would not consider any charges which I might make.

Mr. ROBINSON. Oh, well, the Senator did say that the committee had taken no action regarding them.

Mr. FRANCE. I said it did not act upon the resolution which I introduced last June, and so far as I am concerned, I feel that it is fruitless for me to occupy an afternoon, or an afternoon and a morning, of the Senate in bringing forward charges which have been brought to me bearing upon this question, nor do I propose to do so. I will say to the Senator, however, that some of these facts are matters of common knowledge, even to those who are not privileged to be Members of the Senate, and many of these charges have been printed in a document signed by members of the American bar of good standing.

Mr. ROBINSON. Mr. President, of course the Senator will pursue any course that he chooses to pursue; but I repeat that if he wants to charge the Attorney General of the United States with misconduct in office, he ought not to do it by innuendo. So far as his statement is concerned, that I have misquoted him in these remarks as to what he said about the action of the Judiciary Committee, his last statement is not in conflict with anything that I have said, as I understand the matter. He offers a resolution involving these or other grave charges, presents it to the Senate, and has it referred to the Committee on the Judiciary. No action is taken. The session is nearing its close. He does not propose or ask that anything be done about it, but he rises in his place in the Senate and reflects upon an officer of the Government who is not here, and who can not come here to defend himself.

A Senator can not be taken to task, perhaps, in any other place for anything he says upon this floor. Therefore a Senator

ought to be careful as to what he says reflecting upon the character and conduct of other Senators.

Mr. FRANCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Maryland?

Mr. ROBINSON. I yield.

Mr. FRANCE. I am sure the Senator from Arkansas, who knows me quite well, does not believe that I would take advantage of my privilege as a Senator to say anything on this floor, under the law which grants me immunity, which I would not say on a public platform before the American people. I have said these things here, and I have also said them where I can be held accountable for what I did say, and I am sure the Senator does not mean to charge me with taking advantage of my immunity as a Senator on this floor to say things which I would not feel at perfect liberty to say at any gathering of American people.

Mr. ROBINSON. Mr. President, so far as that is concerned, judging by what he says here, I think the Senator from Maryland is likely to say almost anything, anywhere, anytime.

The Senator has been totally unable to understand the trend of my remarks, if he thinks I am complimenting him for what he said or assumed to say here. I am either lacking in the power of expression, or the Senator from Maryland is lacking in the power of comprehension, if he does not understand that I am making the point that a Senator, who can not be taken to task anywhere else for what he says in the Senate, ought not to charge an officer of the Government, who is not a member of the Senate, and therefore can not reply, with misconduct in office, unless he does it frankly, fully, and from a sense of duty; and that is exactly what I understand the Senator from Maryland to have done.

Mr. FRANCE. Mr. President, I admit the charge of the Senator that I am lacking in comprehension. That undoubtedly is the difficulty, because it is beyond my power to comprehend how any Senator could arise upon this floor, without having investigated the charges which have been made by responsible people, and enter upon a general defense of the conduct of the Department of Justice of our Government during the last most trying months.

Mr. ROBINSON. Mr. President, I conclude the matter with this declaration, that the Senator's admission of his lack of comprehension reflects no credit upon his judgment in making a declaration which openly casts aspersion upon the Attorney General of the United States, and in the next breath announces his purpose to take no further interest or action looking to the proving of his charges. The whole purpose of my remarks has been to convince the Senator from Maryland that he ought not to indulge in any innuendo of that sort without standing ready to make good his charges.

Mr. KING. Mr. President, I started out this morning on a pacific mission. I intended to offer but a few remarks upon the necessity of ratifying the Versailles treaty at an early date and pursuing a foreign policy that will increase our foreign trade, but the Senator from Maryland led us into Russia and then stormed the Department of Justice, so that I have been unable to steer the course or reach the goal intended.

Mr. President, it will be impossible, I repeat, within the limits of debate, to discuss all the questions referred to by my friend, the Senator from Maryland, even if I had the opportunity at this time to do so; but as Senators know, the packers' bill must be voted on when we meet next Monday, so that to-day is practically the only period for general debate. The Senator from Wyoming [Mr. KENDRICK] is now waiting for the floor, and the Senator from Kentucky [Mr. STANLEY] is waiting for a chance to discuss that important measure. As soon as opportunity is offered I shall reply to the Senator from Maryland and present what I believe to be the facts in regard to the Russian situation. I take issue with the Senator upon many of the propositions advocated by him, and assert that his policy, if carried into effect, would mean an immediate recognition of the soviet dictatorship, which is cruel and inhuman, and does not speak for the Russian people.

Mr. President, before yielding the floor let me add a word concerning the Senator's defense of Mr. Martens and his implied if not direct condemnation of the Government in ordering his deportation. As I interpreted the Senator, he cordially indorses Mr. Post and the Secretary of Labor for their sympathetic administration of the law of 1918. I call the Senator's attention to the fact that the Secretary of Labor has held that Mr. Martens is a member of the communist organization affiliated with the Third Internationale, and therefore comes within the provisions of the law of 1918 and must be deported.

Mr. FRANCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Maryland?

Mr. KING. I yield.

Mr. FRANCE. The Senator has stated with perfect accuracy the position that was taken by the Secretary of Labor, that Mr. Martens did belong to such an organization; but, at the same time, the Secretary of Labor did exonerate Mr. Martens from any pernicious activities while in this country, as I think the Senator will note if he will read the statement of the Secretary of Labor at the time of the order for his deportation.

Mr. KING. Mr. President, I read the decision of the Secretary. The Senator may be right in his statement of the Secretary's findings, but my recollection is that the decision did not go that far.

But if the Secretary of Labor did acquit Mr. Martens and his staff of activity in the United States hostile to the peace and order of our Government, he closed his eyes to the facts, and condoned conduct which ought to have brought from him condemnation. In my opinion the Department of Labor, in its administration of the law for the deportation of aliens, declined to deport persons who violated the law, and whose conduct called for their deportation, but I acquit Mr. Caminetti, the Commissioner of Immigration, of being privy to this policy.

Reference has been made to the Attorney General. Speaking for myself, I believe that he is, as stated by my friend, the Senator from Arkansas [Mr. ROBINSON], a man of courage, ability, and integrity, one whose Americanism no man can question, and whose loyalty and devotion to the institutions of our country no one can challenge.

The Senator from Maryland [Mr. FRANCE] persists in insisting that Great Britain has not only entered into trade relations with Russia but that such relations have existed for an indefinite period to the benefit and profit of Great Britain. I take issue upon that proposition. The exports from Great Britain to Russia have been inconsequential. They have been so insignificant as to be unworthy of note.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER (Mr. LENROOT in the chair). Does the Senator from Utah yield to the Senator from Idaho?

Mr. KING. I yield.

Mr. BORAH. There can be no doubt, I presume, whether the trade has been large or small, that Great Britain has signified her willingness to enter into trade relations with Russia.

Mr. KING. Mr. President, Great Britain by her conduct has said that any Englishman who desired to trade with Russia could do so, and our Government has said that any American who desires to trade with Russia is at full liberty so to do. Great Britain offers no impediments; neither does the United States. The obstacle to commercial relations with Russia and our country, as well as other countries, is not outside of Russia, but within Russia. The soviet dictatorship has refused to permit the Russian people to buy or sell, even though they had commodities to sell or means with which to buy.

Mr. BORAH. But, Mr. President, England has gone much further than that. I talked with a gentleman the other day who has been in Russia since 1917. He was a soldier there. He resides in the State in which the honored chairman who now presides [Mr. LENROOT in the chair] represents in part. He said that that trade was going on to a very marked degree, and that while officially England was not presuming to do more than the Senator states, as a matter of fact, the English merchant had ample and full protection from the English Government in all his dealings with Russia.

Mr. KING. Mr. President, I think I can prove to the Senator, when I can continue my remarks, that all the importations into soviet Russia during the past one or two years from all countries in the world do not equal the exports of the United States in one day.

Mr. BORAH. I presume that is true, but——

Mr. KING. And I shall prove to the Senator from Idaho that the subjects of Great Britain are trading with Russia to such a limited degree that it is not worthy of consideration.

Mr. BORAH. If they are trading at all, the principle is sacrificed.

Mr. KING. Mr. President, Americans could trade with Russia if they desired; Germans could trade with Russia if they desired; but Germany, right upon her borders, because of the perfidious course of the Lenin despotism and because Russia had nothing with which to pay for the products which the Germans could sell, was compelled to suspend negotiations for extensive commercial dealings.

Mr. BORAH. We are now speaking about a principle, as to whether we sacrifice a principle or not when we open up trade relations with Russia. If we only trade a dollar's worth the

principle is gone, and that is all there is in this debate, as I understand. Be assured that when the barrier is broken down and the so-called principle is abandoned, the amount of trade will be controlled by trade principles, and not by a question of morals.

Mr. KING. I do not know what the Senator means when he talks about "principle." The Government of the United States has announced repeatedly that the Senator from Idaho or any of the constituents of the Senator from Idaho or any other American can trade with Russia if he can find anybody in Russia to trade with. But the Government of the United States has said, as it should have said, that it will not recognize the soviet government so long as it pursues its present course and continues its propaganda and efforts to destroy the United States and all other governments which are founded upon what the soviets call "capitalism."

Mr. BORAH. I do not think there is any man connected with this Government, even including my friend the Senator from Utah, who thinks that the Government is going to be overthrown by propaganda from Russia.

Mr. KING. I agree that such propaganda will not destroy this Government.

Mr. BORAH. That is not what lies at the bottom of this refusal to trade with Russia at all. The soviet government may be a very bad government, and I think it is; but it is a great deal better than any other government Russia has ever had, and in the end, in my judgment, will prove the foundation upon which a sane, free form of government may be established. We did not decline to trade with the Czar or the Czar's government, and yet there never was a government so unfriendly and inimical to the theory of our Government as the Czar's government. We did not refuse to take his gold because no one knew how he got it, nor by what means he acquired it, and yet the methods which were followed by the Russian Government for 300 years were intolerable and indefensible from any standpoint of the principle of American Government.

Mr. KING. Mr. President, the Senator from Idaho and the Senator from Maryland, I believe, and I say it with all kindness, have astigmatism when they come to look at the Russian situation.

Mr. BORAH. It may be that we have astigmatism; but it might be possible, upon a thorough examination it will be found, that the astigmatism is located elsewhere.

Mr. KING. It is possible that that is true. I anticipated that the Senator would make that reply, because it is one which would naturally arise to an inexperienced debater, to say nothing of a debater of the splendid talents of my distinguished friend.

But, Mr. President, the Senator insists, as I understand him, that we have forbidden trade with Russia. That I affirm is not correct. There is no interdiction by the Government of the United States of trade between Americans and Russians. I repeat that the Senator from Idaho or any of his constituents or any other American may put his foot upon any ship that crosses the Atlantic, and under any flag, and can go to any of the ports of Russia, and if he can find any Russian there to buy his goods he can sell them. The Government of the United States offers absolutely no obstacle. If the vendor is willing to take Russian gold, whether it be honestly acquired by the soviet government or whether it be stolen, the Government of the United States offers no objection and interposes no obstacle. The transaction would be between two nationals, and the United States would have no concern. Neither would the United States Government prevent the American selling his goods to the soviet dictatorship and receiving from it any gold which it may have in its possession.

The Senator from Maryland [Mr. FRANCE] seems to proceed upon the theory that the Government of the United States is to be the vendor of all goods exported from its borders, and that it must be the instrumentality or the agency through which all trade activities are to be carried on.

The Government of the United States has no more to do with trade in Russia than it has to do with trade in Great Britain or Germany or France or any other nation to-day. I repeat, any American can trade with Russia if he wishes to, but Americans are unwilling to because of the risks to be encountered.

Why do not Americans trade with Russia? It is because they can find no buyers, because they can find no purchasers who can pay them, because Russia has nothing to export, and having nothing to export, she can not pay for products imported. Moreover, the duplicity and dishonesty of the soviet government make such relations impossible. The Senator says that Russia possesses gold. I shall not discuss that now, but will do so when I can secure the floor. She has perhaps between two and three hundred million dollars in gold. I stated a few days ago that the soviet government had stolen Rumania's gold, which was valued at more than two hundred millions. It has confiscated gold that France had supplied Russia when she was fighting with the Allies against the Central Empires. All the gold and silver, in whatever form, whether jewelry or plate or otherwise, which the bolsheviks could discover have been confiscated by them, and millions have been used for propaganda and revolutionary operations. My information is that the Lenin government does not possess more than $250,000,000 worth of gold and silver.

How long would $250,000,000 of gold last if there were any considerable trade between Russia and the nations that are contiguous to her? If there are peoples near Russia who would sell their products either to the Russian people or the soviet government, and who, no doubt, would accept gold in payment, gold which comes from the soviet government, why does not the soviet government purchase from them and use its stolen gold in payment therefor? The gold is desired for other purposes than trade, and Lenin will not permit trade—until his tyranny is recognized as the government of Russia. It will be necessary to recognize the soviet government to trade with them, and through them with the Russian people, and if there should be commercial dealings, if they had anything to pay for the goods that they purchase, there is no certainty that such goods would ever reach the people for whom they were destined or who might profit thereby.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Idaho?

Mr. BORAH. I thought the Senator was through. I just wanted to say a word.

Mr. KING. I have not concluded what I have to say in reply to the Senator from Maryland, but I must yield to the Senator from Wyoming [Mr. KENDRICK], as he wishes to discuss the packer bill, and the time for considering that bill is limited.

Mr. BORAH. I will only detain the Senate a moment.

Mr. KING. Then I yield to the Senator from Idaho.

Mr. BORAH. I do not wish to delay the Senator from Wyoming. I only wish to say, for fear that some of my remarks may be not entirely clear in the running debate which took place with the able Senator from Utah, that I am in favor of opening up trade relations with Russia, and I am in favor of opening up trade relations with all the nations in the world, and of doing it just as speedily and promptly as we may. My reasons for that I can not state at this time. I simply wanted my position to be understood.

Mr. KING. I am in favor of opening up trade with all the countries of the world. We must send our products into all lands. Our prosperity depends upon our foreign commerce. I shall rejoice when we can send annually hundreds of millions of commodities to the Russian people and receive from them commodities essential to our development and prosperity. America's flag must be found in every sea and in every port. Our raw materials and manufactured products must find markets in every land. There is profound sympathy among the American people for the woes and sorrows of Russia. They are anxiously waiting for the day to dawn in that unhappy land; they sincerely desire that peace and liberty and prosperity shall be the portion of the inhabitants of that State, limitless in area and boundless in its possibilities.

I go further. I am desirous of opening the channels of trade with Germany. I have offered a resolution which calls for the ratification of the treaty, excepting therefrom the covenant of the league. If that course were taken, it would mean the immediate resumption of trade relations with Germany. I should like to see our ambassador and consular agents sent there, and an ambassador from Germany sent to the United States.

Mr. BORAH. Of course, when I said I was in favor of opening up trade relations with Russia, I meant to do all things that were essential and necessary to opening up trade relations with Russia.

Mr. KING. If the Senator means in that statement that he favors our recognizing the soviet government as the de facto and the de jure government and the receiving of an ambassador and other representatives from it, then I can not follow him. If the Senator only means that he favors trading with Russia, then I agree with him.

I should like to continue this discussion, but, as stated, it would be unfair to deprive Senators of their only opportunity of discussing the packers' bill, but when that measure is disposed of I shall ask the indulgence of the Senators, and shall submit further remarks upon the questions raised by the Senator from Maryland.

MEAT-PACKING INDUSTRY.

Mr. KENDRICK obtained the floor.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Iowa?

Mr. KENDRICK. Certainly.

Mr. KENYON. I think there should be a larger attendance to hear the Senator from Wyoming. I therefore suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gronna	McCormick	Shields
Ball	Hale	McCumber	Simmons
Beckham	Harris	McKellar	Smith, Ariz.
Borah	Harrison	Myers	Smoot
Brandegee	Heflin	Nelson	Stanley
Calder	Johnson, Calif.	New	Sterling
Capper	Jones, N. Mex.	Overman	Sutherland
Curtis	Jones, Wash.	Page	Swanson
Dial	Kellogg	Phelan	Trammell
Dillingham	Kendrick	Phipps	Underwood
Edge	Kenyon	Pittman	Walsh, Mass.
Elkins	Keyes	Poindexter	Warren
Fletcher	King	Pomerene	Willis
Gay	Kirby	Ransdell	
Gerry	La Follette	Robinson	
Gooding	Lenroot	Sheppard	

The PRESIDING OFFICER. Sixty-one Senators have responded to the roll call. A quorum is present.

Mr. KENDRICK addressed the Senate. After having spoken for some time,

Mr. SMOOT. Mr. President, will the Senator from Wyoming yield to me for a moment?

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Utah?

Mr. KENDRICK. I yield to the Senator.

Mr. SMOOT. Mr. President, I am obliged to leave the Chamber in a few moments to attend a meeting of the Appropriations Committee, and I desire to say that I hope when the Senate shall take a recess to-day it will be until Monday next at 10 o'clock. I do not make a motion to that effect at this time, but I simply wish to state if that is done I intend to address the Senate upon the packers' bill Monday morning.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Iowa?

Mr. KENDRICK. I yield to the Senator.

Mr. KENYON. In that connection, Mr. President, I desire to say that on Monday two hours, from 12 to 2 o'clock, have been allotted for speeches without limit, and after that hour the Senate will proceed under the five-minute rule. It will be manifestly unfair for one Senator to occupy the floor at 12 o'clock and speak until 2. There are a number of Senators who wish to speak on the bill, although they desire to speak only briefly, I understand.

Mr. SMOOT. I will say to the Senator that I have no intention of occupying more than a reasonable time.

Mr. STERLING. I do not know that I understand the suggestion of the Senator from Utah. Is it that the Senate shall take a recess at the conclusion of the remarks of the Senator from Wyoming?

Mr. SMOOT. No; I did not make that suggestion. I merely expressed a hope that when the Senate shall take a recess to-day it will be until 10 o'clock on Monday morning next. That will give us four hours in which to discuss the packers' bill before the five-minute rule shall apply, as the bill is to be voted on at 4 o'clock and no speech longer than five minutes can be made after 2 o'clock.

Mr. STERLING. I had expected to address the Senate at some time this afternoon after the Senator from Wyoming shall have concluded.

Mr. SMOOT. There is no intention of adjourning or taking a recess immediately after the conclusion of the remarks of the Senator from Wyoming.

Mr. STERLING. I thought it was the intention of the Senator to ask that the Senate adjourn or take a recess at that time.

Mr. KENYON. If the Senator from Wyoming will permit me, the Senator from Utah knows that it is impossible to get Members of the Senate to attend committee meetings at 10 o'clock, and it seems to me it would be a waste of time to have the Senate convene at 10 o'clock.

Mr. SMOOT. I do not think it will be a waste of time, but, on the contrary, I think it will result in a gain of time. However, I merely desired to express the hope that when the Senate takes a recess to-day it shall take a recess until 10 o'clock on Monday, and then we will have four hours within which speeches may be made by Senators who desire to address the Senate on the bill, irrespective of the 5-minute rule.

Mr. KENDRICK. Mr. President, on May 21 last I discussed in detail the bill under consideration, and I do not propose at this time to enter into any extended analysis of it, other than to take up a few of the principal points in controversy. Before doing so, however, I wish to refer to certain remarks made by the Senator from Illinois [Mr. SHERMAN] in his speech delivered here on the 20th and 21st instant.

During his discussion of this measure on the 20th the Senator from Illinois, though not calling me by name, but evidently referring to me, took occasion to question whether the Senator from Wyoming was acting in harmony with good ethics in urging this legislation upon the floor of the Senate while maintaining his membership in the American Live Stock Association.

My conception of the principal duty that devolves upon a Member of the United States Senate is that of service to his people and his country. I have never doubted that the results of the enactment of the measure here proposed will be in the highest sense beneficial to the entire country, and I know that it represents the desires of literally thousands of small stockmen and ranchers in the producing States of the country. The fact that I have given my own life to the business of producing live stock and that I am a member of the American National Live Stock Association has served only to make me better aware of the needs of the unnumbered hosts of producers throughout the Union. I am happy to have the opportunity to speak for them here. The Senator from Illinois has chosen to speak not for this vast army of producers but for the limited number of powerful individuals who now control the destinies of the packing industry of the United States. As between my code of ethics and that of the Senator from Illinois in this matter, I am perfectly content to have the people for whom we respectively speak pass judgment.

The Senator intimates that my motive in actively advocating this bill is the hope of financial benefit. Yet the gentlemen who speak for the so-called big packers, in opposition to a degree of Federal supervision of this industry, are unanimous in their prediction that it will not bring financial benefit but disaster to ranchmen and stock growers. I am very glad to have the judgment of the Senator from Illinois that they have been wrong in this conclusion and that the legislation will, as I have always asserted, prove beneficial to the rank and file.

Not only producers but consumers, and I believe packers as well, will profit by the enactment of this bill, which will introduce responsibility where there is now only irresponsibility and establish confidence where there is now only suspicion.

The principle involved in the legislation is one of fair play, of justice and equity between men who are dealing in one of the most important products of the country, and I submit that one may well claim the right to the benefits that will inevitably follow from the enforcement of the rules of just dealing.

In a speech made yesterday the Senator from Illinois referred to a statement which he said I made at El Paso, Tex., during a recent convention of the National Live Stock Association. I will quote his words accurately. He said:

> A Senator who is quite active in the Live Stock Association and somewhat intimately connected with the market committee of that association, which is the active instrumentality of the organization, made a public announcement at a meeting of the association held in El Paso that he would resign from the United States Senate in order to serve as a member of the live-stock commission.

Mr. President, the Senator from Illinois was not at El Paso, and I am not aware that any press association attempted to report my remarks. It is regrettable that the messengers of the packing-house interests should misquote the words used at that time, and more particularly should misinterpret the meaning of those words. It is lamentable, from my viewpoint, that a Senator of the United States should be willing to accept such a misinterpretation as the basis of any allusions upon this floor when he might easily have learned from me exactly what was said. No man who heard me at El Paso, not even the messenger who reported to the Senator from Illinois, believed then or believes now that I even intimated that I would resign my seat in this body for the purpose of receiving benefit from any other occupation or any other salary.

What I said at El Paso in an endeavor to impress upon my hearers my anxiety to have this proposed law enforced impartially and without prejudice to any interest was that I would be willing to sacrifice my seat in the United States Senate if by so doing I could bring to the people of this country the benefits to be derived from a law like this.

Mr. President, I have the highest regard for a seat in the United States Senate; I prize membership in this body above any other distinction that the people of my State or any other

State could possibly give me; and I believe that the people of the country understand that the majority of Senators do not enter public service for money making. That is all I wish to say on that phase of the question.

I desire now to consider some of the principal points of the bill before you, and I will do so briefly, in order that others may occupy the floor.

The great stockyards have become and are admittedly public utilities. There has been more than one decision of the Supreme Court of the United States that they are instruments of interstate commerce, and certainly no one will now deny that these vast marts of trade are clothed with a public interest as great as that which surrounds even the railroads. The manner in which these yards are managed affects in the most vital way the food supply of the country. The cost to the consumer, the quantity at his command, the price to the producer, are all dependent upon the conditions that exist in the stockyards.

Under the present system the public interest is in no way safeguarded, and the powerful private interests which have gained control of the markets are under no check. It has been the history of business in this country that irresponsible power over public utilities has always led to grave abuses. Such is the course of human nature, and the repeated investigations which have been made of this industry in the past have proved beyond all question that it has been no exception to the rule. Failure to recognize the fact that, like all other public utilities, these great markets should be subjected to supervision on behalf of the public will mean only that the abuses of the past may be easily repeated in the future.

Those who oppose this bill are insistent that there is no more reason for the establishment of Federal supervision over this industry than over any other, but such a statement does not take cognizance of the fact that this business is not comparable to any other. It has peculiar characteristics that take it out of the category of ordinary business. In the first place, though I recognize that mere size is not in itself an argument for special treatment, yet it is worthy of note that the volume of this business is larger than that of any other business in the country save only that of the railroads, and some representatives of the packing-house interests have stated that it is even larger than that of the railroads. More important, however, is the fact that it has been brought to such a high degree of concentration that it is dominated by a few men. The big packers, so called, stand between hundreds of thousands of producers on the one hand and millions of consumers on the other. They have their fingers on the pulse of both the producing and consuming markets and are in such a position of strategic advantage that even if they do exercise it, as they claim, they have unrestrained power to manipulate both markets to their own advantage and to the disadvantage of over 99 per cent of the people of the country. Such power is too great, Mr. President, to repose in the hands of any men.

One of the considerations which, in my judgment, is generally overlooked is the fact that with the sole exception of the shipper, all the agencies operating in the stockyards are thoroughly organized.

The commission men have their local exchanges and, in addition to that, their national exchange, in which they formulate most complete and far-reaching rules for the conduct of the industry. We have seen since the beginning of the war one increase in commissions after another, and I may say that the man who pays these commissions has no opportunity to express his opinion as to their justice and equity, much less to control them. Not only that, but there is no one authorized to speak for him.

The scalpers and traders in the yard whose function—theoretically, at least—is to absorb the surplus shipments of stock to the markets also have their organizations. And we have good reason to believe that the packers are not without organization, too. Only the men who go to market with their product, the unnumbered hosts of producers, are without organization, and, in the very nature of things, they can not be organized.

Here I wish to say, Mr. President, that when the producers enter the market they find themselves under every sort of handicap as against the men in control of the yards. Take, for instance, the shipper from a remote section of the country. The moment he puts his stock on the cars and bills it to market his control over his property is virtually at an end. He consigns it to a commission firm, and becomes at once responsible for the payment of enormous fixed charges, while at the same time, because of the peculiar character of his product, he faces heavy loss through shrinkage. When he reaches the market he must sell, and sell at once. He is under a compelling necessity to accept whatever price is offered, because refusal to sell only entails greater loss. If, for instance, he should elect to go to another market, he must pay additional freight charges, additional yardage charges, he must sustain additional shrinkage in the weight and condition of his stock, and in the end he finds that he faces the same buyers in that other market. All the conditions of the industry combine to put the shipper at the mercy of the buyer. He is not like the producer of wheat, for example, who can store his product. Live stock once shipped to market can not be stored. It must be sold. It can not be held for a better price, for every day's delay in sale entails additional loss. So it is that the unorganized shipper, dealing with highly organized marketing agencies, is sorely in need of some sort of governmental supervision that will guarantee him fair play.

Those who have watched the development of this industry will perhaps have but little anxiety about the man who ships trainloads of live stock. He may be expected to take care of himself, and no sympathy need be wasted on him. He is, fortunately I believe for the country, becoming fewer in numbers each year; but it is about the man who ships a single carload or the man who ships even a single animal that we are concerned in in this proposed legislation—the man who is absolutely dependent upon the integrity of the market, the man who can not afford a loss.

Mr. President, it has been strongly protested that there should be no meddling on the part of the Government with a complex business like this. Anyone who has given sober thought to the methods of regulation proposed by the pending bill, however, will not be in the least disturbed by that sort of a statement, for there is no provision in the bill that assumes to give the Government the power to manage any phase of this business whatsoever. Neither does the bill provide for Government ownership, as has been so widely proclaimed throughout the country. The bill is intended to regulate only the trading in the stockyards and to prevent discrimination through the abuse of power. It goes this much further in that it gives to the commission to be created the power to fix the rates that may be charged for commissions, the rates that may be charged for yardage, and the rates that may be charged for feed in the yards.

To illustrate the necessity of such authority being conferred, I wish to point out the fact that, as heretofore stated, within the last few months commissions have been almost doubled, until there has arisen all over the country a protest against the increases. Another incident will indicate the need of reform in reference to feed charges. On recent shipments of cattle that came to my personal attention the shipper was charged in transit from $40 to $58 per ton for hay fed to his cattle, although all along the route there were countless thousands of tons that could not be sold for enough to pay freight charges to market. At a time when every farm product in the country is tobogganing in price, we find the fixed charges going up. It is easy enough to understand why the producers of the country are discouraged by such conditions, particularly since there is no agency whatever authorized to maintain just and fair relations between the operators in the yards and the men who constitute the chief pillar of the market, the men who produce and ship their live stock in. Under the present system the commission man to whom consignments are made is the only agent the shipper has, and constitutes his only protection, but unfortunately during the period when the Department of Agriculture under war legislation exercised supervision, several instances were found in which commission men had not fulfilled their trust and by unfair and even dishonest charges had levied an unjustifiable toll upon the shippers.

The object of this bill, Mr. President, is to give to all men who have to deal with the markets a court to which they may appeal for redress of grievances, to set up a governmental body which shall guarantee the rights to which they are now entitled. It is not proposed to give them any special privileges, nor is it proposed to limit the legitimate operations of the packer. This bill does not forbid a single act that is not prohibited by law to-day. It provides only for simple machinery to enforce fair dealing, and I can not understand why any man should oppose it unless for some reason he dreads publicity.

A great deal has been said in the discussions on the floor of Congress and in the press of the country against establishing new bureaus. Mr. President, those of us who propose this legislation assume to say, and have no fear of disproof of the statement, that the great markets of this country have been for years and years controlled and dominated by a self-appointed group of men; and between men acting in that way in their own selfish business interest, and men who are appointed by the Government, by the people of the country, for the interest of the rank and file, there can be no choice whatsoever between a limited group of men who speak for themselves only

and a limited group of men who speak for all the agencies of the market, and all who deal in the market, including the producers and the consumers as well.

A great deal has been said about the cost of this commission. One of the men who at this time represents a packing house told me that he knew of two different firms in the yards that had accumulated within 12 months' time a million dollars each by questionable methods of trading in those yards. I assume to say here and now that the majority of the men having to do with the agencies of the markets are honorable, straightforward, honest men; but many of the abuses that creep into that situation they are unable and powerless to correct themselves if they would, simply because of the law of competition. They are the victims, and not the causes, of many of these abuses. Without some one to speak for the public, without some one to correct the abuse, it never will be corrected; and for every penny expended in the supervision of those markets there will be a dollar returned to the producers and consumers of the country.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. PHIPPS in the chair). Does the Senator from Wyoming yield to the Senator from Ohio?

Mr. KENDRICK. I yield to the Senator.

Mr. POMERENE. If it will not interrupt the course of the Senator's argument——

Mr. KENDRICK. Not in the least.

Mr. POMERENE. I should be obliged to the Senator if he would point out what the questionable practices are by means of which these men made these vast sums of money. Also what does the Senator conceive to be the disadvantages to the public from the packers owning the yards; and what are the special advantages which he would expect to be derived from their being owned publicly, or in some other way than under the control of the packers?

Mr. KENDRICK. Mr. President, I shall be very glad to explain the first point, in reference to the questionable practices. I am glad to have a concrete example given by the very man who called my attention to the fact; and I testify here to the fact that there are many men connected with the market agencies it is proposed to supervise who have a real understanding of this situation, and who, whenever it is brought to their attention clearly, never hesitate at all to admit that some instrumentality of the Government must be called into play to correct this situation.

The question asked by the Senator involves this sort of an abuse: As stated a few moments ago, the scalpers and traders of the yards are supposed to serve a useful purpose by absorbing the surplus that is shipped in on an excessive run to market. That is to say, they buy the product and carry it over until there is less of congestion in the yard, ordinarily a period of anywhere from two to three days, when there would be a demand for the product, and they then call upon their commission men to resell it to the packing houses or the killers.

In this case this friend of mine pointed out that that practice had come to be abused by reason of the fact that through connivance between some of the commission men and the scalpers it was practically impossible for the legitimate buyers, the men who wanted the product to kill, to obtain it at the first opportunity. For instance, the packer might be willing to pay the demanded price, but these speculators would be permitted by the commission men to buy at practically the same price, or even less, and within two or three hours after it was bought they would submit it for resale; and every turn meant an unnecessary profit for the middleman and an unnecessary commission that must be paid by either the producer or the consumer of the product. In other words, instead of facilitating the trade of the yards, they were acting as an impediment, and the product changed hands in a way that would involve two commissions, which might under legitimate circumstances be entirely reasonable and regular; but under such circumstances as those, of course, it imposes an increased burden and an unnecessary one.

In reply to the question the Senator has asked with reference to the ownership of the stockyards, let me say that I, for one, have never seriously objected to the packers owning an interest in those stockyards; and I call attention here and now to the fact that there never has been a bill introduced in this body by me, there never has been a word uttered here by me, to indicate that in any way, under any circumstances, it was my intention, or the intention of those who joined with me in proposing this legislation, to penalize the packers or punish them for anything they have done in the past or might do in the future.

I want to point out, further, that failure to join hands and meet this situation squarely and bring it to a final conclusion, in order that there might be order where there is now disorder, in order that there might be peace where there is now a public clamor, has already in my judgment involved a serious loss in dollars and cents, or is likely to involve it, through the sale of these yards. As long as the packers do not control and dominate the yards to their own advantage and to the detriment of the shippers, there is no reason under the sun why they should not have an interest in those yards if they care to do so; and I am willing to say also that I have never had any desire to prevent the packers from entering any other line of business that might attract them. Indeed, I might be persuaded to doubt the constitutionality of the recent decree so far as it related to that particular matter. But I may add that there never has been a contest between entrenched privilege and popular rights that the effort has not been made to transform the Constitution into a bulwark of privilege. Why, at this very moment when the farmers of the country are clamoring for credit and should have every legitimate accommodation that may be extended to them, the functioning of the Federal farm loan system has been suspended because a corporation interested in the profits derived from private loans is endeavoring by testing the constitutionality of the Federal farm loan act to prevent the Government from coming to the assistance of the farmers. Had it not been for this appeal to the courts the farm loan system would have been enabled to put millions at the disposal of the farmers and thousands of them would have been saved from real distress.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Kentucky?

Mr. KENDRICK. I yield to the Senator.

Mr. STANLEY. Under what clause of the Constitution does the Senator claim that Congress would have a right to prevent the packers of meat from engaging in the manufacture or sale of some other product?

Mr. KENDRICK. The Senator from Wyoming just made the statement—the Senator from Kentucky evidently did not hear it—that he was not altogether convinced that it was constitutional.

Mr. STANLEY. To prohibit it?

Mr. KENDRICK. No.

Mr. STANLEY. I misunderstood the Senator. I understood him to say he thought it was.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Iowa?

Mr. KENDRICK. I yield to the Senator from Iowa.

Mr. KENYON. I do not want to see the Senator from Wyoming led further than I believe he intends to go. If the control of other business—competing business, substitutes for the products of the packer—tends to monopoly and is in interstate commerce, then there is a right to regulate it. I do not think the Senator from Wyoming intends to go so far as to state that that proposition is unconstitutional.

Mr. KENDRICK. I am glad the Senator called my attention to that, because I did not intend to convey that meaning.

Mr. STANLEY. Mr. President, the handling of these outside commodities would have to be an integral part of some restraint of trade, it would have to enter integrally into the control of commerce, before you could reach it under the commerce clause of the Constitution, whether it tended to monopoly or not.

Mr. KENYON. If the whole scheme and plan enters into interstate commerce, then you go further; if there is a tendency to monopoly, then Congress has the right to control it.

Mr. KENDRICK. Concluding my statement in answer to the question of the Senator from Ohio [Mr. POMERENE], I want to say that I have not been one of those who have opposed or objected to the packers having an interest in the yards. What I object to is their domination of the yards. I insist it ought to be an entirely uncontrolled market, in which every man meets every other man as nearly as possible on a complete equality, and therein lies the whole question. Undoubtedly the control of the yards in the early days involved the prevention of the building of other packing houses. I think that is generally agreed. It also resulted in discrimination. There are many records, I believe, to that effect, showing discrimination in the management of the yards, the favoring of one commission man over another, by the distribution of locations within the yards, for, of course, there is a great advantage in buying and selling to be gained by a commission man from occupying a favorable location where the buyers can see the stock to advantage. This power to exercise favoritism and to show discrimination has

been abused in the past, and in the very nature of things it will be abused in the future unless there is some supervisory authority, greater than any of the agencies involved, which is interested in maintaining justice. Domination of the yards by a private agency which could profit from discrimination is not to be tolerated, but as long as no particular private group has sufficient power to dominate the situation there is no reason why such a group should not have an interest in the yards. The trouble in the past has been that the big packers have dominated the markets to the disadvantage of the producer and consumer. My aim in this legislation is to see established an instrumentality of the whole people which through the power of publicity will protect the yards against the arbitrary and unjust exercise of power.

Mr. KING. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from Utah?

Mr. KENDRICK. I yield.

Mr. KING. I have not had the pleasure of hearing all of the remarks of the Senator, having been called from the Chamber. My understanding is that the court has recently entered a decree which compels the packing companies to dispose of their holdings in the yards, in part or in whole. Am I right in regard to that?

Mr. KENDRICK. Yes; I think so.

Mr. KING. And this bill has for its object, has it not, the confirmation of the view the courts have taken?

Mr. KENDRICK. It has the purpose of crystallizing that decree into legislation.

Mr. KING. In the opinion of the Senator, would he permit the packers to have some other than an ordinary interest in the yards, and does he not think it would be injurious to the packers if they had more?

Mr. KENDRICK. I have never opposed that, Mr. President, and I would not now.

Mr. KENYON. Will the Senator permit me to say further, in answer to the Senator from Utah, that the decree, which is a consent decree, separates the yards from the packers. But it has never been agreed just how that shall be done. The packers, by their counsel, maintain that there is no law to compel them to give up the stockyards. This bill brings the law up to what the packers practically agreed to.

Mr. RANSDELL. Mr. President——

The PRESIDING OFICER. Does the Senator from Wyoming yield to the Senator from Louisiana?

Mr. KENDRICK. I yield.

Mr. RANSDELL. I understood the Senator from Ohio to indicate in his question that this bill would provide for public ownership of the yards. Perhaps I misunderstood him. I would like to say that that is not contemplated in the bill at all. Section 13 provides that the packers must dispose of their interests within two years, and then it contemplates that any private person or corporation may engage in the stockyard business, but must obtain registration from the commission created by the bill. But it will not be public ownership. Perhaps I misunderstood the Senator.

Mr. POMERENE. Mr. President, I think the Senator did misunderstand me. I indicated no preference for either one scheme or the other. What I asked of the Senator from Wyoming was this, What were the disadvantages to the public which were derivable from packer owned and controlled yards, and what would be the advantages if the packers ceased to own these yards and they were owned or controlled by some other body? That was the main purpose of my question.

Mr. RANSDELL. I do not wish to interrupt the speech of the Senator from Wyoming, but it seems to me that one could readily understand that if one were both buyer and seller he could work on his own interest very well, and if the packers owned and controlled the yards and sold to themselves, there might be a good deal of collusion unless they were remarkably honest people.

Mr. KENDRICK. The Senator from Louisiana has described the situation very well. The suspicion that discrimination is practiced is, in one way, just as bad as discrimination.

Mr. President, we have had many direful predictions as to what may happen if this bill should become a law. It has been stated that it would upset the business, and even that it would actually destroy this industry.

Fortunately for us we have a very good precedent for this legislation. Until a few years ago in Canada the buyers and slaughterers of live-stock products went to the country for their supplies, as they originally did in this country. Finally the markets were concentrated much as they have been in this country. With that concentration came suspicion and distrust about the methods of the market. The demand for reform arose, the protest originating with the live-stock association.

Within a few short months after the protest was made the Canadian Parliament enacted a law, quite analogous to that here proposed, placing the industry under the supervision of the minister of agriculture and establishing a system of Government licenses for the agencies in the yards.

We had extensive hearings in our committee, as the Senator from Louisiana [Mr. RANSDELL] will remember, and we had witnesses from all over this country. It was declared by nearly every witness who came before our committee that if we should enact a license bill it would place the whole industry under bondage and destroy legitimate business. Nearly every witness who testified before our committee, at least the great majority of them, where they were questioned on that point, admitted that some legislative action ought to be taken, but they objected to the licensing.

In deference to that objection, so as to avoid even the appearance of imposing any unfair condition upon the industry, the licensing system then proposed was abandoned and this commission was provided as a substitute. But in Canada the licensing plan was made operative. The Canadian measure gives the minister of agriculture the power to fix commissions, to regulate charges of other kinds in the yards, and in a general way to supervise the methods employed in those markets.

In discussing the effect of the legislation within the last 10 days with the minister of agriculture, Dr. Tolmie, one of the most capable and efficient ministers of agriculture, I think, serving any Government to-day, he told me that one of the salutary effects of this legislation was to bring confidence to the markets, and he assured me business is now proceeding in an orderly instead of a chaotic way. Confidence is a thing that our markets have never known from the time they were initiated down to the present time. I believe without any question in the world that it is due largely to the condition I have described, of complete and full organization on one side and of an equally complete lack of organization on the other.

Mr. RANSDELL. Mr. President, I would like to know if under the Canadian system the packers are permitted to dominate and control the stockyards.

Mr. KENDRICK. Mr. President, I have not the details of the Canadian plan before me, but I was told by Dr. Tolmie that there had resulted from the law general good understanding and confidence in the markets. That would indicate, from my viewpoint, that there has been no domination of their markets since the enactment of the law.

Mr. RANSDELL. May I ask, further, if the law permits the minister of agriculture to manage and control the situation in the marketing of cattle?

Mr. KENDRICK. That is undoubtedly the intention of the law, as I understand it.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from Nevada?

Mr. KENDRICK. I yield.

Mr. PITTMAN. Does all the stock which goes into these large centers go into these yards?

Mr. KENDRICK. I should say, in answer to that question, that practically all the stock is shipped directly to the yards. Many, many thousands of animals are shipped from the yards to the country, because they are unfit to go to the slaughter pens, and are afterwards returned to the yards for slaughter.

Mr. PITTMAN. If a stock raiser were shipping a carload of cattle to Kansas City, or to Chicago, or to St. Louis, would those cattle have to go into the stockyards in those places? What I am trying to get at is this, whether these yards are essential to the stock raiser. Are they essential to the marketing of his stock?

Mr. KENDRICK. Mr. President, I am convinced from close study of that situation that it is the most economical way the business could be handled. I do not believe there is a doubt in the world but what the large owner or large producer of live stock would, perhaps, profit more by having the buyer come to him in the country; but the multitude of smaller owners might be, and probably would be, overlooked in the remote sections of the country, and might not in that way have as ready a sale as they do by going into the markets. I consider the concentration that has come about entirely too great. I believe we would have very much more economical handling of the products if the yards or markets were distributed more widely over the country, always, of course, with a view to the sufficiency of the supply to keep the market going. Of course, you can understand a duplication of shipments enters into it largely, where live stock are shipped from one section of the country over long distances by rail and then, after being

slaughtered, the product of the live stock is reshipped back, in many cases, to the point of origin. But it is a matter of fact that under the present system practically all the live stock sold in interstate commerce for slaughter are sold in the stockyards.

Mr. SHEPPARD. Mr. President, may I ask the Senator if, under this bill, it will be optional with the seller as to whether he will effect any particular sale through a stockyard?

Mr. KENDRICK. There is nothing arbitrary in the bill at all.

Mr. PITTMAN. Mr. President, smaller producers of cattle or other stock, when they ship their products to the market, are constantly out of touch with it from that time on, are they not, and at the mercy of the people handling the stockyard?

Mr. KENDRICK. There is not a question about that, Mr. President, and I want here to emphasize this point. It is difficult, of course, to have people appreciate how this situation involves so many different features, and I understand full well that it is a problem for a man who has not seen the yards, who has not visited them,who has not followed the shipment from its origin to the yards, and has not seen the helplessness of a shipper, to realize what the situation is. As a matter of fact, there is no system of marketing in this country on a parallel with this. The man ships his stock to market, as the Senator from Nevada [Mr. PITTMAN] has said, and even if the market be conducted on principles of absolute integrity, there are conditions which arise compelling him to be suspicious, in many cases, of the whole transaction.

Let me cite one. Suppose a man loads a car with cattle or hogs or sheep out in the western country within, say, 24 to 36 hours' run of the market. He has a local paper, and he judges from the class of cattle or sheep or hogs, as he knows them, as to the class into which they will fall in the market. He consigns them to a commission house, and, as the Senator has said, he has nothing further to say about it. He probably accompanies the shipment himself. When he has reached the market it will be "called off," as they say, to the extent of 50 or 75 cents a hundred. That will entirely absorb, in many cases, every dollar of equity he has in that live stock, including his feed for the winter. His labor and the use and employment of his place and his teams and everything else will be completely lost by this decline in the market.

He will take his check, whatever it is, and return home, and the day after he gets home he will see that the market is right back where it was the day that he left home. In the meantime there will not be the slightest fluctuation or variation in cost to the consumers of the country. Perhaps it was an entirely unavoidable circumstance, but can you blame a man for resenting a condition that eliminates his profit, that takes the equity he had, and sometimes more than the equity, when he finds himself in debt where he should have a surplus?

I should like to have the Senate get just a glimpse of what the stockyards are like. The 14 largest stockyards in the country include, among others, Chicago, Kansas City, Omaha, and similar places. One of those yards alone, Chicago, covers an area of 1 mile square, as I understand it. In that yard alone on every business day there is a transfer of $4,000,000 of value. Any man who has ever entered the gates of those yards under present conditions understands the hopelessness and helplessness with which the individual shipper faces that situation. A few yards like this handle the great bulk of the live stock shipped in interstate commerce for slaughter, and these yards are owned or dominated by the big packers. This condition is not the result of normal development, but it is an artificial result of discriminatory practices of the past.

Mr. RANSDELL. Will the Senator please tell us who owns the big stockyards in Chicago now?

Mr. KENDRICK. I can only refer the Senator to the showing made by the testimony given, I believe, before the Committee on Agriculture and Forestry. I believe that the dominant factor in the ownership of the yards at that time was a man by the name of Prince, of Boston, who is supposed to have held a large share of the control through certain systems of bearer warrants and that sort of thing, so as to leave the question of actual ownership very much in doubt. However, I believe before the hearings were concluded that the reports on the question, whether they came from the Federal Trade Commission or whether from hearings before our committee or the Committee on Interstate Commerce in the House of Representatives, brought out the fact that J. Ogden Armour owned a large part of the stock, though I do not recall how much.

Mr. RANSDELL. Was not the committee left under the impression that the real control or, if I may use the word, the real manipulation of the great stockyards of the country was, as a matter of fact, in the hands of the men who were practically the only buyers of the commodity sold in those yards, so that, to put it in plain English, they were both sellers for the owners of the produce and purchasers of that produce from themselves or their agents?

Mr. KENDRICK. I believe the statement is fully confirmed by the information contained in the report. Not only that, but there is too abundant evidence to show that every opportunity has been employed to increase the capitalization of the yards, and with the increased capitalization has always gone increased yardage costs to pay increased dividends to the stockholders, and that must come out of the pockets of the producers and consumers.

Mr. RANSDELL. May I ask another question? Does the Senator, who is certainly a man of affairs and well posted in the matters of the Nation, know of another large commodity of any kind in the country which is sold by a set of agents to themselves? The Senator was reared in Texas and is pretty familiar with cotton. Do the cotton spinners, who consume the cotton raised by the southern farmers, sell it to themselves or is it sold to the spinners by an entirely independent set of men who have no connection—at least, so far as I know—with the men who consume the cotton?

Mr. KENDRICK. I stated a few moments ago that I knew of no other industry the market conditions of which are in any way parallel to this. I regret my inability to inform the Senator about conditions with reference to cotton. The greater part of my cotton picking was done on horseback, and I am uninformed entirely with reference to that matter.

Mr. RANSDELL. If the Senator will permit me, I can say that so far as I know the men who sell the cotton have no connection whatsoever with the people who spin the cotton into the cloth ready for consumption by the American people.

Mr. KENDRICK. In connection with the question of disposition, I think perhaps it could be clearly shown that in any event the men who buy the cotton do not own the market place in which the cotton is sold.

Mr. RANSDELL. They certainly do not.

Mr. FLETCHER. Mr. President——

Mr. KENDRICK. I yield to the Senator from Florida.

Mr. FLETCHER. I should like to hear the Senator upon this phase of the bill, though perhaps he has already dwelt upon it in my absence. I am puzzled a little about this thought. Granting that there is need of legislation on the subject, is it advisable to create a new commission? Would not the purpose be accomplished by vesting the Federal Trade Commission with all the power and authority proposed to be given to the new commission? The Federal Trade Commission have an organization; they are in position to make investigations under the law as it now stands, I believe, and if, upon inquiry and study and hearings, they find that certain practices are in violation of the law, they now have the authority to order those practices to be discontinued; they have the authority to say "You must quit," but that is all the power they now have.

Suppose we gave the Federal Trade Commission the power and authority to enforce their findings, in other words, invest them with all the authority that we give the proposed new commission under the terms of the bill. That brings us to the question whether it is necessary or greatly to be desired in the public interest to create here a new commission to deal entirely with the subject.

Mr. KENDRICK. I am very glad to have the Senator propound the question.

Mr. STERLING. I might add to what the Senator from Florida has said that by reason of the investigations already made, the Federal Trade Commission ought to be reasonably familiar with the practices and methods of the packing industry.

Mr. FLETCHER. That was my idea, that they had already made investigations and that they were equipped for making perhaps a more thorough investigation than almost any new commission would have the facilities for making, and particularly at the start. But I am not advised whether the industry is so great and its ramifications so extensive that there is need for a special commission to handle that subject alone in the interest of the public. I should like to hear from the Senator upon that question.

Mr. KENDRICK. I regret that the Senator was not in the Chamber when we discussed that point a few moments ago. I will say, however, that the original bill provided for authority over and control of markets by the Secretary of Agriculture, but there was such a strong protest against that character of legislation on account of what was termed by the witnesses "one-man power," and the further statement by at least a great many witnesses that they would not object to a separate commission, that this plan was adopted to meet that objection.

The question raised by the Senator from South Dakota as to the machinery for making any investigation is entirely correct, but unfortunately the Federal Trade Commission to-day has more responsibility and more work, in my judgment, than it can possibly take care of. In addition to that is the fact that these markets constitute the greatest marts of trade and the greatest beehives of industry in the country. In providing for a separate commission we had in mind the belief that this body would, at least at the beginning of its work, be the busiest commission in the United States.

One can not conceive, whatever may be said here, of the restless spirit of criticism that has prevailed over a period of 40 years, and is still growing apace. This sentiment has not arisen, as we have been told, because of accusations here in the United States Senate. What we hear about it here is like the spray thrown from a great tidal wave. I believe that if the bill is enacted into law and the commission is put into operation it will serve the country more fully, more completely, and more beneficially than any commission we now have.

Mr. STERLING. Mr. President——

Mr. KENDRICK. I yield to the Senator from South Dakota.

Mr. STERLING. I call the Senator's attention to the last report of the Federal Trade Commission at page 38, under the head of "Meats," where is set forth a statement showing the subject of the investigation by the Federal Trade Commission. They have issued a report, or rather a series of reports, covering the various subjects, as follows:

Part 1. Extent and growth of power of the five packers in meat and other industries.
Part 2. Evidence of combination among packers.
Part 3. Methods of the five packers in controlling the meat-packing industry.
Part 4. The five larger packers in produce and grocery foods.
Part 5. Profits of the packers.
Part 6. Cost of growing beef animals; Cost of fattening cattle; Cost of marketing live stock.

A commission which is able to make a report on those great subjects—and they are subjects in which we are interested here in considering the packing industry—it seems to me is best fitted of all others to go ahead and exercise control from now on.

Mr. KENYON. Mr. President——

Mr. KENDRICK. I yield to the Senator.

Mr. KENYON. I wish to make a suggestion to the Senator from Florida and to the Senator from South Dakota, supplementing what the Senator from Wyoming has said. It was my opinion when we started out on this proposed legislation that the packing industry could be put under the Federal Trade Commission. I felt, as many other Senators did, that it was not advisable to increase the number of commissions. I wish, however, to say to the Senator from Florida that there is somewhere in the RECORD, though I can not put my hand on it now, the statement made before the committee by Mr. Levy Mayer, a very eminent attorney and an attorney for the packing interests, that their business in all its various ramifications exceeded the business of the railroads. Because of its magnitude I have been rather converted from the idea of putting this matter in the hands of the Federal Trade Commission. It is equal to the railroads in extent—that is one of the justifications for the pending measure—and it is just as important to the country.

There are just as many complicated questions arising in reference to it as arise in the management of the railroads. We could not get along without the Interstate Commerce Commission; we could not put the railroads into the hands of the Federal Trade Commission. That commission is rushed and its time is occupied to the limit.

I will say to the Senator from South Dakota that it was in response to a request of the President that the Federal Trade Commission made the investigation covered by the report in six volumes to which the Senator has referred. The House tried to pass what is known as the Borland resolution, but that was defeated by methods which I shall try to explain when I get the floor, by the most complete system of lobbying and maneuvering, by the same kind of lobbying that has been practiced against the pending bill. That all came out in the report. When the Borland resolution failed, then the President asked the Federal Trade Commission to make the investigation. They did so to the detriment of their other work. It was a tremendous task. That is why I feel so strongly that this work should not be imposed upon the Federal Trade Commission. It can not be done by them; it is too large, too extensive, too important to be added to the work which they are already performing.

Mr. STERLING. Mr. President, if I may make a suggestion in answer to the Senator from Iowa in regard to the magnitude of the work and the fact that it can not be done by the Federal Trade Commission, I desire to say this: All such work is done, after all, by experts who are selected by the Federal Trade Commission. If the live-stock commission bill becomes a law the experts will be selected by the live-stock commission to do the work and they will make their report to the commission. In verification of that, I have here a report on "The maximum profit limitations fixed on the meat-packing industry," transmitted by the Federal Trade Commission in response to Senate resolution of September 3, 1919. Turning to that report, I find this letter being a part of Exhibit I of the report:

FEDERAL TRADE COMMISSION,
Washington.

GENTLEMEN: Having been directed by you to ascertain the facts pertinent to the question of the reasonableness of the maximum profit limitations imposed on meat packing and slaughtering companies by the present regulations of the Food Administration, the undersigned beg to report the results of their investigation as follows:

The undersigned are Walter Y. Durand, Perley Morse & Co., and Stuart Chase. There are two other reports here if not more, but those two I have discovered. One is Exhibit II, and in that instance the letter to the Federal Trade Commission is as follows:

GENTLEMEN: In accordance with your instructions we have made an investigation of the profits of certain meat packers affected by the rules and regulations of the Meat Division of the United States Food Administration, and we submit herewith in relation thereto the following report:

That is signed by Perley Morse & Co., certified public accountants.

The next, Exhibit III, is "Regulation of Packers' Profits," and that report is signed by Mr. Chase alone.

So it seems to me, Mr. President, that there is very little in the contention that the task is too big for the Federal Trade Commission to perform. They will, of course, supervise, control, give directions, and lay down policies, but the work of investigation must necessarily be carried on by men whom they will employ for that particular service. It would not be expected that the Federal Trade Commissioners or, if a live-stock commission shall be established, that the live-stock commissioners will themselves personally investigate the accounts, the statements, and the methods of transacting business of the packers, or, in the case of stockyards, will investigate the stockyards, but they will send their inspectors and their experts to do that work.

Mr. KENDRICK. Mr. President——

Mr. STERLING. If the Senator will pardon me for a moment longer, I desire to say that I have a substitute bill here which is found for the first time on Senators' desks to-day. I had expected to address the Senate briefly this afternoon in regard to that substitute, pointing out its main features, but I shall hardly have time to do so. I say that because, according to the program, other Senators are to follow the Senator from Wyoming [Mr. KENDRICK]; it will then be getting late, and to-day is Saturday; but I hope that Senators will have reference to the substitute which I have offered, which is briefly this: It preserves all the prohibitions so far as the packers are concerned found in the pending bill, but provides that the Federal Trade Commission shall have supervision. It then provides that sections 5, 6, 7, 8, 9, 10, and 11, governing the procedure throughout, shall apply in the case of the packers' and operators' industry just as they apply in the matter of the duties of the Federal Trade Commission.

Mr. JONES of New Mexico. Will the Senator from Wyoming yield to me?

Mr. KENDRICK. If the Senator from New Mexico will wait for just a moment, I will yield to him. I wish to say to the Senator from South Dakota [Mr. STERLING] that the matters referred to by him were all considered by those who are responsible for framing the pending bill. One of the difficulties involved in leaving the responsibility for the execution of the law to the Federal Trade Commission is that it is going to be necessary for the live-stock commission, if the law becomes operative, to be in continuous session; it is to be an administrative body; and one of the reasons why I wished it to be a commission of three men and not less was to be sure that there would be no discrimination between any of the market agencies or the patrons of the market. I also wished to make sure of the fact that the authority was not to be, as the Senator has suggested, a delegated authority. I desire a commission that will pass upon the questions at issue.

I was reminded of what I take to be a defect in the bill by the Senator from New York. The bill should, in my judgment, provide that the commission take action on complaint, and it should be, in my judgment, amended in that way. However, the commission should be available to parties interested at any time, and it will undoubtedly have more business than any

other commission burdened with other responsibilities could take care of.

This work of this commission is to be largely administrative in character, and the best way to avoid the dangers of what we sometimes hear denominated bureaucracy is to see to it that responsibility for the work to be done and the actual doing of it are united in the same persons. In order to obtain the desired results, this commission should be composed of men of unusual business qualifications and unquestioned integrity of purpose, who could and would give their undivided attention to this industry.

My feeling is that the members of this commission should give their personal attention to the problems. One of the principal objections to be raised against the suggestion of putting this work under the direction of the Federal Trade Commission is the fact that such a course would necessitate delegated authority.

I want a commission that is eternally and continuously on the watch, and not one which will merely give its attention to the meat-packing and live-stock problems as incidental business, not one which from press of other duties will be compelled merely to review the findings of other and perhaps less able men. The magnitude of the packing industry is so great and it is so tremendously important to the country that it can not be treated as incidental business.

I wish to say that nothing under the sun would more conduce to increased production in this country, and ultimately to cheaper food products for the people of the Nation, than a dependable market, one wherein the producer would understand, beyond the shadow of doubt, that he would not merely get what is called "a fair market," but would get "the market" for his products, based on the law of supply and demand. The average producer in this country is a pretty good sport; he is not afraid to take his chances; but he wants to know that he meets the other man on a dead level and does not have to go against stacked cards. I now yield to the Senator from New Mexico.

Mr. JONES of New Mexico. Mr. President, I merely rose for the purpose of making the suggestion which the Senator has just so ably covered in his remarks, and to call attention to the distinction between the administration of a bill of this kind and a mere investigating commission, such as the Federal Trade Commission chiefly is.

Mr. STERLING. Mr. President, if the Senator from New Mexico will allow me, I desire to suggest to him and also to the Senator from Wyoming, lest they may have misunderstood me in that respect, that the substitute intended to be proposed by me confers every power that the original bill confers upon the live-stock commission. I will ask the Senator to read the two bills and compare them and see if the proposed substitute does not confer every substantial power that the original bill confers, and if the proceedings therein provided for are not substantially the proceedings provided for in the pending bill.

Mr. GRONNA. Mr. President——

Mr. KENDRICK. I yield to the Senator from North Dakota.

Mr. GRONNA. Mr. President, the Senator from Wyoming will remember that I was one of the members of the committee who believed at first that it would be an act of wisdom to impose the additional burden upon the Federal Trade Commission. However, I became thoroughly convinced, after hearing the testimony for weeks, that it would be impossible for the Federal Trade Commission to function and perform the duties required of it under the original act creating it, namely, to investigate not only the meat industry but all industries of the country in cases where there was a violation of law. I say without any hesitancy that if the pending bill is to be changed so as to impose the duties required by it upon the Federal Trade Commission, that will be about all the Federal Trade Commission will be able to do, because it will keep one commission very busy in order to dispose of the questions which will come before it in connection with the meat-packing industry, the business of which is larger in dollars and cents, I may say, than that of the railroads.

The Senator from Wyoming is correct in the statement which he has made, that it will require the constant attention of the members of the commission—I care not whether the commission be composed of three or five—and they will have all they can do to perform the duties required of them under the provisions of the committee bill.

Mr. STERLING rose.

Mr. GRONNA. If I may be pardoned for a moment longer, the Senator from South Dakota says that his proposed substitute confers the same powers upon the commission as those conferred by the pending bill. I assume that he has reference to the Federal Trade Commission, but I hardly think the Senator from South Dakota will claim that his substitute gives the same power and the same authority to the Federal Trade Commission as is proposed to be given to the live-stock commission by the committee bill. It is true that the substitute of the Senator gives the Federal Trade Commission the same power which it now has, beginning with section 6 of the Federal Trade Commission act, but the proposed substitute does not confer, and will not confer, the same power and the same authority as is sought to be conferred by the original bill.

Mr. STERLING. Mr. President, if the Senator from Wyoming will yield further, I should like to ask the Senator from North Dakota to say what substantial power conferred in the original live-stock commission bill is not also conferred upon the Federal Trade Commission by the proposed substitute presented by me?

Mr. GRONNA. Mr. President, I can not take the time to do that. Running all through the entire bill the Senator has eliminated authority given the Federal live-stock commission which is not contained in his amendment.

Mr. STERLING. Mr. President, I have this to say, in all candor, to the Senator from North Dakota: I have compared the original live-stock commission bill with the provisions of my bill, of course, and I do not now think of a substantial power contained in the live-stock commission bill with reference to the packers that is not contained in this substitute bill. It was the intention to confer upon them the same powers. As I said to the Senator a while ago, the substitute bill contains exactly the same prohibitions and restrictions with reference to the packers, word for word.

Mr. GRONNA. Does the Senator maintain that it gives the Federal Trade Commission power to say what kind of bookkeeping shall be used?

Mr. STERLING. It does.

Mr. GRONNA. I say to the Senator that I do not think it does.

Mr. STERLING. Shall I read it to the Senator?

Mr. GRONNA. Yes; I should like to have the Senator read it.

Mr. STERLING. I will read it.

SEC. 8. That every operator and packer engaged in commerce shall keep such records and statements of account, and make such reports or returns, verified under oath or otherwise, as the commission shall require, as will fully and correctly disclose all transactions involved in its business, and the true ownership of such business by stockholding or otherwise, in such form and at such times as the commission shall by order require. The commission may, in its discretion, prescribe uniform systems of accounts and records and require the installation and use thereof by packers or operators. If such uniform systems are prescribed and required by the commission, no packer or operator shall keep any accounts, records, or memoranda other than those prescribed or approved by the commission. For the purpose of enforcing the provisions of this act, or of any rule, regulation, or order issued hereunder, or of verifying any such reports or returns, any officer or agent of the Government designated by the commission may, during the usual hours of business, enter and inspect any place used by any packer or operator in its business, and examine any books, papers, records, or correspondence relating to such business.

That is taken in haec verba from the Senator's own bill.

Mr. GRONNA. I will in my own time explain the difference in the Senator's substitute and the committee bill.

Mr. KENDRICK. Mr. President, one of the current statements in the discussion of this measure is the declaration that the operation of the proposed commission will, as stated before, ruin the business. This contention is not borne out by the experience during the recent war, when for some months the Government had almost complete control of these yards, and during that time a larger volume of business was transacted than was ever known in the history of the markets. It was not borne out a few years ago, when through the action of Congress and the Federal Government sanitary methods were enforced in the yards. It was contended at that time that to require inspection of the slaughtering and inspection of meats would have the effect of closing foreign markets to our products.

The demand for improvement in the conditions that then prevailed in the stockyards and commission houses was denounced as "agitation" and those who insisted upon reform were condemned as "agitators" in the same manner and in the same language now employed with respect to this movement. The producer was warned that the only result would be to ruin the industry and turn the foreign markets over to the producers of other countries. But these predictions were all mistaken. The country refused to be intimidated, and under the leadership of former President Roosevelt insisted upon legislation. The result was that the stamp of Government approval on American meats, thus guaranteeing their quality and cleanliness, sent those meats to the four corners of the earth, to newer and larger markets than ever before.

In this connection I desire to insert in the RECORD a letter from former President Roosevelt, written to the chairman at that time of the Agricultural Committee of the House of Representatives, showing how the mere agitation for reform was productive of beneficial results. I also desire to include a letter just received from the National Consumers' League, signed by the secretary,

Mrs. Florence Kelley, and a letter from the United Mine Workers at Point of Rocks, Wyo. I shall not take the time to read these letters.

There being no objection, the letters referred to were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, June 8, 1906.

MY DEAR MR. WADSWORTH: In accordance with your request, I send you herewith the two reports of inspection by the committee appointed by the Department of Agriculture of April 5 and 13. This committee had already been appointed when I notified the Secretary that I desired that such a commission should be appointed in order to make the investigation. Subsequent complaints to me and the consideration of complaints already made showed that the charges were not only against the packing houses, but also to a certain extent reflected upon the action of the Government inspectors, and I came to the conclusion that it was best to have an investigation by outside individuals who could not be charged with being in any way interested in the matter. Accordingly, before the completion of the investigation by the Department of Agriculture, I directed Mr. Neill and Mr. Reynolds to make an investigation, the first report of which has been laid before Congress. Much testimony has been offered to us which has not been considered in this report, for Messrs. Neill and Reynolds in this report confine themselves to stating in more or less summary way the facts as to which they had been eyewitnesses, and what they have said can not be successfully controverted. Some of the ground traversed by Messrs. Neill and Reynolds is not touched upon in the report of the committee of the Agricultural Department. As to the ground covered in common by the reports of the two investigating committees, there is no conflict in substance as to the important matters, although there is a marked difference in emphasis, this being partially due to the greater length and detail of the report of the committee of the Department of Agriculture. In my judgment the emphasis of the report of Messrs. Neill and Reynolds is abundantly justified by the facts.

To show the immediate and extraordinary change for the better which the mere fact of their investigation is already bringing about in the condition of the packing houses in Chicago it is only necessary to instance the following portions of a letter received from a most competent and trustworthy witness in Chicago, whose name I will give the committee if it so desires:

"CHICAGO, *Friday, June 1.*

"On Monday I began a tour of all the great packing houses, going first to Libby's, then Swift's.

"Tuesday, all the morning, discussed changes that ought to be made and caught a glimpse of the awakening at Armour's. In the afternoon visited the plant with the superintendent.

"Wednesday I rested and contemplated the 'awakening of packingtown.' It is miraculous.

"Thursday did Nelson Morris with the superintendent. * * * Nelson Morris has done much to make things better. By the time the next inspecting party arrives they will have still more new lavatories, toilet rooms, dressing rooms, etc. Cuspidors everywhere and signs prohibiting spitting. In most the awakening seemed to come by force from without. There was the slightest indication that the 'still, small voice' was at work also.

"At Armour's, at my suggestion—I made no pretense of making an investigation, but frankly announced my desire to see things for myself and to get a fresh impression of conditions, as I had not seen the plants since before the strike—on every hand there was indication of an almost humorous haste to clean up, repave, and even to plan for future changes. Brand-new toilet rooms, new dressing rooms, new towels, etc. Swift's and Armour's were both so cleaned up that I was compelled to cheer them on their way by expressing my pleasure at the changes. The sausage girls were moved upstairs, where they could get sun and light, they to have dressing rooms, etc. I asked for showers and lockers for the casing workers at Armour's and got a promise that they would put them in. The canning and stuffing room, chip beef, and beef extract at Armour's seemed really quite good. In all of these rooms the girls work. At Libby's the girls are to be put into blue calico uniforms, which they will buy at one-half price. They are putting in toilet rooms, which they say are temporary, and that when the building is remodeled they will have these put in a better place. The haste toward reform would have been amusing if it were not so nearly tragic.

"They tried to win my help on the ground that loss of foreign trade would mean hardship for the workers in my neighborhood, and I must say I do share this fear, but I can not see the wisdom of my coming out publicly and saying that I saw indications of an awakening, for I want the changes to be radical and permanent, even though we all have to suffer for the present."

I wish to repeat that my investigations are not yet through. I am not prepared to make a final statement either as to so much of the complaints as concern the management of the Bureau of Animal Industry or as to certain of the graver charges in connection with the adulterations of meat products, as well as certain other matters. But enough has been developed, in my judgment, to call for immediate, thoroughgoing, and radical enlargement of the powers of the Government in inspecting all meats which enter into interstate and foreign commerce. Unfortunately, the misdeeds of those who are responsible for the abuses we design to cure will bring discredit and damage not only upon them, but upon the innocent stock growers, the ranchmen, and farmers of the country. The only way permanently to protect and benefit these innocent stock growers, these farmers and ranchmen, is to secure by law the thorough and adequate inspection for which I have asked.

Sincerely, yours,

THEODORE ROOSEVELT.

Hon. JAMES W. WADSWORTH,
Chairman Committee on Agriculture, House of Representatives.

NATIONAL CONSUMERS' LEAGUE,
New York City, January 20, 1921.

Hon. JOHN B. KENDRICK,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR KENDRICK: The monopolistic control, or even the possibility of such control, of the food supply of 105,000,000 people by private business enterprise is intolerable. The National Consumers' League, with full knowledge of the facts, adopted as part of its 10 years' program a proposal for the Federal regulation of the meat-packing industry.

In the name of its thousands of members, its 59 affiliated leagues in 17 States and the District of Columbia, for whom it speaks directly, and the consumer, we most respectfully urge you to vote next Monday, January 24, or whenever the bill comes to a vote, for the Gronna bill.

No more important public issue than the Federal protection of the people's interest in food and meats can be imagined.

Sincerely, yours,

FLORENCE KELLEY,
General Secretary, National Consumers' League.

UNITED MINE WORKERS OF AMERICA,
LOCAL UNION NO. 3603,
Point of Rocks, Wyo., January 17, 1921.

Hon. JOHN B. KENDRICK,
United States Senate, Washington, D. C.

DEAR SIR: Local Union No. 3603, United Mine Workers of America, has ordered me to write and ask you to support the Gronna bill, regulating the packing industry, which, we understand, is to come before the Senate for action January 24, 1921.

Thanking you in advance for your kindly consideration of this matter, I beg to remain

Very truly, yours,

J. E. CLARKE, *Secretary.*

ABE REEVES, Sr., *President.*
VIRGIL WRIGHT, *Treasurer.*

Mr. KENDRICK. I also ask to include as part of my remarks a resolution sent me by the National Live Stock Association, and in that connection I will say that this association is composed of 17 State associations and 36 local associations, and that these various organizations represent practically the entire territory west of the Mississippi River.

Mr. KENYON. Mr. President, may I ask the Senator how many members of that association there are?

Mr. KENDRICK. I have no idea how many thousands of members there are. One of the associations involved has 6,000 members.

Mr. KENYON. Is this a resolution indorsing this legislation?

Mr. KENDRICK. It is a resolution indorsing this legislation.

There being no objection, the resolution referred to was ordered to be printed in the RECORD, as follows:

Following resolution urging prompt enactment of meat-packing legislation adopted Twenty-fourth Annual Convention American National Live Stock Association, El Paso, Tex., January 14:

Whereas the American National Live Stock Association is definitely committed to the establishment of an open competitive system of production and manufacture; and

Whereas under present monopolistic conditions the principal distributors of live-stock products have an unfair advantage over both unorganized producers and potential competitors which can best be equalized by legislation; and

Whereas lack of confidence resulting from this situation is seriously curtailing production; and

Whereas delay in the final disposition of this important question can result only disastrously to all interests—producer, distributor, and consumer: Therefore be it

Resolved, That we urge Congress promptly to enact constructive Federal legislation regulating the packers, commission men, and traders, to the end that confidence be established, production maintained, and distribution guaranteed on an economical basis; and be it further

Resolved, That copies of this resolution be forwarded to the chairman and all members of the Committees on Agriculture in the Senate and House.

Mr. KENDRICK. Mr. President, I want to say in conclusion that this is not a new question. The demand for this reform has been growing up for a generation. This great industry, so important to the country, is deserving of a better fate than that its continued appeals for protection should always be ignored. It has been a discredit to us that these conditions have been tolerated so long. To allow them to be perpetuated would be a national disgrace.

There is no malice behind this legislation. There is no intention on the part of any of its advocates, and not the slightest desire, to penalize the packers or any other agency. One will scan its terms in vain for any provision designed to hamper even in the smallest detail anyone engaged in the industry. Its sole object is to make it forever impossible for the few having great power to inflict wrong or hardship on the many.

No one will assume that it is intended exclusively in the interest of the producer. I have long been convinced that the manufacturers and distributors of meat products as well as the consumers will derive benefit from the enactment of a law such as that here proposed. Justice and fair play always bring good results, and no man whose aims and practices are legitimate need fear a law the only result of which will be to prevent abuses.

I say to you that the time has come when we should meet this problem squarely, and by enacting this measure create in the great markets of the country a spirit of understanding and good will, without which there can be no orderly progress.

Mr. GRONNA. Mr. President, the Senator from Nebraska [Mr. NORRIS] is absent, due to illness. He called me up this morning and told me he had hoped to be able to be here to deliver an address upon this measure, but finds that he is unable to be present, and he asked me to present to the Senate a statement written by him entitled "Some side lights on the packers." I ask unanimous consent to have the statement printed in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SOME SIDE LIGHTS ON THE PACKERS—A STARTLING REVELATION OF FACTS NOT GENERALLY KNOWN.

[By Senator GEORGE W. NORRIS.]

"It was Sunday morning, the one day of the week when we can afford to have meat for breakfast. As I took my slice of nice crisp bacon, I asked my wife what it cost. She said it was 60 cents a pound. I had just been reading from a western country newspaper that the price of hogs on the western prairies was from 10 to 12 cents per pound. It occurred to me that the producers and the consumers ought to know something about the middleman's profit on this necessary article of human food.

"I wonder if the farmer in the sod house on the prairie and the laboring man in the overcrowded city of the East really understand that this mighty space between them is inhabited by a multitude of unnecessary profiteers who are living in luxury upon the toil of the two extremes of this great equation. It ought to be interesting to the underpaid producer and the overcharged consumer to get a view of some of the side lights; some of the overhead charges and expenses that oil the machinery of the mighty corporations which control most of the lines of the food products of the world.

"Under existing conditions the producer and the consumer are so far apart that they live almost in different worlds. They do not realize the network of machinery existing from one end of the country to the other, having within its grasp the most mighty financial institutions and under its control the dissemination of news and literature of the day by which the very atmosphere of both consumer and producer is saturated with a false knowledge of the necessity of all this useless and expensive machinery, thus keeping them both in ignorance, with a natural tendency in each to fear that the other is getting the best of the deal. They both realize that middlemen are necessary, and that machinery is essential to make over the product of the farm into a suitable commodity for the table. They do not fully understand that they are both bowed down in poverty because they contribute day by day and year by year to the immense fortunes of many millionaires, who are living in comparative idleness and luxury upon the toil and the sacrifices of the two extremes. It ought to be interesting to consider briefly a few of these unnecessary and exorbitant overhead expenses which they contribute to the oiling of the great international machinery operated by the packers. This information has been taken from hearings before Senate committees and the Federal Trade Commission.

"WHAT ONE YOUNG MAN DID.

"Several years ago a very bright and enterprising newspaper man in Philadelphia moved to Washington. He came to the Capital City as the Washington correspondent for a Philadelphia paper. His ability as a writer soon brought him additional clients. It was not long until he became an editorial writer for a well-known eastern magazine. He soon became a regular contributor to a Wall Street publication on financial subjects. He was taken on as one of the editorial writers of an economic magazine, a publication with a circulation all over the United States, having for the main object of its existence the maintenance of a high protective tariff. He was soon employed as a writer on a magazine known as the Fourth Estate. This is a trade publication for newspapers, and goes to practically every newspaper office in the country. He likewise became an editorial writer on a trade publication for manufacturers. He was likewise one of the editorial writers on a Washington daily.

"In the meantime he had built a large office force, maintaining two offices in Washington, and was surrounded by quite a number of able assistants. It can be seen at a glance that this man's work was going into not only the homes but the business offices of the country, particularly those offices that have to do with the creation of public sentiment on various public questions.

"In the meantime he developed into a great social leader. His dinners were attended by members of the Cabinet, Members of the House of Representatives, the United States Senate, foreign ambassadors, and other prominent people influential in national affairs. It is quite apparent that his influence and his power in the building up of any sentiment throughout the country for the control of legislation in a silent and unseen way would be of wonderful force. It was noted by those who knew him best that he was an intimate and close friend of the private secretary to the President of the United States.

"It became known that it was almost a daily occurrence for these two men to be lunching together at one of the most exclusive and expensive hostelries in Washington. All of these various occupations and activities of Mr. Logan are in themselves perfectly legitimate. They are, however, exceedingly important when taken into consideration with what follows—and the reader must not minimize his social activities.

"In every great capital of the world many thousands of dollars are spent in social affairs, innocent on their face, legitimate of themselves perhaps, but having a sinister, powerful, silent, and perhaps unconscious influence on the control of legislation and the activities of executive officials in the enforcement of the laws. It might be said in passing that this is illustrated by the public announcement recently made through the press that the British ambassador has been allowed by his Government nearly $100,000 annually for social entertainment.

"MONEY FROM EVERYWHERE.

"No one suspected that Mr. Logan was on the pay roll of a large number of great corporations, and while we are considering him now only in his financial connection with the packers, it is interesting to note that he received large salaries not only from the packers but from many other large corporations, notably Standard Oil concerns, which always have been interested in and which always have spent immense sums of money to control not only the laws of the Nation but of the States. It was discovered upon investigation that Mr. Logan was getting $500 a month from Swift & Co., $500 a month from the Standard Oil Co. of New Jersey, $500 a month from the Standard Oil Co. of Indiana, $700 a month from the Atlantic Refining Co., $500 a month from the Freeport Sulphur Co., and $500 a month from the General Electric Co. This may not be a complete list of his clients, but when the reader considers these salaries, together with the compensation he received from the various newspapers and magazines which he represented, it can at once be seen that his income compared favorably with the great magnates of the corporations which he represented.

"In addition to all this, it should be said here that while Mr. Logan was drawing these salaries he made a trip to Europe at the request of Mr. Hurley, a Government representative. His entire expenses from the time he left America until he returned were paid out of the Treasury of the United States. He testified that Mr. Hurley wanted, in addition to paying his expenses, to pay him a salary, but he was too modest to accept it; and at the time he gave his testimony the question had not yet been determined whether he would be paid a salary in addition to his expenses. Mr. Hurley, representing the Government of the United States, seemed to be insisting that he should be paid a salary, Mr. Logan declining to accept it. Whether the matter has yet been adjusted or determined I do not know. How much, if anything, has been paid from the Federal Treasury to Mr. Logan I can not say. He claimed that when he went to Europe he went as a sort of adviser to governmental officials. It seems that those who represented the Government and who controlled the purse strings felt that the editorial writer who was getting so many salaries as a business adviser to great corporations should also be paid by the Government of the United States for giving advice to governmental officials in order that they might more efficiently conduct the business affairs of the United States in Europe.

"'AN EXPERT ADVISER.'

"No one has ever charged Mr. Logan with making an attempt to directly control the vote of any Member of Congress. Excepting as they were invited to meet him at social functions, they were, as a rule, unacquainted with him, and when they did not meet him they had no idea that he was writing editorials for these various magazines that were building up a public sentiment favorable to corporations, or that he was on the pay roll of the great corporations that I have enumerated. His time was too valuable to be used for the purpose of directly controlling a vote. His energies were spent upon the broader and more influential plane of building up a sentiment favorable to his clients through his editorial writings and of giving his clients direct information as to the condition of legislation and as to contemplated legislation, so that they might be able to prepare either to influence it or to meet it.

"When put on the witness stand and questioned as to what he did to earn his salary for Swift & Co. and these other corporations, he said that he was an expert adviser; that he advised his clients how to run their business and how to enable them to serve the public good. He admitted that he had never written an advertisement for Swift & Co. He claimed that he earned his salary by telling them how they should run their business so as to best satisfy the public. When called upon to produce a single letter or memorandum in which he had given such advice he was unable to do it. Mr. Swift, the head of Swift & Co., and Mr. Veeder, their general attorney, both corroborated Mr. Logan in his statement that he was employed simply as an adviser. They were both asked to produce a

single letter or a single written statement of any kind that he had ever given them along the lines of his ostensible employment, but, like Mr. Logan, they were unable to do so.

"It did develop, however, upon the investigation that he had given them information about affairs in Washington along lines that were entirely foreign to what they claimed was his duty as an employee of Swift & Co. In fact, in every case where any activity of Mr. Logan was disclosed in regard to Swift & Co. it always appeared that what he did had nothing whatever to do with what he claimed was his line of employment. For instance, it was disclosed that he had given to Swift & Co. advance information as to just what the food bill would be and as to just what would be required of the packers under the law. Even before Congress knew what kind of a food-control act they were going to pass Mr. Logan had outlined the plan in full to his clients, Swift & Co. He gave them direct information of some disagreement between the President and Mr. Hoover, on one side, and Mr. Houston, Secretary of the Department of Agriculture, on the other; and when it is remembered that Congress was more or less a rubber stamp under the control of the President, the value of such information can be fully appreciated and understood.

"Swift & Co., through Mr. Logan, knew before the Secretary of Agriculture, Mr. Houston, knew that Hoover would have complete control of the Food Administration, and that he would not only control the packers in this country but that he would do the buying for the Allies as well as for the United States Government. Mr. Hoover and the President were in private conversation on the night of the 14th day of May, 1917. They went over the entire situation, and the legislation needed was at that time agreed upon and outlined. The next morning Mr. Logan reported the substance of the conference between Mr. Hoover and the President to his clients, Swift & Co. How he got his information, or who it was that told him what happened at that secret conference between the President and Hoover, can only be conjectured from the facts that I have outlined above.

"When Congress appropriated the money to make the investigation of the packers by the Federal Trade Commission, it was Mr. Logan who gave to them the first information that the appropriation had passed, and in the notice he gave them he explained that there was no cause for worry; that he believed the status was satisfactory; and that the plans should not be changed until advised. It is quite apparent from the evidence that Mr. Logan possessed superior facilities for gaining inside information, and that, as a matter of fact, he was paid this magnificent salary by Swift & Co. partially for the inside information he was able to get and partially because they desired to contribute, in connection with the other great corporations, their share of the fund that would enable the trade journals and the political magazines to be editorially controlled by friendly minds.

"'DIAMOND T.'

"The investigation by the Senate Committee on Agriculture disclosed the existence of a mysterious character who was very valuable to the packers in giving them advance information of possible legislation in Washington. This character was never designated by name. Wherever reference was made to him in the packers' memoranda it was by a character drawn with pen and ink. This character was represented by the letter 'T' inclosed in a rectangular figure the shape of a diamond, but because the printer does not have any character that properly represents it I refer to the character as 'Diamond T.'

"It is quite evident that 'Diamond T' was a very important person. Nothing was developed in the evidence that ever disclosed anything that he had written or anything to which his signature was attached. Reference to this character only appears where information is given from one official to another that certain information had just been received from 'Diamond T.' It was from 'Diamond T' that information was given of the beginning of the movement to fix maximum prices. In other instances reference is made to information from 'Diamond T' which is not plain, and which is not explained by any other evidence. It is quite evident that the investigation only disclosed a small part of the information that was thus received. In one memorandum prepared by one of the officials reference is made to receiving valuable information, without disclosing what it was, with the statement that the matter referred to would be looked after at once. Another memorandum written by an assistant of one of the packers refers to a note from 'Diamond T' in regard to the investigation about to take place before the Federal Trade Commission, and it is stated in this memorandum that 'Diamond T' would be glad to have any suggestions that the packers desired to make. This memorandum likewise disclosed the fact that Mr. Veeder, the attorney for Swift & Co., was to see 'Diamond T' the following Monday.

"Another memorandum disclosed that on the 20th day of June, 1917, information was received by Mr. Veeder from 'Diamond T' telling what had happened at a meeting of the Federal Trade Commission. The packers are told in this information from 'Diamond T' that there will be enough delay to give plenty of time for readiness, and he suggests that they have everything ready in regard to high prices and their causes. This memorandum also suggests that Mr. McManus (another packer attorney) would be helpful at the Washington end 'immediately.' 'Diamond T' at this time advised that even the exchange of telegrams would not be advisable, and so important was it to conceal the identity of 'Diamond T' that the official who prepared the memorandum of information received from him asked that even the memorandum be destroyed 'immediately.'

"DIDN'T KNOW WHO HE WAS.

"Mr. Swift, who handled some of this memoranda, on the witness stand denied all knowledge of the identity of the person known as 'Diamond T.' Mr. Veeder, general attorney for Swift & Co., when on the witness stand, likewise denied any recollections whatever of 'Diamond T,' although some of the memoranda referring to information received from 'Diamond T' was prepared by Mr. Swift, and at least one of the memorandums disclosed the fact that Mr. Veeder was to meet in consultation with 'Diamond T.' There is no one who heard the testimony of Mr. Swift and Mr. Veeder but must have been impressed with an irresistible conclusion that neither was telling the truth.

"A day or two after Mr. Veeder had emphatically and persistently denied on the witness stand that he had any recollection or knowledge whatever of the identity of 'Diamond T,' he returned to the witness stand and stated that Mr. Logan had told him that he (Logan) had sent in the information referred to in at least one of the 'Diamond T' memorandums. To me it looks as though this secondary evidence was given for the purpose of shouldering the identity of 'Diamond T' upon a person already identified, and thus prevent, if possible, any further investigation as to his identity. It is quite evident that 'Diamond T' had no reference to Mr. Logan, because where information was received from Logan, there was no disposition to conceal that fact.

"How much 'Diamond T' received in the way of compensation, or who he was, will perhaps always remain a mystery. That he was some one high in official councils, and therefore a very expensive character, and that he was able to give the packers exceedingly valuable and inside information, will not for a moment be questioned. That the men who were dealing directly with him in such important matters, where many millions of dollars were involved, should completely forget his identity when they had taken such great pains to conceal it is completely beyond comprehension; and when these men go upon the witness stand and deny any knowledge of the identity of this mysterious individual they not only convince the honest man that they are guilty of falsehood but they make themselves ridiculous in the eyes of all honest people. Such testimony if given by the ordinary person would be at once branded as false, but when testified to by those who represent hundreds of millions of dollars it escapes notice in the news items of the day.

"ADVERTISING.

"One of the most remarkable attempts to control the public sentiment of the country through the instrumentality of the public press has been going on for the last three or four years. The packers are not the only corporations engaged in this great undertaking. There are many other great corporations that are equally guilty. It is a nation-wide campaign to build up a reactionary sentiment in favor of the great corporations of the country. But in this article we are dealing only with the packers, and I confine myself in my comments to the part which they have taken in this colossal undertaking. I do not want to be understood as claiming that all of this advertising was unnecessary or subject to criticism. Neither do I argue that because a newspaper accepts advertising it is necessarily controlled in its editorial policy. The assertion is made, however, that the advertising of the packers is far beyond any legitimate, fair, or even liberal allowance for that purpose, and neither can there be any doubt but that some newspapers are controlled in their editorial policy by the advertising end of the business. Many others remain silent in their editorial columns when they would otherwise condemn, if it were not for the oiling of the business machinery through advertising.

"There can be no doubt but that one of the objects of this campaign was to mold public sentiment, and to close up the criticism that their acts would otherwise receive at the hands of newspapers. There was evidence developed upon the investigation to show that this was the real intent and purpose of a large portion of the advertising. The packers carry large page and half-page advertisements in all the newspapers of the United States. No country paper was too small to be taken into consideration by them. Large display advertisements appeared in newspapers that had only two or three hundred subscribers. Moreover, the greatest of this advertising took place at a time when no advertising was needed in order to sell their products. It took place at a time when there was a shortage of production, when they were positively unable to supply the hungry with the food which it desired.

"THE PACKERS' DEFENSE.

"The only defense the packers made is that this advertising was necessary in order to show up the erroneous conclusion that they claimed the Federal Trade Commission had reached in its investigation. An examination of the subject, however, will disclose that this advertising campaign was on in full blast long before the Federal Trade Commission's report was given to the public. An examination will also disclose that a very large part of the matter included in the advertising had no reference whatever to the sale of any of their products and made no attempt to refute the charges of the Federal Trade Commission.

"The advertising campaign of the packers is akin to the former practice of railroads in issuing passes to all influential people, particularly those who had to do with the making of laws controlling the railroads or the enforcement of them. The person who received a pass was not requested to use his influence in their favor, and it does not follow that because a man received a pass he was in any way influenced; but on the whole it was universally conceded that the promiscuous issuing of passes was an evil; that it interfered with the enactment of railroad laws and the administration even in courts of justice where railroads were parties litigant. The enlightened public sentiment of the country condemned the practice, and nearly ever State in the Union has made it illegal.

"I have before me the Sunday edition of a great metropolitan daily, published in the latter part of 1919, in which Armour & Co. have more than 15 pages of advertising. The matter is highly and beautifully illustrated, and a great deal of the space is taken up with a showing made in behalf of the philanthropic treatment on the part of this great corporation of its employees. One would think in reading over the very well written articles that Armour & Co. is organized more for philanthropic purposes than for financial reasons.

"I have searched hundreds of country newspapers coming from the smallest villages and have never yet found a paper that was not patronized by the packers in the way of advertising. I have a copy of a small newspaper, published way out on the frontier, in a small country town, that contains a half-page advertisement, signed by all five of the great packers, in which they make common cause to demonstrate that it would be difficult, indeed, for the country to exist without them.

"On February 28, 1918, Swift & Co. had a large display advertisement in practically all of the great newspapers of the United States, in which they devote the entire space to a demonstration that the employees of Swift & Co. are patriotic. Nothing is said in it about anything for sale and nothing is said in regard to a defense of any of the charges made by the Federal Trade Commission; but for some reason they seem to be imbued with the idea that some one had charged their employees with being unpatriotic, and they rush into print, wrap themselves in the American flag, and proclaim their patriotism from the housetops. During the war this was a favorite pastime for all profiteers. When a big corporation was about to cut a melon or a few millionaires were about to rob the Government in some unconscionable contract, they always made an attempt to distract attention by parading in public under the Stars and Stripes.

"SPENT HUGE SUMS.

"For the year 1918 Swift & Co. alone spent over $1,600,000 for advertising, and Mr. Swift himself admitted that they would spend $2,500,000 in the year 1919. This would mean more than $200,000 a month, about $7,000 per day. Assuming that the other members of the 'Big Five' spend one-half of what Swift & Co. spends, which everybody will admit is way below the actual fact, we find that the great packers on this basis spend more than $8,500,000 annually for advertising. This would be more than $1,000 for every hour of the 24.

"This cost only includes what is actually paid to the newspapers and magazines. To keep the machinery going and to employ the necessary men to prepare the advertisements entails an additional expense of enormous amounts. It must be remembered that this is only one corporation. If you spread this over the country at the same rate, it means that trainloads of paper are used in this wonderful propaganda, 90 per cent of which is useless so far as any legitimate object is concerned. This wonderful advertising of great corporations, if reduced to its legitimate sphere, would of itself alone settle the acute question, which is now country-wide, of a paper shortage. It must be remembered, too, that these great corporations do not in reality pay one penny of all these enormous expenses that I have enumerated. The wonderful financial outlay, enormous as it is, is placed upon the unwilling and overburdened shoulders of the producer and the consumer.

"For the last 50 years the packers have been growing in size, and as they have grown their disposition to avoid the law has increased with their size. They have been fined an innumerable number of times for violation of the criminal statutes. Their attempt to control the prices of the country through their lavish expenditure of money is partially accounted for by their desire to conceal publicity of their transgressions. While they are fighting before a referee in Chicago with their employees, who are seeking better working conditions, they are advertising in Minneapolis the alleged advanced sanitary conditions of their packing establishments. By their utilization of newspaper space they are making it physically impossible for newspapers, even if they desired to do so, to give proper publicity to the cases where they have been found to have violated the law. They have spent many thousands of dollars in the use of special trains to carry delegates to various conventions where editors, particularly of farm journals, have been invited to be their guests for the real purpose of indirectly influencing the news columns of such magazines and for the purpose of suppressing from the people a knowledge of their shortcomings. The editor of the Nebraska Farmer could undoubtedly tell of such an invitation that he recently received himself.

"On the 7th day of March, 1919, a Washington paper, on an inside page in a very inconspicuous place, gave an account of the trial and conviction of an agent of one of the 'Big Five,' who, in the city of Washington, had violated the pure food law by selling catsup in original packages which were short in actual measurement. It was shown at the trial that the cans of catsup were marked as containing 5 gallons each, and that upon actual measurement they were considerably short of that amount. One can was shown on actual measurement to be 2 quarts short. A third can was taken by the officials and brought into court unopened, and upon the trial of the case the prosecution offered to rest its entire case upon the unopened can. It was proposed that the can be opened and that if it was full measure the prosecution would be dismissed.

"The great packing concern, however, declined to accept this proposition. The result was that the agent making the sale was found guilty and he was fined the enormous sum of $10. It is fair to assume that these cans were no exception to the general rule, and that this great corporation had sold thousands, perhaps tens of thousands, of these same cans, all of which were undoubtedly short in measure. They had probably violated the pure food law in every city and hamlet in the United States, but so far as I have been able to learn this was the only place where they paid any penalty.

"A DIFFERENT KIND OF STORY.

"It happened that the same paper containing this announcement contained a column article written in behalf of this same packer. It was only one of many that had been printed in practically all the papers of the United States—a nicely written article, directed to 'Dear Folks,' and signed by William C. Freeman, of New York City. The ordinary reader would not get the idea that it was an advertisement, but these series of articles contain a most ingenious and misleading argument in behalf of the honesty of this member of the 'Big Five.' In one of their articles Mr. Freeman tells about his visit to the plant; how satisfied and enthusiastic all the employees were; and with what marvelous consideration every whim of the faithful employee is looked after by this great corporation. In other articles he speaks, as do the advertisements of the packing company, of the guarantee of the company's brand. The slogan, 'The Wilson Label Protects Your Table,' has been printed a million times and is familiar to every citizen of the United States.

"These articles, paid for by the producers and consumers of our country, attempt to demonstrate that when you buy of Wilson & Co. you run no chance of being defrauded; that the brand of this company is a guaranty of purity, of quality, and of quantity; and yet, while this enormous propaganda is

going on over the country, this great corporation is violating the law and practicing deception which if committed by the ordinary, common individual would cause him to be driven out of the community as a citizen unworthy of belief.

"BIG SALARIES PAID.

"It will be found upon investigation that the middlemen who handle the food products after they leave the producer and until they reach the consumer are receiving salaries that in many cases are altogether out of proportion to the work they actually do. In fact, many of the men who are engaged in the packing business devote most of their time and most of their energies to concealing the true situation. Let us take Wilson & Co., one of the 'Big Five,' as an example.

"Several years ago Mr. Wilson was elected president of that corporation. He was given a salary of $125,000 a year, which he still draws. In addition to giving him that salary, they gave him outright $100,000 as a bonus in cash. In addition to this they gave him $1,500,000 of the common stock of the company without the payment of one cent. In addition to all this they gave him an option on $3,500,000 more of the common stock, at $10 per share, which option he afterwards exercised. When he exercised this option and purchased this stock, he did it without the payment of a dollar of his own funds. He simply sold some of the stock that had been given him, at from $50 to $55 per share, and purchased the option at $10 per share; so when the transaction was completed he found himself the owner of 43,000 shares of the stock, of the par value of $4,300,000, which cost him nothing. In 1917 this stock paid a little over 16 per cent, and, according to Mr. Wilson's own statement, is worth much more than par. We can therefore sum it up by saying that out of this transaction, within two or three years time, Mr. Wilson found himself with a salary of $125,000 a year, a cash bonus of $100,000, and a gift of stock worth more than $4,300,000—all without the investment of a dollar; all paid for by the producers of hogs and the consumers of meat.

"Little transactions like these have been going on for many years and are going on now. The public is turning water into a steady stream of gold that goes to men who neither toil nor spin, excepting as they manipulate figures and prices. The producer is still toiling. The consumer is still suffering. Their suffering and their toil have made possible the luxury of many of the so-called great captains of industry.

"DISHONEST EXPENDITURES.

"No one will probably ever know just how much money has been spent by the packers to control legislation, to appoint officials, and to deceive the public. It is doubtful whether packers themselves could give this information correctly. For instance, the books of Swift & Co. would nowhere show the payment of any salary to Mr. Logan. There is no item anywhere which would indicate how much money was paid to 'Diamond T.' It appears, for instance, that Mr. Veeder, the general attorney for Swift & Co., was paid $71,000 in one year; but he was drawing a salary of less than $25,000. While he was getting a salary of about $25,000, his expenses amounted to about $50,000. Mr. Swift seemed to be unable to tell definitely just what Mr. Veeder's salary was. He was unable to tell why they paid him over $70,000 when he was getting a salary of less than $25,000. An examination of the evidence also discloses that Mr. Veeder was in the habit, outside entirely of his expense account, of acting as the middleman by whom sums of money were transferred not only from his client but from all the other packers to various officials. So that the enormous discrepancy between his salary and his expenses, in addition to the various sums of money, amounting to many thousands of dollars, which passed through his hands from the packers to almost numberless persons who were carrying out their plans in various localities, remains unexplained.

"Large amounts of money were spent in political contests. Contributions to elect Members of Congress were made by the various packers. Large sums of money were expended to handle legislation in a large number of State legislatures. In one case the evidence shows that the packers took part, down in Oklahoma, in the election of a local assessor, and they were so careful that the assessor should be friendly that they contributed to both sides of the contest. A contribution of $2,000 was made by one of the big packers to a firm of attorneys in Texas for legal services and 'legislative services in Austin.' Instructions were sent from Chicago that a receipt should be taken 'in accordance with the understanding had with Mr. Veeder in his office in Chicago on May 21, 1908.'

"In another case a check for $500 was sent to an attorney at Fort Worth, Tex., in which Mr. Veeder asked the recipient to use the money 'in accordance with our conversation.' He also notified the attorney that he would receive the same amount each from Armour & Co. and the Stock Yards Co. In Illinois the evidence shows that various sums at various times were contributed to influence the legislature. They did their best to defeat the eight-hour law for women. They took an active interest in defeating the bill in regard to renovated butter that the farmers desired put on the statute books. They used their power against the enactment of laws regulating the cold storage of meat, fish, eggs, and poultry.

"BUY UP TRADE PRESS.

"The National Provisioner is a trade publication, published by the Food Trade Publishing Co. of New York. Its subscribers consist mostly of packers and dealers in various articles of food. For many years the general manager of this concern was a man by the name of McCarthy. Mr. McCarthy was also the secretary of the American Meat Packing Association, an organization composed of all the packers, big and little, throughout the United States. Holding these two positions, it is quite evident that Mr. McCarthy could be of inestimable service to the Big Five, if he were so disposed. The National Provisioner went to most of the customers, and as secretary of the American Meat Packing Association he came into direct contact with all the packers throughout the United States. The evidence disclosed that Mr. McCarthy was secretly paid a regular yearly salary of $5,000 a year by Armour, Morris, and Swift. It is denied by the owners of the National Provisioner that they had any knowledge of this secret bonus of Mr. McCarthy.

"The American Meat Packers' Association, that was supposed to be operated in the interest of all packers, big and small, had, of course, no knowledge that their secretary was getting a salary on the side, contributed secretly by three of the Big Five. It further appears that after we got into the war and after the establishment of the Food Administration, in making up some of the various committees to properly carry out the administration of the law, Mr. McCarthy, because he was secretary of the American Meat Packers' Association and was therefore supposed to be fair and unbiased and well acquainted with all of them, was requested by the Food Administration to suggest the names of some of the small packers who would be suitable for appointment to such committees; and that before he took action on this request he communicated with the packers who were contributing this money on the side, in order to make a selection that would be satisfactory to them. He was thus giving ample evidence to the big packers that he was earning the secret salary they were paying him. This is only an illustration of the method employed by the packers in the control of all kinds of associations. They scatter thousands of dollars around over the country in the payment of secret salaries to persons having official connection with organizations that have anything to do with the meat or food business.

"LOANING OF MONEY.

"The packers are heavy borrowers, as everybody knows. They continually borrow many millions of dollars, and their paper is scattered all over the country. You would not suppose therefore that an ordinary individual could go to the packers and borrow money, but in order to borrow money of the packers it is only necessary for them to be convinced that you are able to build up public sentiment in their favor or to be influential in the handling of a public official having to do with their business or to be of assistance in the preventing of any unfriendly legislation or in securing the passage of desired laws.

"This practice is well illustrated by what happened just before the war in Fort Worth, Tex. Both Armour and Swift have packing plants at Fort Worth. Together they own the stockyards at that place. The evidence discloses that they loaned money to a man by the name of Armstrong, in Fort Worth, for the purpose of buying an interest in a daily paper there, which had been advocating the control and regulation by the Government of the meat-packing business. They considered the paper unfriendly. Both Armour and Swift loaned money to Mr. Armstrong. It is noticeable that after the money was loaned and Armstrong became a part owner the policy of the paper changed. In writing to the packers for a renewal of the loan, Mr. Armstrong called attention in this letter to the fact that he had gone into the newspaper business to be of service to Mr. Armour and Mr. Swift, and also called attention to the editorial policy of the paper 'before and after taking.' It is unnecessary to say that he had no difficulty in getting an extension of his loan.

"The men who were running this paper, however, were not aware that their competitor, the other daily newspaper published at Fort Worth, was likewise having its machinery oiled by packer money. The president of Swift & Co. in a letter asked his attorney whether they had better comply with the request of this other paper for a 'donation' of $1,200, which

should be given ostensibly in return for a 'page devoted to hogs and hog raising.' In this letter Mr. Swift called his attention to the fact that Armour & Co. and the Stock Yards Co. of Fort Worth were each contributing like amounts. In addition to this, it seems that the editor of this paper was loaned $5,000 by Swift & Co. He did not pay his interest promptly, and Mr. Swift asked his attorney whether he thought it would antagonize this editor if he sent him a bill for the interest, saying that the editor also owed Armour & Co. a like amount and he had paid the interest. The attorney, however, asked Mr. Swift not to present any bill for interest at that time, because they had some important litigation pending in Texas, and he thought it would not be wise to ask for the payment of interest from the editor until this litigation had been disposed of.

"THE ATTORNEY GENERAL.

"It must be remembered that the Federal Trade Commission recommended that prosecutions be commenced against the packers. They turned the evidence over to the Attorney General at the time they made their report, more than a year ago. That the evidence shows plain violation of law there can be no doubt whatever. The violation of the Sherman antitrust law, in some instances, could have been proved by their own correspondence, signed by their own officials. They were liable both criminally and civilly. At a recent hearing before the Senate Committee on Agriculture, the present Attorney General, Mr. Palmer, testified that this evidence submitted by the Federal Trade Commission showed that the packers had violated the law, but that he had decided not to commence any criminal proceedings against them. Instead, he determined to commence a civil suit. For weeks the papers were full of announcements that the Attorney General was about to proceed against the packers. I think the country generally understood that the suit was actually commenced and was pending. The people would be perfectly justified in reaching this conclusion from the announcements that were made at various times in the public press. A suit was finally actually filed and judgment rendered on it, but it looks as if it had been agreed upon in advance between the attorney and the packers before it was actually filed. How many of the people really believe that the Attorney General had accomplished the great things that he so bombastically boasted of in the headlines of the newspapers?

"The ordinary individual, the common citizen, who violates the law and commits a crime has no opportunity to make an arrangement with the prosecuting attorney by which a civil suit shall be commenced, satisfactory to both sides, with the understanding that no criminal prosecution shall take place. The ordinary thief would be glad, indeed, if we could agree with the prosecuting attorney that an injunction suit should be commenced in court against him and an injunction issued restraining him from further commissions of crime, if by such an agreement he could escape punishment for his criminal act. The trouble with the ordinary petty thief is that he does not steal enough to come under this new and humane rule of the Department of Justice. In his newspaper campaign to reduce the cost of living, the Attorney General can not stop to consider any of the little fellows. It would appear upon careful analysis that his boasted suit against the packers consisted in agreeing in advance with the attorneys for the packers upon a petition, an answer, and a decree, and that no papers were filed until this agreement was reached, and the Government and the packers both voluntarily went into court, presented the decree, and asked the judge to sign his name upon the dotted line.

"MORE MIGHT BE SAID.

"In the foregoing sidelights I have made no attempt to exhaust the subject. The facts are that the subject is almost inexhaustible. We approach the domain of the great packers as a little child would approach a giant. At every step we are impressed with their wonderful power, their inexhaustible resources, the infinite network of connection with the most powerful financial institutions of the country. Their paid emissaries are in every locality. They are secretly entrenched in politics, in all kinds of business, and in nearly all the activities of human endeavor. To carry out their ends they have all kinds of instrumentalities. They are equipped to go into the church, and are likewise prepared to send the bum into the saloon. They have an army of highly paid, useless employees, who can give no honorable reason for their packer connections. Their agents are at the meeting of every legislature and in the Capital City at Washington. Their control of human food is so great that expense is a secondary consideration. They know that, after all, all these expenses are paid and all this machinery is oiled by the consumers of the country. If their expenses increase, they have but to lower the price that they pay to the producer, or increase the price that they charge the consumer, or both. The competition of the independent dealers is negligible. In fact, the existence of independent packing establishments is desired by them, so long as they do not develop in size and their competition become dangerous. They fix the price, and when they have fixed a price that covers all their unnecessary extravagance and expense, it naturally follows that a multitude of little packers can follow along in their tracks and make big profits.

"I have made no attempt in this article to discuss what I believe to be the fundamental reasons for their great power. Neither have I suggested a remedy. It will be found upon a full and impartial investigation by the honest student that their privately owned refrigerator cars, their ownership and control of stockyards and refrigerator plants, together with their intimate connection with large financial institutions, are the main sources of their power. It is not my purpose to discuss the remedy here, but in conclusion I desire to say that by the ownership and control of refrigerator cars and stockyards the packer question is inseparably intermingled with the question of railroad control, and it will be found impossible to properly control one without controlling the other, and mainly in this I think can be demonstrated the remedy that must ultimately be applied to narrow the present mammoth and expensive gulf that exists between the producer and the ultimate consumer."

Mr. STANLEY. Mr. President, monopoly found its origin among English-speaking peoples in the folly of kings rather than in the machinations of merchants or violations of the law. The exclusive right to manufacture cards or glass or leather was conferred upon some royal favorite, and his control of the business was based not upon efficiency or combination with others, but upon fiat of law. Such grant necessarily involved an almost unrestricted right to regulate production and to fix prices. There could be no agreement with a competitor, since the conditions creating the monopoly excluded all competition.

The manifest injustice of such an indefensible exercise of power could not be defended even by the stubborn Elizabeth against the protests of a justly outraged people.

For centuries it has been the purpose of wise Governments to prevent the taking of an unconscionable advantage of a competitor and to secure the greatest freedom of trade and absolute justice to all persons engaged in any productive and legitimate enterprise.

The medieval monopoly no longer exists, but the idea abides; and we often fail to discriminate between the size and the conduct of a business, and to regard as more or less criminal the control of a large proportion of the production and the sale of a commodity without regard to the means or circumstances under which that control was obtained.

No civilized Government would re-create an ancient monopoly. No wise Government will foster it by special privilege conferred by legislation, direct or indirect. On the other hand, the mere size of the business is not in itself an offense. It is a perilous policy to penalize the mere growth of any legitimate enterprise without regard to its character or conduct.

The courts have repeatedly held that the mere size of a business is not cognizable in the enforcement of the laws against combinations in restraint of trade.

> There is no limit under the American law to which a business can independently grow. Even a combination of two or more businesses, if it does not unreasonably restrain trade, is not illegal; but it is the combination which unreasonably restrains trade that is illegal. (International Harvester case, 214 Fed. Rept., 994.)

In the case of the United States against the United States Steel Corporation, Justice McKenna says:

> The corporation is undoubtedly of impressive size, and it takes an effort of resolution not to be affected by it or to exaggerate its influence. But we must adhere to the law; and the law does not make mere size an offense or the existence of unexerted power an offense.

The absolute control of a single business under a monopoly created by royal grant was its vice. It was not due to overcoming competition. It was not due to the efficiency of the enterprise. It was not due to economies in production. It was not due to any understanding with any other business or any control over the channels of commerce. It was the result of the fiat of law. It was exactly the same right that is now conferred by a patent or a copyright. When these monopolies were overthrown this association of the size of a business and the extent of the business which it controlled with the modern methods used for interfering with commerce have been confused, and while the old monopoly is gone we still indissolubly associate the size of a business with its conduct.

Monopolies in this country never have been big enough to control an entire business. Not the Standard Oil Co., nor the American Tobacco Co., nor the United States Steel Corporation, nor any of the great industrial concerns of America, has ever

acquired an entire business, or ever can, in the nature of things, in all human probability; and yet they have at various times exercised a most pernicious influence upon commerce between the States. They have sought to monopolize business. They have been guilty of extortion. They have affected prices. They have divided territory. They have done a thousand and one things by which the generous and natural law of supply and demand is evaded, and by which the greed of a great corporation can be satiated by the practice of pitiless extortion.

The size of a business engaged in interstate commerce may make it infinitely more hurtful to the public weal in the event it is disposed to violate the laws now made and provided against interference with the freedom of trade; but the size itself is not an offense. The smallest concern in this country is subject to the mandates of the law. It is punishable for any interference in the freedom of trade between the States as well as the largest concern, and so long as the business is not guilty of violations of the law as written the courts can not figure out the per cent of the business it owns and by any manner of means punish it as a monopoly for that reason. As was said in the Keystone Watch case:

> As population has swelled and as vast aggregations of men have multiplied their wants, the inevitable trend of modern affairs has called for large business enterprises as well as for small, and we think it no more than reasonable to say that when a large business has proved itself to be beneficial and not harmful to the community it should not be condemned merely because it is large.

Mr. President, to say to any business in the United States, "You become lawless because you have become large" is to punish growth. To say to any great business engaged in a lawful and legitimate enterprise, "You shall cease your activities when you have attained a certain per cent of this business" is not to stop that business there; it is to kill it, because no business can cease to grow that does not cease to live. To stop it is stagnation, and stagnation is death. There is no such thing as absolutely stable equilibrium in the conduct of any great enterprise; it must go up or down.

I have given some study to this question of monopoly, or, more properly speaking, to the multitudinous and ingenious combinations of lawless concerns in an attempt to obtain an inequitable advantage either in the purchase of raw materials or the sale of finished products.

Mr. KING. Mr. President——

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Utah?

Mr. STANLEY. I yield.

Mr. KING. May I suggest to the Senator that it would perhaps follow, if the Federal Government penalizes an institution engaged in interstate commerce because it is large and fixes a limit beyond which it may not grow, might not the States, pursuing the same example, interdict the organizations within their borders and say that any big department store that has a capital of a million dollars shall go no further, or prescribe limits as to all activities within their borders, so that in the end you would be met by legislation in States, in counties, and in municipalities restricting the size of the business, which in the end might kill the business itself?

Mr. STANLEY. I will say to the Senator from Utah, it could be done with much greater propriety by the States. The Federal Government has no control, as I will show later, over any private business, except in so far as that business is discharging a public function or is engaged in the business of a common carrier or in commerce between the States. It does not matter about its size. It does not matter about its conduct, so long as it is not a banking concern or a like concern. So long as it is not engaged, not in the shipping of articles in interstate commerce, but in the movement of that commerce, it is not cognizable by the Federal Government, as the Supreme Court has held a dozen times.

Mr. President, to legislate against the growth of a business, to penalize the size and the strength of American enterprise, is contrary to the whole genius of our institutions. We have never been able to compete with the continental tenant upon a few acres of intensely cultivated soil, and in this generation we will not be able to enter into such competition.

We have never been able in mill or factory to compete with the manual skill and the patient toil of the continental artisan in his little shop under his own roof. We have attained an industrial mastery only in the cultivation of broad areas, in the control and management of ponderous machinery, owned and operated by immense aggregations of capital. We not only must do big things, and do them in a big way, in this young and virile empire, but we can do no other kind of thing so well. When we attempt to put a strait-jacket upon any business without regard to the legality of its conduct, we are tying our own hands and paralyzing the strongest arm, we are doing violence to the aspiring genius of young and mighty America.

Mr. President, I hold no brief for these packers. If it be true that any five great concerns have engaged deliberately, by combination among themselves, in an effort to depress the price and destroy the market for the raw material, and to extort an unnecessary and unwarranted tribute from the hunger of millions, then those concerned, being guilty, should be penalized under the heaviest enforcement of the law, their assets should be reached, and the men behind them should be held personally responsible.

It is not a question as to whether five or six or any number of them shall be permitted to engage, unrestricted and unpunished, in monopolizing foodstuffs in utter defiance of the laws in restraint of trade. It is a question of a remedy, and in this case the remedy is in some instances worse than the disease, if such a thing is possible.

Mr. President, in my opinion, there has never been a greater piece of legislation graven upon the statutes of America than the Sherman Act. While I have had some hand in amending that law, I sometimes doubt if it has been very much improved by amendment. From the day the great authors of that act made it a part of the Federal statutes until now great and ingenious concerns have attempted in a thousand ways to evade it, and any effort at evasion of this law upon the part of combinations in restraint of trade resolves itself into one of three simple expedients. It is either an effort to limit output or to divide territory, or to fix a price, and the thousands of devices all lead to one of those ends. The courts, in tearing the mask from these several efforts to violate the law, have exposed the purpose, have gone to the gravamen of the offense, until now it is, in my opinion, a most difficult thing for any man or any set of men to successfully fix the price of any commodity in interstate commerce above that resulting from the natural flow of the law of supply and demand without a violation of the law.

Mr. KENYON. Has not the Sherman antitrust law been weakened, if not almost destroyed, by the decision of the Supreme Court applying the rule of reason, so that it really has lost a great deal of its efficiency?

Mr. STANLEY. That is true; and in this very connection I express regret that the Supreme Court has extended that rule of reason. In my opinion no two men, I will say to the Senator from Iowa, ever agreed to limit output or production or fix prices or to divide territory, or to do any other thing for the purpose of obtaining an unconscionable advantage in the market place of America, that they did not know it, and nine times out of ten an unreasonable restraint of trade simply means a negligible restraint. I am not criticizing the court, but as a principle of law I hold that a man should not be allowed to say, "I did that which I knew was wrong; I committed an offense against the freedom of the commerce of my country, but I did not do any particular harm, and for that reason I should escape."

Mr. KENYON. Mr. President, I did not intend to criticize the Supreme Court. I have too much respect for the court to do that. But Congress made the law, and Congress never wrote into that law the rule of reason which the court has made a part of the law now.

Mr. STANLEY. As the Senator understands, I do not mean to criticize the court. But the principle, in my opinion, outside of the holding of the court that injustice will be done by a rigid enforcement of the law against restraints of trade is, in my opinion, untenable.

Mr. President, the law as now written, in my opinion, is sufficient, and if not we should amend the existing law against combinations in restraint of trade rather than create new commissions.

It is maintained that a great business, becoming by virtue of its size a monopoly, is a matter of public concern, and for that reason is cognizable by the Federal Government. Now, I do not believe that position is sound. I hold that the size of a business, as I have shown, has nothing to do with its relations to interstate commerce or with the power of the Federal Government over it. A packing house which is a simple butcher shop, not engaged in interstate commerce, covering 20 Chicago blocks, and a butcher shop on the corner of Fourteenth Street and Pennsylvania Avenue, 20 feet square, have identically the same legal status.

It is claimed that the packers are liable to Federal control because they are monopolies; that is to say, that a business which is not subject to Federal control can violate the law and change its whole status. No business is subject to Federal control unless it is a public utility or is engaged in some governmental function like a national bank. It must be remembered that public utilities, like common carriers, not only have

responsibilities by virtue of their status, but they have powers and privileges as well. Could a butcher shop, however large, which successfully violated the laws in restraint of trade, go into court and exercise the right of eminent domain like a railroad? If it is a public utility, it can; and if it is not a public utility it is not under the control of the Federal Government. So that neither the size of the corporation nor its conduct can render it subject to the control of the Federal Congress, and the Congress has no control over the packing or any business except in so far as it is actually engaged in the movement of commodities between the States.

Mr. KING. Will it disturb the Senator to interrupt him at this point?

Mr. STANLEY. Oh, no.

Mr. KING. The word "control" was used the other day in the debate upon the nitrate bill, and it has been used frequently in the discussion of the powers of the Federal Government under the interstate commerce clause of the Constitution. The Senator will recall that that clause of the Constitution states that Congress shall have the power to regulate interstate commerce among the States. Is there not a great deal of difference between control and regulation? Under the power to regulate can it be successfully contended that power is given to the Federal Government to determine the size of a business and to control it in its activities in all of its various shapes and differentiations, or does not the word "regulate" simply mean that it may prescribe reasonable regulations to prevent wrongdoing, the destruction of competition, but may not control to the extent of suppressing and destroying business? What is the meaning of the word "regulate" and the meaning of the word "control," in other words?

Mr. STANLEY. The Senator is more familiar than I with the decisions, but from Gibbons against Ogden down I am free to admit that the construction placed upon the commerce clause of the Constitution of the United States has become broader and broader, until, for the sake of the argument, I am willing to concede that, in so far as the packers are interstate carriers, in so far as the interstate commerce clause of the Constitution gives the Government jurisdiction that is plenary, I am willing to admit that I am in grave doubt about whether the powers enumerated in the bill introduced by the Senator from Iowa might not be exercised, by a strained construction, if the packers were in the operation of stockyards and those stockyards were held by the courts to be an integral part of interstate commerce, an integral part of the system.

But, as I shall show further on, my opposition to the bill is predicated upon the idea that the packer will get rid of his yards and that, having divested himself of any participation in the movement of interstate commerce, it is better to leave the control of the business to the Department of Agriculture, to the Meat Inspection Bureau, to the Federal Trade Commission, and such other bureaus as now have jurisdiction over it, and then to hold them to the strictest account when they do engage in interstate commerce and are guilty of any of the acts with which they are charged.

Mr. KENYON. The question of the Senator from Utah is as to what is covered by the term "power to regulate" under the Constitution. Of course, the minute we begin discussing the interstate-commerce clause of the Constitution we get to a most interesting situation. The Senator from Utah is no doubt familiar with the Lottery case, where the Supreme Court held that the power to regulate included the power to prohibit. There is no claim, I think, that there is any power to destroy, and the bill is not trying to destroy. If the packers are engaged in interstate commerce—and I do not see how anyone can claim they are not—then, if they have a monopoly there comes the power, because monopoly is an obstruction to commerce just as much as anything else could be, and the courts have always held that, and that is the theory upon which the Sherman Act is based.

With reference to the suggestion of the Senator from Kentucky about the stockyards, it has been held, as the Senator knows, in the Swift case, in Two hundred and twenty-second United States, that they were engaged in interstate commerce.

Mr. STANLEY. An integral part.

Mr. KENYON. Yes. In the case the other day in the District of Columbia it was conceded, as I read the statement, by the packers' counsel that that was an incident of interstate commerce; and the Supreme Court said, in the Swift case, that buying and selling in the yards is an incident and a part of interstate commerce. Now, of course, if they are not engaged in interstate commerce we can not act. Our theory is interstate commerce, monopoly, obstructing interstate commerce, the right to regulate the monopoly. That is the theory.

Mr. STANLEY. I am of the opinion that the stockyard is a depot, a market, in which the railroad and the packer are participants. There is a distinction, however, which I am sure the Senator will draw very readily, between the production of edible meats and their subsequent entering into the channels of interstate commerce. When the packer has divorced himself from his yards, when he is no longer engaged in interstate commerce, when he comes into yards controlled neither by the carrier nor by himself but by an independent concern, or by the railroads, if they are permitted to take them over, buys so many thousand head of cattle and takes them to his own private property and converts them into the several uses of the community, either the by-products or the meats, he then does not render himself subject to any Federal control until some part of that product again enters the channels of interstate commerce. When he enters the channels of interstate commerce with that product and makes any arrangement whatever with any other packers, either within the State or without, for the purpose of fixing its price, he is guilty of a violation of existing law.

Mr. KENYON. I call the Senator's attention to a most interesting case decided just a few weeks ago in Indianapolis, I think, where the court held that coal taken out of the ground and subsequently shipped in interstate commerce was, even as it came out of the ground, in interstate commerce. I do not believe the court is right. I think the actual journey in commerce must commence; that the whole scheme or plan must involve that. The cattle coming to the yards in commerce, then being slaughtered, and the product going on in commerce between the States, it seems to me, clearly would be interstate commerce.

Mr. STANLEY. I think it is well to bear that distinction well in mind. The stream is broken when the stock leaves the yards.

Mr. KENYON. That would be true, and I would agree with the Senator if it were not, as the Supreme Court said in the case to which I have referred—the Swift case (222 U. S.)—that here is a great plant, a center of operation, that involves bringing cattle in from one State to another, and a product going out to other States. It is the scheme itself that makes interstate commerce.

Mr. STANLEY. For instance, if we had one slaughterhouse in Chicago, no matter how large, as large as Swift, or if Swift, for instance, should conclude to sell only in the State of Illinois and divest himself of the stockyards, he would be exempt, in the operation of his business, from any act providing for the inspection of meat or review by the department, would he not?

Mr. KENYON. That would be a very close question, I think, and I would agree with the Senator unless they had a plan of bringing stock in from other States, then slaughtering, and selling it in Illinois. I think that would still be in interstate commerce; but, of course, if he bought the stock in Illinois——

Mr. STANLEY. Bought it in the stockyards——

Mr. KENYON. And slaughtered it in Illinois and disposed of it in Illinois, I do not believe it could be considered interstate commerce.

Mr. STANLEY. If the stream is broken in the case of one packer, it would be broken in the case of all. The thing that puts the packer within the purview of the law is participation in the movement of products between the States. I am of the opinion that he must be engaged in that business, and then that part of the business is the basis of Federal jurisdiction, and any inspection afterwards is based upon that transportation.

Mr. KENYON. The Senator will remember the fact that about 90 per cent of the refrigerator cars are owned by the packers. They are used, I suppose, in interstate commerce almost entirely. That element adds to the general character of the interstate commerce of the whole business.

Mr. STANLEY. As I understand it, the refrigerator cars, while owned by the packers, are under the absolute control of the Interstate Commerce Commission, and the packers pay the same freight, subject to the same provisions as any other packer, for the use of their own cars. I would say that if it were possible for the same service to be rendered without the ownership of the cars, I would be more than glad to see them divested of that ownership.

There is no principle more potent as a basis upon which to rest every character of legislation against combinations in restraint of trade than an absolute divorce, a clean-cut separation, without any interlinking arrangement, between the business of transportation and the business of production. The industry and the carrier should have no common interest; they should never be under a common ownership or common control. In my opinion, the ingenious interlocking of the busi-

ness of transportation and production is the one handicap now, in view of the broad construction given to the rule of reason, to the successful enforcement of antitrust legislation. Whenever every carrier in the United States gives to every shipper under the same circumstances and at the same time the same facilities and the same price, the question of monopoly in restraint of trade in heavy and semifinished products will in a great measure be automatically settled.

In my opinion, if the report of the Federal Trade Commission has established and it is a fact that the great packing companies enjoy an inequitable advantage because of their ownership of refrigerator cars, then the money recently appropriated by Congress for the rehabilitation of the rolling stock of the railroads of this country could not be better employed than in the purchase of additional facilities of that character, in order that every meat packer in the United States who is engaged in competition with the five great packers may have an identical service.

I am gratified, indeed, to know that the stockyards, by virtue of a consent decree voluntarily entered into by the packers, as I understand, are to be divorced from the meat-packing business. In that event a great deal of the mischief alleged to exist by the report of the Federal Trade Commission will be obviated.

Mr. President, I am of the opinion that a careful analysis of the pending bill will show that the very acts that it is proposed to prohibit are now in violation of existing law. Since it will be necessary, in order to enforce the finding of the proposed live-stock commission, to go to the same courts that now have jurisdiction over the offenses, if we enact into law the pending bill, we shall be moving in a circle; we shall be creating additional officers and additional experts and additional machinery without obtaining the result at which we aim. For instance, section 12 of the bill provides:

It shall be unlawful for any packer to—

(a) Engage in any unfair, unjustly discriminatory, or deceptive practice or device in commerce; or

(b) Sell or otherwise transfer to or for any other packer, or buy or otherwise receive from or for any other packer, any live stock or live-stock products for the purpose of apportioning the supply between any such packers or unreasonably affecting the price of or creating a monopoly in the acquisition of buying, selling, or dealing in live stock or live-stock products in commerce; or

* * * * * * *

(d) Conspire, combine, agree, or arrange with any other packer to apportion territory for carrying on business, or to apportion purchases or sales of any live stock or live-stock products, or to control prices thereof in commerce; or

(e) Conspire, combine, agree, or arrange with any other packer to engage in any course of business or to do any act for the purpose of preventing any person from carrying on a competitive or similar business in commerce; or

All of those acts now constitute well-known offenses forbidden by existing laws most of which have been repeatedly interpreted by the courts and their violation is punishable by heavy fines and forfeitures against the offending corporation and in most cases by sentences of imprisonment against the persons directly responsible for such offenses.

Sections 1 and 2 of the Sherman Antitrust Act provide:

SEC. 1. Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared illegal. * * *

SEC. 2. Every person who shall monopolize, or attempt to monopolize, or to combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several States, or with foreign nations, shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by fine not exceeding $5,000, or by imprisonment not exceeding one year, or by both said punishments, in the discretion of the court.

The Federal Trade Commission act provides:

Unfair methods of competition in commerce are hereby declared unlawful.

The commission is hereby empowered and directed to prevent persons * * * except banks, and common carriers subject to the acts to regulate commerce, from using unfair methods of competition in commerce.

The Clayton Act provides:

It shall be unlawful for any person engaged in commerce, in the course of such commerce, either directly or indirectly to discriminate in price between different purchases of commodities, which commodities are sold for use, consumption, or resale within the United States * * * where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

Section 14 of the pending bill provides:

It shall be unlawful for any packer to (a) engage in any unfair, unjustly discriminatory, or deceptive practice or device, or charge any unreasonable price or rate in commerce in connection with its business.

The interstate commerce act of 1920 provides:

All charges made for any service rendered or to be rendered in the transportation of passengers or property shall be just and reasonable; and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful.

So, Mr. President, it appears that if the pending bill shall become a law we will have two separate tribunals with concurrent jurisdiction over identical offenses. Is a commission of three men, at $10,000 a year, sitting at Washington, better able to discover violations of the acts referred to in Chicago, Omaha, Kansas City, or Fort Worth than the courts and grand juries established at those places? Is it the purpose of this bill to establish an instrumentality for the conviction of alleged offenders without the intervention of a jury or by the decree of a court previously denied the opportunity to ascertain all the facts and circumstances admissible under established judicial procedure?

If the five great packers, or others, are guilty of the offenses enumerated in the several sections of this bill, they are guilty of a gross violation of existing law; they are guilty of pernicious efforts to plunder the producer or to demand an unconscionable tribute from the hunger of a hard-pressed people. In that event they should be indicted and convicted and subjected to the severest penalties provided by the law. For one, Mr. President, notwithstanding my abhorrence of monopoly and especially of monopoly in foodstuffs, I will never give my consent to any unnecessary or devious device by which a defendant accused of a monstrous crime may be deprived of the right to be heard, to have a court or jury fully advised of all the facts and circumstances surrounding his case which are admissible as evidence in a court of competent jurisdiction. If the packing corporations have allotted territory, have arbitrarily fixed the price for the purchase of live stock, have limited the supply by conspiracy among themselves, have practiced extortion in the sale of foodstuffs, they should be mulcted in the heaviest damages, and the individuals personally responsible for the conduct of such corporations should be held to a pitiless personal account.

OTHER DUPLICATION.

When we turn to the administrative features of the pending bill we find the same duplications. Section 16 of the bill provides, among other things:

Every operator or packer engaged in commerce * * * shall make such reports and returns, verified under oath or otherwise, as the commission shall require, as will fully and correctly disclose all transactions involved in its business—

And so forth.

The identical provision is found in the Federal Trade Commission act. Under that act the packers are now required—

to file with the commission in such form as the commission may prescribe annual or special or both annual and special reports or answers in writing to specific questions, furnishing to the commission such information as it may require as to the organization, business, conduct, practices, management, and relation to other corporations, partnerships, and individuals of the respective corporations filing such reports or answers in writing. Such reports and answers shall be made under oath—

And so forth.

Section 16 of the pending bill further provides that—

Any officer or agent of the Government designated by the commission may, during the usual hours of business, enter and inspect any place used by any packer or operator in its business and examine any books, papers, records or correspondence relating to such business.

The Federal Trade Commission act provides in paragraph 9:

For the purposes of this act the commission, or its duly authorized agent or agents shall at all reasonable times have access to, for the pupose of examination and the right to copy, any documentary evidence of any corporation being investigated or proceeded against; and the commission shall have power to require by subpoena the attendance and testimony of witnesses and the production of all such documentary evidence relating to any matter under investigation. Any member of the commission may administer oaths and affirmations, examine witnesses, and receive evidence.

Paragraph 10 of the Federal Trade Commission act provides:

Any person who shall willfully make, or cause to be made, any false entry or statement of fact in any report required to be made under this act, or who shall willfully make, or cause to be made, any false entry in any account, record, or memorandum kept by any corporation subject to this act, or who shall willfully neglect or fail to make, or cause to be made, full, true, and correct entries of such accounts * * * shall be deemed guilty of an offense against the United States, and shall be subject, upon conviction in any court of the United States of competent jurisdiction, to a fine of not less than $1,000 nor more than $5,000, or to imprisonment for a term of not more than three years, or to both such fine and imprisonment.

Section 17 of the pending live-stock commission bill requires "Any packer or operator, or any officer, agent, or employee of such packer or operator, when requested by an officer or agent of the Government designated in accordance with the provisions of this act, to answer correctly to the best of his knowledge, under oath or otherwise, as may be required, all questions touching his knowledge of any matter authorized to be investigated," and provides upon conviction a penalty of a fine not exceeding $1,000, or imprisonment for not more than one year, or both such fine and imprisonment.

Under existing law, the Federal Trade Commission is authorized to require the furnishing of just such information. That act provides:

If any corporation required by this act to file any annual or special report shall fail so to do within the time fixed by the commission for filing the same, and such failure shall continue for 30 days after notice of such default, the corporation shall forfeit to the United States the sum of $100 for each and every day of the continuance of such failure.

Any person who shall willfully make, or cause to be made, any false entry or statement of fact in any report required to be made under this act, or who shall willfully make, or cause to be made, any false entry in any account, record, or memorandum kept by any corporation subject to this act, or who shall willfully neglect or fail to make, or to cause to be made, full, true, and correct entries of such accounts, * * * shall be deemed guilty of an offense against the United States, and shall be subject, upon conviction in any court of the United States of competent jurisdiction, to a fine of not less than $1,000, nor more than $5,000, or to imprisonment for a term of not more than three years, or to both such fine and imprisonment.

Section 18 of the pending bill provides a penalty of not exceeding $5,000 or imprisonment for not more than one year, or both such fine and imprisonment, in the discretion of the court, for any failure to make full and true entries, or for the making of false entries in the accounts and records to be kept by a packer or operator, or for altering, mutilating, or concealing accounts and records, or for making any false or fraudulent statement in any return or report required by the bill.

Paragraph 10 of the act creating the Federal Trade Commission provides:

Any person who shall * * * willfully mutilate, alter, or by any other means falsify any documentary evidence of such corporation, or who shall willfully refuse to submit to the commission or to any of its authorized agents, for the purpose of inspection and taking copies, any documentary evidence of such corporation in his possession or within his control, shall be deemed guilty of an offense against the United States, and shall be subject, upon conviction in any court of the United States of competent jurisdiction, to a fine of not less than $1,000, nor more than $5,000, or to imprisonment for a term of not more than three years, or to both such fine and imprisonment.

Section 25 of the pending bill provides that a packer, when a registrant, must provide the necessary railroad connections with his place of business and furnish such facilities at a reasonable charge. The transportation act of 1920 in detail compels the packer to provide the same facilities required to be furnished under section 25 of the Gronna bill. I refer to paragraph 7 of that act, which is as follows:

Any common carrier subject to the provisions of this act, upon application of any lateral, branch line of railroad, or of any shipper tendering interstate traffic for transportation, shall construct, maintain, and operate upon reasonable terms a switch connection with any such lateral, branch line of railroad, or private sidetrack which may be constructed to connect with its railroad, where such connection is reasonably practicable and can be put in with safety and will furnish sufficient business to justify the construction and maintenance of the same; and shall furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper. If any common carrier shall fail to install and operate any such switch or connection as aforesaid on application therefor in writing by any shipper or owner of such lateral, branch line of railroad, such shipper * * * may make complaint to the commission, * * * and the commission may make an order * * * directing the common carrier to comply with the provisions of this section in accordance with such order—

And so forth.

Section 25 further provides for the protection of live stock, and for the maintenance of sanitary conditions in the conduct of its business.

Section 6 of the meat-inspection act, June 30, 1906, covers this whole subject:

SEC. 6. The Secretary of Agriculture shall cause to be made, by experts in sanitation or by other competent inspectors, such inspection of all slaughtering, meat canning, salting, packing, rendering, or similar establishments in which cattle, sheep, swine, and goats are slaughtered and the meat and meat-food products thereof are prepared for interstate or foreign commerce as may be necessary to inform himself concerning the sanitary conditions of the same, and to prescribe the rules and regulations of sanitation under which such establishment shall be maintained; and where the sanitary conditions of such establishment are such that the meat and meat-food products are rendered unclean, unsound, unhealthful, unwholesome, or otherwise unfit for human food, he shall refuse to allow said meat or meat-food products to be labeled, marked, stamped, or tagged as "Inspected and passed."

Section 25, subsections 7 and 8, provides for the keeping of accurate accounts and records and for the inspection of the place of business of the registrant, and so forth.

All of this is now, as I have hitherto shown, abundantly covered by existing law. In the Agricultural Department, in the Bureau of Animal Industry, in the Federal Trade Commission, to say nothing of the courts of justice, thousands of high and highly salaried officers and experts are now employed to do, and are doing, practically everything provided in this act, with the exception of subsection c of section 12, and of sections 13 and 15, which touch the control of the stockyards, and they are now practically out of consideration.

The sections regulating the ownership of stockyards are a duplication of existing law. It does not mean that we shall acquire any further jurisdiction over the business of the packer. This proposed law does not give the Government any further control over packing, inspection, transportation, or stockyard facilities than is now exercised by some departments of this Government. It simply leaves these departments in operation, and duplicates them under one head.

TREND TOWARD SOCIALISM.

It is urged in justification of this legislation that these five packers control the bulk of all meats now entering into interstate commerce; that by combination among themselves they have monopolized an essential food, and that the necessity for relief justifies the innovation. Assuming, for the sake of the argument, that this is true, meat is not so essential as bread in the maintenance of human life. If it be discovered to-morrow that a combination of millers has materially affected the price of wheat or of flour, shall we organize another commission of three or more men, at $10,000 a year, with thousands of employees, to regulate the milling business?

Raiment is as essential to life and comfort as is food. The manufacturers of cotton and woolen fabrics are not ministering angels by any means. Having organized this commission for the regulation of the meat packers, is it not incumbent upon us immediately to establish a textile commission?

There is evidence, and abundant evidence, that the so-called Lumber Trust and the master builders of the country have, by an illegal combination, placed a tribute upon every home. Men must have shelter. Shelter is as essential as food or raiment. If this is the remedy, we should immediately begin to prepare for a building commission, a lumber commission, and of course a fuel commission is essential, and so ad infinitum. Now, when we shall have established thousands of commissions, at a cost of millions and hundreds of millions of dollars, to do the work that courts were duly constituted to do—courts which can and should and must finally pass upon all the conclusions of these commissions—when we have established this intricate and difficult machinery at the cost of millions, perhaps billions of dollars to the taxpayer, and have regulated in the last detail the activities of an individual engaged in a private enterprise, is it not a natural, is it not an almost rational demand on the part of the philosophic socialist that the Government, having been put to the expense of regulating these multitudinous businesses now under its control, shall determine a fair price for their commodities? And having determined the price, it will necessarily follow that they should determine a just remuneration for labor, and, having given labor its portion, to say what the original owner should receive; and if we can say what he can receive for one thing, why not for ten, and why not guarantee him a reasonable return upon his investment and let the State take over absolutely what is left of his property?

This is the plan of Lenin and Trotski, to which we are approaching by successive and inevitable steps.

Is it not time to return to basic principles, to see that this bill and all others like it shall safeguard the liberty of the citizen, and the inviolate right to the use and ownership of private property so long as that property is owned and operated in obedience to the law and without the infraction of the rights of any other citizen?

If the packer, the butcher, the baker, or the candlestick maker in the production or transportation of any commodity, especially a commodity necessary to the health and happiness of the community, attempts by any secret or sinister combination with some competitor engaged in a like enterprise inordinately to increase his earnings by any ingenious interference or infraction upon the freedom of commerce and of the market place, by any attempt to monopolize that market, by the restraint of trade or throttling of competition or the increase in price, we visit upon such malefactor the dread penalties of the law; and if we find that he has been ingenious enough to discover some new and hitherto unpunished device by which his baneful end can be accomplished, we provide a penalty for that device. Every pernicious practice in restraint of trade is now or can be made punishable by law. The commerce clause of the Constitution is broad enough and the Federal Government is powerful enough, its arm is long enough to reach the malefactor. A multitude of special commissions and commissioners, an additional army of high-salaried experts and employees to duplicate the duties of departments already created, and of courts having jurisdiction of these alleged offenses is unnecessary and unwarranted.

Mr. KENYON. Mr. President, I hope to secure some time on Monday to submit a few observations. I shall take only a minute or two this afternoon to put in the RECORD a few matters that Senators may possibly have time to read on the morrow.

I was unable to hear very much of the speech of the Senator from Illinois [Mr. SHERMAN] and his address has not as yet been published in the RECORD; but I understand he made rather serious reflections upon the Federal Trade Commission, and especially upon Mr. Colver. One of the favorite occupations nowadays, of course, is to attack the Federal Trade Commission, and especially Mr. Colver, than whom I do not hesitate to say a more faithful servant of the people never occupied a public office. He has stood up under every kind of assailment, abuse, and malice, and he can really be proud, I think, of the enemies he has made. But the charge which, as I understand, was made by the Senator from Illinois, that the Federal Trade Commission had disseminated throughout the world information injurious to the meat business of the United States, is a charge that never had been made in the months of hearings that were had before the Agricultural Committee of the Senate and the hearings in the House.

Mr. McCORMICK. Mr. President——

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Illinois?

Mr. KENYON. I do.

Mr. McCORMICK. If my memory be not at fault, I think my colleague has made the same charge before on the floor of the Senate.

Mr. KENYON. I think that is true; and the Senator's colleague introduced a resolution on the floor of the Senate calling for certain information relative to that matter, and that information was laid before the Senate. It arose in this way:

On the 27th day of June, 1919, as appears by volume 58, part 2, of the CONGRESSIONAL RECORD, the following occurred:

Mr. SHERMAN. Mr. President, I wish to ask the Senator from Ohio a question. Does he know who the chairman of the Federal Trade Commission is now?

Mr. POMERENE. I think Mr. Colver is the chairman now.

Mr. SHERMAN. Does the Senator know where he is at this time?

Mr. POMERENE. I do not; I am not my brother's keeper in that respect.

Mr. SHERMAN. I am not his keeper, either; but I believe I have some accurate information about where he is. Unless he has returned recently, he is in England. When the Senator speaks of the fostering care of the Federal Trade Commission on our export trade I will say that I believe I will have adequate proof to present here that instead of promoting our export trade he is destroying it in England by unfriendly comments, by violent speeches reported in English newspapers denouncing certain of our export lines. I think he is paying his traveling expenses across the ocean out of such appropriations as this.

On July 10, 1919, as appeared by the CONGRESSIONAL RECORD of that date, volume 58, the Senator from Illinois introduced a resolution which I ask to have set out as a part of my remarks.

There being no objection, the resolution referred to (S. Res. 114) was ordered to be printed in the RECORD, as follows:

Resolved, That the Federal Trade Commission be, and is hereby, requested to furnish to the Senate at the earliest possible moment copies of all documents, correspondence, or other papers in its possession relating to its efforts or action in promoting or concerning the export trade in meats from the United States to the Kingdom of Great Britain or any of its colonial dependencies or other countries, and especially any communications by the Federal Trade Commission, or any of its members, officers, agents, or employees, with the officers or agents of any foreign Government, and, more especially, all communications had with the ministry of reconstruction of Great Britain or the members thereof appointed in 1918, and to include all correspondence with the Hon. Charles A. McCurdy, M. P., of the ministry of foods and recently chairman of the committee on trusts; also such correspondence with any other member of the ministry of reconstruction in relation to the meat industries of the United States.

Mr. KENYON. The information requested in this resolution was furnished to the Senate on the 31st day of July, 1919. It is too long a document to put in the RECORD, but portions of it are interesting.

The letter from Mr. Fort, chairman of the commission, to Commissioner Murdock, I ask to have printed as a part of my remarks at this time.

There being no objection, the letter referred to was ordered to be printed in the RECORD, as follows:

SPRING LAKE, N. J., *July 19, 1919.*

Commissioner MURDOCK,
Federal Trade Commission, Washington, D. C.

MY DEAR MURDOCK: I have your letter inclosing copy of the Sherman resolution, copy of the Report of the Export Division of the Federal Trade Commission, for my amendment or approval, and your request that I make individual reply to the matters covered by the Senate resolution.

In the allotment among the commissioners of the work in the commission the export division, prior to my illness in April, 1919, was directly under my supervision, and the report of Dr. Notz for the division seems to be a complete summary of its activities in relation to export trade in packing-house products.

I have had no correspondence with any British official on the subject of import or export trade or on the meat business of American packers. I have had no communication even remotely connected with that.

The only incident that I recall having to do with the American packers' export trade was at the time that the Federal Trade Commission called for a report as to the operations of the foreign business of the packers. At this time Mr. Levy Mayer, representing Armour & Co., said to me that the real reason that the returns should not be made was that it might involve very heavy additional payment of income tax to the United States Government on the part of his client, and likewise might lead to taxation in Argentina and other foreign countries.

Mr. Mayer exhibited a list of a number of companies doing business in Argentina. As you remember, I was very much outraged at the suggestion that I could or would be party to the defrauding of this Government, or, being a Government official, would be party to a deception on a friendly foreign Government. As you remember, I reported the circumstances immediately to my colleagues, and further discussion of the matter of the returns of the foreign branches of the packing companies was terminated, and I am informed the desired information was demanded and secured without any further delay.

This, I think, covers all my recollections of anything touching on foreign trade of the packers, or the other things covered by Senator SHERMAN'S resolution.

With best regards to you and your brethren, I am,

Very truly, yours,

JOHN FRANKLIN FORT,
Chairman.

Mr. Colver has denied the alleged interview in London and has shown that his expenses abroad were paid by himself.

There are other letters, particularly, and statements on page 3412 of the RECORD that will be of interest to Senators, if they desire to understand some of the methods that the packers were then pursuing.

So that it is true, as the junior Senator from Illinois [Mr. McCORMICK] suggests, that the charge has been made on the floor, but it never had been made in the committees, it never was made by anyone there representing the packers, that the attempt had been made to use the Federal Trade Commission's report to injure American business abroad, or that Mr. Colver had done that thing. Strange it was not urged in the hearings. The Senator's resolution, I think, went to the committee, together with the resolution of the Senator from Indiana [Mr. WATSON], asking for an investigation of the Federal Trade Commission as socialistic, which committee was appointed and which committee, I understand, never took one particle of evidence and never did one thing in investigating the resolution of the Senator from Indiana or the resolution of the Senator from Illinois, though that has been over a year ago. It was all a part of the effort to discredit the commission. That charge is a serious charge, of course. If Mr. Colver or the Federal Trade Commission had tried to injure American business abroad, it is a very serious thing. The answer to it is that they did not.

On page 3414 of the RECORD will be found a statement submitting all of these documents:

A letter of May 12, 1915, from Joseph E. Davies, chairman of Federal Trade Commission, to official secretary of the governor general, Melbourne, Australia.

(The four above letters concern a request by the Commissioner of Corporations, subsequently the chairman of the Federal Trade Commission, for a copy of the report of an investigation of the beef industry by Commonwealth royal commission on the meat-export trade of Australia and the supplying of this document. They are in files 2267–1–1 of the Bureau of Corporations and 8029–1–1 of the Federal Trade Commission, and are attached as part of Exhibit 3.)

So that before the time the Federal Trade Commission ever entered into an investigation of the packers here, Australia was investigating that very subject as to meat; and the same is true of New Zealand.

I am embarrassed by not having a copy of the remarks of the Senator from Illinois [Mr. SHERMAN], and I did not hear that part of it, but, as related to me, he said that England became somewhat annoyed and angry over the situation; that England moved to control her meat industry because of what the Federal Trade Commission here had said about the packers, and that our trade with England suffered.

It is true that Britain did show some feeling about the American packer, and I am going to put in the RECORD what I think was the reason for the feeling, and I hope Senators will read it. It was not because of any investigation of the Federal Trade Commission. They had tried to run the blockade with cargoes of meat. Seven consignments were in the prize courts of Britain. They used their influence also to stop a loan of the American Republic to those who were subsequently our allies; at least, it was so published in the newspapers. My proof of that is the great paper published in the State of the Senator from Illinois, the Chicago Tribune. On September 18, 1915, we find this heading on the front page:

Packers ask Lansing to defy England. Cite Hay's dictum to Russia to smash ruling of prize court. Principle at stake.

I will not ask to have that all inserted, but on the next page, as a part of the same article, is this:

VEEDER DEMANDS ACTION.

Henry Veeder, counsel for the Swifts, directly charged England with as "flagrant violation" of international law as Germany committed in the submarine cases. His statement, made after conference with the Packingtown heads, amounted to a demand that the United States defy England in the meat cases and insist on a show-down.

In addition to declaring that the prize court's decision "has been thoroughly inconsistent," Mr. Veeder said England is now "breaking faith with the world when she repudiates the principles of international law, to which she subscribed in the declaration of London."

* * * * * * *

BEARING ON THE BIG LOAN.

The possibility of the packers exerting an antagonistic influence on the negotiations now pending in New York for the $1,000,000,000 loan to the Franco-English commission, because of the Admiralty court's ruling, was held as an improbable development by the Packingtown heads.

They refused to express themselves on the subject, but the intimation was that they would not directly involve the meat seizures in the loan negotiations.

Then there was a cable from London that the packers were to appeal from the ruling of the prize court.

In the issue of the same great paper of Tuesday, September 21, an article, on page 16, is headed:

Reynolds talks of Allies' loan. Chicago banker, back from East, says $500,000,000 is contemplated.

Mr. Reynolds is the president of the Continental and Commercial National Bank, in which Mr. Armour is one of the heaviest stockholders, and Mr. Reynolds in this interview said:

But the action of the British prize court in confiscating $2,500,000 of packing-house products was an unfortunate decision, I think, to be laid before Chicago bankers at this time. Packing-house interests are necessarily heavily interested in the larger banks, and, as is shown by their public utterances, they feel aggrieved at the prize court's action.

This was before the report of the Federal Trade Commission had ever been filed or gotten up.

Then, again, in the issue of September 22, 1915, is set out a letter, which was one of three letters from Ambassador Dumba to Baron Von Burian, Austro-Hungarian foreign minister, taken from J. F. J. Archibald, the ambassador's messenger. The article says:

This letter has not heretofore been printed—is dated August 20, and follows.

Here is a letter which might well arouse feeling in England. It was not by any action of the Federal Trade Commission in this country, but by the effort to run the blockade to get meat to the enemies of Britain. Is it any wonder that Britain had some feeling about the packers in this country?

This letter from Mr. Dumba taken from this ambassador's messenger says, among other things:

Says Wilson can control Congress.

That may have been true at that time. It continues:

CONFERS WITH ARTHUR MEEKER ON A YACHT.

As for the note to protest against British interference with shipping, which has so often been notified and as often postponed, I learn that the issue is delayed in consequence of the imminent declaration of cotton as contraband. The feeling which obtains among the great American importers was accurately represented in Mr. Meagher's (Meeker's) speech. Meagher is one of the principal exporters of the United States, for he is a partner in the Chicago firm of Armour & Co., who, with the firm of Swift, control the meat market of the whole Western Hemisphere.

Mr. Meagher, whom I recently met on a yacht, and whose acquaintance I had already made in Chicago, absolutely regards England's acts as arbitrary. No fewer than 31 ships, with meat and bacon, shipments of his firm for Sweden, valued at $19,000,000, have been detained in English ports for months under suspicion that they ultimately are intended for Germany.

The negotiations are being so long drawn out, because Mr. Meagher and his companions will not accept a lame compromise, but insist on full compensation or the release of the consignments, in which the bacon may be still sound.

COULD REFUSE TO SEND MEAT TO ENGLAND.

My informant further gave me to understand he has not yet played his last trump, namely, a refusal to import meat to England under the circumstances. He—that is to say the above-named slaughtering houses—control the Argentine market. At the present moment they are paralyzed here also by the action of the British Admiralty, for the latter has commandeered most of the English freight ships intended to transport meat from Argentina.

Listen to this: If England had any feeling toward the meat packer, would she not have a right to, in view of this statement from the Austrian ambassador:

If England stood face to face with the danger of not being able to get any meat from the United States or Argentina she would soon give in.

That was in 1915. If there is any reason, as charged by the Senator from Illinois, for the feeling in Britain about the meat industry in this country, it is not because of anything the Federal Trade Commission has done; but on account of the efforts to run the blockade and get meat into Germany, which was at war with England, through Sweden, or other countries.

The letter of the President asking for the investigation was dated February 7, 1917, and the report of the Federal Trade Commission was filed July 3, 1918, or about three years after the Dumba letter was published.

I ask leave to have the Dumba letter printed in full; and I may have something more to say on other phases of this question on Monday.

There being no objection, the letter referred to was ordered to be printed in the RECORD, as follows:

The reply of Secretary of State Lansing to the note of the 29th of June, in which your excellency protested against the enormous deliveries of weapons and munitions to the Allies from the United States, was published here—I do not know whether with the agreement of the Austrian Government—on the 16th ultimo.

As was to be expected, the refusal was quite categorical. The legal arguments are certainly very weak, for the references to articles supplied by Germany and Austria during the Boer War are not to the point and are misleading, for at that time Germany claimed the right to send foodstuffs to the Boers via the neutral port of Lorenzo Marques, and, if I am not mistaken, carried the point after the war against England.

The true ground for the discouraging attitude of the President lies, as his confident, Mr. House, already informed me in January and has now repeated, in the fact that the authorities in a serious crisis would have to rely on neutral foreign countries for all their war material. At no price and in no case will Mr. Wilson allow this source to dry up.

For this reason I am of the opinion that a return to the question, whether officially by replies of your excellency or by a semiofficial conversation between myself and the Secretary of State, will not only be useless, but even, having regard to the self-willed temperament of the President, harmful. In this matter I agree entirely with the view expressed by Consul Schwegel in a report attached. The President has broken all the bridges behind him and made his point of view so definite that it is impossible for him to retreat from this position.

SAYS WILSON CAN CONTROL CONGRESS.

As last autumn, he can always through his personal influence either force the House of Representatives to take his point of view against their better judgment, or, on the other hand, in the Senate can overthrow the resolution already voted in favor of prohibiting the export of guns and munitions.

In the circumstances any attempts to persuade individual States to vote parallel resolutions through their legislative bodies offer no advantages apart from the international difficulties which the execution of this plan presents.

The proposal to forbid passenger ships to carry munitions stands on a different footing, however. Mr. Bryan and his Democratic supporters would stand for this prohibition, and I believe the President would not show himself so intransigeant with regard to this action.

CONFERS WITH ARTHUR MEEKER ON A YACHT.

As for the note to protest against British interference with shipping, which has so often been notified and as often postponed, I learn that the issue is delayed in consequence of the imminent declaration of cotton as contraband. The feeling which obtains among the great American importers was accurately represented in Mr. Meagher's (Meeker's) speech. Meagher is one of the principal exporters of the United States, for he is a partner in the Chicago firm of Armour & Co., who, with the firm of Swift, control the meat market of the whole Western Hemisphere.

Mr. Meagher, whom I recently met on a yacht and whose acquaintance I had already made in Chicago, absolutely regards England's acts as arbitrary. No fewer than 31 ships, with meat and bacon, shipments of his firm for Sweden, valued at $19,000,000, have been detained in English ports for months under suspicion that they ultimately are intended for Germany.

The negotiations are being so long-drawn out because Mr. Meagher and his companions will not accept a lame compromise, but insist on full compensation, or the release of the consignments, in which the bacon may be still sound.

COULD REFUSE TO SEND MEAT TO ENGLAND.

My informant further gave me to understand he has not yet played his last trump, namely, a refusal to import meat to England under the circumstances. He—that is to say, the above-named slaughtering-houses—control the Argentine market. At the present moment they are paralyzed here also by the action of the British Admiralty, for the latter has commandeered most of the English freight ships intended to transport meat from Argentina.

If England stood face to face with the danger of not being able to get any meat from the United States or Argentina, she would soon give in.

What the immediate result here of making cotton contraband will be is hard to say. The anger of those interested in cotton will be enormously increased, but, on the other hand, the fear of threatened confiscation may make the leaders of the Cotton Trust so yielding that they, against their better judgment, may agree to the sale of the greater part of the present supply en bloc to England, who would be in a position in the future to control the whole cotton market, and on peace being declared to force on the whole world this essential raw material.

C. DUMBA.

CALL OF CALENDAR ON TUESDAY.

Mr. CURTIS. I move that the Senate take a recess until 10 o'clock Monday morning.

Mr. UNDERWOOD. Before the motion is put I wish to suggest to the Senator from Kansas that Monday is the calendar day. A good many Senators are interested in the calendar, and although I do not care to insist upon its particular place on Monday, if an arrangement could be made to have the calendar called on Tuesday it would be quite satisfactory, I am sure.

Mr. CURTIS. I would be willing to have the calendar called on Tuesday, instead of Monday as calendar day.

Mr. UNDERWOOD. Then I ask unanimous consent that instead of calling the calendar on Monday, as usual, it shall be called on Tuesday.

The VICE PRESIDENT. The request is that the rule which applies to Calendar Monday shall be applicable to Tuesday of next week. Is there objection? The Chair hears none, and it is so ordered.

RECESS.

Mr. CURTIS. I renew my motion that the Senate take a recess until 10 o'clock on Monday next.

The motion was agreed to; and (at 4 o'clock and 55 minutes p. m.) the Senate took a recess until Monday, January 24, 1921, at 10 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *January 22, 1921.*

The House met at 12 o'clock noon.

Rev. James Shera Montgomery, D. D., pastor of Calvary Methodist Church, Washington, D. C., offered the following prayer:

Almighty God, our Heavenly Father, lift upon us all the light of Thy holy countenance. Bless each life with a measure of a great peace and grant unto all of us the spirit of faith, faith in our country, faith in our fellow men, and faith in Divine Providence, which is above all and over all. Amen.

The Journal of the proceedings of yesterday was read and approved.

REREFERENCE OF H. R. 15793 (PURCHASE OF FUEL YARDS, ETC.).

Mr. RHODES. Mr. Speaker, I ask unanimous consent that the bill H. R. 15793, which was erroneously referred to the Committee on Public Buildings and Grounds, be rereferred to the Committee on Mines and Mining.

The SPEAKER. The gentleman from Missouri asks unanimous consent that the bill, which the Clerk will report by title, and which was referred to the Committee on Public Buildings and Grounds, be rereferred to the Committee on Mines and Mining.

The Clerk read the title, as follows:

A bill (H. R. 15793) authorizing the Secretary of the Interior to purchase necessary lands for use of the Government fuel yards, for the erection of a garage, and payment by check by branches of the Federal Government for fuel furnished.

The SPEAKER. The Chair understands the chairman of the Committee on Public Buildings and Grounds consents to this?

Mr. RHODES. He does, Mr. Speaker. I spoke to him personally about the matter yesterday.

Mr. GARNER. Mr. Speaker, let me ask the gentleman if he spoke to any of the minority members of the Committee on Public Buildings and Grounds?

Mr. RHODES. I will say that I failed to do that.

Mr. GARNER. It occurs to me that the gentleman ought to consult some Members on this side of the House before undertaking to get a transfer of this bill. While you have the power on that committee to get it done by vote, you ought to consult some one here in reference to the matter.

Mr. WINGO. If the gentleman will permit me, while I agree with the general proposition laid down, this subject has been before the Committee on Mines and Mining since 1915, and I think that reference to that committee is proper. I agree with the gentleman's proposition, but I do not think there is any question in this case but that this is the proper committee to which to refer the bill.

Mr. GARNER. If the gentleman from Arkansas [Mr. WINGO] insists he has investigated this and thinks it should be referred to the Committee on Mines and Mining, I shall not object.

Mr. WINGO. There is no question about it.

Mr. GARNER. But I think anyone before asking unanimous consent ought to consult somebody on this side.

Mr. WINGO. I agree with the gentleman.

The SPEAKER. Is there objection?

Mr. GARD. Reserving the right to object, what is the subject of the legislation?

Mr. RHODES. Mr. Speaker, the bill merely provides for the acquisition by the Government of the ground by purchase on which the present fuel yards are situated. In 1918 the Government acquired a 5-year lease on a plot of ground in this city to be known as the Government fuel yards, and since that time the Government has been operating the fuel yards, as the place where all the fuel in the District of Columbia is assembled, and from which the fuel is distributed to the various governmental agencies.

Mr. GARD. Has that been under the jurisdiction of the Committee on Mines and Mining?

Mr. RHODES. The original legislation was initiated by Dr. Foster, who was chairman of the Committee on Mines and Mining in 1917. I have spoken to the parliamentarian and also to the chairman of the Committee on Public Buildings and Grounds, the committee to which it was referred, and all to whom I have spoken agree that the bill was erroneously referred.

Mr. BLANTON. Mr. Speaker, I ask for the regular order.

The SPEAKER. Is there objection to the request of the gentleman from Missouri [Mr. RHODES]? [After a pause.] The Chair hears none.

MEMORIAL EXERCISES ON LATE REPRESENTATIVE GARLAND.

Mr. BUTLER. Mr. Speaker, I ask unanimous consent of the House that Sunday, February 6, 1921, may be set apart for addresses on the life, character, and public services of the late Hon. MAHLON M. GARLAND, Representative at large from the State of Pennsylvania.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent that Sunday, February 6, be set aside for memorial exercises on the late Representative GARLAND. Is there objection? [After a pause.] The Chair hears none.

CONFERENCE ON DISTRICT OF COLUMBIA APPROPRIATION BILL.

Mr. DAVIS of Minnesota. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 15130, being the District appropriation bill, disagree to all of the Senate amendments, and agree to the conference requested by the Senate.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to take from the Speaker's table H. R. 15130, disagree to all the Senate amendments therein, and agree to the conference asked for on the bill, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 15130) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1922, and for other purposes.

Mr. GARRETT and Mr. MAPES rose.

The SPEAKER. The Chair will recognize first the gentleman from Michigan [Mr. MAPES].

Mr. MAPES. Mr. Speaker, reserving the right to object, this is the first big appropriation bill, I believe, to be sent to conference since the adoption of the new rule increasing the Committee on Appropriations and limiting the power of the conferees from that committee to accept Senate amendments to appropriation bills that would have been subject to a point of order if offered in the House of Representatives, on account of being legislation on an appropriation bill.

This bill contains several Senate amendments in the nature of legislation which have been considered by the Committee on the District of Columbia, and some of them have been passed upon by the House of Representatives itself. In fact, one of the Senate amendments to the bill, or the substance of it, is now in conference between the two Houses, represented by the legislative committee. I have no desire to object to the unanimous-consent request, because I think the conferees to be appointed by the House are in accord with the action that the House has heretofore taken, but to protect the rights of the House and of the legislative committee I would like to have an interpretation of the new rule by the Speaker. The rule provides that:

No amendment of the Senate to a general appropriation bill which would be in violation of the provisions of clause 2 of Rule XXI, if said amendment had originated in the House, nor any amendment of the Senate providing an appropriation upon any bill other than the general appropriation bill, shall be agreed to by the managers on the part of the House unless specific authority to agree to such amendment shall be first given by the House by separate vote on every such amendment.

My question, Mr. Speaker, is, When should those who are interested in the Senate amendments raise the point of order to protect their rights? Can it be done after the conferees make their report or should it be done now before the bill goes to conference?

The SPEAKER. The Chair understands that the gentleman from Tennessee [Mr. GARRETT] also has an inquiry concerning that matter, and the Chair will recognize him also.

Mr. GARRETT. Mr. Speaker, still reserving the right to object, I agree with the gentleman from Michigan that it is quite important at this time that we should have a ruling upon this new rule, for the benefit of the conferees in particular, in order that they may know their powers in conference, and, of course, for the benefit of the Members generally. And I have reduced to writing a parliamentary inquiry which I think will, when answered, give an interpretation that will serve as a guide to the conferees. And if I may, I should like to submit that inquiry at this time, a copy of which is at the desk of the Clerk.

The SPEAKER. The Chair will be glad to consider it. The Clerk will report the inquiry.

The Clerk read as follows:

Mr. GARRETT submits the following parliamentary inquiry: Section 2 of Rule XX provides:

"Section 2, Rule XX:

"2. No amendment of the Senate to a general appropriation bill which would be in violation of the provisions of clause 2 of Rule XXI, if said amendment had originated in the House, nor any amendment of the Senate providing an appropriation upon any bill other than a general appropriation bill, shall be agreed to by the managers on the part of the House unless specific authority to agree to such amendment shall be first given by the House by a separate vote on every such amendment."

If the House by unanimous consent or by special resolution from the Committee on Rules disagrees to all Senate amendments en bloc and asks for or agrees to a conference with the Senate, and there are Senate amendments obnoxious to the rule above quoted and the conferees without instructions from the House recede from their disagreement and agree to such amendments, will the conference report so including such illegal amendments be subject to a point of order, as in cases where conferees exceed their authority and include in their report matters not in disagreement?

Mr. DAVIS of Minnesota. Mr. Speaker, after listening to the statement of points made by the gentleman from Tennessee [Mr. GARRETT] and by the gentleman from Michigan [Mr. MAPES], I will state briefly what conclusion I had come to, and I believe the conclusion of the other conferees who will be appointed with me, before hearing the statement of the gentleman from Tennessee. It was this, that I, as a conferee—and I think my brother conferees will agree with me—do not propose under this new rule to agree to any matter that would be subject to a point of order if the matter had been put on in the House. In other words, anything in violation of clause 2 of Rule XXI we expected—or I did—to absolutely not consider at all in the conference, and if the Senate persisted in that, to come back to the House on each one of these amendments and get the consent of the House by a vote thereon.

That was the conclusion that I came to before these questions were raised. I am aware of the position that I and other conferees on appropriation bills are placed in, and I am glad the gentlemen raised the point, and I would be very glad to have the Speaker make a ruling now to govern me, although I am inclined to think that the statement I have made will, under the rule, be virtually the decision that will be rendered. The Chair will excuse me for forecasting or prejudging what the decision may be, but I hope that will be the decision. But I have stated the position I would have taken in case no decision was made on the subject.

Mr. GARRETT. Mr. Speaker, I do not know that I have any desire to suggest any particular ruling. My purpose in presenting the inquiry was merely that we might have a ruling for our guidance, and particularly for the guidance of the conferees.

Of course, this is the only new part of the rule. All of these matters that we have been dealing with on the appropriation bills that have come up before have been in accordance with the rules as they have existed heretofore. But this part now is new, so far as the House is concerned, and it is going to be very interesting to watch the working out of it. Probably if a ruling is made, as suggested by the gentleman from Minnesota [Mr. DAVIS]—and, so far as I am individually concerned, I am inclined to agree with him and do agree with him that that is the correct ruling—that probably presents a situation in which we have prevented what is called "a full and free conference." In other words, the conferees are to a certain degree instructed in advance.

But I do not care to go into any argument as to what should be the ruling. I have simply submitted my inquiry in order that we may have a ruling.

The SPEAKER. This rule is a radical departure from the custom of the House in the past, and it is, as the gentleman from Tennessee [Mr. GARRETT] and the gentleman from Michigan [Mr. MAPES] suggest, important that the House should know in advance what the ruling of the Chair would be, and both gentlemen were courteous enough to suggest to the Chair in advance that they wished to raise the question, and the Chair has been considering it.

What the Chair wishes to do, as every Member of the House will wish, is to adopt the system which will best further the business of the House. It is very obvious that this new rule is going to interfere with the past methods of conferences, because as the gentleman from Tennessee suggests, the House conferees do not go into "a free conference"; they are hampered by this rule. And what the Senate conferees will do it is impossible to predict.

At the same time the Chair, of course, is bound as far as practicable, to give the interpretation which the Chair thinks was intended by the House in adopting the rule, and also to facilitate the transaction of business. It might be construed, and I suppose this is the point which the gentlemen both wish to have settled, that when the House by unanimous consent disagrees to the Senate amendments and sends the bill to conference, the House thereby waives the provisions of the new rule, which says that there shall be a separate vote upon each question which is subject to the rule. But the Chair thinks that certainly would be a strained interpretation, and one which, at first, at any rate, ought not to be adopted. We ought at least to have some experience under the rule, and let it develop and see what difficulties arise; and, at any rate, at the outset we ought to more strictly follow the specific language of the rule, which is that nothing "shall be agreed to by the managers on the part of the House unless specific authority to agree to such amendment shall be first given by the House by a separate vote on every such amendment."

The Chair does not imagine that that means in the future that there will necessarily be a separate vote, after the conferees have reported, on every such provision. The Chair thinks very likely by such agreement the House could, if it desired to, have unanimous consent and agree to them en bloc. But the Chair thinks that now the ruling ought to be that if the conferees should agree to an item which was repugnant to this rule, it would so far invalidate the conference report that anybody could make the point of order against it. Therefore, disagreeing by unanimous consent to the Senate amendments and agreeing to the conference asked for by the Senate leaves it subject to a point of order, if the conferees in any respect agree to an item which is obnoxious to the rule. Does that answer the gentleman's question?

Mr. GARRETT. I think so.

Mr. BUTLER. Mr. Speaker, may I ask the Chair a question?

The SPEAKER. Certainly.

Mr. BUTLER. If a measure goes to conference by unanimous consent the House does not waive the privilege it may have hereafter?

The SPEAKER. That is the way the Chair will rule now. Of course this is a new question, and the Chair reserves the liberty at any time to change its ruling.

Mr. ELSTON. Mr. Speaker, is it within the meaning of the Speaker's announcement that after the conference has begun, and consideration is had of some item that would be subject to a point of order in the House, thereupon the House conferees can come back to the House in the interim and obtain instructions, and then continue the conference, or that the whole matter should be presented when the conference report is finished and presented to the House?

The SPEAKER. The Chair thinks the conferees can come back and report at any time.

Mr. HAUGEN. Mr. Speaker, I am not clear as to the Speaker's ruling. Are we to understand that if the conferees bring back an item which is subject to a point of order, it must be given consideration by the House, and that the point of order will lie in the House?

The SPEAKER. That is the ruling.

Mr. BUTLER. We do not waive anything here.

Mr. MOORE of Virginia. We are not to understand, are we, that the conferees would be precluded from bringing back one item or a number of items with a definite recommendation? That would not be a report of either agreement or disagreement.

The SPEAKER. The Chair is not certain about that, whether they could bring it with a recommendation.

Mr. MOORE of Virginia. It seems to me that if the conferees, in a given case, should come in with a large number of items that had been attached to a bill by the Senate, without any recommendation, the House would be without any guide as to such views as the conferees might have reached during the conference.

The SPEAKER. The Chair would prefer not to rule upon that issue now.

Mr. GARRETT. It seems to me that under the ruling of the Chair the conferees could not bring in a conference report containing recommendations as to matters obnoxious to the rule. Of course, as legislators they could address themselves to the House, suggesting what action they thought the House ought to take upon any given proposition; but if they are permitted to recommend to the House in their conference report matter which is obnoxious to the rule, it seems to me, it would do the very thing which the Chair has just ruled can not be done.

The SPEAKER. The Chair is not aware that the conferees, in the report which they present, have any right to give their reasons. They must recommend either agreement or disagreement, but in the debate they can state their reasons, and can influence the House in that way.

Mr. MOORE of Virginia. Mr. Speaker, with deference to the gentleman from Tennessee [Mr. GARRETT], who knows more about these matters than any new Member can hope to know, it strikes me that the conferees should have full latitude to suggest, and that it will be essential to orderly and prompt procedure in the House, that in many instances they should suggest not simply as individuals but in the conference report itself the views they may entertain. That would not be the report of an agreement or of a disagreement. It would only be an independent statement of the views that they believe should control the action of the House.

Mr. WINGO. Does not the gentleman think that the first suggestion of the Speaker is the proper one, that he confine him-

self to a broad generalization, and not preclude himself or the House by an abstract ruling upon any detail? I anticipate that we are going to have some practical difficulties arise which must be measured by the rule, and, as suggested by the Speaker, it might be well to avoid abstract generalizations on matters of detail, and be content with the general rule which the Speaker has laid down, which I think is correct.

Mr. MOORE of Virginia. I do not urge that my inquiry shall now be formally answered. I am only stating a thought that I think sooner or later will have to be dealt with here if we are to go along as speedily and satisfactorily as we should in the transaction of business.

Mr. BANKHEAD. Mr. Speaker, just one further inquiry in connection with this same question. The matter of procedure is, of course, of extreme importance. Assume that the Senate should put on two obnoxious amendments which were contrary to the rule. One of those amendments might meet with the unanimous approval of the House. As I understand it, the objection to one of the amendments would not invalidate both, in the event that specific objection was not made to both amendments.

Mr. BUTLER. The rule is positive.

The SPEAKER. The Chair is not sure that he understands the gentleman.

Mr. BANKHEAD. Assuming that the conferees agree to two amendments.

The SPEAKER. The Chair understood the gentleman's statement, but did not understand his conclusion.

Mr. BANKHEAD. If a point of order were not made to the first amendment, assuming that it might meet with the approval of the House, but that the second amendment was obnoxious to some Member of the House and obnoxious to the rule, and the Member made a point of order against the second amendment, that would not invalidate the first amendment unless a specific point of order was made against it, would it?

Mr. BUTLER. It would all go out.

Mr. BANKHEAD. Or would it all go out automatically?

The SPEAKER. The Chair thinks the whole conference report could be invalidated by a point of order against one item.

Mr. BUTLER. It would all go back.

Mr. HICKS. Do I understand the ruling to be that if there is any objectionable feature in the conference report, a point of order made against one item will invalidate the whole conference report?

Mr. GARRETT. It does that now.

Mr. BUTLER. It will all go back.

The SPEAKER. The Chair thinks it would.

The gentleman from Missouri asks unanimous consent to disagree to all the Senate amendments and agree to the conference asked by the Senate. Is there objection?

Mr. HAUGEN. Mr. Speaker, for the present I object.

Mr. MONDELL. If the gentleman from Iowa [Mr. HAUGEN] will allow me, it seems to me the Speaker's ruling has made the matter very clear. Will the Speaker allow me just a moment on the question raised by the gentleman from Virginia [Mr. MOORE]. It seems to me that under the Speaker's ruling no conference committee will bring in a conference report containing provision repugnant to the rule of the House, because the inevitable result would be the making and the sustaining of a point of order against the entire report.

It would be idle and useless for any committee of the House to bring in a conference report subject to a point of order. That being true, it seems to me that the practice likely to be followed is this: When the conferees on the part of the House find the conferees on the part of the Senate insistent on an item that is obnoxious to the rule the conferees on the part of the House would report to the House a disagreement, whereupon the matter would be settled under the rule as to whether or no the conferees were to be authorized to agree to the provision. They would then go back and follow the instructions of the House, whatever they might be. But certainly conferees on the part of the House would not, in view of the very clear decision of the Chair, do the idle and fruitless thing of bringing in a conference report that would be subject to a point of order.

Mr. GARRETT. Will the gentleman yield to me?

Mr. MONDELL. If I have the floor.

Mr. GARRETT. I want to suggest, if I may, for the consideration of the gentleman from Wyoming and other gentlemen, particularly those charged with the responsibility of arranging the order of business, that this particular measure which is before us originated in the House. It passed the Senate, and immediately upon its passage in the Senate it was moved that a conference be asked with the House. I have looked at the RECORD to see the form of that motion. It is my recollection that the usual form of the motion, whichever body it is made in, is to insist on its amendments or disagreement and ask for a conference. But I want to call attention to the practice that has become very frequent of late years for the Senate to take a House bill, put amendments on it, and immediately ask for a conference without having the bill come back to the House to take such action as the House may see fit on the amendments.

That was not formerly the practice. My recollection is that probably the first measure in which that practice was adopted was the Dingley tariff bill. I was not a Member of Congress at that time. After the Dingley tariff bill had passed the Senate with Senate amendments, immediately, without its coming back to the House, it was moved to insist on the Senate amendments and ask for a conference with the House. I do not think it occurred again until the Payne tariff bill passed the Senate. Then the same policy was adopted. Since that time in recent years it has become almost the custom. The effect of that is it necessitates the House acting first on the conference report. A conference report comes up for action first in the body which agrees to the conference and not in the body that has asked for it.

It has occurred to me that possibly in working under this new rule that it may be desirable to bring about a change in that practice so that the House bill can be returned with Senate amendments and let the House determine what it is going to do with the Senate amendments in advance of any conference being requested or agreed to.

Mr. MONDELL. Under the decision of the Chair to the effect that a conference report being presented that is repugnant to the rule, the entire conference report fails if the point of order is made, I assume, and I think the gentleman from Tennessee will agree with me that no committee of conference would bring back a conference report clearly subject to a point of order. In other words, when they meet, a Senate amendment raising an issue or question between the two Houses which would make a conference report subject to a point of order, the Senate insisting on its amendment, the conferees would come to the House for a decision on the amendment before they agreed to it.

Mr. GARRETT. In other words, I take it that they would report a disagreement.

Mr. MONDELL. They would report a disagreement.

Mr. GARRETT. I think the gentleman is correct about that, and the remarks I made were not intended to suggest anything different. In fact, they are not related to that subject. I was calling attention to what I thought might become a necessary development under the operation of this new rule, namely, to stop the practice of the Senate asking for a conference without first letting the bill with the amendments come back to the House for such action as the House might take upon those amendments.

Mr. HAUGEN. Mr. Speaker, the gentleman from Wyoming has made it clear that any Senate amendment reported back shall be made in order by the House. It matters not what the amendment may be—it may be anything under the sun. The gentleman from Tennessee has referred to the Dingley tariff bill. If the Senate should attach the Dingley tariff bill as an amendment to a bill, the House would have to give it consideration. That is the very thing sought to overcome by the amendment to the rule referred to. Talk about autocratic power and the usurpation of power! It seems to me that if the rule is to be construed as indicated the House would surrender all of its power in its rights to initiate certain legislation and all of its functions to the other body.

Mr. MONDELL. It does not seem to me that the action of a majority of the House of Representatives can be properly or accurately referred to as autocratic. The rule has been adopted. I am simply referring to it, and the rule is to the effect that if the Senate insists on an amendment subject to a point of order, the House must pass upon that matter before the conferees can accept it. What is fairer than that? That is presenting the matter to the House; that is the rule.

Mr. HAUGEN. The purpose of the rule was that amendments made by the Senate not in order in the House should not be in order, and that a point of order would lie against any Senate amendment not in order in the House. Now, as I understand, its interpretation is, Whatever the Senate may suggest by way of amendment it shall be made in order and given consideration by the House.

Mr. BUTLER. Mr. Speaker, will the gentleman yield?

Mr. HAUGEN. Yes.

Mr. BUTLER. The gentleman knows and we all know that many pieces of legislation have been put on appropriation bills, placed there by the Senate, and until the adoption of the rule they were in order, but they will not get through hereafter with-

out being passed on. Any piece of legislation put on an appropriation bill reported here by the Senate was in order, but hereafter they will not be in order.

Mr. HAUGEN. But the rule will make them in order.

Mr. BUTLER. Oh, no.

Mr. HAUGEN. I would ask the Chair this question: If the amendment comes back, shall it be given consideration by the House? I understood the Speaker to rule that it should be given consideration by the House after it was reported back.

Mr. BUTLER. That is correct.

Mr. HAUGEN. Mr. Speaker, so that we may know exactly where we are at.

The SPEAKER. Will the gentleman kindly again state his question to the Chair.

Mr. HAUGEN. If an amendment is reported back by the conferees, shall it be given consideration by the House and be held in order?

The SPEAKER. Oh, no. It is subject to a point of order, and any individual Member can make the point of order.

Mr. HAUGEN. Does that send it back to conference?

The SPEAKER. That depends on the action of the House.

Mr. HAUGEN. What becomes of it if it is subject to the point of order?

The SPEAKER. It is ruled out and the conference is nullified.

Mr. HAUGEN. But if a point of order is made against any Senate amendment, can a vote be taken on that amendment?

Mr. DAVIS of Minnesota. If the point of order is sustained, there is no necessity for a vote, for it goes out.

Mr. HAUGEN. If it is subject to a point of order under the rules of the House, does that dispose of it? Or may it be considered by the House?

The SPEAKER. Oh, the House can consider it, of course.

Mr. HAUGEN. If it is in order for consideration that makes it in order.

The SPEAKER. It is in order to be considered as a separate Senate amendment.

Mr. HAUGEN. That makes it in order. That is the thing that we are trying to get away from.

The SPEAKER. That has always been so. A Senate amendment must be acted on by the House.

Mr. HAUGEN. The purpose of the rule was to give the legislative committees power to legislate and recommend legislation.

Mr. BLANTON. Mr. Speaker, if the Chair will permit, I would suggest to the gentleman from Iowa that we still hold a cudgel over this appropriating committee, because if it becomes too autocratic, the same power that gave it authority can take that authority away.

Mr. HAUGEN. Oh, the only protection this House has ever had and the only protection it can have is to make these amendments subject to the point of order, in order that they may be properly considered by the proper committees, and then reported back to the House so that the House may pass upon them. If all Senate amendments are made in order in the House for consideration it takes in the whole scope of legislation, and if the usual rule is followed Senate amendments would be disposed of without consideration by the committees.

Mr. BANKHEAD. Mr. Speaker, the gentleman seems to be under the impression that any Senate amendment would be violative of this rule.

Mr. HAUGEN. Any Senate amendment, as I understand it, can be made in order. It has to come up for consideration and determination by the House. If it comes up for determination, it of course must be in order.

Mr. BANKHEAD. But the rule provides that a Senate amendment which does not violate the rule is in order.

Mr. McARTHUR. Mr. Speaker, I demand the regular order.

The SPEAKER. This is the regular order. Any amendment of the Senate coming into the House always has been and must be subject to the consideration of the House.

Mr. HAUGEN. And the purpose of the rule is not to make it in order.

The SPEAKER. The rule does not give a Senate amendment such a status that the House can not consider it.

Mr. HAUGEN. I am talking about the rule.

The SPEAKER. Of course, the rule does not provide that the House shall not consider a Senate amendment. Is that the point the gentleman makes?

Mr. HAUGEN. I think that is the purpose of the rule—that no legislation should be put on any appropriation bill, that appropriation should be distinct from legislation, and, as was stated on the floor at the time, that the legislative committees were to authorize legislation, that it should be first given consideration by a legislative committee, and after the authorization has been made, then that the Committee on Appropriations should give consideration to it and prepare appropriation bills accordingly.

The SPEAKER. The purpose of this clause of the rule is to prevent conference committees on appropriation bills legislating without the permission of the House, and the rule provides that the conference committees shall not have the right to agree to a Senate amendment which is obnoxious to the rule.

Mr. HAUGEN. It seems to me absolutely unfair that any new legislation should be put on any bill without its first being given consideration by any committee of the House. In many instances conference reports on appropriation bills come up in the last days of Congress and have to be rushed through, and in some instances no time is given to even read the conference report, and I object for the present.

APPOINTMENT OF SPEAKER PRO TEMPORE.

The SPEAKER. The Chair would state to the House that he is liable to be absent the first of next week. In case he is absent, he designates the gentleman from Connecticut, Mr. TILSON, to act as Speaker pro tempore.

AGRICULTURAL APPROPRIATION BILL.

Mr. ANDERSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 15812) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1922.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the Agricultural appropriation bill, with Mr. HICKS in the chair.

The Clerk reported the title of the bill.

The CHAIRMAN. When the committee rose last evening, the gentleman from Iowa [Mr. HAUGEN] had reserved a point of order against lines 5 and 6, on page 2.

Mr. ANDERSON. Mr. Chairman, I desire to be heard briefly under the reservation of the point of order.

The CHAIRMAN. The Chair apprehends that a number of points of order will be made during the reading of this bill. In order that the matter may be brought to the attention of the committee, the Chair is going to ask Members making points of order to specify clearly what their objections are. The Chair therefore asks the gentleman from Iowa to specify the objection that he has to the item in question.

Mr. HAUGEN. Mr. Chairman, the committee has authority now to increase the number of employees in the department. There seems to be no question about that, but it has not the authority to increase the number, so far as the heads are concerned.

The CHAIRMAN. Just what is the point of order which the gentleman from Iowa makes?

Mr. HAUGEN. That there is no authority of law.

Mr. ANDERSON. Mr. Chairman, I am not now addressing myself to the point of order. I am in hopes I will be able to persuade the gentleman from Iowa to refrain from making the point of order. I regard the two items to which the point of order is directed, namely, the director of scientific work and the director of regulatory work, as the two most important items in the bill, and I have in mind items carrying very large sums of money, and I am speaking from the standpoint of the development of a definite and permanent forward-looking policy for the Department of Agriculture and the agriculture of the country. If we are going to have a definite and permanent policy for the agriculture of America we must put the Department of Agriculture in America in a position to assume that leadership in agriculture which its position as the foremost scientific institution in the world devoted to agriculture entitles it to assume. It is not a matter of money, it is a matter of men and of leadership, and of providing the department with the human instrumentalities necessary to enable us to assume that leadership. The gentleman who is to be the next President of the United States, in a speech he made at the great Minnesota State fair last September, laid down what I believe to be the most comprehensive agricultural policy ever committed to writing in this country. I want to see the Agricultural Department furnished with the human instrumentalities necessary to carry out that policy. The creation of these two positions is the first step in providing those instrumentalities.

Mr. Chairman, Germany was able to maintain a ring of steel against the combined nations of the world for more than four years, not because her men were braver than those of the other nations, not because she was better prepared in a military sense, but because she had applied the science of her scientific men to the development of a balanced industry and agriculture. I do not desire to emulate the purpose for which she applied those sciences, but we may very well emulate those policies for

the power which they gave. The gentleman from Texas yesterday referred to little bureau chiefs. I do not think he did himself much credit in that reflection. Mr. Chairman, there are chiefs of little bureaus and chiefs of big bureaus in the Department of Agriculture. These men are not in the department because of the salaries which they receive, for most of them are inadequately paid, but they are there because they love the work and because it affords an opportunity for service, and out of the obscurity of long, patient, and untiring research of these men have come the fundamental principles of agriculture upon which all practical agriculture to-day is based. I know that these men are enthusiastic. I know they believe in the things they are trying to do, and it is because I know their enthusiasm and——

Mr. BLANTON. Mr. Chairman, I make the point of order that the gentleman, the chairman of the committee, is not discussing the point of order; in fact, he concedes the point of order, but he is trying by oratory to influence the gentleman from Iowa to withdraw the point of order.

Mr. ANDERSON. Mr. Chairman——

Mr. BLANTON. Mr. Chairman, I ask for the regular order.

The CHAIRMAN. The gentleman from Minnesota.

Mr. ANDERSON. Mr. Chairman, as I say, I know these men are enthusiastic. They are enthusiastic in believing in the things they are trying to do, and we ought to have somebody in the department who can at the proper time encourage that enthusiasm, and who will at other times——

Mr. BLANTON. Mr. Chairman, I ask for the regular order.

The CHAIRMAN. The gentleman from Minnesota is the regular order.

Mr. BLANTON. I know the chairman is a parliamentarian and knows what the rules are.

The CHAIRMAN. The gentleman from Texas demands the regular order. The regular order is, Is there objection made to this item? Does the gentleman from Iowa make the point of order?

Mr. HAUGEN. I make the point of order. I have no objection to the gentleman from Minnesota speaking. I will agree to reserve the point of order.

The CHAIRMAN. As a matter of fact, the gentleman from Iowa reserved the point of order and now he makes the point of order.

Mr. HAUGEN. If necessary, I will make the point of order, but I would be glad to reserve it in order to let the gentleman from Minnesota have opportunity——

The CHAIRMAN. The gentleman from Texas has demanded the regular order; of course, if it is insisted upon——

Mr. BLANTON. I think we ought to get along with the bill, Mr. Chairman.

Mr. HAUGEN. If the gentleman insists upon the Chair determining the point of order, I will make it.

Mr. BLANTON. I know he can not change the opinion of the gentleman from Iowa.

The CHAIRMAN. The gentleman from Iowa makes the point of order against certain parts of this bill. The Chair thinks the gentleman from Iowa should specify a little more clearly than he has done, and the Chair takes it that the gentleman from Iowa makes the point of order against the three officers, director of scientific work, director of regulatory work, and solicitor——

Mr. HAUGEN. No; against two offices not authorized by law. As I stated, the committee under our rule may make appropriations for clerks and scientists in the department——

Mr. BYRNES of South Carolina. Will the gentleman yield?

Mr. HAUGEN. But there is no authority to create new positions such as these.

Mr. ANDERSON. The gentleman has made the point of order, and I desire to be heard on it.

The CHAIRMAN. The Chair would like to know from the gentleman from Iowa the exact point of order that he is making and will ask him to specify the names in this bill to which he objects.

Mr. HAUGEN. Director of scientific work, $5,000; director of regulatory work, $5,000; that is the language.

The CHAIRMAN. That is all. The Chair will now hear the gentleman from Minnesota on the point of order.

Mr. ANDERSON. Mr. Chairman, I hope I may have the careful attention of the Chair, because the ruling which the Chair applies to this case will have applicability to other items in the bill. I am free to confess—I want to be entirely fair with the Chair—that the items under consideration present a somewhat closer question than may be presented under some of the other items. I desire his particular attention because of the importance of the positions to which I have tried to direct the attention of this committee.

It is true, Mr. Chairman, there is no law which specifically provides for the employment of a director of scientific work or a director of regulatory work in the department. But, Mr. Chairman, there are employed in the Department of Agriculture agronomists, chemists, meteorologists, all sorts of men of various, sundry, and diverse designations, and there is no specific authorization of law for these employments. There is, however, a general law applicable to all the departments, which has been frequently construed and which may have an applicability to this situation. That general law is as follows, and is in section 169 of the Revised Statutes:

> Each head of a department is authorized to employ in the departments such number of clerks of the several classes recognized by law, and such messengers, assistant messengers, copyists, watchmen, laborers, and other employees, at such rates of compensation, respectively, as may be appropriated for by Congress from year to year.

Now, I do not maintain, of course, that these two places are authorized under this law. I refer to it only because I shall have occasion later to refer to the decisions under it, which I think are applicable as well to another provision which I am now going to read.

Section 523 of the Revised Statutes provides:

> The Commissioner of Agriculture shall appoint a chief clerk, with the salary of $2,000 a year, who in all cases during the necessary absence of the commissioner, or when the office of the commissioner shall become vacant, shall perform the duties of the commissioner.

Now, this is the language to which I wish to direct the attention of the Chair:

> And he shall appoint such other employees as Congress may from time to time provide in other departments of the Government, and he shall, as Congress may from time to time provide, employ other persons for such time as their services may be needed, including chemists, botanists, entomologists, and other persons skilled in the natural sciences pertaining to agriculture.

Now, it is clearly the intention of Congress in putting that language into the statute to give to the Secretary of Agriculture the broadest possible power to employ persons necessary to carry on the work which Congress provides for by appropriations, and also to give the general authority to appoint the persons for whom Congress might by appropriation provide these salaries.

Mr. CARTER. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. CARTER. The gentleman would not contend under the language he has just read that this would give the Secretary of Agriculture the right to appoint these persons?

Mr. ANDERSON. But to employ them.

Mr. CARTER. Or to employ these persons, without an authorization by Congress? The gentleman could not contend that, because the language says and repeats, "as Congress may provide."

Mr. ANDERSON. Ah, but the purpose of that language is to provide an authorization for appointments in those cases where Congress provides an appropriation.

Mr. CARTER. Exactly.

Mr. ANDERSON. Not by specific authorization. It never has been held——

Mr. CARTER. The gentleman from Minnesota is certainly a good enough parliamentarian not to assert that view seriously.

Mr. ANDERSON. I am asserting it in all seriousness, but I defer to the gentleman.

Mr. CARTER. As I understood the gentleman, he said that the Secretary of Agriculture would be authorized to appoint these men as provided in an appropriation?

Mr. ANDERSON. Yes. All this statute does is to authorize the Secretary of Agriculture to make an appointment or to employ a person when Congress has provided necessary appropriation for that person.

Let me direct the gentleman's attention to this: When this proposition first came up, as I recall it, the point of order was directed against an assistant secretary, a man who held an official position. Now, there was reason in the application of the rule to such a case, because it went against not only the inhibition against places not authorized by law but it went against the inhibition of legislation, because, of course, when we appropriated for a new secretary we at the same time imposed upon the Secretary the duties that were imposed upon an assistant secretary by law. The gentleman must keep in mind the fact that there are two inhibitions in this rule. One of them is that Congress shall not provide for places which are not authorized, and, second, that it shall not legislate on appropriation bills. Now, we are not legislating here. If we had provided that these men should perform certain duties; that they should take the place of the Secretary of Agriculture, or impose other duties upon them, then we would have come up against the inhibition of the rule.

But we have made no such provision. We have simply provided an appropriation for the salary of a person whom the Secretary has the right to employ. That is all that we have done.

Mr. CARTER. And the thing I am trying to find out is, Does the gentleman contend that the words "as may be provided by law," or "provided by Congress," would not limit the Secretary in these appointments until after the provision had been made by Congress?

Mr. ANDERSON. We might make this provision in two ways: We might give the Secretary a general appropriation for directing all the work of the department, and under the statutes I have read he would be clearly authorized to employ persons to do that work. There is no question in the world about that. The only difference here is that instead of making a lump-sum appropriation for the direction of the work we provide for two specific positions for which the Secretary of Agriculture has the power to make appointments.

The CHAIRMAN. Will the gentleman from Minnesota permit the Chair to ask him a question?

Mr. ANDERSON. Yes.

The CHAIRMAN. I presume the gentleman contends that the director of scientific work and the director of regulatory work are both scientists?

Mr. ANDERSON. Yes. And I am simply contending that all we are doing in this appropriation is to appropriate $5,000 for each of two places which the Secretary has the general authority to fill. We are not providing any statutory duties for these people. We are simply providing an appropriation for two men whom the Secretary now has the authority given him by Congress to employ.

I would like to direct the attention of the Chair to a decision of a prior chairman of the committee on a somewhat similar question. The Chair will find the decision in the CONGRESSIONAL RECORD for the third session of the Sixty-second Congress, on page 2732. As I recollect, the question was there raised as to the appointment of a solicitor. I will not go through the debate; I will only read the decision of the Chair, which is very short. The Chair says:

In the opinion of the Chair the precedents are almost uniform, to the effect that under the authority of the act creating the Department of Agriculture, as well as under the authority of the article of the statute which has been read here, it is within the province of this committee to consider any item in an appropriation bill to create and to care for such an employee as this, and therefore overrules the point of order.

Now, in the same session of the same Congress the Chair will find another decision at page 234. I want particularly to direct in this case the attention of the Chair to the argument made by the distinguished gentleman from Illinois [Mr. MANN], because it very well states the rule which is applicable to this situation. The gentleman from Illinois said:

Mr. MANN. Mr. Chairman, if the Chair will permit, I would like to make an observation in reference to the rule. Mr. Chairman, the rulings in regard to matters of this sort are so arbitrary and artificial that sometimes it is necessary to restate them. The rulings are uniform for many years that so far as the salary is concerned the salary in the current law fixes the salary for the bill. In other words, an increase in the salary of an official when that salary is covered by the current law can not be made over a point of order. This is purely artificial ruling, because there is no salary fixed by law for these places.

Which is the situation here. Then he proceeds:

Not long ago some chairman held that current law fixed the salary, because without that the House was in confusion. Now, there is also no law fixing the number of these places.

The Chair ruled on the matter in question there as follows:

It seems to the Chair that the first question for the Chair to ascertain is whether or not section 169 of the Revised Statutes—

That is the section I have read—

authorizes these clerks or whether the head of a department has the right to employ these five clerks. In 1906 Mr. HULL of Iowa was in the chair, and this identical question came up and was decided by him on a point of order made by Mr. Tawney upon clerks of a similar nature in the War Department. Mr. HULL held at that time, quoting section 169, that where the statute had authorized the head of a department to employ clerks and other laborers that it was in order, and he overruled the point of order.

Now, there is no essential point of difference between the power or authority to employ a clerk and the power or authority to employ a chemist or a director of scientific work, especially in view of the fact, as I said before, Mr. Chairman, that we have not in this appropriation bill imposed upon these two positions any official or administrative duties.

I want to direct the attention of the Chair to one or two other more recent decisions. I do so very briefly. The question came up again in the Sixty-sixth Congress, first session, and I direct the Chair's attention to the decision on page 295 of that session. I only read the decision of the Chair:

The Chair believes that the law organizing the Agricultural Department is sufficiently comprehensive to authorize the employment of additional persons by the department from time to time, as the department develops. Therefore the Chair overrules the point of order.

It is clear that the decisions of the Chair heretofore have been as broad as the language itself authorizing the Secretary to employ other persons as they might be needed in the department.

I have another decision here that I will just refer to by title. The Chair will find the decision in the Sixty-fourth Congress, first session, at page 2851, again sustaining the position which I am now taking. In fact, I think it has uniformly been held that, under the general authority authorizing the Secretary of Agriculture to employ other persons, it is in order to appropriate for the persons whom the Secretary of Agriculture is authorized to employ or appoint.

Mr. HAUGEN. The contention has not been made that the committee has no authority to make provision for certain employees in the department, but its authority is limited. I admit it has authority to report increases in the number of positions in the clerical force, but it has not the authority to report creating new positions as indicated.

When this matter was under consideration in the Sixty-fifth Congress, third session, on the 30th day of June, the gentleman from Illinois [Mr. MANN] made a point of order against the bill carrying an additional Assistant Secretary. Let me quote the RECORD, on page 2368:

Under this organic act we have the authority in the appropriation bill to increase the number of clerks, to increase the number of chemists, to increase the number of scientific men working in the Department of Agriculture, and have so authorized in the organic act—

Exactly as stated by the gentleman from Minnesota [Mr. ANDERSON]. Then he adds:

These organic acts refer not to the superior officer at the head of the department, but to the personnel of the department. In the language of the organic act creating the commissioner of agriculture, the language relates to certain under employees or officials. It does not relate to the men who are supervising officials at the top. And it seems to me that while it is in order to increase the number of employees of the department below, it is not in order to increase the number of officials at the top, which are not covered by the language of the organic act.

I quote from the Chairman's ruling. Mr. HAMLIN was in the chair. He ruled:

The CHAIRMAN. The organic act undoubtedly gives the Secretary of Agriculture authority to increase any given number of employees in the different places provided for by law, but that does not apply to administrative positions, such as Assistant Secretary to the department. For instance, the Chair thinks that the position of First Assistant Secretary is one position, and that of Second Assistant Secretary is a different position, and the Third Assistant Secretary is still a different position, and so on. The Chair does not think that the organic act gave the Secretary of Agriculture authority to increase the number of Assistant Secretaries, and you can not appropriate for such a position against a point of order unless Congress has authorized or created the particular position. The Chair therefore sustains the point of order.

That seems to me as clear as day, and the two provisions are on all fours. The gentleman from Minnesota [Mr. ANDERSON] says he assumes that the director is a scientist. The language in the bill does not so state. He may be a scientist, or he may be a politician. I do not know.

Mr. ANDERSON. I just want to make this observation, Mr. Chairman: Of course, if we had undertaken to appropriate for an additional secretary that would have been in violation of the rule, not alone because it was not authorized, but because it was legislation, because we could not provide for an additional secretary without imposing upon him the duties which are imposed by law upon an assistant secretary. But we are not undertaking to impose any duties by law upon these employees.

Mr. CARTER. Mr. Chairman, I know nothing about the duties performed by these two gentlemen—the director of scientific work and the director of regulatory work. They may be very good officials and may serve a splendid purpose, for all I know. I have no interest in stopping the activities of those two gentlemen; but I have some interest in the preservation of the integrity of the procedure and rules of the House. I recall when I first came to Congress how very much fretted and discommoded I often found myself by some of the rules of the House. I well remember that they seemed to me to prevent, preclude, and impede the progress of legislation which at that time seemed to me imperatively necessary; but after my subsequent experience in this House I have come to the conclusion that the rules of the House are about the best check we have upon expenditures from the Public Treasury, and, therefore, the greatest safeguard to the people.

Now, my friend from Minnesota cites to you here section 523, by which the Secretary of Agriculture is authorized to appoint a chief clerk, and so forth, "and shall appoint such other employees as Congress may from time to time provide." That is not and can not be construed by any means to be an authorization to place an amount in an appropriation bill. That simply authorizes the Secretary to appoint certain officials after the law has provided those officials. Now, so far as I can recall, the only authorization further than that cited by the gentleman

seems to be the fact that this item has been carried in appropriation bills heretofore, which is merely an appropriation for a specific term, during the years for which the bill ran, and is not in any way an authorization for the appointment of additional officials by the Secretary of Agriculture, as contemplated by this item.

Mr. BYRNES of South Carolina. Mr. Chairman, I simply want to add one thing to what has been said by the gentleman from Minnesota [Mr. ANDERSON].

In the organic act creating the Department of Agriculture that department is authorized to make investigations to secure information on subjects connected with agriculture. On page 410 of volume 4 of Hinds' Precedents, section 3615, the Chair will notice a decision by Chairman Payne, holding that the department being created for the declared purpose of investigation, an appropriation for the instrumentalities of such investigation is within the rule.

I simply suggest to the Chair that the employment of a director of scientific work is an instrumentality for the purpose of conducting the investigations authorized by the organic act creating the Department of Agriculture, and that it is sufficient authority in law for this appropriation. It does not involve the creation of a new bureau, but this is simply an appropriation for an instrumentality to accomplish the work authorized by the organic act, and the language of this decision by Chairman Payne is clearly a precedent for the decision overruling the point of order.

The CHAIRMAN. The Chair is aware that this is a very close question and that there is some conflict in the precedents.

Section 169 of the Revised Statutes has been quoted, which refers to the power of the department to appoint clerks of various classes, messengers, and so forth. If that was the only law in existence the Chair would have no doubt as to his decision, for he would base it on a precedent in Hinds', volume 4, section 3590, in which case a nearly similar proposition was ruled out of order. But referring to the law creating the Department of Agriculture, paragraph 778 of Chapter I, the Chair reads:

The Secretary of Agriculture shall appoint a chief clerk—

And so forth; and then this further power is given him:

He shall, as Congress may from time to time provide, employ other persons for such time as their services may be needed, including scientists, botanists, entomologists, and other persons skilled in the natural sciences pertaining to agriculture.

It seems to the Chair in reading the part of the bill to which objection has been made that the director of scientific work must be assumed to be a scientist in order to be qualified to be a director of that work. The Chair also thinks that the man in charge of the regulatory work should be a scientist.

Mr. HAUGEN. What evidence has the House that either of them is a scientist? There is nothing in the language of the bill to indicate that either are scientists. As I stated, they may be politicians, or they may be fishermen. I do not know. It is simply an assumption, but there is nothing here to show, not even the evidence of the statement of a member of the committee that they are scientists. The gentleman from Minnesota says he assumes they are. Are we going to base it on an assumption? If some Member of the House assumes that some one is a scientist, are we going to make that the basis of an appropriation?

The CHAIRMAN. The Chair asked the gentleman from Minnesota the question, and the answer was that these gentlemen were scientists, and the Chair will assume that that is correct.

Mr. HAUGEN. I should like to ask the gentleman from Minnesota who the scientist is?

The CHAIRMAN. Can the gentleman from Minnesota enlighten the gentleman from Iowa?

Mr. ANDERSON. Of course, there has been no appointment of any gentleman to either of these places. The places do not now exist.

Mr. HAUGEN. We have only the assertion of the gentleman from Minnesota that they are scientists.

Mr. ANDERSON. The Secretary has the power and authority to appoint other persons; he is not confined to appoint scientists or chemists or astrologists.

The CHAIRMAN. The Chair fortifies his position by a further authorization in the law. The Chair finds that in addition to the power to appoint scientists the Secretary of Agriculture has the power to appoint other persons, persons skilled in science pertaining to agriculture. It seems to the Chair that the authority granted to the Secretary of Agriculture is extremely broad—undoubtedly intended to be so in order to be sufficiently comprehensive to provide for the needs of the department as it develops. While a precedent can be referred to which does not allow the creation of a bureau for the purpose of carrying on scientific investigations without specific authorization, the Chair does not think that ruling applies in this case. Other rulings would make it clear that the authorization is not broad enough to cover officers high up in the department. But the Chair thinks that in order to carry on the work of the department the Secretary is authorized under the organic law to appoint men who are not at the very top of the department. Therefore the Chair feels that the point of order made by the gentleman from Iowa is not well taken. To further fortify the Chair's decision, he refers to page 2732 of the CONGRESSIONAL RECORD, February 7, 1913, where a ruling was made which is in line with the ruling of the present occupant of the chair. The Chair also cites the ruling of Chairman MADDEN on May 27, 1919, in a case almost parallel to the present one. The Chair overrules the point of order.

The Clerk read as follows:

For salaries and compensation of necessary employees in the mechanical shops and power plant of the Department of Agriculture, $100,000: *Provided*, That hereafter the Secretary of Agriculture may, by transfer settlement through the Treasury, reimburse any appropriation made for the salaries and compensation of employees in the mechanical shops of the department from the appropriation made for the bureau, office, or division for which any work in said shops is performed, and such reimbursement shall be at the actual cost of such work for supervision and labor.

Mr. HAUGEN. Mr. Chairman, I make a point of order against section 9, which provides that the Secretary may transfer, and so on; it is new language.

Mr. ANDERSON. I concede, Mr. Chairman, that the language is subject to a point of order. It will save money to the department, but if the gentleman from Iowa does not care to save the money, he can make the point of order.

Mr. HAUGEN. Oh, I understand what the question is.

The CHAIRMAN. The gentleman from Iowa makes the point of order that it is not authorized by law.

Mr. HAUGEN. Yes; it is new legislation.

The CHAIRMAN. The Chair sustains the point of order.

Mr. HAUGEN. Mr. Chairman, I offer the following amendment.

Mr. BANKHEAD. Did I understand the Chair to sustain the point of order to the original paragraph?

Mr. HAUGEN. Only to the proviso, and I offer this as a substitute for the paragraph.

The Clerk read as follows:

Page 3, line 7, strike out lines 7, 8, and 9 and insert in lieu thereof the following: "One mechanical superintendent, $2,500; 1 mechanical assistant, $1,800; 1 mechanical assistant, $1,400; 1 mechanical assistant, $1,380; 1 engineer, $1,400; 1 electrical engineer and draftsman, $1,200; 1 chief engineer, $1,800; 2 assistant engineers, at $1,200 each; 2 assistant engineers, at $1,000 each; 10 firemen, at $1,080 each; 1 fireman, $840; 4 firemen, at $720 each; 1 chief elevator conductor, $840; 16 elevator conductors, at $720 each; 3 elevator conductors, at $600 each; 1 superintendent of shops, $1,400; 1 cabinet shop foreman, $1,200; 5 cabinetmakers or carpenters, at $1,200 each; 3 cabinetmakers or carpenters, at $1,100 each; 9 cabinetmakers or carpenters, at $1,020 each; 3 cabinetmakers or carpenters, at $900 each; 1 instrument maker, $1,200; 1 electrician, $1,100; 2 electrical wiremen, at $1,100 each; 1 electrician or wireman, $1,000; 1 electrical wireman, $900; 1 electrician's helper, $840; 3 electrician's helpers, at $720 each; 1 painter, $1,020; 1 painter, $1,000; 5 painters, at $900 each; 5 plumbers or steamfitters, at $1,020 each; 2 plumber's helpers, at $840 each; 2 plumber's helpers, at $720 each; 1 blacksmith, $900; 1 elevator machinist, $1,200; 1 tinner or sheet-metal worker, $1,100; 1 tinner's helper, $720; 4 mechanics, at $1,200 each; 1 mechanic, $1,000."

Mr. HAUGEN. Mr. Chairman, that is a substitute and places them on the statutory roll instead of a lump-sum appropriation of $100,000. This carries exactly the amount of last year. It puts them on the statutory roll.

Mr. BLANTON. May I ask the gentleman a question?

Mr. HAUGEN. Yes.

Mr. BLANTON. Are any of these positions and salaries contained in the gentleman's amendment not authorized by law?

Mr. HAUGEN. I think they are authorized by law.

Mr. BLANTON. Does the gentleman know that some of them are not authorized by law? His argument was so novel, in the light of past transactions, that I had simply to sit here and be amused.

Mr. HAUGEN. I think there is a distinction between the two. I have not made a point of order against any position of the department as ruled by the chairman two years ago. On the point of order made by the gentleman from Illinois it was sustained and it has now been reversed. I am not finding any fault with reversing the decision. I think the rule is clear as to the clerks in the departments and that it has the authority to increase the number, but no authority to increase the salaries. But shall this Congress make lump-sum appropriations in lots of $100,000, or will it exercise its right in fixing a limit on the salaries? Shall we leave it entirely to the department? I believe that sane business requires that Congress should have something to do with fixing the salaries and determining the number of employees.

Mr. BLANTON. I am with the gentleman. I have been against him heretofore, but I am with him now.

Mr. HAUGEN. All this does is to put them on the statutory roll at the same salary carried in the current year instead of making a lump-sum appropriation of $100,000 to be expended as the department may in its discretion deem wise. I am not reflecting on the department, but the employees therein are not always infallible. I believe Congress has certain duties to perform, and that it should perform its plain duty and should determine the number of emyloyees as well as their salaries. That has been the policy of the committee heretofore which has handled these appropriations. I might say that the bill as prepared heretofore carried 6,000 positions on the statutory roll. I believe it is a sane business policy and we ought to adhere to it.

Mr. ANDERSON. Mr. Chairman, I desire to oppose the amendment. I merely want to state some of the considerations which moved the committee to provide a lump sum in lieu of the statutory mechanical roll. With the statutory mechanical force it is necessary to keep employees at all time, men who can do the mechanical work necessary to be done for the department, with the result that frequently these men are not employed as they might be at full capacity. Under the lump-sum amount they can be employed from day to day or hour by hour as they are needed, and a lump sum will give a flexibility which is not possible when they are on the statutory roll. Besides this, the statutory roll, which the gentleman from Iowa proposes and which we carried last year, carries $10,240 more than is carried under the lump-sum appropriation. If gentlemen of the House want to save $10,240 by providing a flexible mechanical force that can be employed as they are needed, then they ought to vote against the amendment of the gentleman from Iowa. If, on the other hand, they are willing to give $10,240 for the privilege of writing into the bill a page of statutory places, they ought to vote for that amendment. That is the entire situation.

Mr. HAUGEN. Oh, I take it that the gentleman wants to state the facts?

Mr. ANDERSON. I not only want to, but I do.

Mr. HAUGEN. I have not added up the amounts, but I am sure there is not that much difference.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The amendment was rejected.

The Clerk read as follows:

Salaries, Bureau of Farm Management and Farm Economics: Chief of bureau, $5,000; assistant to the chief, $2,520; executive assistant, $2,250; clerks—2 of class 4, 4 of class 3, 7 of class 2, 2 at $1,320 each, 18 of class 1, 3 at $1,100 each, 4 at $1,080 each, 15 at $1,000 each; clerks or draftsmen—1, $1,440; 1, $1,020; draftsman, $1,200; library assistants—1, $1,440; 1, $900; photographer, $1,400; cartographer, $1,500; messenger or laborer, $720; messenger boys—1, $600; 3 at $480 each; charwomen—1, $480; 5 at $240 each; in all, $89,830.

Mr. HAUGEN. Mr. Chairman, I reserve the point of order.

Mr. ANDERSON. Mr. Chairman, let us dispose of the point of order.

Mr. HAUGEN. Mr. Chairman, I make the point of order with reference to the use of the word "bureau" wherever it occurs.

Mr. ANDERSON. Mr. Chairman, I do not think that the words are subject to the point of order. The whole question is whether by using the word "bureau" in place of the word "office" you thereby create something that does not now exist. The use of the word "bureau" in lieu of the word "office" does not create anything. It is simply a distinctive title under which we are making these appropriations. So far as I know there is no law creating a bureau of farm management and farm economics. It is simply a convenient title which we use as a general head under which these appropriations are made. The Secretary has general authority, of course, to organize his force in the way which will best enable him to carry out his work. The mere fact that he calls one an office and another a bureau does not create anything, and this does not create anything.

Mr. HAUGEN. Mr. Chairman, I think there are numerous decisions, though I am not prepared to point them out now, which hold that this is out of order. It has never been questioned, so far as I know, and whenever the point of order has been made it has been conceded.

The CHAIRMAN. The Chair is prepared to rule. The Chair sustains the point of order.

Mr. ANDERSON. Mr. Chairman, I ask unanimous consent that the word "office" may be substituted for the word "bureau" wherever it occurs in the paragraph, and in the heading.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent that the word "office" may be substituted in this paragraph wherever the word "bureau" now appears, and in the heading. Is there objection?

There was no objection.

Mr. SUMNERS of Texas. Mr. Chairman, I move to strike out the paragraph.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. SUMNERS of Texas: Page 3, strike out lines 18 to 25, inclusive, and on page 4, lines 1 to 4 inclusive.

Mr. SUMNERS of Texas. Mr. Chairman and gentlemen of the committee, I desire to direct your serious consideration to the motion which I have made. This item carries an appropriation of $414,830 for cost of production, farm organization, farm finance, farm labor, agricultural history and geography, land economics, and farm-life studies. This is in addition to the farm demonstration and other agricultural agents scattered through the country. The chief expenditure is for the first item. There are 19 agents regularly in the field, so the chief of the bureau says, getting information, studying the cost of production of the various crops in the country. They select 100 farms in a State, and out of that 100 farms they will pick 25. Once a week, or possibly twice a week, or once a month, some young man will go around to the farmer and find out how he is getting along and what it is costing him to run his business. A good illustration, I imagine, of what they have been doing may be had with regard to cotton. They conducted a study of the cost of cotton production in 1918, and they made the remarkable discovery that one man's crop would cost 8 cents a pound and another man's $1.07 a pound, and they guessed the average cost of cotton, which, I believe, was 28 cents per pound, but the bulletin containing the guess was not printed until 1920. My objection to this sort of activity is that it is taking the people's money to get a lot of stuff which is crammed away in these departments, which was of but little value at any time, and dead before you get it, and that nobody ever uses it. I am going to quote from the committee hearings on cotton price matter:

Mr. BYRNES. Yes. To give you an idea, this cotton bulletin you have here, which contains 814 records for 1918, was published November 19, 1920; that is two years later.

Mr. TAYLOR. The mimeographed result of that was sent back to all these farmers, a complete statement for all was sent back to these farmers a year earlier than that.

Mr. BYRNES. Which would be a year after it was taken, because it says studies for 1918, and they were computed in the fall of 1918.

Mr. TAYLOR. They were taken in the spring of 1919. It was in the spring of 1919 that I took charge of the office.

Mr. BYRNES. How does it represent the cost for 1918?

Mr. TAYLOR. In the spring of 1919 they got the record for the previous year.

Mr. BYRNES. You do not think the average farmer down there, if you collect the information as you have described, has any recollection in 1919 of how much he spent in the spring of 1918 for chopping up cotton?

Mr. TAYLOR. Yes; we think he does.

Mr. BYRNES. Is that the information upon which it is based, that you ask him to recall how much time his children spent in chopping up cotton the previous year?

Mr. TAYLOR. Yes.

Mr. BYRNES. I am frank to say that you have made me lose confidence in your cost production studies.

Mr. TAYLOR. You are not the only one who, at first blush, on a question of that kind would think that your view was correct. I was of that view at one time, but when I see the skill with which the men ask questions——

Mr. BYRNES. It is not the skill with which a question is asked, but it is the skill with which the question is answered that gets me.

Mr. TAYLOR. That is also true; but you must bear in mind that these farmers are going ahead very much the same year after year.

The crop studied had all been sold and the next crop had been sold, and it only lacked a month and 11 days of being Christmas of the next year before it was published. They have been studying farm labor in the wheat belt and getting along pretty well, but they wanted to study the life history of the farm laborers. I quote from the hearings:

They found that one of the difficulties is the lack of continuous employment after the men get out there, and they are studying the life history of the men who come into this region during harvest, getting a notion of the kind of men who come.

It is for that sort of stuff that the people's money is being taken under the guise of rendering service to the American farmer and the American people. They said they did not have quite enough for that particular job, and they wanted $20,000 to hire some doctor to study and, I suppose, of course, to write the life history of these agricultural birds of passage. I am going to quote again from the hearings:

Then there is also the farm-labor problem, and the ordinary farm monthly hand proposition. We have not been able to touch that, but with the increase of $20,000 we expect that we will be able to hire Dr. Lescohier or some other man equally as good, we believe, to take charge and devote his entire time to studying the farm-labor problem, first the itinerant labor, and then the regular monthly hand.

They sent some one out here to find out how much it cost to raise beef, and then there is some one studying whether it is better to use horses or tractors. Another man is studying whether it is better to use a reaper or an old hand cradle.

They want to get up a geographical history of the country, and they will draw a lesson for the prairie farmer from the fact that the man in the hills of Tennessee uses a cradle.

We men who come from the South know now that we are not getting the cost of producing cotton. The grain farmer and the stockman know the same thing with regard to their products. Our people are hard up. We need money more than we do to have somebody tell us what we know too well. Yet this section and the two following take over $400,000. What we want to know is how to change the situation. A man who has fallen overboard 10 miles from shore, where the water is too deep for him to wade and the shore too far away for him to swim, does not care how deep the water is or how far the shore is away if he can neither wade nor swim. He needs a boat, not somebody to crawl on top of his back. He has all the weight he can carry, and so have the taxpayers of this country. We have enough knowledge right now. We want some way in which to apply it. I am getting tired of taking my people's money and using it to pay the salary of a lot of these fellows who run around in their Ford automobiles, take down a few figures, and run back to the hotel and issue a bulletin two years afterwards that nobody cares anything about. This is the most remarkable record of the expenditure of money that I have ever read of.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BLANTON. Mr. Chairman, I ask unanimous consent that his time be extended for five minutes.

The CHAIRMAN. Is there objection?

Mr. ANDERSON. Mr. Chairman, in view of the attitude of the gentleman from Texas [Mr. BLANTON] when I was endeavoring to make a few feeble remarks with respect to the two places on the statutory roll of the Secretary's office, this request is very remarkable. However, I do not object.

Mr. BLANTON. I am sure the gentleman's diplomatic sense of what could happen and what could not——

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ANDERSON. I have not the slightest objection to the gentleman proceeding now.

Mr. SUMNERS of Texas. Gentlemen, I want to call your attention to the records. This item runs up close to a half million dollars of the people's money. In the report here, if you gentlemen happen to have it, under the head of activities, there is enumerated the activity to which I have directed your attention. Then when it comes to subheading and subdivision of this activity you will find what the people get for their money. Under the head of wheat they pick out some wheat farmers, send these folks around to these various wheat farmers and get records of how much man power they use, how much horse power they use, how much tractor power they use at the time, and bring a report back—I presume on the theory that they can thus find out why and how some particular farmer has raised a crop cheaper than somebody else. Do not confuse these people with the regular demonstration agents. For instance, they will find one man is using four horses and another man is using six horses, and they draw a lesson from that. Now, we who have been raised on a farm know that a man who has four big horses does not have to have six, but just makes use of the four; but if you have six little horses you have to put them in to get the work which the four big horses could do, and yet one of these fellows will go and say, "Here is a man who did so much with four horses; you ought to be able to do with four horses," even though the other man has but six little ones. Now, under the head of farm labor, let us use our horse sense. They go out and make this remarkable discovery, that up in the wheat fields of Kansas where men go in to do that seasonal work, there may not be immediate connection between jobs, and when they get through with cutting the wheat there is nothing at all to do there. It takes Dr. Somebody to discover that—and the people have to pay for the discovery. They say they are not quite ready to handle this thing because they want to know the life history of the fellows. Why, the life history of the next bunch may differ, just as the cost of the next cotton crop will be different. If they can show the use of this stuff I am willing to pay for it, but I am not willing to take the money from my people to pay salaries of these Ford drivers going around over the country trying to teach people who knew before they were born more than they will ever know in the world how to run a farm. Now, they take agriculture, history, and geography, and under the head of that, to illustrate, those who testified before the committee said that in some places they use the cradle and in some places they use these ordinary harvesting machines. Now, they have got another proposition here. They have got a fellow who goes out here and undertakes to talk to the farmers upon insurance contracts——

The CHAIRMAN. The time of the gentleman has again expired.

Mr. ANDERSON. Mr. Chairman, I confess I have a great deal of sympathy with the attitude of the gentleman from Texas with reference to this appropriation. I was not impressed with some of the things which were being done and which it was proposed to do under this item. The committee had that fact in mind when it changed the proportions of the items as between the amount which could be spent for ascertaining the cost of production and the amount which might be spent for the study of power, for the study of farm labor and investigations of that sort, but, Mr. Chairman, this work properly conducted will eventually be of the highest value to the farmers of the country. It is necessary before we can bring it actually back to the farm that some study should be made of a general character in order that we may get the basic information to check against when considering the costs of a particular farm or particular operation. Now, industry generally has the widest and the most complete information with respect to the cost of production in manufacture. We know in a general way, for industry in the country over, what different operations cost, and each manufacturing establishment has the most detailed information with respect to what it cost to produce a given article. We have no such information for agriculture, and before we can have it it is necessary to make certain general studies of cost of production from which general rules can be ascertained before we can make the individual studies which I think ought ultimately to be made.

Mr. SUMNERS of Texas. Will the gentleman yield?

Mr. ANDERSON. In just a moment. Now, the question of cost of production is not a mere matter of bookkeeping. It goes much deeper than that. It comes eventually to the question of an analysis of the operations themselves, in the light of what the operations actually cost, to determine whether the operations can be so modified as to cheapen the cost of production. I recognize the fact that these general studies will not benefit the farmer immediately or directly, but they may help to give the general public an idea that what it is paying for farm products is not excessive considering the cost of production, and we must have that information before we can make the analysis of operations which is necessary as a basis for farm management.

Mr. PURNELL. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. PURNELL. I want to ask the chairman what part of this work, if any, he thinks could be done by the agricultural experimental stations?

Mr. ANDERSON. Practically all of it is done in cooperation with the agricultural experimental stations.

Mr. PURNELL. Could they, in his judgment, if they had sufficient funds, take over this work and do it more advantageously than it is now being done by the two separate divisions?

Mr. ANDERSON. I do not think so, because the cooperation which exists now is very complete, and it is necessary to have a central agency which will correlate the work of the different experimental stations, so that all of the information will be upon a comparable basis.

Mr. PURNELL. However, there is necessarily a duplication of work?

Mr. ANDERSON. I do not think so. I do not think there is any duplication. I think the work is done in cooperation which prevents any real duplication of work.

Mr. SUMNERS of Texas. Will the gentleman yield for a question?

Mr. ANDERSON. Yes.

Mr. SUMNERS of Texas. I appreciate that the gentleman in charge of this bill has very broad and liberal views, but I want to ask my friend if he does not recognize this fact, that it is necessary for industry to know the cost of production, because then it is able to write the cost of production into its selling price? Now, then, if it is necessary for industry to do that, it does not follow that a business that has not been able to organize a sales-agent business, so that it can write the cost into the selling price, should have that information.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ANDERSON. The gentleman is dealing with only one side of this proposition, and that is a purely informational side, a determination of the question of cost with a view of determining what the price ought to be. While it is important, it is a relatively unimportant side of the proposition. The real object of this work is to determine the cost of operations in such

a way that analysis of those operations will show which of them is too expensive as compared with the same kind of operations of another farmer or another class of farmers, or between one section and another. You can not get that analysis unless you have as its basis the actual cost of the operations.

Mr. SUMNERS of Texas. Does not the gentleman recognize in regard to agriculture, from a practical standpoint, that the difference in soil and in climate, difference in the products of the farm, production through the different years, and all of those things, make this information not worth the money we pay to obtain it?

Mr. ANDERSON. No; I do not. I know that two farmers farming exactly the same land, side by side, one pursuing one method and the other another method, will get yields altogether different. Those widely differing yields are largely due to the different methods employed. Now, then, if we get such an analysis through, a determination of costs will demonstrate why one man's method is better than another's, and it seems to me we can help the fellow whose cost of operation is too high.

Mr. SUMNERS of Texas. Does not the gentleman think, as a practical proposition, that a man who can not get his information from his neighbor across the way, can not get information from one of these Ford fellows?

Mr. ANDERSON. No; I do not think it is true. I think the history of the work shows it is not true.

Mr. BYRNES of South Carolina. Mr. Chairman, I move to strike out the last two words.

I desire to say to my friend from Texas [Mr. SUMNERS] that in reading the hearings he doubtless overlooked this fact, that while the representative of the department stated that these bulletins as to the cost of cotton production, to which he has referred, are not printed and issued until a year and a half afterwards—that information having been elicited by a question of mine—the representative of the bureau stated, however, that mimeograph copies of the information, secured as a result of this investigation, was immediately forwarded to the farmers of the particular section where the survey was made, and that the information was also made public, and I think it was published in the newspapers of the country. And the fact is that the officials of the American Cotton Association, who are asking to have this very work done as to cotton, secured from the Agricultural Department the information that the bulk of the crop of cotton made during the year 1918 cost about 28 cents; and it enabled them to put before the country the truth as to the cost of cotton production. It was important to the cotton farmers of this country, for many men believed that because cotton had been sold at one time for 10 cents it could still be made for 10 cents, and, notwithstanding the fact that the farmers of the South might assert that it cost 28 cents, they could never convince the people of this country that it cost them that much, but the mere statement of the Department of Agriculture that the agents of the United States Government had gone down into the cotton fields and had ascertained that the cotton crop of 1918 cost 28 cents a pound served to convince the people of the country that if cotton goods were high certainly the farmer was not reaping the unusual profit but that the mills of the country were receiving the major portion of the profit. And it helped the farmers of the State of Texas and the farmers of the State of South Carolina in the demand they are making—a price that will at least enable them to meet the cost of production.

Mr. SUMNERS of Texas. Will the gentleman yield?

Mr. BYRNES of South Carolina. I will.

Mr. SUMNERS of Texas. Does the gentleman stand here and say that that statement, wherever it was made, caused any man to pay one cent more for cotton or got the farmer one single cent more for his cotton?

Mr. BYRNES of South Carolina. I have never assumed to state what fixes the cost of cotton, and I do not think the gentleman from Texas could convince the other gentlemen from the South as to exactly what causes cotton to sell to-day for the prices at which it is being sold. And I can not say that the knowledge of the cost of production increased the price paid for cotton, unless it has served to induce the farmers to hold their cotton for a fair price. But I know that there is not a cotton farmer in this country who would not want to have behind his statement that his cotton is costing him 28 cents the statement of the United States Government that they have investigated it and found that the farmers' allegation is true. It should serve to strengthen the position of those who are holding their crops and demanding a price equal to the cost of production.

And it gives greater effect to the argument which is made with eloquence and effectiveness always by the gentleman from Texas [Mr. SUMNERS], that the cotton farmers of the South are entitled to more than they are now receiving.

Mr. SUMNERS of Texas. Mr. Chairman, will the gentleman yield for a question?

Mr. BYRNES of South Carolina. I yield.

Mr. SUMNERS of Texas. Does not the gentleman know that the price of commodities is not fixed by argument, but by trade conditions and the conditions of commerce?

Mr. BYRNES of South Carolina. Well, in their fight for better prices, does the gentleman believe that it puts the cotton farmers in any better fix not to have the statement of the United States Government behind them, that their statement as to the cost of production is true?

Mr. SUMNERS of Texas. Not a bit on earth. The buyer does not pay a quarter of a cent more than he is obliged to pay for it.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. JONES of Texas rose.

Mr. ANDERSON. Mr. Chairman, I wonder if we can not come to some agreement as to the time to be expended on this item. Of course, all of this debate with reference to the statutory roll is on the amendment to strike out the statutory roll, which has no relation to the thing that the gentleman from Texas [Mr. SUMNERS] is trying to do. I wonder if we can not get a vote on this particular proposition, which is really an item necessary to carry on this work.

Mr. JONES of Texas. Mr. Chairman, I would like to make a few remarks on this amendment.

Mr. ANDERSON. Mr. Chairman, I ask unanimous consent that the debate on the pending paragraph and all amendments thereto close in 12 minutes, the gentleman from Texas [Mr. JONES] to have five minutes and the gentleman from Kansas [Mr. WHITE] to have five minutes and the gentleman from Minnesota two minutes.

The CHAIRMAN. The gentleman from Minnesota asks unanimous consent that the debate on this paragraph and all amendments thereto close in 12 minutes, the time to be detailed as outlined by him. Is there objection?

There was no objection.

Mr. JONES of Texas. Mr. Chairman, I rise to support the amendment of my colleague. I see here on page 41 of the hearings that Dr. Taylor states:

> In a general way, the cost of producing wheat showed a range from about $1 a bushel up to about $5 a bushel on the different farms in Kansas.

That indicates the wide range of information that they get, and the lack of accuracy in connection with it. But over here on page 55 it says:

> The farm-life studies all look toward a study of the methods of improving country life and making it more attractive from the standpoint of the home and the community, but with the greater emphasis here upon the community and the development of right relations in the community. I should say that this work at the present time is in this stage, that communities that have a better organized life and a more satisfactory country life are being studied and the results being published with a view to stimulating leadership in other communities where less development has taken place, but it all centers upon making farm life more attractive and keeping in the country the better element of our rural population.

I submit that there has been too much attention paid recently to efforts on the part of various people to try to make farm life more attractive. There is always some sort of an uplifter going around who imagines that by the waving of a magic wand or through some subtle process he will be able to make farm life attractive, and bewails the fact that there are many conveniences which men have in the cities which men in the country do not possess. There is one sure way, and only one sure way, to make farm life attractive, and that is to make it profitable, and then these other things will come in the natural course of events. They do not have these conveniences now, not because they do not appreciate them, not because they do not wish to have them, but because farm life is not profitable.

Now, I submit you are not going to get anywhere with the kind of conduct and the character of investigations that are shown to have been carried on by the people under this appropriation, and I believe that we could very much better afford to appropriate more to some bureau or organization of government that is trying to get a better system of distribution in this country. That is the real problem. [Applause.]

Even if you are going to make this appropriation, I would rather transfer it to the Bureau of Markets or strike it out altogether. I would transfer it to the Bureau of Markets, where something tangible and real is under investigation, and through which information of real value is being furnished.

Mr. BLANTON. I want to call attention to the splendid proposition which our colleague [Mr. SUMNERS of Texas] has now brought in to relieve that very situation. At present he can not get it out of committee.

Mr. JONES of Texas. I am glad the gentleman suggested that. I have taken occasion to read the measure of our colleague and his comments in reference to the same, and I believe that his bill is practical with reference to a method of distribution. There are many articles and commodities in the United States for which the producer gets very little but before they reach the consumer the consumer must pay high prices.

If we refer such matters to the bureau in the department that is doing something worth while, there would be some excuse for it; but to appropriate half a million dollars to some people who are investigating something that is of no value, either to the producer or the consumer, is pure folly. I suggest that all we are able to appropriate by the Government at this time should be appropriated toward securing a method of distribution in this country, and the studies that are carried on in the Department of Agriculture should be devoted primarily to the investigation of better methods of distribution in the United States. For that reason I think the paragraph ought to go out. [Applause.]

Much has been said recently of the necessity of securing some measure of relief for the farmers and stockmen of this country. All men agree that practically all the farm produce that has been grown this year and practically all the stock have been sold at less than the cost of production. This is a condition which can not continue if this country is to flourish and the prosperity of the Nation is to endure. This situation brings directly before Congress and before the people the most serious and important problem that the Republic has faced in many years.

As a matter of fact, one of the greatest causes of the trouble is that so many people are living in the cities and too few people are living in the country, and too few people are willing to undergo the burdens of farm life. This condition is getting worse. In the early part of the history of this country only about 15 per cent of the people lived in the city, and there were then no large cities. In those days about 85 per cent lived in the country. Even 40 years ago 35 per cent lived in the cities and 65 per cent lived in the country. At the present time, according to the latest statistics which are available, about 51.4 per cent of the people of the United States live in cities and towns of more than 2,500 population.

From time to time we have heard statements on the floor of the House to the effect that farm life should be made more attractive; that organizations should be promoted and maintained which would cause the installation of more modern conveniences and better living conditions under which the farmers, the ranchmen, and stock farmers of America are living. This is all very well. It goes without saying, all these things would be appreciated and enjoyed by the people who live in the country, but to suggest this as a remedy or to start trying to change conditions after this fashion is putting the cart before the horse.

I grew up in the country, and until I was grown I had lived nowhere except on the farm where I was born. This place my father is still running. I know something, therefore, of the practical side of life in the country, and I know that it is idle to talk about bettering living conditions in the country or of making farm life more attractive except in one way, and this is the only way to stop the present drift from the country to the city. The way to accomplish this is to make farm life a paying business. On no other basis will conditions ever be changed, and if farm life is made more profitable the modern conveniences, the attractive places, and all of these other things will follow as mere incidents. They have not come heretofore, not because the people have not wanted them but because of the prevailing prices the farmers and stockmen have received they were not able to afford these things.

If the conditions are changed about so that farm life will be more profitable than life in the cities there will be a real back-to-the-farm tendency. Many people do not appreciate the difficulties under which the farmer labors. Many men do not understand the uncertainties of the seasons, the hardships which he has to face. The drift from the country to the city can not be stopped by a mere slogan. You can not drive the American people by a mere process of lecturing them.

On the other hand, by making country life attractive—and the one way to make it attractive is to make it remunerative, for when people have money they are able to surround themselves with conditions through which they can make life attractive—this question will be in a large measure settled. Compare in your own mind the average home in the country with the average home in the city; contrast the home equipment, the furniture that the average farmer is able to use as compared with the average man who lives in the town or the city; compare the conveniences of these homes of the city man which the average farmer does not possess; compare the average returns of the man on the farm with that of the man in the city; compare the hours which he works, and you soon know the secret of the desire of the boys to leave the farm and go to the crowded city. The permanent prosperity of every man who lives in a town or city is necessarily dependent upon the prosperity of the man who produces the necessities of life.

It is just as certain as can be that we will never be able to get people to till the soil at the old figure. One can well see the conditions that might prevail if everybody moved to the town. We would all starve, and yet a great many more people could move to the country, not only without starving but with the effect of making conditions better in this country.

In view of the many things that have been said here as to the terrible conditions prevailing and as to the remedies that might be put forward, I thought it wise to submit these thoughts in connection with the solution of the problem.

To my way of thinking there are two ways in which farm conditions in this country may be materially improved: First, by securing a better, more efficient, and less wasteful system of distribution in this country, and, second, by increasing or bettering and furnishing larger markets in foreign countries for the raw products of the land in which we live. As an incident to these a better system of rural credits should be devised.

In my judgment the sudden placing of the graduated system of rediscount rates by the Federal Reserve System all at one time and the consequent headlong deflation was a mistake. Of course, everyone realizes that some deflation was necessary, but such as was necessary should have been begun earlier and done gradually. It is simply the difference between being in a 10-story building and desiring to come down with the choice of two methods—first, to jump out of the window, and, second, to come down the stairs. It seems that those in authority chose the method of jumping out of the window. Practically at the same time this was done those in charge of its operation chose to discontinue the activities of the War Finance Corporation. In my judgment the Congress acted very wisely in reviving the work of this body, as it will tend to give us better markets in this country and abroad for the raw products of America.

We must have a better marketing system in this country. A plan must be devised to secure for the producer a larger percentage of what the ultimate consumer pays. We have always paid too much attention to forms and not enough attention to the substance of things. If we will transfer in this bill the appropriations and the activities from some of the useless things to the far more useful and practical problem of bringing the producer and consumer in closer touch with each other, we will perform a work that is really worth while.

In my judgment, also, legislation should be enacted to abolish the wild gambling in futures of farm products through which by means of juggling certain persons are able to manipulate the prices of such products in violation of the legitimate laws of supply and demand. Of course, everyone realizes the necessity for legitimate trading exchanges, but the wild, absurd, and speculative gambling should be checked.

There are some men in this House and elsewhere throughout the country who smile in a cynical sort of way when a plea is made for relief for the American farmer. The man who treats lightly the problems of the American farmer is short-sighted. The American producer faces real problems, and his problems are the problems of the whole country and the problems of the human race. I want to say to everyone who does not take this matter seriously that all the busy prosperity of the cities, their skyscrapers, and their towering buildings of brick and marble, which make such inspiring skylines, with all the hum and spin of industry, are alike dependent upon the success of the producer, and their busy wheels will no longer be heard and those evidences of prosperity will become waste places of decay unless the farms and ranches of this country are rehabilitated and opportunity furnished them to share in that prosperity.

The CHAIRMAN. The gentleman from Kansas [Mr. WHITE] is recognized for five minutes.

Mr. WHITE of Kansas. Mr. Chairman, I want to say it is impossible to ascertain accurately the cost of the production of a bushel of wheat. [Applause.] You can not standardize the cost of a bushel of wheat. It can not be done, because the fact is that the circumstances surrounding its production are so varied the production of a bushel of wheat or a pound of beef or a pound of pork or a bushel of any kind of grain

is beset with so many precarious conditions that it is impossible to ascertain or standardize the cost.

I think of all the useless things that I have heard of, this is the most superlatively useless and extravagant item in this bill or in any piece of proposed legislation of which I have knowledge. [Applause.] In my own district on many farms in the last season volunteer wheat yielded from 20 to 30 bushels per acre. But that establishes no precedent; that fixes no rule; that disseminates no valuable information. I say to you, Mr. Chairman, from the viewpoint of a practical farmer, that the greatest stimulus which a slipshod, poor, needy farmer can have is his contiguity to a good farmer. [Applause.]

This bureau is endeavoring to disseminate information that is being disseminated throughout this country by duplicating agencies that are in a far better position to secure and disseminate the information.

I am in favor of this bill. I am going to vote for it. I do not think it is entirely useless. I am in favor of getting the chinch bug, the boll weevil, the blight, and the rust if it can be done. I do not know how much progress has been made in that direction. Very little, I think. Yet I am for it.

> We will swat the fly in his good right eye;
> We will sing the chinch bug's knell,
> And punch a hole in the wicked boll
> And send the blight to—destruction.

[Laughter.]

I say to you, gentlemen, that you can ascertain the cost of a pound of steam pretty accurately, and the cost of any kind of a machine that is built for any purpose, but the man who puts wheat in the ground can not tell how big a crop he is going to get. The farmer is a manufacturer, and the farm is his factory and his investment. He must have tools. He must have a big investment in land, in fences, and in labor. Yet he does not know and can not know whether he will have a crop, or half a crop, or a third of a crop, or a failure. That is incident to every line of agriculture throughout this country, North as well as South, and no man knows how many more bushels of corn or wheat, or how many more pounds of beef, or how many more bales of cotton we will produce because of the activities of the Department of Agriculture. But in this particular instance I shall vote for the amendment of the gentleman from Texas to strike out the section and save to the taxpayers approximately one-half million dollars.

Mr. ANDERSON. Mr. Chairman, I am very sorry to see so many of the gentlemen who say they are practical farmers put themselves in disagreement with those who appeared before our committee and asked for items such as this. I think there is no item in the bill behind which the farmers' organizations are as completely united as they are on the proposition of securing costs of production of farm products. Everybody knows, of course, that you can not say dogmatically that it costs $1 or $2 a bushel to raise wheat the United States over. Of course, that is ridiculous; but taking the farm as a factory, as my friend from Kansas [Mr. WHITE] says, you can find out whether the operations of that farm are costing too much or not, and if so why they are costing too much. You can have an analysis of those operations that will enable you to determine which one of them as compared with the same operation elsewhere is costing too much.

Mr. WHITE of Kansas. Will the gentleman pardon a question?

Mr. ANDERSON. I have only two minutes, but I yield to my friend from Kansas.

Mr. WHITE of Kansas. Does not the gentleman think the farmer knows as much about his business as men in other lines of business know about theirs?

Mr. ANDERSON. Of course I do, but the farmer has not the facilities for securing his costs which industry generally has, and I am glad to see him taking a leaf out of the book of industry and undertaking to find out what it is costing him to do business—not upon any guesswork basis, but upon the basis of the scientific ascertainment of costs.

Mr. DEMPSEY. Will the gentleman yield for a question?

The CHAIRMAN. The time of the gentleman has expired.

Mr. ANDERSON. I would be glad to yield to the gentleman from New York, but my time has expired.

The CHAIRMAN. The question is on the motion of the gentleman from Texas to strike out the paragraph.

The question being taken, on a division (demanded by Mr. SUMNERS of Texas) there were—ayes 11, noes 51.

Accordingly the motion to strike out the paragraph was rejected.

The Clerk read as follows:

General expenses, Bureau of Farm Management and Farm Economics: For the employment of persons in the city of Washington and elsewhere, furniture, supplies, traveling expenses, rent outside of the District of Columbia, and all other expenses necessary in carrying out the work herein authorized, as follows:

Mr. ANDERSON. Mr. Chairman, I move to strike out the word "Bureau" in line 5, after the words "general expenses," and insert the word "Office."

The CHAIRMAN. The gentleman from Minnesota offers an amendemnt which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. ANDERSON: Page 4, line 5, strike out the word "Bureau" and insert in lieu thereof the word "Office."

The amendment was agreed to.

Mr. RUBEY. Mr. Chairman, I offer the same amendment in line 16.

Mr. ANDERSON. That has not been read.

The CHAIRMAN. That paragraph has not been read.

Mr. SUMNERS of Texas. Mr. Chairman, a parliamentary inquiry. That language is divided as a paragraph, but it is not a complete sentence. Is it to be regarded as a complete paragraph for the purpose of offering an amendment? It does not appear to be a complete sentence and does not seem to get anywhere.

The CHAIRMAN. The Clerk will read the next paragraph and then the Chair will recognize the gentleman for an amendment.

The Clerk read as follows:

To investigate and encourage the adoption of improved methods of farm management and farm practice, $325,000: *Provided*, That of this amount $150,000 may be used in ascertaining the cost of production of the principal staple agricultural products.

Total for Bureau of Farm Management and Farm Economics, $414,830.

Mr. ANDERSON. I move to strike out, in line 16, the word "Bureau" and insert the word "Office."

The CHAIRMAN. The gentleman from Minnesota offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 4, line 16, strike out the word "Bureau" and insert in lieu thereof the word "Office."

The amendment was agreed to.

Mr. SUMNERS of Texas. I move to strike out the entire paragraph.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. SUMNERS of Texas: Page 4, after line 4, strike out lines 5 to 17, inclusive.

Mr. SUMNERS of Texas. Mr. Chairman, I recognize that there is no chance to strike out this item. My opposition to the section of the bill just read does not rest upon any disposition to give the committee trouble, but upon what I believe to be a violation of the duty and obligation of the American Congress in dealing with the great business of agriculture and dealing with the finances of a tax-burdened people. I listened to the gentleman in charge of this bill for some justification, for some reason, for not taking this money from where it is appropriated by this section and putting it where it would do some service, or otherwise leaving it in the Treasury. If these committees, if these bureaus, are to hold the confidence of the American people, they must quit spending money to get information which can not be applied definitely to any practical benefit. There are no more practical persons than the farmers in this country, and when you take a half million dollars almost from the people to find out what it costs to produce things that everybody knows are selling below the cost of production and they can not help themselves, they have the right to know why, and why this tax burden. It is not sufficient to say it might do some good, though none has been shown. But the question is, Will it do more good than if otherwise expended? The big fact is known.

We know that the commodities are being sold for less than the cost of production. How much more sure can we be made? What are you going to do with the information when you know that the farmer who is given the information is not getting the cost of production and knows it? If we have any money to spend let us spend it to increase his power to defend himself against the situation. That is what he needs. He needs an opportunity to make the situation better. I challenge anybody on either side of the House to show that the farmers are going to get any benefit out of this information. Yet he is compelled out of his poverty to pay this tax. It is money taken from his children. It is not right.

Mr. FESS. Will the gentleman yield?

Mr. SUMNERS of Texas. I will.

Mr. FESS. The gentleman is a member of the Committee on Agriculture.

Mr. SUMNERS of Texas. No; I do not possess that honor.

Mr. FESS. The gentleman has impressed himself on the Members of the House, including myself, as one who knows considerable about agriculture. I want to ask him whether he is convinced that the expenditure of this money is useless?

Mr. SUMNERS of Texas. It is pretty hard to say whether it is utterly useless.

Mr. FESS. It amounts to nearly half a million dollars.

Mr. SUMNERS of Texas. I can say without any question that in my judgment it is an extravagant and an unjustifiable waste of the public money. That is what I say about it. If gentlemen will examine the hearings made by the committee on this bill they will see that they want to study the life history of the casual laborer that goes into the wheat fields of the Northwest. They want to study the different sorts of insurance policies and help the farmer out on that. They want to study how much you should use a tractor and how much an ordinary plow, and then bring that information back here and give it out.

The CHAIRMAN. The time of the gentleman has expired.

Mr. RAYBURN. Mr. Chairman, I ask unanimous consent that my colleague have five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. SUMNERS of Texas. Now, to give you a sample, and this is the only one where there was any detailed information in this whole hearing, I have already referred to it. Listen to me. In 1918 they sent out a bunch of fellows—and this is the business for which you are asked to appropriate the money of the people—in 1918 they sent out people to interview farmers of the South—I believe it was in the spring of 1919—to study the production cost of the 1918 crop. They found the difference in the cost of cotton production ranging from 8 cents to $1.07 a pound. They made some averages. Then they brought that information back here, and in the fall of 1919 they mimeographed it and sent it out to the farmers from whom they had gotten the information, and published it as a bulletin in the fall of 1920. The cotton had been sold before the study began.

Take my own country, on my own farm; this year we planted cotton three times, and it cost to produce that cotton, let us say, 50 cents a pound. As a matter of fact, we did not gather any. The men where the boll weevil did not get at it possibly raised it for 20 to 35 cents a pound. It does not make any difference whether it cost me 50 cents a pound or cost the other man 20 cents a pound, when we bring the cotton to the market we get the same price. You get nowhere with this information. Maybe next year the situation will be reversed. There is nothing of use gotten which the farm demonstrators could not get.

Mr. ANDERSON. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. ANDERSON. Of course, if anybody could suggest means by which you could modify the methods of raising cotton so as to decrease the cost of production, you would make more money.

Mr. SUMNERS of Texas. Oh, yes; we know the way to do that. The man on my place is an excellent practical cotton farmer. Under good conditions, if the weevil would stay away, and the rains come right, we could do it.

These folks can not help us. What good will it do us to tell us what it cost to raise cotton, the average cost, year before last, or last year even?

Mr. SUMMERS of Washington. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. SUMMERS of Washington. If it could be shown that the cotton farmer was losing money on cotton and he was making money on corn and other crops, that might be of some service.

Mr. SUMNERS of Texas. Yes; but we know about that. This year it happens to be a good year for corn, but next year during July or August there may come a drought and we will not make a nubbin. Does the gentleman think we have got to have a fellow running around in a Ford car at our expense to tell us all that? [Laughter.] We know just about as much in reference to that as any man that ever turned a wheel on a car. We have hard enough time paying for what we must have. What we want is a better chance to get more for what we raise, and not take the money out of the pockets of the farmers to pay the expenses of a lot of fellows who are keeping the roads hot.

Mr. JOHNSON of Mississippi. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. JOHNSON of Mississippi. Does not the gentleman think it would be better to take this money and appropriate it for some market system for the farmers which would be more remunerative?

Mr. SUMNERS of Texas. Well, I have talked so much about that and have plead so long with the Agricultural Committee and with the House for help there, and have had no better success than I am having in trying to defeat this item. We know that he needs help in the sale and distribution of his crops. That is where the nerve center of agriculture is located, and if we would take this money and put it there, and put these people to work who are riding on the backs of the farmers of this country, trying to tell men who know more than they do, then we might get somewhere.

The time is coming when the men who plow in this country are going to revolt against this sort of taxation and demand of the American Congress that the money taken from the sale of the products of his farm shall be given back in value. Gentlemen supporting this appropriation say that the manufacturer must know the cost of production. Certainly he must. He can use it. He can write that cost price into the sale price of his product. He is able to write the cost of production plus a profit into the price of his commodity, but the farmer sells in a restricted market to the highest bidder, and everybody knows it. I want to spend this money in helping to put the farmer into position to have something to say with regard to price, instead of wasting it for information which he can not use. What good does it do to tell the farmer that he loses 5 cents or 3 cents? It does not make any difference to him. If the market is 5 cents low, he loses it, and if it 3 cents low he loses that.

Summing up this whole matter, this item is made up of office expenses in Washington, printing, telegraphing, traveling expenses, and so forth. Most of it goes to these expense items and to salaries of "experts." Then after this overhead is taken care of there is not much left, but enough money left out of the $414,830 to put about 20 men in the field. That seems to be the number of regular outside men. They "study" farm organization, farm finance, farm labor, agricultural history, land economics, get up, or rather work at helping with farm lease contracts, and so forth—"studying" why farm lands have gone up, conducting "rural-life studies," and production cost. For every one of these "studyers" in the field, the people who are being "studyed," together with the other taxpayers, are putting up $20,741 in money.

That is a pretty healthy sum, under a condition like the present, to ask a tax-burdened people to pay for this work of most uncertain value, to say the least of it.

This looks like we are hard pressed to find an excuse to tax the American people. This item ought to be stricken from this bill and this money shifted to the place where the farmers of this country need help.

They need help to reach a condition of economic strength so that they can write into the selling price of their commodities the average cost of production plus a reasonable profit, just as the manufacturer does. I suppose this spring they will "study" the cost of last year's cotton crop. Next fall they will give the farmers who had been "studied" the figures to show that it had been sold below the cost of production, and the next year print a bulletin on the subject, and we will make the people pay for it. Such transactions as this will make up a great record for this "economy Congress."

The CHAIRMAN. The time of the gentleman from Texas has again expired. The question is on the amendment offered by the gentleman from Texas.

The question was taken; and on a division (demanded by Mr. BLANTON) there were—ayes 8, noes 30.

So the amendment was rejected.

The Clerk read as follows:

For the maintenance of a printing office in the city of Washington for the printing of weather maps, bulletins, circulars, forms, and other publications, including the pay of additional employees, when necessary, $11,450: *Provided*, That no printing shall be done by the Weather Bureau that, in the judgment of the Secretary of Agriculture, can be done at the Government Printing Office without impairing the service of said bureau.

Mr. KIESS. Mr. Chairman, I make the point of order against the paragraph, beginning with line 11 and ending with line 18 on page 7. It repeals existing law. I read from page 1270, volume 40, Statute at Large:

That on and after July 1, 1919, all printing and binding, blank-book work, for Congress, the executive office, the judiciary, and every executive department, independent office and establishment of the Government shall be done at the Government Printing Office, except such classes of work as shall be deemed by the Joint Committee on Printing to be urgent or necessary to have done elsewhere than in the District of Columbia, for the exclusive use of any field service outside of said District.

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard on the point of order?

Mr. ANDERSON. Mr. Chairman, may I inquire whether the point of order is against the entire paragraph or the proviso?

Mr. KIESS. The entire paragraph, beginning with line 11 and including line 18. I might say, Mr. Chairman, that it is not the intention of the Joint Committee on Printing to prevent the printing of weather maps at this printing esablishment.

Mr. ANDERSON. That is what the gentleman is doing when he strikes this out.

Mr. KIESS. They can come to the joint committee and get permission. The trouble is that each department of the Government that maintains a printing office wants to have the authority to have all its printing done there. The policy as laid down by Congress is to have all printing done at the Government Printing Office when it can be done cheaper than elsewhere. Making the point of order against this paragraph is in the interest of economy and not with the intention of hindering the work of the Weather Bureau. This point of order has been made before on a similar bill, and the bureau came to the Joint Committee on Printing and received permission to do such printing as they could show was necessary to have done at their plant.

Mr. ANDERSON. Mr. Chairman, I am not prepared to sustain the item against the point of order made by the gentleman from Pennsylvania. If the gentleman insists on the point of order, it will have to go out. I know of no statute which authorizes this printing to be done in the Weather Bureau. Of course, the effect of the point of order will be that the Weather Bureau will have no money with which to print maps, and the maps will not be printed.

The CHAIRMAN. It seems very clear to the Chair, in view of the act approved March 1, 1919, a portion of which was just read by the gentleman from Pennsylvania, that the Chair must sustain the point of order. The Chair, therefore, sustains the point of order, and the Clerk will read.

The Clerk read as follows:

For necessary expenses outside of the city of Washington incident to collecting and disseminating meteorological, climatological, and marine information, and for investigations in meteorology, climatology, seismology, volcanology, evaporation, and aerology, $1,300,110.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I move to strike out the last word for the purpose of calling attention to the fact that this is a lump-sum appropriation, a departure by the committee that framed this bill from the policy that has been followed by former committees and approved by the House. This is a lump sum, with no direction to the department as to how it shall be expended; and the statement made by the bureau is simply that they would like to have a lump sum, so as to spend it as they please. When we grant their request, we cut all the strings and let them expend the entire sum as they wish. Up to this time it has not been thought advisable to do that. There may be some reason now that I do not know of that would justify a lump sum.

Mr. RUBEY. Mr. Chairman, will the gentleman yield?

Mr. McLAUGHLIN of Michigan. Yes.

Mr. RUBEY. This identical language has been carried in the bill since 1912 and appropriations under it have been made. Last year there was appropriated the same amount appropriated this year.

Mr. McLAUGHLIN of Michigan. But the gentleman will notice that in the bill of last year, following the sum of $1,303,000, just a little more than the amount carried this year, are the following words:

Including not to exceed $700,000 for salaries, $129,040 for special observations and reports, and $295,750 for telegraphing and telephoning.

It seemed wise to the committee last year and to the Congress last year to divide that up and to specify and limit the amount that could be spent for each line of work, and this dividing up and specifying is in line with the insistent demand of the House year after year. This committee and other committees have been criticized for making lump-sum appropriations. Some of them are necessary; some of them are not; but in response to the insistent demand that there be specification wherever possible we have specified in many, many cases. This is one of the cases in which the total amount was divided and direction given to the bureau as to how much should be spent for each particular line of work. There may be some reason why the committee thinks in this work the string should be cut and the department should be permitted to spend this entire sum of money of more than a million dollars as it may please, but until I hear an explanation I shall have to think that the action of the present committee is unwise. Will the gentleman from Minnesota make no answer to my suggestion? I did not offer an amendment; my remarks were intended as an inquiry.

Mr. ANDERSON. Mr. Chairman, of course I did not intend to be discourteous; I did not know the gentleman had finished his statement. There was no particular point in striking out the language which divided the entire appropriation into three items, $700,000 for salaries, $129,040 for special observations and reports, and $295,750 for telephoning and telegraphing. However, the head of the bureau was of the opinion that the segregation of these items resulted in a lack of flexibility in the use of the entire appropriation which prevented its best utilization. However, I am so anxious to defer to the opinion of the gentlemen who have heretofore considered this appropriation that I take the liberty of offering an amendment to insert the following language:

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 7, line 23, after the figures "$1,300,110," insert a comma and add: "including not to exceed $697,080 for salaries, $129,040 for special observations and reports, and $295,750 for telegraphing and telephoning."

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard on his amendment?

Mr. ANDERSON. Just a moment. The gentleman from Michigan will observe the item for salaries is somewhat less in my amendment than in the current year, and this is, of course, due to the practice, with which the gentleman is familiar, of transferring clerical positions to the clerical roll. We have reduced the amount of salaries by the sums thus transferred.

Mr. BANKHEAD. Will the gentleman permit a brief question really for information? I see this paragraph carries an appropriation for the study, and so forth, of volcanology. Are there any volcanoes within the jurisdiction of the Department of Agriculture?

Mr. ANDERSON. The gentleman from Michigan can tell more than I can, but I understand this is in reference to the study of volcanoes in Hawaii.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, as the gentleman from Minnesota says, volcanology is carried on, or rather the proposition of studying volcanoes in Hawaii, and for a time it was done at private expense, the money needed being provided partly by private subscription and partly from the Massachusetts School of Technology, I believe, and by scientific men over the country and in the islands of Hawaii; but there came a time when they thought the importance of it justified it being taken over by the Government, and several years ago, at the suggestion of the Committee on Agriculture, the word "volcanology" was added to this item and the amount carried by the item was slightly increased so as to provide a few thousand dollars for carrying on that work in Hawaii.

Mr. BANKHEAD. Well, do the activities of volcanoes in Hawaii seriously affect agricultural interests?

Mr. McLAUGHLIN of Michigan. Well, volcanoes there are rather active and there have been times when there has been considerable destruction and loss of property by the eruption of volcanoes, but they are there making investigations of a general character which they consider of value to the entire country and for the world. Gentlemen of scientific attainments are in charge of the work and they have expensive and delicate instruments that are in operation and are watched and records made of them all the time.

Mr. BANKHEAD. Does any other bureau of the Government undertake a study of this same question other than the Department of Agriculture?

Mr. McLAUGHLIN of Michigan. None.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

For official traveling expenses, $30,000.

Mr. HAYDEN. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. HAYDEN: Page 7, after line 24, insert: "For the maintenance of a highway weather service for the collection of reports concerning the effects of weather on public highways, and the issuing of advice, forecasts, and warnings in the aid of highway travel, in cooperation with Federal, State, and local agencies, including salaries, travel, and all other expenses in the city of Washington and elsewhere, $20,000."

Mr. ANDERSON. Mr. Chairman, I reserve a point of order on the amendment.

Mr. HAYDEN. Mr. Chairman, the amendment which I have offered is clearly within the provisions of law creating the Weather Bureau, and I therefore doubt very much whether it is subject to a point of order. As to the merits of the amendment——

Mr. BLANTON. Mr. Chairman, it being legislation, I make the point of order.

UMI

The CHAIRMAN. The gentleman from Texas makes the point of order. Does the gentleman from Arizona care to discuss the point of order?

Mr. HAYDEN. Mr. Chairman, the amendment provides for nothing but a forecast of weather conditions on the public highways. If the Weather Bureau can make forecasts of weather conditions everywhere in the United States, certainly the bureau may make such forecasts in any part of the territory of the United States, such as a highway.

Mr. BLANTON. If the Chair is in doubt about it, I would like to be heard.

The CHAIRMAN. Has the gentleman from Arizona [Mr. HAYDEN] finished?

Mr. HAYDEN. The conclusion which I have pointed out is so obvious that further argument is unnecessary.

Mr. BLANTON. Mr. Chairman, there is no law authorizing the Department of Agriculture to make observations with respect to weather conditions and their effect upon highways. It is entirely a new departure and a new department.

Mr. HAYDEN. This project is not new. It was first undertaken in the winter of 1917 and 1918 to aid the Army Transport Service by furnishing information as to the conditions of the roads over which motor-truck convoys passed.

Mr. BLANTON. I mean there is no law at present authorizing it. The gentleman from Arizona can not cite the Chair to any substantive law authorizing it, and it is only in the interest of protecting the legislative committees in their proper function and authority that I make the point of order, although I am heartily in favor of the proposition that the gentleman seeks to put on this bill.

Mr. HAYDEN. The easiest and quickest way to have my amendment included in the bill is for the gentleman from Texas to withdraw the point of order. It seems to me, Mr. Chairman, that the time has arrived when Congress should recognize the great use that is made of the automobile all over the United States in interstate traffic. There are now thousands of people who travel from one State to another, and this important service of information which was found to be so valuable during the war should be continued.

The CHAIRMAN. If the gentleman from Arizona will permit, just what activity will be benefited should his amendment become law—agriculture, commerce, or navigation?

Mr. HAYDEN. The enactment of such legislation is in the interest of the general welfare of the people of the United States. Certainly it would benefit commerce, which has been defined by the Supreme Court to be any kind of intercourse between the people of different communities or of different States.

Mr. WINGO. Mr. Chairman, I do not care to go into the merits of the amendment, because that is neither here nor there. I want to confine myself to the very interesting parliamentary point of order. As I understand the organic law, it limits the activities of the Weather Bureau to such activities as would benefit commerce, agriculture, and navigation. Is that it?

Mr. HAYDEN. The gentleman from Arkansas is, as usual, correct in his statement.

Mr. WINGO. Now, commerce, agriculture, and navigation cover about all of the activities of the human race. I suggest to the logical processes of the mind of the chairman that if under the organic law you can provide for bulletins to protect one type of navigator—a sea captain or a captain of a coastwise vessel—and warn him of a storm that might put his vessel on a reef, then would it not be permissible under the organic law to provide for a service which might warn the "captain" of a Ford car when the weather was going to run his vessel of navigation into a mudhole? Of course, I intend to be serious, but I see that some of my philosophic friends evidently have discovered a weakness in the philosophy that I present to the Chair. In all seriousness, I suggest that the Weather Bureau was created for the purpose of advising the general public about the weather and not about any particular kind of weather or particular kind of boat or means of navigation. And I submit that it is not any more possible for a man to get seasick on a stormy sea in a coastwise vessel than if he were riding in a palatial Ford along some country roads in Arizona. And I hope the Chair will also take this view—that there is something in the public welfare. If it were a constitutional question, I would appeal to the general welfare clause of the Constitution, because if reports that have been circulated in my part of the universe are true, if the weather man can improve some of the roads in my friend's State, it would be conducive not only to commerce and navigation, but also to agriculture, because I think it would help to increase the pleasure of some of my agriculturists who travel in his district.

Mr. FOCHT. It has been suggested over here as to how far those agents of the department who travel in Ford cars might be involved in this.

Mr. WINGO. If the gentleman has discovered where by spending the paltry sum of $20,000 he can improve the roads as well as the weather, if he can use that to improve the public roads, I say strength to his arm and wisdom to the Chair in sustaining his amendment.

Mr. ANDERSON. Mr. Chairman, I did not intend to make the point of order, but as long as it has been made it is important that it should be determined correctly. I assume the weather is not different over the highways than anywhere else in their vicinity, and that the general authority of the Weather Bureau would apply with respect to a weather service directed particularly to informing motorists as to what the weather was going to be just as much as to anyone else. But the language which I think is questionable is the language in the first part of the amendment, namely:

For the maintenance of a highway weather service.

I think that is all right. Then it says:

For the collection of reports concerning the effect of weather on public highways.

I do not think there is any law which authorizes the Weather Bureau to make reports concerning the effects of the weather upon public highways. It has authority to report what the weather is in the vicinity of the highways, but I do not think it has the authority to investigate the effects of the weather upon the highways. And that part of the amendment, I think, is clearly subject to a point of order.

The CHAIRMAN. The Chair will rule. This amendment brings up a rather close question, in the opinion of the Chair. The Chair feels it is impossible for him to determine which of the three activities enumerated in the act creating the Weather Bureau will be benefited. He also doubts if the authorization is broad enough to cover a specific case outside the three mentioned. This amendment is to ascertain "the effect on public highways," and the Chair doubts very much if the law contemplated that a specific subject of that kind should be included. The Chair, therefore, sustains the point of order. The Clerk will read.

Mr. WINGO. In order that I may grasp the significance of the Chair's ruling, I understand that he says the part is not included in the whole?

The Clerk read as follows:

For the maintenance of stations, for observing, measuring, and investigating atmospheric phenomena, including salaries, travel, and other expenses in the city of Washington and elsewhere, $81,020.

Mr. HAUGEN. Mr. Chairman, I reserve a point of order on the paragraph.

Mr. ANDERSON. Let us have the point of order determined.

The CHAIRMAN. Will the gentleman kindly make his point of order and specify what it is?

Mr. HAUGEN. It is not authorized by law.

Mr. ANDERSON. Mr. Chairman, I do not know whether the Chair is familiar with the history of the Weather Bureau or not, but my impression is that the Weather Bureau is the successor of the Signal Service, which originated in the War Department. The law provides that "the civilian duties now performed by the Signal Corps of the Army shall hereafter devolve upon the bureau to be known as the Weather Bureau," and so forth. Then the following section provides what the duties and powers of the Chief of the Weather Bureau are, and those duties are very broad:

That the Chief of the Weather Bureau, under the direction of the Secretary of Agriculture, on and after July 1, 1891, shall have charge of the forecasting of the weather, the issue of storm warnings, the display of weather and flood signals for the benefit of agriculture, commerce, and navigation, the gauging and reporting of rivers, the maintenance and operation of seacoast telegraph lines, and the collection and transmission of marine intelligence for the benefit of commerce and navigation, the reporting of temperature and rainfall conditions for the cotton interests, the display of frost and cold-wave signals, the distribution—

A very wide power here—

the distribution of meteorological information in the interests of agriculture and commerce, and the taking of such meteorological observations as may be necessary to establish and record the climatic conditions of the United States, or as are essential for the proper execution of the foregoing duties.

That is a very broad power. Now, I assume that the language in the proposed item which attracted the attention of the distinguished gentleman from Iowa [Mr. HAUGEN] is the language "for the maintenance of stations." I desire to direct the attention of the Chair to this language in the law touching the Weather Bureau and its predecessor, the Signal Service of the Army:

The Secretary of War shall provide, in the system of observations and reports in charge of the Chief Signal Officer of the Army, for such stations, reports, and signals as may be found necessary for the benefit of agriculture and commercial interests.

The CHAIRMAN. Where is that found?

Mr. ANDERSON. That is in Revised Statutes, section 222. It is still applicable to the Weather Service, and I think it clearly authorizes the work proposed to be done under the item now under consideration.

Mr. HAUGEN. Mr. Chairman, I withdraw the point of order. I was under a misapprehension.

The CHAIRMAN. The gentleman from Iowa withdraws the point of order, and the Clerk will read.

Mr. HAYDEN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Arizona offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HAYDEN: Page 8, after line 4, insert:
"For the establishment and maintenance of special stations in national forests and elsewhere, the collection of reports, and the issuing of forecasts and warnings in connection with the protection of forests from fires, in cooperation with the Forest Service, State, and other organizations, including salaries, travel, and other expenses in the city of Washington and elsewhere, $15,000."

Mr. ANDERSON. Mr. Chairman, I reserve a point of order on that.

Mr. HAYDEN. Mr. Chairman, I am sure that my amendment is not subject to any point of order. As to the merits of the question, it seems to me that, with millions of dollars' worth of timber in the national forests which can be protected by a comprehensive scheme of this kind, so small an appropriation as $15,000 is fully justified. Everyone realizes the enormous losses that occur each year by fires in the forest reserves. Heretofore Congress has provided for combating forest fires in a sporadic sort of way by doing simply what was necessary to be done when a fire occurs. There has been no general study of the fire hazard with a view to finding means to reduce it.

The Weather Bureau is the best available agency to collate data relating to the probable occurrence of fires and with such data as a basis to make predictions and issue warnings. I am confident that a practical plan can be worked out in cooperation with the Forest Service which will save vast quantities of timber from destruction. The average amount annually expended by the Federal Government in fighting fires in the national forests since 1910 is $750,000. If this small appropriation has no other effect than to reduce that huge sum it will be fully justified. Whether we have much faith in the plan or not, the interests affected are so enormous that there can be no harm in giving the Weather Bureau an opportunity to demonstrate what may be accomplished by a good forecaster with his instruments and assistants.

The CHAIRMAN. Does the gentleman from Minnesota make the point of order?

Mr. ANDERSON. I withdraw the reservation of the point of order.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Arizona.

Mr. ANDERSON. Mr. Chairman, I desire to be heard on the amendment.

The CHAIRMAN. The gentleman from Minnesota is recognized.

Mr. ANDERSON. Mr. Chairman, the effect of this item is to provide a separate appropriation for work already being done in the department. This work is being done under the general authority of the Weather Bureau, and we think that it is being done to an extent that the present condition of the Treasury justifies. There is no doubt that the reports of the weather service in the national forests are of value. But they propose now to send half a dozen new men out over the forests to make general observations with respect to weather conditions in the national forest districts. There is no necessity for expanding the work in that way. It is being done adequately now, and there is no need whatever for putting into the bill a new item carrying this particular appropriation.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Arizona.

The question was taken; and the Chairman announced that the ayes appeared to have it.

Mr. ANDERSON. Mr. Chairman, I ask for a division.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 12, noes 33.

So the amendment was rejected.

Mr. HAYDEN. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The gentleman from Arizona offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HAYDEN: Page 8, after line 4, insert:
"For the maintenance of a highway weather service and the issuing of advices, forecasts, and warnings in aid of highway travel in cooperation with Federal, State, and local agencies, $20,000."

Mr. BLANTON. Mr. Chairman, I make a point of order on that.

The CHAIRMAN. The gentleman from Texas makes a point of order on the amendment.

Mr. HAYDEN. Mr. Chairman, I believe I have so amended the amendment on which the Chair ruled before as to bring it clearly within the rule. I have stricken out the matter referred to by the gentleman from Minnesota as objectionable.

The CHAIRMAN. Does the gentleman desire to be heard on the point of order?

Mr. BLANTON. Mr. Chairman, I think it should be decided on the same rule that the other point was decided on, and I do not think it necessary to take up the time of the House.

Mr. ANDERSON. Special reports are clearly authorized by the law which applies to the Weather Bureau, and, while I shall oppose the amendment, I do not think in its present form it is subject to a point of order.

Mr. WINGO. Mr. Chairman, in the present form it remedies the defects of the former amendment. There is nothing in the rules of the House or in the organic act to say that Congress in the exercise of its power can not for the sake of convenience or administration properly segregate or hold down or limit an appropriation by which you undertake to have some definite expenditure for the purpose for which the original act was passed and the money appropriated.

Mr. BLANTON. Mr. Chairman, the Chair will remember that this question has been decided many times on points of order that have been made against what is known as the continuation of the United States Employment Service. In trying to get an appropriation of $10,000,000 for that service parties in their amendments used the very language of the act creating the Department of Labor, recited the very language of the act creating that department in behalf of labor. In that amendment they tacked onto that an appropriation for $10,000,000. The distinguished parliamentarian from Tennessee [Mr. GARRETT] happened to be in the chair, and decided that very question, that under the general law or under the general provision you could not make in order an amendment for some specific purpose under that act where it was clearly legislation. On four different occasions the distinguished Chairman [Mr. GARRETT] sustained the point of order.

Later on the authority in the House changed, and the distinguished parliamentarian from Connecticut [Mr. TILSON], whom the Speaker designated this morning to preside over the House of Representatives next Monday as Speaker pro tempore, was presiding over the Committee of the Whole, and that same question was raised, and the distinguished gentleman from Connecticut again decided the question against this very proposition. Later on, only two weeks ago, the distinguished parliamentarian from Massachusetts [Mr. WALSH] happened to be in the chair presiding over the committee, and this identical question was again raised in the House and decided in accordance with the precedents laid down in the House to which I have already referred.

Mr. BYRNS of Tennessee. Mr. Chairman, as I heard the amendment read it provides for cooperation of the States in the expenditure of this appropriation. It may be and doubtless is true, as the gentleman from Minnesota says, that the Congress is authorized to make appropriations for special observations, but I submit that an amendment which undertakes to provide that an appropriation shall be spent in cooperation with the States clearly carries legislation, and is therefore subject to the point of order.

Mr. HAYDEN. The gentleman will concede that there is a substantial saving of money to the Treasury by cooperation with the State.

Mr. BYRNS of Tennessee. As a matter of fact, I think the whole appropriation will be wasted, because I do not see that any value will be obtained by the expenditure of money for this purpose. I had a letter the other day from the president of an automobile club in my own home city. His attention had been called in some way to this estimate.

He was speaking on the general subject of economy, but he urged this instance as one showing the absolute disregard in that particular of the department to economy, because, as he said, this is just what the automobile clubs all over the country are doing. They are reporting to their various associations here and there as to the condition of the highways, and certainly the information which they obtain is more direct and more to be depended upon than any that can be obtained in this way relative to the condition of roads.

Mr. HAYDEN. The American Automobile Association is very earnestly in favor of this, and I can say the same of my own home State association. The reports made in 1918 and 1919 are valuable and are appreciated by the owners and drivers of automobiles who travel from one place to another, and they

would like to see the service continued. Automobilists all over the United States will more and more demand this service, and I am satisfied that ultimately the service will be rendered to the people.

Mr. BLANTON. Will the gentleman from Tennessee [Mr. BYRNS] yield?

Mr. BYRNS of Tennessee. If I have the floor.

Mr. BLANTON. To come within the Holman rule, must not the amendment be shown to clearly retrench and save expenditure in public money?

Mr. BYRNS of Tennessee. The gentleman is clearly correct. Of course, this could not be considered to come within the Holman rule, because the bill carries no appropriation for this specific purpose. Therefore it could not on its face show any retrenchment of amounts carried in the bill.

The CHAIRMAN. The Chair will rule. The Chair has listened with interest to the gentleman from Texas and the gentleman from Tennessee. He feels that the gentleman from Tennessee predicated his observations probably largely upon the precedent that we have in Hinds in which, on an amendment, the Weather Bureau was directed to cooperate with the States, and because of that wording it was ruled out of order. The Chair ventures the assertion that there is no direction of authority in this amendment. The Chair feels that under the broad authority creating the Weather Bureau for the public good, and on which the only limitation so far as the Chair can ascertain is that it shall be for the benefit of agriculture, commerce, or navigation, and as this is clearly for the benefit of one of those three——

Mr. BLANTON. Which one, Mr. Chairman?

The CHAIRMAN. Preferably agriculture, for highways are of vital importance to the farmers. The Chair feels that this amendment comes within the law creating the Weather Bureau and therefore overrules the point of order.

Mr. HAYDEN. Mr. Chairman, on the merits of the amendment, permit me to say that the American Automobile Association and a number of State automobile organizations have found this service to be of such value that they have recommended to Congress that an appropriation of this character be made.

Mr. CARAWAY. In what way will this service help a man with an automobile?

Mr. HAYDEN. The gentleman from Arkansas realizes that a vast and increasing number of people travel from place to place in the United States by automobile. This highway weather service is particularly valuable to the tourist where improved roads have not been constructed for the entire length of his journey. Of course, if one could travel the whole distance over a paved highway the state of the weather would not make much difference. But where the highways have not been improved, as is usually the case, it is highly important for a tourist to know in advance the condition of the road over which he proposes to travel. If up-to-date and accurate information can be furnished in advance, it will be entirely practicable in many cases for the tourist to make a detour and save himself much difficulty. If this appropriation is made, any tourist will know that he can get an accurate road report from the local Weather Bureau station. This service was instituted and found to be immensely valuable during the period of the war, when great fleets of motor trucks were carrying supplies over the roads of the country.

Mr. CARAWAY. Honestly, does the gentleman expect the Weather Bureau to go out and ascertain whether a bridge has broken down and therefore warn everybody what road to take to get around it?

Mr. HAYDEN. That is exactly what should be done.

Mr. CARAWAY. All right. I realize that Congress will have gone into a rather peculiar line of business when it goes to providing that kind of information to everybody.

Mr. HAYDEN. Congress has provided a Weather Bureau station in every city and town of importance in the United States. One of the principal expenditures under this appropriation will be for telegrams, for the purpose of furnishing accurate and up-to-date information, which can be disseminated by such stations. Let me read from the statement made last December by Dr. Charles F. Marvin, Chief of the Weather Bureau, during the hearings on the Agricultural appropriation bill:

This work was begun during the war, when the State commission of Pennsylvania asked us to give them forecasts as to the weather conditions along the highways through Pennsylvania when the motor trucks were moving eastward, and the work has been so favorably received that we have been asked to extend it elsewhere, and we are now performing this work as far as our limited means will permit at quite a number of our stations.

The work at the present time is almost entirely carried on by mail. There is only a small amount of telegraphic charges connected with it.

Mr. BYRNES. Now, to whom do you send these reports?

Mr. MARVIN. Well, they go to the automobile interests in the different cities where they are issued, and those people have them displayed throughout the cities, at the garages or elsewhere, and the people traveling on the road covered by the report have the advantage of that information before them, and they know the conditions that they are going to meet. It is a very useful thing. I have an abundance of papers and letters here from the motor people and the motoring public in testimony of it.

It is a matter for the committee to determine entirely whether it is one that should be authorized. The fact that the Weather Bureau has this organization throughout the country constitutes a good argument as to why it should do the work.

We have 200 stations scattered all over the country to-day for other purposes, and the men are doing this kind of work. We are furnishing advice and information, and we have the organization and the machinery, and if you will furnish the additional appropriation we can handle it. If you attempt to have the good roads people and the State highway commissioners take up this work, I think it is bound to be more expensive.

Mr. McARTHUR. Will the gentleman yield?

Mr. HAYDEN. I yield to my friend from Oregon.

Mr. McARTHUR. Will it be possible in this forecast to have the Government tell us where the traffic cops will be located? [Laughter.]

Mr. HAYDEN. I hardly think that is a proper function of the Weather Bureau.

Mr. CARAWAY. Doubtless that would be a most useful service.

Mr. HAYDEN. Perhaps it would be exceedingly useful to the gentleman from Oregon. [Laughter.]

Mr. CLEARY. Will the gentleman yield?

Mr. HAYDEN. I yield to the gentleman from New York.

Mr. CLEARY. Is it not true that farmers frequently send farm products from the farm to the railroad station by automobile truck?

Mr. HAYDEN. Certainly.

Mr. CLEARY. And perhaps it would not do to start out with a load of wheat or something of that character if the weather was going to be very stormy. It might damage the load. So they would like to know whether the weather is fit for them to take their produce to market.

Mr. HAYDEN. The gentleman has made a very appropriate suggestion. Vast quantities of perishable agricultural products are now shipped by motor trucks for increasing distances. In order to illustrate the nature of the road reports made by the Weather Bureau, I shall include as a part of my remarks the following bulletin recently issued by the section director at Phoenix, Ariz.:

HIGHWAYS WEATHER BULLETIN.

RIVER CROSSINGS.

The river at Sacaton is dry. However, the crossing is sandy and rough. Crossing is all right for light cars.

APACHE COUNTY.

All roads in good shape except mountain roads, which are unsafe for travel.

COCHISE COUNTY.

Light rain over most of county on 6th, which helped roads considerably. All roads in good condition.

GILA COUNTY.

County forces at work in widening and improving road between Winkelman and Christmas. Work going on in widening county road north of Roosevelt. Contractor at work in reconstruction of portion of Salt River Pleasant Valley Road. General good condition of all roads in the county.

GRAHAM COUNTY.

Graham County roads are in good condition in all parts of the county.

GREENLEE COUNTY.

All roads in first-class condition; all graveled and well packed; no mud or slippery roads anywhere; all streams bridged. Best route between Safford and Clifton is via Duncan.

MARICOPA COUNTY.

Valley roads dusty; coast roads fair; Black Canyon rough; Wickenburg road good; Superior-Florence good; Apache Trail fair. Going to Ajo via Laveen be careful of drain-ditch crossings. Buckeye crossing very good to Gila Bend.

MOHAVE COUNTY.

All main roads in fair condition except Old Trails national highway from Crozier to Hackberry. New construction over Oatman-Topock road makes this temporarily impassable; all traffic is being routed via Yucca. Drivers should be careful in crossing washes.

PIMA COUNTY.

All roads in fair condition except for dust, which has been caused by continued dry weather.

SANTA CRUZ COUNTY.

All county roads in good traveling condition. Light shower on 6th. No damage to county roads.

PINAL COUNTY.

Mesa and mountain roads good. Valley roads very dusty and chucky; no rain.

YUMA COUNTY.

Road from Vicksburg to Ehrenberg in good condition. Ferry service good.

ROBERT Q. GRANT.

Mr. PELL. Will the gentleman yield?

Mr. HAYDEN. I yield to the gentleman from New York.

Mr. PELL. Why are not the ordinary weather reports, such as we now get, sufficient for the drivers of automobiles? I have driven an automobile a good deal, and all I wanted was the weather forecast in the paper, to see what the weather was going to be. You certainly do not expect the department to go into the business of road inspection and turn itself into a bureau of tours?

Mr. HAYDEN. Not entirely that; but with the present facilities of the Weather Bureau it is possible, with very small increased expense, to correctly advise those who intend to travel over the country by automobile as to the condition of the roads.

Mr. PELL. It is a complicated thing to make a road report of the country.

Mr. HAYDEN. The State and local authorities are very glad to cooperate if they can have the assistance of the United States Weather Bureau in this undertaking. As time goes on there will be a much more insistent demand for the service which I am seeking to have supplied by this amendment. Gentlemen may indulge in humorous remarks, but travel by automobile is the serious concern of a great number of American citizens, who will not hestitate to make their wants known in no uncertain manner.

Mr. ANDERSON. Mr. Chairman, of all the ridiculous proposals I have seen in my short experience with appropriations for the Agricultural Department, this is the most ridiculous. There is no more need for a highway weather service than there is for a thirteenth cylinder on a gasoline engine. This proposition is the outgrowth of a service that was performed by the Weather Bureau during the war in connection with the movement of trucks from points in central Ohio and in Michigan to the East, particularly with reference to snow conditions in the mountains, and it was a valuable service as thus conducted. But spread all over the country, with the idea of advising motorists what is the condition of the roads, it is absolutely ridiculous. The Chief of the Weather Bureau brought before the committee a post card on which it was stated the conditions of the roads in a part of Minnesota with which I happen to be familiar. I said then, after reading that post card, I would not know whether to stay at home or go.

In my opinion the service as it is proposed to establish it is so general that it is absolutely useless. Anybody who is going on an automobile journey who wants to know what the weather is going to be can find out from the weather station in the city in which he lives. There is no need of this service. It is a waste of money, and I hope the amendment will not be agreed to.

Mr. WINGO. I can not agree that this proposal is ridiculous. I recall that last year a cloud-burst washed out the bridges on the highways in my own and adjoining county. Many tourists were put to the trouble and loss of time of doubling back and finding another highway. This trouble, expense, and loss of time could have been avoided had the weather service reported the condition of the highway to the public with its daily weather report. At another time in my State a motor corps was delayed and put to great expense for lack of service provided by this amendment. If such service is ridiculous, it is because any weather-reporting service is ridiculous, and I do not so regard it. Oh, I know some gentlemen think the Government was created to tax the people and give no service in return.

Then, again, there are those who regard as ridiculous any service of a practical nature and consent only to such expenditures as are necessary to furnish positions for stargazers and meal tickets for experts. This bill appropriates thousands for saddle-colored messengers to guide Members of Congress from room to room in Government buildings, but this amendment, which would guide the traveling public on the highways in their own vehicles, burning their own and not Government gasoline, is denounced as ridiculous. Quietly resting in the bosom of this bill are provisions that will pay for and maintain a stately carriage and horses to be cared for by a Government employee, and by a Government employee will be used to convey in pomp and dignity a distinguished official from his domicile to his office and return him thence at eventide free from the contaminating touch of the proletariat. Such expenditures are approved by those who regard seed distribution as an improper use of public funds and practical aid to highway navigation and commerce proposed by the pending amendment as ridiculous.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arizona.

The amendment was rejected.

The Clerk read as follows:

Salaries, Bureau of Animal Industry: Chief of bureau, $5,000; chief clerk, $2,500; editor and compiler, $2,250; executive assistant, $2,500; 8 executive clerks at $2,000 each; clerks—12 of class 4, 10 at $1,680 each, 18 of class 2, 14 at $1,500 each, 40 of class 2, 8 at $1,380 each, 20 at $1,320 each, 45 at $1,300 each, 8 at $1,260 each, 120 of class 1, 20 at $1,100 each, 25 at $1,080 each, 32 at $1,000 each, 6 at $960 each; architect, $2,000; illustrator, $1,400; laboratory aid, $1,200; laboratory helper, $1,200; 6 laboratory assistants at $1,200 each; laboratory mechanicians—1 $1,640, 1 $1,440; carpenters—1 $1,140, 2 at $1,000 each; 2 messengers and custodians at $1,200 each; skilled laborers—1 $1,200, 3 at $1,000 each, 11 at $960 each; painter, $900; laborers—50 at $960 each, 2 at $900 each, 3 at $780 each; messengers or laborers—11 at $840 each, 29 at $720 each; messenger boys—2 at $660 each, 3 at $600 each, 5 at $540 each, 15 at $480 each; charwomen—1 $600, 2 at $540 each, 17 at $480 each, 5 at $360 each, 2 at $300 each, 7 at $240 each; in all, $655,050.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I move to strike out the last word. I notice there are a number of changes, the number of clerks employed at certain salaries being decreased or increased, as the case may be, which amounts to a modification of the salaries. I am wondering if it is wise for committees in this way to undertake to establish a change in the salary bases. The idea as to a lot of salaries has been to leave them as they are at the present time and to take care of employees by the payment of a bonus of $240 each. If, following the recommendation of the head of a bureau, salaries are readjusted to take care of present conditions, all bureaus would have to do it or else there would be a lack of uniformity throughout the department, and then would come the question of whether or not it would be necessary or proper to reenact the bonus provision. It struck me as I looked through the statutory rolls for the different bureaus of the Department of Agriculture, as reported by the gentleman's committee, that perhaps the committee has done too much by way of readjusting salaries.

Mr. ANDERSON. Mr. Chairman, what the committee did in that direction we thought was in the direction of increasing the efficiency of the bureaus, and at the same time reducing the number of employees and the amounts of money carried in the bill. There were a number of instances in which the heads of bureaus represented to us that if they could have a smaller number of places at higher salaries they would reduce the number of clerks at lower salaries, thus effecting not only a reduction in the number of employees but a reduction in the amounts carried by the bill. Take the statutory roll, for instance, about which the gentleman is talking. The existing law carries salaries of clerks amounting to $505,100. The department estimated for clerks with salaries amounting to $506,280. The committee allowed clerks involving salaries of $496,980, a reduction of approximately $10,000 in that class of employees. So that the result of the committee's labor in this matter we think has been to increase the efficiency of the bureaus and also to reduce the amount of money paid for clerical service.

Mr. McLAUGHLIN of Michigan. But has not the gentleman done just what I say has been done. There has been a general readjustment and a general increase of salaries.

Mr. ANDERSON. No; there has not been a general increase of salaries, because a general increase of salaries would involve more money.

Mr. McLAUGHLIN of Michigan. There has been a general increase of salaries by employing less men and paying those who remain higher salaries than they theretofore received. Consequently it seems to me to be a general revision of salaries and a general increase. It may be all right. I like to see men get good pay, but when one bureau of a department does it, it throws out of joint the entire department, or if all of the bureaus of the department do it, it puts that department out of line with other departments of the Government. Committees having other departments in charge have refused to increase salaries so as to make them in keeping with present conditions, and instead have provided the $240 bonus.

So it would seem to me that the gentleman has anticipated, or rather made unnecessary, the bonus provision by making a general increase of salaries.

Mr. ANDERSON. There has been no general increase of salaries involved.

Mr. McLAUGHLIN of Michigan. Is not the effect of it as I have stated?

Mr. ANDERSON. Undoubtedly some promotions will result from this rearrangement of the statutory roll, but the rearrangement has been entirely within the authority of the rule, and it has also been, I think, in the interest of efficiency in the service.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. JONES of Texas. Mr. Chairman, I move to strike out the last two words for the purpose of asking a question. For several years the custom was followed of performing tests with reference to blackleg and of distributing blackleg vaccine in the department. I understand that that has been discontinued recently. I do not find any specific appropriation with reference to it in the bill, although it may be covered by some general appropriation. If it has been discontinued, will the gentleman tell me why the department has discontinued it?

Mr. ANDERSON. Mr. Chairman, since the gentleman asked me the question in general debate I have looked into the matter. There has been no change in the language which eliminates the work on blackleg vaccine. It is carried just as it always has been, in the general item for inspection and quarantine work.

Mr. JONES of Texas. I understand that they have discovered a vaccine in the Agricultural College at Manhattan, Kans., which is superior and generally recognized as superior to that which the Government has been using. I am told that those who have this matter in charge in the Department of Agriculture state that the reason they have not adopted and tested much more thoroughly this serum from Kansas is the fact that it is more expensive. Has any provision been made to proceed with an investigation of that serum?

Mr. ANDERSON. The matter was not brought up before our committee in any way.

Mr. JONES of Texas. The matter was brought to the attention of the department, and I was wondering if it might be brought to the attention of the committee.

Mr. ANDERSON. It has not been brought to the attention of the committee in any way.

The CHAIRMAN. The pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

For investigating the disease of tuberculosis of animals, for its control and eradication, for the tuberculin testing of animals, and for researches concerning the cause of the disease, its modes of spread, and methods of treatment and prevention, including demonstrations, the formation of organizations, and such other means as may be necessary, either independently or in cooperation with farmers, associations, State, Territory, or county authorities, $1,978,800: *Provided, however*, That in carrying out the purpose of this appropriation, if in the opinion of the Secretary of Agriculture, it shall be necessary to destroy tuberculous animals and to compensate owners for loss thereof, he may, in his discretion, and in accordance with such rules and regulations as he may prescribe, expend in the city of Washington or elsewhere out of the moneys of the appropriation, such sums as he shall determine to be necessary, within the limitations above provided, for the reimbursement of owners of animals so destroyed, in cooperation with such States, Territories, counties, or municipalities, as shall by law or by suitable action in keeping with its authority in the matter, and by rules and regulations adopted and enforced in pursuance thereof, provide inspection of tuberculous animals and for compensation to owners of animals so destroyed, but no part of the money hereby appropriated shall be used in compensating owners of such animals except in cooperation with and supplementary to payments to be made by State, Territory, county, or municipality when condemnation of such animals shall take place; nor shall any payment be made hereunder as compensation for or on account of any such animal destroyed if at the time of inspection or test of such animal, or at the time of condemnation thereof, it shall belong to or be upon the premises of any person, firm, or corporation, to which it has been sold, shipped, or delivered for the purpose of being slaughtered: *Provided further*, That out of the money hereby appropriated no payment as compensation for any tuberculous animal destroyed shall exceed one-third of the difference between the appraised value of such animal and the value of the salvage thereof; that no payment hereunder shall exceed the amount paid or to be paid by the State, Territory, county, or municipality where the animal shall be condemned; and that in no case shall any payment hereunder be more than $25 for any grade animal or more than $50 for any pure-bred animal, and no payment shall be made unless the owner has complied with all lawful quarantine regulations.

Mr. BLANTON. Mr. Chairman, I reserve a point of order.

Mr. ANDERSON. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Texas will state his point of order.

Mr. ANDERSON. The gentleman reserves the point of order on what?

Mr. BLANTON. On the whole paragraph.

Mr. ANDERSON. Let us settle it.

Mr. BLANTON. Mr. Chairman, I make the point of order because the proviso requires the department to cooperate with the State departments and there is no provision of law authorizing such legislation. I am in sympathy with the legislation but I just wanted a ruling of the Chair as to whether or not this character of legislation should be put on an appropriation bill.

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard on the point of order?

Mr. ANDERSON. It seems to me, Mr. Chairman, if this is the only point that the gentleman has in mind——

Mr. BLANTON. It is the only one.

Mr. ANDERSON. Under the ruling of the Chair heretofore the point of order would not be well taken. This does not direct anything to be done so far as cooperating is concerned. This simply authorizes the department in carrying out the work which is authorized by law to cooperate with States, counties, and municipalities.

Mr. BLANTON. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. BLANTON. Why, it says that it can not be done except by cooperation. Does not it require it? There is where the Chairman, I respectfully submit, made a mistake awhile ago. It says that he shall not do it except by doing so and so, and that is cooperation.

Mr. JONES of Texas. Would not that be a limitation?

Mr. BLANTON. I was speaking of the absence of any law authorizing this character of legislation. While I am in sympathy with the legislation, I want to see how the Chair was going to rule on it.

The CHAIRMAN. Does the gentleman from Minnesota desire to discuss the point of order?

Mr. ANDERSON. No; I do not care any further.

The CHAIRMAN. The Chair takes it that the gentleman from Texas makes the point of order on page 11, beginning line 20, and running through to the end of line 7 on page 13——

Mr. BLANTON. Yes; on the whole paragraph because of the provision to which I called the attention of the Chair, which is legislation unauthorized.

The CHAIRMAN. The Chair would like to ask the gentleman from Minnesota if he can give the Chair information as to whether there is any authorization for cooperation between the Government and the States in regard to this matter?

Mr. ANDERSON. There are some general statutes, I will say to the Chair, which provide certain cooperation with the States; for instance, like the Smith-Lever Act, for certain purposes. I do not know of any statute which directs cooperation on expenditures of this kind, and in my judgment this part of the language as well as some of the rest of the language is legislation.

Mr. RUBEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. ANDERSON. Yes.

Mr. RUBEY. I desire to call the attention of the Chair to the fact that the language commencing with line 21, in my opinion, is clearly a limitation. It says—

That out of the money hereby appropriated no payment as compensation for any tuberculous animal destroyed shall exceed one-third of the difference in value between the appraised value of such animal and the value of the salvage thereof——

The CHAIRMAN. What page is the gentleman reading from?

Mr. RUBEY. From page 12, bottom of the page. Now, continuing on the next page—

That no payment hereunder shall exceed the amount paid or to be paid by the State, Territory, county, or municipality where the animal shall be condemned; and that in no case shall any payment hereunder be more than $25 for any grade animal, or more than $50 for any pure-bred animal, and no payment shall be made unless the owner has complied with all lawful quarantine regulations.

It seems to me that the whole language is a limitation, and therefore is not subject to the point of order.

Mr. BLANTON. Mr. Chairman, I call the attention of the Chair to this language on page 12, beginning in line 10:

But no part of the money hereby appropriated shall be used in compensating owners of such animals except in cooperation with and supplementary to payments to be made by State, Territory, county, or municipality.

Mr. RUBEY. That is a limitation; it does not compel them to do it. If they do not do it, it does not make them do it.

Mr. BLANTON. In other words, this whole appropriation and its expenditure depends absolutely upon cooperation with State, county, and municipality.

Mr. JONES of Texas. I would like to suggest to the Chair that where the States do cooperate the expenditure will be less, and therefore it comes strictly within the application of the Holman rule, and if the States do not cooperate none of this money can be expended; therefore whatever effect the proviso has will tend to reduce expenditures, tend to retrench them, and therefore brings it strictly within the Holman rule, and it is a negative provision as well.

Mr. MADDEN. Before the Chair rules, if the Chair please——

The CHAIRMAN. The Chair will hear the gentleman.

Mr. BLANTON. Mr. Chairman, I hope the Chair will listen patiently to the chairman of the steering committee.

Mr. MADDEN. Under Rule XXI, which prohibits legislation on an appropriation bill, except in a case where legislation tends to reduce expenses, this legislation, it seems to me, would be in order, first, because it prohibits the expenditure of the money unless certain conditions exist. Those conditions are that the States must provide the means to pay part of the compensation for cattle killed as the result of tubercular disease, and it limits the amount that can be expended when the States do cooperate. Now, if that be the case, and it seems to be the case by the language employed in the bill itself, and if the department can not expend the money except under certain happenings, then it clearly must be understood to be a limitation on the expenditure of the money, even if the department is permitted to expend the money. The amount it can expend in any

case is limited to $25 in one instance and $50 in another, whereas if there were no limitation whatever placed upon the amount appropriated it might be within the power of the department to spend three times that amount of money. Consequently the language in the bill limits the amount to be expended and reduces the expenses and amount of the expenditure.

Mr. CARTER. If the gentleman will yield?

Mr. MADDEN. I will.

Mr. CARTER. Would not the practical application of the provision be about this, that when they came to spend the money, if they found that the States were not willing to spend a similar amount, no money would be spent?

Mr. MADDEN. Surely. That is just exactly what I said. And therefore if this is not a limitation there can be no language written that could be classed as a limitation. And the provision, I say to the Chair, under the rules of the House, in that it reduces or tends to reduce expenses on its face, is in order as legislation.

The CHAIRMAN. The point raised by the gentleman from Illinois is, of course, a valuable one. But the Chair feels that it is drawing on the assumption of what might happen and is a very indirect limitation of uncertain application. Because, if all the States should bear their share of the expense there would be no saving to the Government. The Government would still be forced to expend the amount of money appropriated. It is only in case the States would decline.

Mr. MADDEN. If the Chair will permit one word there. In case the States do pay this, the Government is limited in the amount that it can pay, whereas if there were no such limitation it might be within the power of the Government to pay the entire amount without respect to what the States did. So, clearly, on the face of the bill itself is indicated the limit of power placed in the hands of the Department of Agriculture to pay beyond a certain amount. Now, if you do not limit them to that amount, there will be no limitation and, consequently, there can be no doubt, in my mind, that there is a reduction in the expense when you place the limit beyond which the department can not go.

Mr. JONES of Texas. I beg the pardon of the Chair, but I believe it is an important item and one that should stay in the bill. In fact, I think it is the most important single item in the bill.

Mr. BLANTON. Will the gentleman yield right there?

Mr. JONES of Texas. Yes.

Mr. BLANTON. Is a piece of legislation, as to whether it stays in or goes out of a bill, to be determined upon its importance? In other words, if it is a very important item, although it is legislation against the rule in going on an appropriation bill, should it go into the bill?

Mr. JONES of Texas. I would not take the time of the House in discussing a matter that I did not think was of some importance.

Now, this is an appropriation that is made and so much money can be expended. Two provisos are put onto that legislation. The point of order goes to those two provisos. If all of the States appropriate their specific amounts, then the provisos will have no effect at all. But if any of the States fail, then the proviso will reduce the expenditure. Therefore the tendency of the proviso is to reduce expenditures. That is the only effect which the provisos can possibly have.

Now, the Holman rule, and the whole purpose of the Holman rule, is to permit legislation which is of such a nature that it causes a retrenchment of expenditures, if it has any effect at all. Of course, no one can say whether it will or not, but everyone can say if it is in effect at all it will reduce expenditures. It can have no other effect. It simply says that none of this money can be expended unless the States cooperate. In other words, the appropriation is not available until those conditions come to pass.

Now, that is purely negative legislation. The Holman rule permits legislation that is of a negative character; that is, that places restrictions and limitations on expenditures. There is not a single sentence or clause in either of the provisos which authorizes the spending of money under any conditions that are not authorized in the general provision in the first part of the paragraph. In other words, the whole purpose, the whole intent, and the only thing that can be accomplished by either proviso, is to reduce the expenditure, and it is purely negative legislation. It does not say they can spend $100,000 more if the States cooperate, but that they can not expend any unless they do cooperate. It is a limitation that says they can only spend what is actually appropriated when certain conditions come to pass, and they name those conditions. I believe it is purely a negative proposition.

Mr. McARTHUR. Mr. Chairman, the practical effect of this legislation in a similar item during the last fiscal year was that the various States, in the matter of this cooperative indemnity, paid to the owners of cattle that were destroyed under process of law $934,237.17, while the United States Government paid from its Treasury $551,331.08. If there had been no limitation in paying this out on cooperative work, the Government would have paid the total of the two sums that I have read—if that much had been carried in the bill. I submit that this is clearly a limitation and in the interest of economy.

Mr. BLANTON. My colleague from Texas [Mr. JONES] would argue that the purpose of these provisos was to prevent the States from cooperating and paying their part thereof, saving this money to the Treasury.

Mr. JONES of Texas. Oh, no.

Mr. BLANTON. When the very purpose of these two provisos is just the opposite. It is to force the States to come in and cooperate with the Federal Government in putting up this money.

Mr. JONES of Texas. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. JONES of Texas. Would the Government spend less money if we knocked out the provisos?

Mr. BLANTON. No. But there is no authority of law for it. I just called the attention of the Chair to the provisos, as I thought that was the quickest way to reach it. The distinguished chairman of this Subcommittee on Appropriations, the gentleman from Minnesota [Mr. ANDERSON], has admitted that there is no authority of law for this legislation. My distinguished colleagues favor it. I am not opposing the legislation, but I am trying to enforce the rules of the House which the Members of Congress were given to understand would be enforced when we voted for the new provision concentrating all the appropriating power of all the committees of this House in one big appropriating committee. I voted for this concentrated committee because I believed it would result in economy. I believed that the Members of this House would be treated fairly, and that when questions arose, when the committee had seen fit to go beyond its authority and place legislation upon the appropriation bill, I took it for granted that the Chair would not decide the question on the ground of expediency, or on the ground of whether or not the legislation was good, or on the ground of whether or not it should be passed, but upon the question of the rules, and give every Member of this House the benefit of these rules, on which we saw fit to vote for this law concentrating all this power in one committee.

Mr. ANDERSON. Mr. Chairman, I do not wish the gentleman from Texas [Mr. BLANTON] to put me in a false position. I only said I did not know of any specific statute which authorized the requirement of cooperation. I do not admit that the whole paragraph is legislation.

Mr. DOWELL. Mr. Chairman, will the gentleman yield for a question?

Mr. ANDERSON. Yes.

Mr. DOWELL. Standing alone, as to the appropriation commencing at line 12 and continuing down to the figures on line 20, there can be no question about the entire appropriation for this purpose. Now, all that is following that is a mere limitation on how that appropriation may be expended. It is a limitation upon it, is it not, and it has nothing to do with the appropriation itself?

Mr. ANDERSON. If the Chair were considering the whole item and the point of order as made against the whole item, I would like to direct the attention of the Chair to some law on the subject. But if the Chair is only considering the proviso—that is, the question of whether it is a limitation or not—I do not care to discuss that question, because it has been sufficiently discussed already.

The CHAIRMAN. The gentleman from Texas [Mr. BLANTON] made the point of order on the whole paragraph.

Mr. DOWELL. On the theory that if one part was objectionable all of the paragraph was objectionable?

Mr. BLANTON. Yes.

Mr. DOWELL. As I understand the appropriation, down to line 20 there is not any question about that being in order, and the point of order raised is as to the proviso, which it seems to me is a limitation upon the appropriation, and not legislation.

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard further?

Mr. ANDERSON. Mr. Chairman, only if the point of order is directed to the entire paragraph after the amount. It might be of some value to the Chair if I directed his attention to the authority of the Secretary of Agriculture with respect to the

eradication of contagious animal diseases. I read from section 8 of the act of May 24, 1884.

The CHAIRMAN. What page is the gentleman going to read from?

Mr. ANDERSON. This is on page 41 of the volume I have before me. I do not know where it is in the book that the Chair has. I read:

That it shall be the duty of the Commissioner of Agriculture to prepare such rules and regulations as he may deem necessary for the speedy and effectual suppression and extirpation of said diseases, and to certify such rules and regulations to the executive authority of each State and Territory and invite said authorities to cooperate in the execution and enforcement of this act. Whenever the plans and methods of the Commissioner of Agriculture shall be accepted by any State or Territory in which pleuropneumonia or other contagious, infectious, or communicable disease is declared to exist, or such State or Territory shall have adopted plans and methods for the suppression and extirpation of said diseases, and such plans and methods shall be accepted by the Commissioner of Agriculture, and whenever the governor of a State or other properly constituted authorities signify their readiness to cooperate for the extinction of any contagious, infectious, or communicable disease in conformity with the provisions of this act, the Commissioner of Agriculture is hereby authorized to expend so much of the money appropriated by this act as may be necessary in such investigations and in such disinfection and quarantine measures as may be necessary to prevent the spread of the disease from one State or Territory into another.

Now, this is a very general statute, not only authorizing but directing cooperation with the States in the extirpation of communicable and infectious diseases of animals.

Mr. BLANTON. Is not that an appropriation bill that the gentleman is reading from?

Mr. ANDERSON. No; it is not an appropriation bill that I am reading from. It is the act for the establishment of the Bureau of Animal Industry in the Department of Agriculture and to provide for the extirpation of pleuropneumonia and other contagious diseases among domestic animals. It is permanent law.

The CHAIRMAN. Will the gentleman permit the Chair to ask him a question?

Mr. ANDERSON. Certainly.

The CHAIRMAN. Is there any provision in the statute which the gentleman is reading that permits the killing of animals and the payment therefor?

Mr. ANDERSON. Yes; there is such a statute. I read:

That the Secretary of Agriculture shall have authority to make such regulations and take such measures as he may deem proper to prevent the introduction or dissemination of the contagion of any contagious, infectious, or communicable disease of animals from a foreign country into the United States or from one State or Territory of the United States or the District of Columbia to another, and to seize, quarantine, and dispose of any hay, straw, forage, or similar material, or any meats, hides, or other animal products coming from an infected foreign country to the United States, or from one State or Territory or the District of Columbia in transit to another State or Territory or the District of Columbia whenever in his judgment such action is advisable in order to guard against the introduction or spread of such contagion.

Mr. BLANTON. Right there; that is only from one State to another, not in the various States themselves. There is the distinction. This seeks to require cooperation for acts that the Secretary may perform in a State, regardless of State laws, or regardless of the entry of stock from one State into another.

Mr. MADDEN. He must certainly kill them in one State to prevent their going into another State.

Mr. ANDERSON. Certainly, as my friend from Illinois suggests, you have to kill them in one State to prevent their going into another. My impression is that there is a statute which authorizes the Secretary of Agriculture to kill infected animals and pay the cost of the animals so killed.

The CHAIRMAN. Will the gentleman permit another question?

Mr. ANDERSON. Certainly.

The CHAIRMAN. Does not the matter that the gentleman is now referring to come in another part of this bill? Is not the gentleman reading about the quarantine regulations?

Mr. ANDERSON. No. This is the law creating the Bureau of Animal Industry.

The CHAIRMAN. Is there any other part of this bill which provides for the very thing the gentleman is now referring to?

Mr. ANDERSON. There is a general item which provides for the enforcement of the inspection and quarantine law.

Mr. RUBEY. It appropriates the money for it?

Mr. ANDERSON. It appropriates the money for that purpose.

Mr. CARTER. Unless the Chair is satisfied about the matter being a limitation——

The CHAIRMAN. The Chair will hear the gentleman from Oklahoma if the gentleman from Minnesota will yield.

Mr. ANDERSON. I yield to the gentleman from Oklahoma.

Mr. CARTER. Unless the Chair is satisfied that this is a limitation, I should like to cite him to Hinds' Precedents. I find in the manual this language:

The limitation may not be applied directly to the official functions of executive officers, but it may restrict executive discretion so far as this may be done by a simple negative on the use of the appropriation.

Citing Hinds' Precedents, volume 4, sections 3968 and 3972, It seems to me very clear.

Mr. BLANTON. Mr. Chairman, in order to save time I will withdraw the point of order. I think my action has been protest enough against the action of the committee, and I withdraw the point of order.

The CHAIRMAN. The gentleman from Texas withdraws the point of order.

Mr. ANDERSON. I offer an amendment.

The CHAIRMAN. The gentleman from Minnesota offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 11, line 20, after the figure "$1,978,800" substitute a comma for the colon and insert "of which $978,000 shall be set aside for administrative and operating expenses and $1,000,000 for the payment of indemnities."

Mr. ANDERSON. I should like to say with reference to the amendment that when the committee considered this particular item, owing to the great change that has taken place in the market value of cattle, which is an element in determining the amount of indemnity to be paid by the Federal Government, we did not have any indication as to what the division between operating expenses and indemnity should be. Since that time I have conferred with the department, and they have suggested that if a division is made it should be made upon the basis of the amendment which I have sent to the Clerk's desk.

Mr. McLAUGHLIN of Michigan. Will the gentleman yield?

Mr. ANDERSON. Yes.

Mr. McLAUGHLIN of Michigan. How much money was paid in indemnities during the last calendar year?

Mr. McARTHUR. The gentleman means fiscal year, does he not?

Mr. ANDERSON. I can not say how much for the calendar year.

Mr. McLAUGHLIN of Michigan. What are the latest data the gentleman has as to the money paid for indemnities out of the appropriation we last made?

Mr. ANDERSON. In 1920, up to the time these hearings were held, as I recall, $171,973.

Mr. McLAUGHLIN of Michigan. That was up to about the 20th of November?

Mr. ANDERSON. November 30.

Mr. McLAUGHLIN of Michigan. That would be five months. In five months they used $171,000, and the gentleman is now proposing to provide $1,000,000 for a year.

Mr. ANDERSON. When I did that I was following the example of the gentlemen on the Agricultural Committee, who have always insisted without exception that the amount for indemnity should be more than the amount for operating expenses.

Mr. McLAUGHLIN of Michigan. The gentleman's memory is short. The members of the Committee on Agriculture have never insisted on any such thing. The gentleman on the Committee on Agriculture insisted on making such a division as seemed just and proper under all the circumstances. They occasionally used their own judgment, and did not take for granted everything said by the gentlemen from the Department of Agriculture.

Mr. SUMNERS of Texas. I desire to direct a question to the gentleman in charge of the bill.

The CHAIRMAN. The gentleman from Michigan has the floor.

Mr. McLAUGHLIN of Michigan. I yield for a question.

Mr. ANDERSON. If I have the floor, I will answer it.

Mr. SUMNERS of Texas. The gentleman stated that the price of cattle had changed. Has that resulted from the ordinary market conditions, or the difference in the estimates made by the Farm Management Bureau?

Mr. ANDERSON. That resulted from the actual market, because the amount of the indemnity paid is reduced by the slaughter value of the carcass, so that if the slaughter value is less the indemnity paid is more.

Mr. SUMNERS of Texas. I though perhaps the Office of Farm Management had changed the estimates of the cost of production.

Mr. HAUGEN. Mr. Chairman, I would like to ask the chairman of the committee a question, if he has any estimates of the amount required to pay the indemnities? In the estimates, I understand, it was put somewhere about $2,000,000, and in the amendment of the chairman there is only $1,000,000 made available.

Mr. ANDERSON. I have no estimate of $2,000,000 for indemnity.

Mr. HAUGEN. There were a number of tables submitted, and, as I understand, the total was $2,000,000. We should provide an adequate fund to pay the indemnity besides providing for the administration.

Mr. ANDERSON. I am wholly unable to reconcile the position of the gentleman from Iowa with the position of the gentleman from Michigan. The gentleman from Michigan says that the amount is too high, and the gentleman from Iowa says that it is not enough.

Mr. HAUGEN. The legislatures are about to meet, and it will take some time for the States to make the appropriations. I understand the legislatures are contemplating making large appropriations to pay indemnities.

Mr. ANDERSON. The tables to which the gentleman refers put the total estimates for Federal indemnity at $2,097,000. That is based upon a larger sum for operating expenses that we have authorized in the bill.

Mr. HAUGEN. The all-important part is to pay the indemnity. The administration will be of little value unless the indemnities are provided for. We do not want to spend money for veterinary service unless we have money to pay the indemnities with. I am not certain but that the division made by the gentleman in his amendment is a proper division. I would like to see the amount available for indemnity made much larger.

Mr. McLAUGHLIN of Michigan. I have not expressed the opinion as to what either of these amounts should be. I have noticed that there is an increase of $500,000 in the appropriation. The only thought I had in mind was that a part of this proposed increase might possibly be saved, just as the gentleman from Iowa says the amount of the indemnity must be large enough.

Mr. HAUGEN. My understanding is that the legislatures did not have an opportunity to make their appropriations, but that they will take hold of it this year, and that it will take about $2,000,000 to meet the indemnity, and therefore we should provide for the indemnity instead of for the veterinaries.

Mr. McLAUGHLIN of Michigan. Is not the estimate of $2,000,000 the estimate of the amount to be appropriated and used by the States?

Mr. HAUGEN. Yes; we match dollar for dollar.

Mr. McLAUGHLIN of Michigan. Oh, no.

Mr. HAUGEN. The general arrangement is the Federal Government pays one-third, the State pays one-third, and the owner stands one-third.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I move to strike out the last word. The gentleman from Iowa is mistaken in saying that the Federal Government matches dollar for dollar. The law says that we shall not pay more than a State pays in any case. I have in mind the State of Wisconsin, where there is an indemnity as high as $200. In several of the States the indemnity is very high. The law we have enacted here is that the Federal Government shall not pay more than the State pays.

Mr. HAUGEN. The Federal Government pays one-third and the State arranges it between the State and the owner.

Mr. McLAUGHLIN of Michigan. In some States they pay more than the Federal Government pays. The law provides that we shall pay not more than one-third of the value of the animal; it says also we shall not pay more than the State pays; and says finally that we shall not pay more than $25 for a grade animal or more than $50 for a pure-bred animal.

Mr. HAUGEN. The State is expected to pay one-third and the owner one-third.

Mr. McLAUGHLIN of Michigan. In the State of Wisconsin they may pay as much as $200 for an animal. We would not be permitted to pay more than $25 or $50, but the State of Wisconsin would pay up to the full amount. We do not pay as much as the State, so our amount of indemnity does not need to be measured by the amount of indemnity contemplated by the State.

Mr. SNELL. Mr. Chairman, I would like to ask the gentleman in charge of the bill a question. Do I understand that it costs $1,000,000 overhead to pay out in the vicinity of $400,000 for animals killed and destroyed?

Mr. McLAUGHLIN of Michigan. A great deal more work is done under this item than testing animals for tuberculosis; it does not all go for tuberculosis. Only a part of the bureau's work under this item is the testing of animals for tuberculosis, leading up to slaughter, and the payment of the indemnity.

Mr. SNELL. Is all the testing done in each State by the Federal authority instead of the State authority?

Mr. McLAUGHLIN of Michigan. If we keep on furnishing money I think we can say that ultimately much of the expense will be paid by the Federal Government, because the States are getting careless. They permit their veterinarians to be inefficient, and the more careless they are the more they ask from the Federal Government and the more we supply their demands.

Mr. SNELL. If there is considerable doubt about the advisability of the amount of this appropriation, why would it not be a good idea to reduce it to what it was last year?

Mr. McLAUGHLIN of Michigan. This is the situation: The animals are tested for tuberculosis partly for the safety of the animals and for the satisfaction of the owner and partly to provide for a basis for issuing of certificates so that the owner may ship to another State. If the work of testing the animals as the basis for a certificate is efficiently and honestly done, the certificate going with the animal to the other State is accepted; if the work has been inefficiently done the animal is rejected in the State to which it goes, and then there is trouble between the States. The officials of one State accuse the officers and shippers of the other State, and what do they do? They lie down and insist that the Government of the United States shall do the inspecting and issue the certificates.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McLAUGHLIN of Michigan. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SNELL. Does the gentleman think that this appropriation could be cut at this time and still get the efficiency that is necessary on the part of the Federal Government?

Mr. McLAUGHLIN of Michigan. The States are going to depend upon the Federal Government for this kind of work, and the Federal Government is doing good work. This work is in the hands of very competent, capable, and conscientious men. They are doing splendid work, and there seems to be no effort upon the part of the States to improve the character of the work their own men are doing, so the work will pile up on the Federal Government. I questioned some of these gentlemen who were before the committee, and I have talked with them at other times. I have said to them, "What do you do when you find a veterinarian on the State pay roll who is inefficient, who has been issuing improper certificates, and what do you do when you find a veterinarian has been in collusion with the owner of a herd and has issued dishonest certificates?" The reply has been that they take him off the pay roll and then call in the Federal Government to do the examining, and that is all they do. I then asked whether they permitted that veterinarian to continue his private practice after having shown himself incompetent and dishonest, and the reply was that they did, that there was no statute to provide for his punishment. So that they just lie down and ask the Federal Government to do the work.

Mr. SNELL. Are we behind in paying for the animals that have been destroyed up to the present time?

Mr. McLAUGHLIN of Michigan. No.

Mr. SNELL. Then if we paid up in full and used only $171,000 in five months, why do they need a million dollars for the next year?

Mr. McLAUGHLIN of Michigan. This act provides that we shall cooperate with the States only on a certain basis, and that the States must be willing to cooperate with us. Some of the States do not have laws that enable them to cooperate. Our officials have been cooperating with only 33 States last year, but it is expected that during the coming year all of the States will be in a position to cooperate with the Federal Government so that more work will be done, more States will be taken in, and more money will be needed.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. McLAUGHLIN of Michigan. Yes.

Mr. MONDELL. Do I understand that that is the basis on which the committee brought in this very large appropriation—that there was a hope or an expectation that we might do more than we have done, with nothing definite or assured? Is that the way we are appropriating money?

Mr. SNELL. That is what I am trying to find out.

Mr. MONDELL. If we are throwing away a million dollars here and a million dollars there, on the mere hope or expectation that we may do something, it is about time that we knew about it.

Mr. McLAUGHLIN of Michigan. I am not a member of the committee reporting this bill. I speak only in a general way and from such information as I have been able to gather.

Mr. MONDELL. I had assumed that the gentleman was speaking from knowledge.

Mr. McLAUGHLIN of Michigan. I understand that is why the amount is increased. The gentleman can get the particulars from the members of the Committee on Appropriations.

Mr. MONDELL. There seems to be a notion in the minds of some people that because these appropriations are agricultural appropriations they must be very large, whether they are needed or not.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. McARTHUR. Mr. Chairman, I rise in the hope that I may shed a little light on this matter. I want to quote some figures furnished me by the Bureau of Animal Industry on this very question. During the last fiscal year, ending June 30, 1920, the Government paid out by way of indemnity $551,331.08, and there was paid out to the cattle owners by the various States by way of indemnity $934,237.18—practically $2 by the States to $1 by the Federal Government.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. McARTHUR. Certainly.

Mr. SNELL. What period does that cover?

Mr. McARTHUR. The last fiscal year, ending June 30, 1920. The head of the Tuberculosis Eradication Division of the Bureau of Animal Industry advises me that the money on hand at the present time will be barely sufficient to cover the cost of carrying on this work up to June 30, 1921, and that even a larger sum will be required for the next fiscal year, for the reason that a very wide campaign is under way for the wiping out of this disease among the cattle of this country, especially in the dairy industry. The figures I have here show the growth of that campaign. At the present time there are on the accredited herd lists of the bureau 5,018 herds, approximating 80,000 cattle, which have passed either two or three tuberculin tests yearly at the hands of the bureau, and there are 27,842 herds, approximating 440,000 cattle, that have passed one test. There has been a tremendous growth since this work was undertaken, and it is costing money to carry it on.

Mr. RUBEY. Mr. Chairman, will the gentleman yield?

Mr. McARTHUR. Yes.

Mr. RUBEY. Is it not a fact that there are a great many herds on the waiting list?

Mr. McARTHUR. Yes; thousands of them are asking that this work be done, and that this test be administered, because it is all important in eradicating this disease, which is costing the people of the United States $50,000,000 a year.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. McARTHUR. Yes.

Mr. FESS. What has the gentleman to say about the observations of the gentleman from Michigan that the States are not doing it?

Mr. McARTHUR. My observation has been that it is necessary for the Federal Government to take hold of this work for the reason that the veterinarians employed by the Bureau of Animal Industry are men of ability and of the highest character, whereas in a number of States the official veterinarians, who are appointed for political purposes, are men who can not be depended on to do the right thing, and we have witnessed a great many instances of tubercular animals which have been certified to by crooked veterinarians and shipped to distant parts of the country, there to be dumped on the unsuspecting public at a good price.

Mr. FESS. What is the specific purpose of the appropriation? Is it a matter of obtaining food or of preserving health?

Mr. McARTHUR. The specific purposes of the appropriation are very many. First, to stamp out this disease which entails an economic loss to the people of the country; and, second, to insure a wholesome supply of milk and dairy products for the consumers of the country, and also to insure a wholesome supply of meat from domestic animals.

Mr. SNELL. Will the gentleman yield for a further question?

Mr. McARTHUR. I will.

Mr. SNELL. The evidence the gentleman has presented, where it cost about $500,000 last year, is in direct line with the statement of the gentleman from Wisconsin that it took $191,000 for the last five months. Now, if that is the direct evidence, I can not see any reason for appropriating $1,000,000 for the next year.

Mr. McARTHUR. If the gentleman will permit, this work is growing tremendously from month to month. There are thousands of herds on the waiting list now.

Mr. SNELL. Is it growing because we appropriate more money and they want to get it?

Mr. PELL. Yes.

Mr. SNELL. Or because there is some actual need?

Mr. McARTHUR. It is growing because of the wisdom of this law; and, Mr. Chairman, the sooner we go on with the campaign of eradicating bovine tuberculosis, the better off the country will be. We can not make any headway if the job is half done. There is only one way to fight this disease and stamp it out, and that is to do it and get rid of it. It will be only a few years, if this campaign is carried forward, when tuberculosis in our cattle will be stamped out and further appropriations will be unnecessary.

Mr. FESS. Will the gentleman yield further?

Mr. McARTHUR. I will.

Mr. FESS. What has the gentleman to say of the impression that as we increase the expenditure we are increasing tuberculosis?

Mr. McARTHUR. There is nothing in that statement, Mr. Chairman, because as we increase the appropriation we are certainly decreasing tuberculosis, and we are slaughtering and disposing of infected animals, and there are very large areas in various sections of the country where tuberculosis has been wiped out altogether. Federal and State authorities are taking it up by county units in a great many States, and they have wiped it out altogether in one county in my State, in one in Washington, and in one in Wisconsin, and, in my judgment, it will not be many years until tuberculosis among cattle of this country will be a thing of the past. If we are going to carry the campaign forward and wipe out this disease, this is no time to talk about reducing the required appropriations. We either should abandon the work altogether or go forward with it. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOCHT. Mr. Chairman, I move to strike out the last word.

Mr. ANDERSON. Mr. Chairman, I think there is an amendment pending.

The CHAIRMAN. The gentleman from Pennsylvania rises in opposition to the amendment of the gentleman from Oregon to strike out the last two words.

Mr. FOCHT. Mr. Chairman, I have listened to this discussion with much interest, also with a great deal of surprise. I am amazed that there are so many tubercular cattle in the country after making these appropriations so many years.

Mr. McARTHUR. Will the gentleman yield?

Mr. FOCHT. Ever since I have been here—I will yield.

Mr. McARTHUR. How many years did the gentleman imagine these appropriations had been made?

Mr. FOCHT. Well, we have been making them for 14 years—here and in Pennsylvania.

Mr. McARTHUR. The gentleman is mistaken; only for three years here.

Mr. FOCHT. That is all right. As a matter of fact, in my State we have cleaned out tuberculosis. Now, I would like to know where these crooked veterinarians come from you are talking about. I will say, gentlemen——

Mr. McARTHUR rose.

Mr. FOCHT. No; I can not yield now. I want to ask this of the gentlemen who talk about the efficiency of these veterinarians: From what particular State do you get the eligible veterinarians? Where do they come from to Washington and where are they educated? You know very well that the only place you can go is Pennsylvania and New York, where we have a high standard for veterinary surgery. They have to stand a searching examination and they can not practice the profession as they did in the old days. Now, as for dishonesty, why, that is simply a question of opinion and evidence. How many herds are passed on or disposed of? I have heard a good deal about $2,000,000 for the service, but we have not heard a word about how many cattle were found to have had tuberculosis, nor how many cattle there are that have tuberculosis, and if we do find some cases why do you come down to Washington and forever hit the Treasury?

We talk about economy. The leader of this House has just preached another sermon about it, and yet we want to raid the Treasury here for $2,000,000 for tuberculosis, when there is not a tubercular cow or steer in the District of Columbia. Why does not your State of Oregon, your State of Minnesota, your State of Iowa, do as New York and Pennsylvania do, take care of your own tuberculosis? That is the question.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOCHT. Mr. Chairman, I ask unanimous consent to continue for five minutes longer.

Mr. McARTHUR. Reserving the right to object——

Mr. FOCHT. And I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to revise and extend his remarks. Is there objection?

Mr. McARTHUR. Reserving the right to object, I understood the gentleman from Pennsylvania asked for five additional minutes. Coupled with that I ask unanimous consent that I

be given five additional minutes in which to reply to the gentleman from Pennsylvania.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. FOCHT] asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none. And the gentleman from Pennsylvania asks unanimous consent to be allowed to proceed for five additional minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. FESS. Will the gentleman yield?

Mr. FOCHT. Yes.

Mr. FESS. I have a good deal of sympathy with what the gentleman is saying. However, if the purpose of this item is to eradicate not only disease in cattle, but disease also of the human, which will certainly be multiplied by the presence of disease in meat, would it not be a proper function of the Federal Government even if it had to do all of that?

Mr. FOCHT. I am in favor of all of this. You all understand that. Sometimes I like, as I follow these arguments along, to let it be known that I am not so overwhelmed and immersed in the idea expressed that I accept everything I hear. I like to call attention to some inconsistencies.

But here is something I would like to say in connection with this objection. Now, when I first came here and saw this agricultural bill, I really thought it would be a fair proposition to offer as a substitute for it, with all these scientific matters referred to here, the Lancaster Almanac. But there has been a great growth in the need of assistance to the farmer, and I am heartily in favor of it all. You may wonder why I would rise here, coming as I do from the State of Pennsylvania, when it is known we do not raise enough east of the Alleghenies to sustain human life, and talk about agriculture.
